

We believe that both of our organizations, the State Board and IDLA, have experience in creating statewide systems to help support education and so it seemed like a great pairing between our entities to work together on the creation of the transfer portal.

IDLA has been honored to work with the SBE and their staff as well as all of the post secondary partners. We are excited about the portal and the opportunity and the benefits it will provide for Idaho students. Additionally, IDLA, leveraging our partnerships with K-12 Idaho school districts and Idaho post secondary institutions will be a catalyst for generating awareness and utilization of the portal for all Idaho students. Thank you for the opportunity to work together.

Before we continue, we would be remiss if we didn't mention a group of people at this point. We would like to thank each of the registrars at the state institutions. We would like to take this opportunity to thank each of them for their dedicated time and effort on this project. They have been meeting with us virtually at least three times each month and sometimes more often. These ladies are very knowledgeable and have been integral part as this project has moved forward.

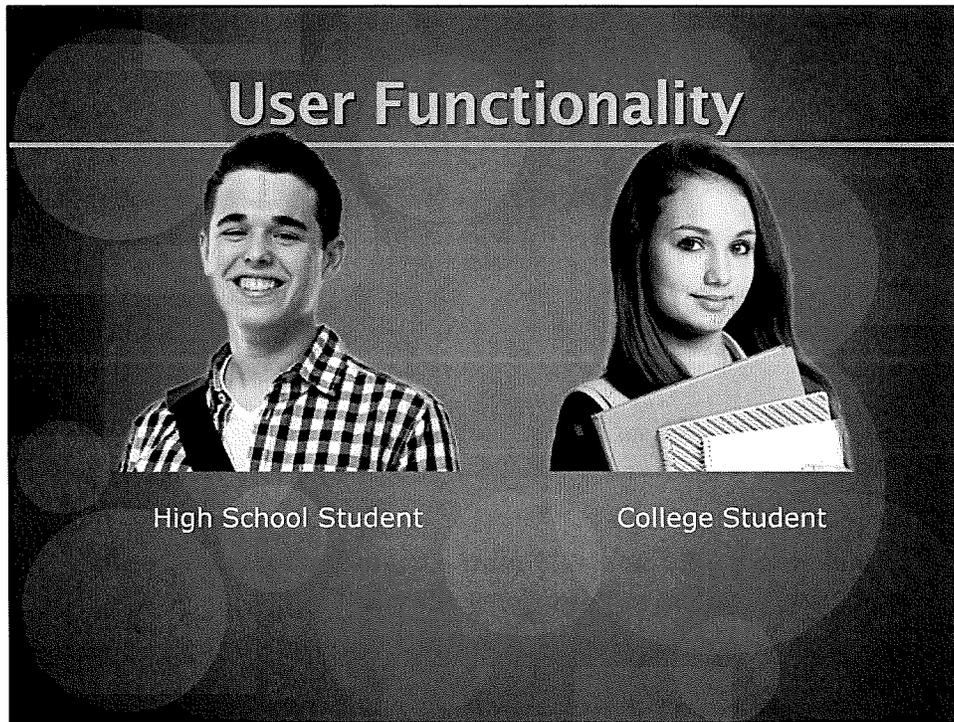

Introduction

- Objective
 - Development of website and resources for prospective transferring students
- Outcome
 - Simplification of transfer across all Idaho state sponsored post-secondary institutions

SHERAWN

Throughout the development of the web portal our objective was to develop a website with tools that would simplify the transfer process for students throughout Idaho at our post-secondary institutions. We were looking to develop a site where they would be able to understand how their courses would transfer – straight across or as an elective. Through this transfer portal they will have a better idea prior to transferring.

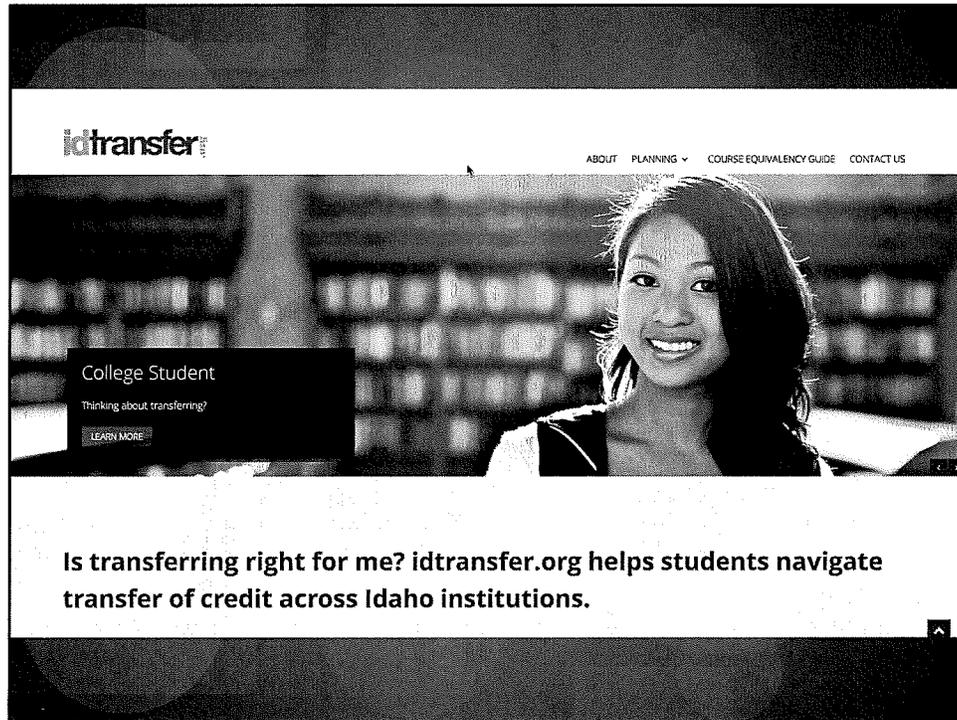

SHERAWN

As we began development of the portal we were focused on two functionality groups of users: the college student and the high school student. For the High school user we wanted them to see how dual credit courses transfer into their school of choice; and for the College user we were looking at what transfer options could be available, and where do they start?

We had to choose one functionality to start with, so we started with the development for the college user.

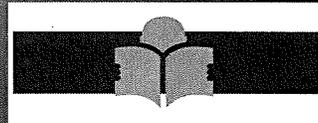

Through development it was crucial that the transfer site would be user friendly, easily accessible, mobile compatible and simple to use. Giving answers about every course that a student may take and to ease the burden of the decision or need to transfer. With that...I am going to turn it over to Ryan for the live demonstration.

Live demonstration, this is the tool that has launched – however, it won't be marketed until closer to the fall. Gives simple navigation to those two segments. Planning, course equivalency, at your fingertips.

Project Overview/Next Steps

- Phase 1
 - Website
 - Transfer Information
- Phase 2
 - Dual Credit
 - Course Matrix
 - GEM Courses
- Phase 3
 - Additional Transfer Tools

The project has been broken into three different phases. We are in the process of completing Phase 1. Additional functionality will be completed in the next phase – of which we are in discussion with the state board staff on what that looks like.

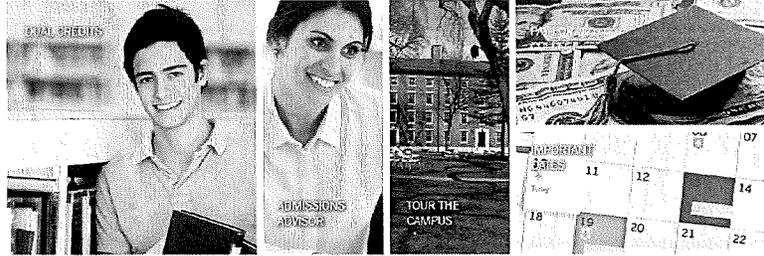

The Idaho College Search Engine

We have begun the development of “The Idaho College Search Engine”
