---

**SUBJECT**

Board Direction to the Medical Education Subcommittee of the Board

**REFERENCE**

January 26, 2009

Move to delete recommendation number 5 from Attachment 1 and renumber items 6-11 to read items 5-10. And, in doing so, to approve the Report of Findings and Recommendations of the State Board of Education Medical Education Study Committee contained in Attachment 1, and to direct that the Report be forwarded to the Governor and the Legislature.

April 16-17, 2009

The State Board of Education provided instruction to the Medical Education Subcommittee with this motion: To embrace the principles that appear in the Board materials, as prepared by Board members and staff, and that the Board refers the matter to a medical education subcommittee of the Board that will work out the implementation plan, engaging appropriate stakeholders.

**BACKGROUND/DISCUSSION**

The Board has been engaged with stakeholders and the institutions for a number of years about how to best provide medical education in the state. In 2009, a paper containing findings and a series of recommendations was presented to the Board by the Medical Education Subcommittee. The Board adopted the specific recommendations in January and asked the medical education subcommittee to work out an implementation plan in April. Those recommendations included expanding residencies, increasing the number of medical education seats and developing a long range strategy for expanding medical education in the state. When the economy weakened, these efforts were significantly slowed. The Board did proceed with a study conducted by WWAMI on the best ways to expand medical education seats as well as some efforts to enhance residencies.

The Medical Education subcommittee is looking for some guidance from the Board as to how to proceed with recommendation number 4: The State Board of Education will oversee an initiative to engage all stakeholder groups (ISU, UI, BSU, LCSC, University of Washington, VA Medical Center, the hospitals, and the Idaho Medical Association) to jointly develop a collaborative and comprehensive plan for establishment of a 4-year, Idaho based MD program.

**IMPACT**

This direction will help the Board's Medical Education Subcommittee focus its efforts.

**State Board of Education Medical Education Study Committee  
Board-approved Recommendations  
January 7, 2009**

*Status as of May 2012*

1. Expand the development of graduate medical education (residency programs) opportunities in the State of Idaho focusing on primary care and rural practice. In partnership with Idaho hospitals, the VA, Idaho doctors, private enterprise and Idaho's colleges and universities, the State of Idaho should promote and assist the funding of these programs.

*Status:*

*The Boise Internal Medicine (BIM) residency accepted its first incoming class of interns in FY 2011. The program will have 8 interns, 8 R2s and 8 R3s. State funding was requested in FY 2011 and FY 2012. No funding was appropriated.*

*Coeur d'Alene Family Medicine Residency has an planned start for 2014 at 6 residents per year. No State funding has been requested to date.*

2. Immediately increase the State funding support for Idaho WWAMI students to expand the number of seats from 20 per year to 40 per year (adding 10 per year over the next two years) and encourage the WWAMI program to establish the full four years of medical education opportunity in Idaho.

*Status:*

*No State funding has been requested or appropriated for expansion of WWAMI seats.*

*In November 2009 the Medical Education Study Committee charged the University of Washington School of Medicine (UWSOM) to proceed with a self-funded study of expanding the first-year class size in Idaho and establishing a second-year class in Idaho. UWSOM completed phase one (feasibility) of its study in November 2010 and phase two (cost analysis) in November 2011.*

3. Expand the total number of medical seats for Idaho sponsored students to between 60 to 90 per year (an aggregate total of 240 to 360) as soon as practicable through partnerships with WWAMI, WICHE, University of Utah, osteopathic schools and other medical schools taking into consideration the following factors:
  - a. Quality
  - b. Return rate
  - c. Cost effectiveness
  - d. Retention

*Status:*

*No State funding has been requested or appropriated for expansion of Idaho sponsored medical school seats.*

4. The State Board of Education will oversee an initiative to engage all stakeholder groups (ISU, UI, BSU, LCSC, University of Washington, VA Medical Center, the hospitals, and the Idaho Medical Association) to jointly develop a collaborative and comprehensive plan for establishment of a 4-year, Idaho based MD program.

*Status:*

*In November 2009 the Medical Education Study Committee charged the University of Washington School of Medicine (UWSOM) to proceed with a self-funded study of expanding the first-year class size in Idaho and establishing a second-year class in Idaho. UWSOM completed phase one (feasibility) of its study in November 2010 and phase two (cost analysis) in November 2011.*

5. Encourage medical school admission committees to use selection criteria for admission into Idaho sponsored medical seats which maximize potential for practice in primary care and rural areas.

*Status:*

*Currently, Idaho students applying to the WWAMI program are interviewed and selected by the Idaho Admissions Committee (IAC) – made up of four Idaho physicians appointed by the State Board of Education. The IAC evaluates applicants' motivation for primary care as part of the interview process, taking into consideration information known to predict a primary care specialty choice such as demonstrated activities with underserved communities and rural upbringing.*

*UWSOM admissions criteria evaluate applications against minimum and average standards in the following eight specific areas: GPA, MCAT score, extracurricular activities, volunteer/community service, leadership, research, physician shadowing, and patient exposure. In addition, the contract with the University of Utah School of Medicine does not include a requirement for the use of selection criteria which maximize potential for practice in primary and rural areas. The contract does provide that "The School agrees to designate at least two Idaho licensed physicians approved by SBOE to serve on the School's Admissions Selection Committee for the purpose of assisting in the selection of the Idaho resident students to be admitted pursuant to this Agreement. ... The Idaho licensed physicians will also participate as full voting members in selection deliberations involving Idaho resident student applicants." The intent of this provision is that the Idaho physicians will help screen/prioritize students with an interest in practicing in primary care and rural/underserved areas.*

6. Work with sponsored medical programs to ensure that Idaho medical students participate in an Idaho rural rotation (clerkship) as part of their program.

*Status:*

*The WWAMI program has an enduring commitment to preparing students for practice in rural and underserved areas. To that end, WWAMI has two benchmark programs which expose students to rural and underserved communities.*

*(1) Rural/Underserved Opportunities Program (R/UOP)*

*This “is a four-week, elective immersion experience in community medicine for students between their first and second years of medical school. During their 4-week rotation, students live in rural or urban underserved communities throughout ... [the WWAMI region]. They work side-by-side with local physicians providing health care to underserved populations. ... Students receive stipends, travel money and assistance with housing expenses.”*

*(2) WWAMI Rural Integrated Training Experience (WRITE)*

*This “program provides third-year students with five months of extended education in rural community practices with primary care physicians and other healthcare professionals.”<sup>23</sup> Students move to teaching sites throughout the WWAMI region from February through June. Students are taught by physicians in the communities and by faculty associated with UWSOM.*

*The UUSOM contract provides the following:*

*Clinical Rotations in Idaho. The School will encourage Idaho sponsored students to participate in shadowing Idaho physicians after the first year of school and will offer electives during the senior year of school. As part of the regular course of instruction for an M.D. degree, students participate in ambulatory clinical rotations during the third year of training. The parties agree that the Idaho resident students enrolled pursuant to the cooperative program covered by this Agreement shall serve such ambulatory clinical rotations at facilities in the state of Idaho, to the extent such opportunities are reasonably available. ... The coordination of such ambulatory clinical rotations shall be the responsibility of the School. The School shall report annually to the SBOE on the status of student rotations in the state of Idaho.*

7. Expand and enhance the current Idaho Rural Physician Incentive Program (RPIP)

*Status:*

*In 2012 the Legislature passed H393 which moved administration of RPIP to the Department of Health & Welfare. The legislation also increased the annual award amount from \$10,000 to \$12,500.*

8. Consider providing a tax incentive for physicians practicing in rural Idaho to help recruit physicians to rural Idaho.

**PLANNING, POLICY AND GOVERNMENTAL AFFAIRS**  
**AUGUST 15, 2012**

---

*Status:*

*No work has been put towards this recommendation to date.*

9. Increase Medicaid reimbursement rates for primary care physicians.

*Status:*

*No work has been put towards this recommendation to date.*

10. Consider developing a pay-back provision for Idaho sponsored medical school seats.

*Status:*

*Board staff authored a white paper on the efficacy of physician payback and service requirements.*

**PLANNING, POLICY AND GOVERNMENTAL AFFAIRS**  
**AUGUST 15, 2012**

---

**SUBJECT**

Idaho's Economy and Workforce

**REFERENCE**

August 2010	Board established an attainment goal that 60% of Idaho's 25-34 year olds will have a postsecondary degree or certificate by 2020.
August 2011	Board reviewed data regarding Idaho's status in meeting the 60% goal by 2020, and heard strategies to meet the goal.
December 2011	Board approved the framework for Complete College Idaho: A Plan for Growing Talent to Fuel Innovation and Economic Growth in the Gem State, and directed staff to obtain stakeholder feedback and buy-in, and bring back the plan for approval at the June 2012 Board meeting.
June 2012	Board reviewed and approved the Complete College Idaho Plan and staff recommendations on certificate and degree production necessary to support the 60% goal.

**BACKGROUND/DISCUSSION**

At the June 2012 Board meeting, staff presented projections on degree and certificate production for the public institutions to support the Boards 60% completion goal. The Board approved the projections as presented.

The projections were based on data available from state and national research findings including Idaho Department of Labor, U.S. Census Bureau, and Georgetown University Center on Education and the Workforce,

Staff recommended targets for certificates, Associate's, and Bachelor's degrees based on historical trends, and an aspirational average of the highest educational attainment levels of the top seven Western Interstate Commission for Higher Education (WICHE) states.

At its June 2012 Instruction, Research, and Student Affairs (IRSA) Committee meeting, the IRSA Committee heard from both the Department of Labor and the Department of Commerce regarding Idaho's workforce needs historically, and what those trends suggest both currently and in the future. While the Department of Labor's projections suggests that the jobs in Idaho in 2018 will require a relatively low postsecondary education attainment level, the Department of Commerce is targeting industry clusters throughout the state for growth. These

**PLANNING, POLICY AND GOVERNMENTAL AFFAIRS**  
**AUGUST 15, 2012**

---

clusters will require, in general, a higher level of educational attainment to attract and retain business and industry and build a more robust economy.

**IMPACT**

The Board's approval of certificate and degree production targets that are, in part, aspirational allow Idaho's public postsecondary institutions to be not only responsive to current workforce needs but also supportive of the state's overall direction in building a more knowledge-based economy with higher-skill, higher-wage job opportunities for Idaho citizens.

**ATTACHMENTS**

Attachment 1 – Hard Times – Not All College Degrees Are Created Equal Page 3  
(a report by Georgetown University Center on Education and the Workforce)

**STAFF COMMENTS AND RECOMMENDATIONS**

Idaho's economy has experienced significant changes over the past three decades. Staff has invited two presenters to speak about those changes and what the future for Idaho's economy and workforce might look like based on decisions made by policy makers.

John Glerum, Idaho business executive, entrepreneur and former director of the BSU TechCenter, will provide an overview of how Idaho's economic drivers have shifted over the last 30 years and what Idaho's economic strengths and opportunities are moving forward.

Gynii Gilliam, Chief Economic Development Officer, for the Idaho Department of Commerce, will present information provided to the IRSA Committee at their June meeting regarding the Career Clusters the Department of Commerce has identified..

COLLEGE MAJORS, UNEMPLOYMENT AND EARNINGS

## NOT ALL COLLEGE DEGREES ARE CREATED EQUAL

AUTHORS:

Anthony P. Carnevale, Ban Cheah and Jeff Strohl

GEORGETOWN UNIVERSITY

Center  
for Education  
and the Workforce

## College Majors, Unemployment and Earnings

*Not all college degrees  
are created equal*

The question, as we slowly dig out from under the wreckage left by the Great Recession, is unavoidable: “Is college worth it?” Our answer: “Yes, extensive research, ours included, finds that a college degree is still worth it.” A Bachelor’s degree is one of the best weapons a job seeker can wield in the fight for employment and earnings. And staying on campus to earn a graduate degree provides safe shelter from the immediate economic storm, and will pay off with greater employability and earnings once the graduate enters the labor market. Unemployment for students with new Bachelor’s degrees is an unacceptable 8.9 percent,<sup>1</sup> but it’s a catastrophic 22.9 percent for job seekers with a recent high school diploma—and an almost unthinkable 31.5 percent for recent high school dropouts.

<sup>1</sup>The combined unemployment rate for both recent college graduates and experienced Bachelor’s degree holders is 5 percent.

# HARD TIMES

**Here is a look at several factors that current and future college students should consider as they choose their courses:**

**The risk of unemployment among recent college graduates depends on their major.** The unemployment rate for recent graduates is highest in Architecture (13.9 percent) because of the collapse of the construction and home building industry in the recession. Unemployment rates are generally higher in non-technical majors, such as the Arts (11.1 percent), Humanities and Liberal Arts (9.4 percent), Social Science (8.9 percent)<sup>1</sup> and Law and Public Policy (8.1 percent).

Unemployment in majors related to computers and mathematics vary widely depending on the technical and scientific content of the major. Employers are still hiring technical computer specialists who can write software and invent new applications. But for information specialists who use software to manipulate, mine, and disseminate information, hiring slows down in recessions. We can see the difference in unemployment between people who invent computer technology as opposed to people who use computer technology. The unemployment rate for recent college graduates in Information Systems has spiked to 11.7 percent, while the rates for majors in Computer Science and Mathematics are 7.8 percent and 6.0 percent, respectively.

**Computer majors are likely to bounce back strongly as the recovery proceeds.** For example, the unemployment rate for recent college graduates who major in information systems is a hefty 11.7 percent, but only 5.4 percent for experienced workers who major in Information Systems.

**The Education, Healthcare, Business and Professional Services industries have been the most stable employers for recent college graduates.** Unemployment rates are relatively low (5.4 percent) for recent college students who majored in Healthcare and Education because these majors are attached to stable or growing industry sectors. Recent graduates in Psychology and Social Work have relatively low unemployment rates (7.3 percent) nearly half work in Healthcare and Education. The same is true for unemployment among recent college graduates who majored in the Life and Physical Sciences (7.7 percent). More than 60 percent of these recent college graduates who are working have landed in the Healthcare, Professional Contracting Businesses or Education sectors.

Business majors have low unemployment rates (7.4 percent) with the exception of those who specialize in Hospitality Management (9.1 percent), which is hampered by the ongoing slump in Travel and Tourism. Similarly, recent graduates in Engineering do relatively well (7.5 percent unemployment), except for Civil and Mechanical Engineers who are still suffering from the deep dive in manufacturing and construction activity.

---

**UNEMPLOYMENT IN MAJORS RELATED TO COMPUTERS AND MATHEMATICS VARY WIDELY DEPENDING ON THE TECHNICAL AND SCIENTIFIC CONTENT OF THE MAJOR.**

---

**Majors that are more closely aligned with particular occupations and industries tend to experience lower unemployment rates.** Majors such as Healthcare, Education and those related to technical occupations tend to have lower unemployment rates than more general majors, like Humanities and Liberal Arts, where graduates are broadly dispersed across occupations and industries. Unemployment rates for recent graduates in Healthcare and Education are 5.4 percent compared to 9.4 percent for people who majored in Humanities and the Liberal Arts. More than three out of four people who major in Education work in the Education industry while no more than 20 percent of Liberal Arts graduates are concentrated in any single industry.

**At the same time, majors that are closely aligned with occupations and industries can misfire.**

For example, tying oneself to a particular major can be a problem if the associated occupations or industries collapse. Unemployment rates for recent college graduates who majored in Architecture start high at 13.9 percent and, due to its strong alignment with the collapse in construction and housing, unemployment remains high even for experienced college graduates at 9.2 percent.

**As the recovery proceeds and recent college graduates gain access to work, especially in their major fields, their unemployment rates will drop substantially.** Employment patterns among experienced workers who have been out of college for a while suggest that recent graduates will fare better as the recovery continues. With the exception of majors in Architecture, International Business and Theater Arts, more experienced workers have substantially lower unemployment rates and higher earnings than recent college graduates.

**Graduate degrees make a quantum difference in employment prospects across all majors.**

Sometimes, when unemployment is high, the best strategy to increase future employability is to go to graduate school. The unemployment rate for people with graduate degrees is 3 percent compared with a 5 percent unemployment rate for those with a BA (recent college graduates and experienced workers holding a Bachelor's degree). With the exception of majors in the arts and Architecture, unemployment rates for people with graduate degrees range between 1.9 percent and 4.0 percent. Graduate degrees tend to outperform BA's on employment in part because advanced degrees represent higher levels of human capital development and because those degrees are more closely aligned with career pathways in particular occupations and industries.

---

## NOT ALL GRADUATE DEGREES OUTPERFORM ALL BA'S ON EMPLOYMENT, THOUGH.

---

**For example, experienced workers with BA's in healthcare have lower unemployment rates than people with graduate degrees in every other field, except the Life and Physical Sciences.** Similarly, a BA in Education can make a job seeker more employable than majors in Architecture, Humanities, Journalism, Computers, Social Science, Arts and Business who go on to graduate school.

**What college graduates earn also depends on what they take. Median earnings among recent college graduates vary from \$55,000 among Engineering majors to \$30,000 in the Arts, as well as Psychology and Social Work.** In our more detailed data—which drills into the broad categories to look at results for more individual, specialized majors—the variation is even more pronounced, ranging from \$60,000 for Computer Engineering graduates to \$24,000 for Physiology majors.

**Majors with high technical, business and healthcare content tend to earn the most among both recent and experienced college graduates.** Engineering majors lead both in earnings for recent and experienced college graduates followed by Computer and Mathematics majors, and Business majors. Recent graduates in Healthcare majors start out with high earnings, but begin to lose ground to Science, Business and Engineering as college graduates gain experience and graduate degrees. Graduate school further differentiates earnings among majors.

---

## WHAT COLLEGE GRADUATES EARN ALSO DEPENDS ON WHAT THEY TAKE.

---

**Majors that are most closely aligned with particular industries and occupations tend to have low unemployment rates but not necessarily the highest earnings.** Some majors offer both high security and high earnings, while other majors trade off earnings for job security. Healthcare, Science and Business majors have both low unemployment and the highest earnings boost

from experience and graduate education. At the same time, Education, Psychology and Social Work majors have relatively low unemployment, but earnings are also low and only improve marginally with experience and graduate education.

**Although differences remain high among majors, graduate education raises earnings across the board.** The average earnings for BA's now stands at \$48,000 compared with \$62,000 for graduate degrees. With the exception the Arts and Education, earnings for graduate workers range between \$60,000 and \$100,000.

It is easy to look at unemployment rates for new college graduates or hear stories about degree-holders forced to tend bar and question the wisdom of investing in higher education when times are bad. But those questions should last only until you compare how job seekers with college degrees are doing compared to those without college degrees.

Today's best advice, then, is that high school students who can go on to college should do so—with one caveat. They should do their homework before picking a major because, when it comes to employment prospects and compensation, not all college degrees are created equal.

## UNEMPLOYMENT RATES DECLINE AS RECENT COLLEGE GRADUATES GAIN EXPERIENCE AND GRADUATE EDUCATION

ACS 2009-2010, pooled sample. Recent college graduates are 22-26 years of age, experienced workers are 30-54 years of age. Graduate degree holders are limited to 30-54 years of age. Percent unemployed are computed based on total employed and unemployed. Earnings based on full-time, full-year workers.

## EARNINGS INCREASE AS RECENT COLLEGE GRADUATES GAIN EXPERIENCE AND GRADUATE EDUCATION

ACS 2009-2010, pooled sample. Recent college graduates are 22-26 years of age, experienced workers are 30-54 years of age. Graduate degree holders are limited to 30-54 years of age. Percent unemployed are computed based on total employed and unemployed. Earnings based on full-time, full-year workers.

ACS 2009-2010, pooled sample. Recent college graduates are 22-26 years of age, experienced workers are 30-54 years of age. Graduate degree holders are limited to 30-54 years of age. Percent unemployed are computed based on total employed and unemployed. Earnings based on full-time, full-year workers.

## Methodology

Data from the American Community Survey for the years 2009 and 2010 were pooled to provide a larger sample size for the estimates. The unemployment rates were then computed for each of the three groups by dividing the total unemployed with the total employed and unemployed. The earnings used are median earnings in 2010 dollars rounded to the nearest \$1,000. The three groups are: recent college graduates (those between ages 22 and 26 with bachelor degrees), experienced college graduates (those between ages 30 and 54), and graduate degree holders (those with master's degrees or higher and are between 30 and 54). Median earnings are based on those who worked more than 35 hours a week and at least 50 weeks a year. All calculations use the survey weights provided by the Census Bureau.

## Acknowledgements

We would like to express our gratitude to the individuals and organizations that have made this report possible. First, we thank Lumina Foundation and the Bill and Melinda Gates Foundation for their support of our research over the past few years, and in particular, we are grateful for the support of Jamie Merisotis, Hilary Pennington, Holly Zanville, Parminder Jassal and Ann Person. We are honored to be partners in their mission of promoting postsecondary access and completion for all Americans.

We also want to thank our editor, Vic Caleca, and our designer, Woodpile Studios. Finally, we would like to thank Andrea Porter and Andrew Hanson at the Center for editorial and research assistance throughout the project.

*The views expressed in this publication are those of the authors and do not necessarily represent those of Lumina Foundation or the Bill and Melinda Gates Foundation, their officers, or employees.*

**SUBJECT**

Approval of the Five-Year Plan

**REFERENCE**

August 21-22, 2008	Board approved the two-year update to the Eight-Year Plan
June 2011	Board approved amendments to Board Policy III.Z.

**APPLICABLE STATUTE, RULE, OR POLICY**

Board Policy Section III.Z. Planning and Delivery of Postsecondary Programs and Courses, 2.a (ii)

**BACKGROUND/DISCUSSION**

In June 2011, the Board approved amendments to Board Policy III.Z., Planning and Delivery of Postsecondary Programs and Courses. Specific amendments clarified sections of existing policy, incorporated statewide program responsibilities, reduced the eight-year plan cycle to a five-year plan cycle, and amended the process for crafting institution plans.

Board Policy III.Z. requires institutions create an institution plan that describes all current programs and proposed programs to be offered within three years of the approval of the plan and in alignment with each institution's Statewide and Service Region Program Responsibilities. The process requires that institutions provide a level of programmatic information and specificity for each current program being offered and each proposed program as part of the five-year plan development. Historically, institutions provided this level of information during the Notice of Intent (NOI) or Full Proposal process. To align with policy requirements, Board staff amended procedures to require institutions provide detailed information at the time the plans are being crafted rather than at the proposal stage.

Board staff developed templates and instructions for institutions to use in providing specific programmatic details for each program. During this process, staff observed that much of the information being requested in the templates mirrored the information required in the NOI form. Therefore, staff considered the possibility of replacing the NOI form with the proposed program component of the Five-Year Plan given that much of the information provided at that stage was similar to the requirements in the NOI. The review of this option resulted in staff creating and implementing three new proposal forms that took the place of the NOI form and Full Proposal form entirely. These forms became effective March 2012 and include one for Baccalaureate programs, one for Graduate and Doctorate programs, and one for Other Academic Program Activity and Professional-Technical Education programs. Staff believes the creation of these forms will streamline the program approval process, create efficiencies, and most importantly provide the Board with the necessary information to make informed decisions.

**INSTRUCTION, RESEARCH, AND STUDENT AFFAIRS**  
**AUGUST 15, 2012**

---

Consistent with Board Policy III.Z., institution's academic plans include programmatic detail for each statewide and regional program institutions propose to offer in Academic Year 2012-13 and 2013-14. This includes a needs assessment of on-going/future workforce needs for each proposed program. While policy requires institutions provide information for programs projected three years from the approval of the plan, the level of information required the first year of implementation of the five-year plan proved to be difficult for institutions to meet the timeline. Therefore, staff requested institutions forward only proposed programs for the current 2012-13 and upcoming 2013-14 academic years with the understanding that institutions will use this next year to complete the five-year plan requirement.

As part of the Five-Year Plan development process, staff coordinated a work session with the provosts and representatives from their respective regional off-campus sites on April 18, 2012. The purpose of the work session was to review draft institution plans, statewide needs, and to identify programs that could potentially be viewed as duplication or conflict with Statewide Program Responsibilities. Institutions identified programs that would require further clarification and discussion and were instructed to work through those in preparation for the Instruction, Research, and Student Affairs Committee (IRSA) meeting in June.

On June 28, 2012, draft institution plans were presented to IRSA, which included a presentation from the Idaho Department of Labor, Idaho Department of Commerce and the Idaho Workforce Development Council on workforce projections, educational needs, and their ties to business industry needs.

Board staff used the final institution plans to prepare a comprehensive plan of current programs offered by the public institutions to include proposed statewide and regional programs for the Boards review and approval.

**IMPACT**

The Five-Year Plan will provide a comprehensive picture of institutional academic program development. The Five-Year Plan is intended to serve as the foundation for advising and informing the Board in their efforts to coordinate educational programs throughout the State.

Plan provides the institutions the ability to proceed to a program proposal development stage.

As part of the proposed program planning process, institutions met to discuss areas of concern and collaboration. It is important to note that there are three proposed programs listed in the Five-Year Plan which still require further discussion between institutions. Those include Boise State University's Ed.S., Educational Leadership Superintendent Endorsement Program; the University of Idaho's B.S., Natural Resource Conservation Program and their M.S., Integrated Design Program.

The University of Idaho feels BSU's proposed Educational Leadership Superintendent Endorsement program duplicates and would negatively impact their existing Educational Leadership program currently offered online (hybrid and face-to-face), in Boise. The UI feels they are meeting the demand with their program and are not turning students away.

Board staff requested that the UI provide materials that demonstrate potential impact to their existing Educational Leadership program. BSU's proposed program is a self-support cohort model and is not being proposed as an online program. Current Board policy does not assign a statewide responsibility for Education programs to any institution. Staff recommends that the Board determine whether duplication meets the needs of the state.

Boise State University feels the UI's proposed Integrated Design Program may conflict with their Community & Regional Planning and business programs. BSU's concerns also stem from the community based project aspect of the proposed program that could hinder internship opportunities for BSU students.

Board staff determined based on the information provided that the proposed program is in alignment with the UI's statewide program responsibilities; however, both institutions agreed to work collaboratively on this program.

Boise State University feels the UI's proposed generalist undergraduate degree in Natural Resource Conservation in the Boise area strongly duplicates BSU programs: BS Biology (with emphases in environmental biology, zoology, botany, and ecology, BA in Environmental Studies, BS in Geology, and BS in Geophysics).

Board staff determined that the proposed program in Natural Resource Conservation at this stage appears to be fully aligned with the UI's statewide program responsibilities.

While substantial revisions to Board Policy III.Z, and associated reporting requirements have been completed, there is still work to be done. Program titles for Statewide Program Responsibilities have changed and are dated. Staff

**INSTRUCTION, RESEARCH, AND STUDENT AFFAIRS**  
**AUGUST 15, 2012**

## **Five-Year Plan Delivery of Postsecondary Programs**

---

The State Board of Education established in alignment with Board Policy III.Z., a comprehensive process for the planning and delivery of postsecondary education. Consistent with this policy, institutions create an institution plan that describes all current programs and proposed programs to be offered in alignment with each institution's Statewide and Service Region Program Responsibilities. The process requires that institutions provide a level of programmatic information and specificity for each current program being offered and for each proposed program as part of the five-year plan development.

### **Statewide Program Responsibility**

In accordance with Board Policy III.Z.1.(b), "Statewide Program Responsibility shall mean an institution's responsibility to offer and deliver a Statewide Program in all regions of the state. Statewide Program Responsibilities are assigned to a specific institution by the Board, taking into account the degree to which such program is uniquely provided by the institution."

### **Service Region Program Responsibility**

In accordance with Board Policy III.Z.1.(d), "Service Region Program Responsibility" shall mean an institution's responsibility to offer and deliver a Service Region Program to meet regional educational and workforce needs in its primary service region as defined in Section III.L.3. Service Region Program Responsibilities are assigned to the Designated Institution in each service region, but may be offered and delivered by Partnering Institutions in accordance with the procedures outlined in this policy."

The Five-Year Plan consists of proposed programs institutions have identified they will pursue within three years of approval of the Plan. As proposed programs are developed, institutions must follow the program review process and procedures provided in Board Policy III.G, Program Approval and Discontinuance to acquire appropriate approvals prior to implementation of new programs. If the program is to be delivered outside the institution's service region, a Memorandum of Understanding must be developed and agreed upon in cooperation with the Board's Chief Academic Officer prior to implementation of the programs.

The Plan also consists of a complete inventory of programs currently being offered by Idaho's public postsecondary institutions. Programs are listed by CIP code and then alphabetically by institution. The list includes programs, options, and degrees offered through various departments and colleges.

Consistent with Board Policy III.Z., the Plan is updated every two years. It is intended that the Five-Year Plan will provide guidance to the State Board of Education in its planning and coordination of educational programs.

Board Policy III.Z. assigns Statewide Program Responsibilities as follows:

### **Boise State University**

Boise State University shall have responsibility to assess and ensure the statewide delivery of all educational programs in the following degree program areas:

Program Name	Degrees
Public Policy	M.S., Ph.D.
Public Administration	Ph.D.
Urban Studies	M.S., Ph.D.
Urban Regional Planning	M.S., Ph.D.
Social Work (Southeast Region—shared with ISU)	M.S.W.
Social Work	Ph.D.

### **Idaho State University**

Idaho State University shall have responsibility to assess and ensure the statewide delivery of all educational programs in the following degree program areas:

Program Name	Degrees
Audiology	M.S., Ph.D.
Physical Therapy	M.S., Ph.D.
Occupational Therapy	M.S., M.O.T.
Pharmaceutical Science	M.S., Ph.D.
Pharmacy Practice	Pharm.D.
Nursing (Southwest shared w/ BSU)	M.S.
Nursing	Ph.D.
Physician Assistant	M.P.A.S.
Speech Pathology	M.S.
Deaf Education	M.S.
Educational Interpreting	B.S.
Master of Health Education	M.H.E.
Master of Public Health	M.P.H.
Geomatics (Surveying)	M.S.
Health Physics	B.S., M.S.
Dental Hygiene	B.S., M.S. (currently delivered in Boise)
Clinical Lab Science	B.S., M.S.

### **University of Idaho**

University of Idaho shall have responsibility to assess and ensure the statewide delivery of all educational programs in the following degree program areas:

Program Name	Degrees
Law	J.D.
Architecture	M.S., B.Arch
Landscape Architecture	M.S., B.S.
Interior Design	M.S.
Agriculture <ul style="list-style-type: none"> <li>• Animal Science</li> <li>• Plant Science</li> <li>• Agricultural Economics</li> <li>• Food Science</li> <li>• Veterinary Science</li> </ul>	B.S., M.S. M.S., Ph.D. B.S., M.S. B.S., M.S., Ph.D. M.S., DVM
Natural Resources <ul style="list-style-type: none"> <li>• Forestry &amp; Forest Products</li> <li>• Wildlife</li> <li>• Fisheries (Resources)</li> <li>• Conservation Science</li> <li>• Range Science</li> </ul>	B.S., M.S. (Distance Ed) B.M. B.S., M.S. B.S., M.S. B.S., M.S.
