Scope of Work: The scope of work of this Capital Improvement is:

- Install a 480V, 3-phase, 600kW diesel generator at Well #3.
- Install transfer switches, load bank, panels, circuits, and controls.
- Install 500 kVA step up transformer (480V:2.4kV).
- Install automatic transfer switches at Well #3 and #4.
- Construct enclosure and fencing around generator.
- Trench and run cable from new generator to Well #4 (approx. 1,325 ft).
- Provide excavation, demolition, bedding, backfill, surface restoration, etc. for a complete and functional system.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.
A detailed safety plan including appropriate fencing and traffic control management will be developed.

The Concessionaire will coordinate with the University for potential disruptions at the Manis Entomological Laboratory and the Soil Stewards Farm. Similarly, the Concessionaire will coordinate the work with Avista for electrical shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $99,252 and will also include a feasibility study for alternative 480V electrical conversion at Wells.

**Additional Information:**

![Figure 1. Electrical site plan.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $5,087,011.

(B) Forecasted annual operations and maintenance costs: +$4,600. Increase associated with the operations and maintenance of the new generator, ATS switches, transformers, and the required annual testing/certification.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and
hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2023. EPC (Commiss.) occurs from September 2023 to October 2023.

(F) Impact on Sustainability: Minor impact from the fuel consumption of the diesel generator.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $5,049,108.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/4-042

PROJECT NAME: Building Backflow Assemblies Replacement at McClure Hall

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: The backflow assemblies serving McClure Hall are not up to code as they lack redundant valves. This project replaces both potable and non-potable assemblies with dual-valve systems. These assemblies are aged and beginning to fail. Currently water service must be shut off to service the valves, disrupting the building’s occupants. Without redundant backflow devices the building will lose domestic water service if they fail, posing a life safety risk.

Objectives: The main objectives of this Capital Improvement are:

- Replace McClure Hall backflow assemblies to improve resiliency.
- Eliminate single points of failure.
- Bring McClure Hall up to code.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Demo and remove existing 4” backflow preventer for potable system.
- Install new 4” dual-valve backflow preventer.
- Demo and remove existing 3” backflow preventer for non-potable system.
- Install new 3” dual-valve backflow preventer.
- Replace two flow meters.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended the removal of any unnecessary bypasses to reduce O&M Costs on the University’s side.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan including standard domestic water protocols will be developed.
The Concessionaire will coordinate with the University and the building’s occupants for shutdowns.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $13,284.

**Additional Information:**

![Image of a water pump system with labels for potable, non-potable, and fire water.](image)

*Figure 1. Backflow assemblies in McClure Hall are not up to code.*

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:
(A) Total Cost: $92,940.

(B) Forecasted annual operations and maintenance costs: +$300. Increase for required additional BFP valve O&M and upgraded meter reading, calibration, and O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) isolation valves are in operable condition, (ii) sufficient clearance for needed additional pipework, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $92,232.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/4-043

PROJECT NAME: Domestic Water Line Replacement on University Avenue from Ash Street to Memorial Gym

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues, risk to firefighting capability). The impact associated with resiliency is high (a future failure will impact core campus).

The likelihood of these events is medium.

Background: This domestic water line serves multiple campus buildings and allows for sections of the distribution system to be isolated as needed. This project replaces the line and upsizes it to provide for campus growth. At almost 100 years old, the line is well beyond its life expectancy and has failed multiple times in the past. Loss of this line creates fire and flooding risks as well as loss of services to connected customers.

Objectives: The main objectives of this Capital Improvement are:

- Replace the aged domestic water line on University Avenue from Ash Street to Memorial Gym.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Provide for future needs of campus.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Existing 6” piping modifications, abandonment.
- Install new 8” DR18 C900 PVC Water Line and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.
The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $100,764.

**Additional Information:**

![Figure 1. Map of domestic water system in area.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) **Total Cost:** $1,295,945.

(B) **Forecasted annual operations and maintenance costs:** +$0. No changes in O&M Costs are anticipated.

(C) **Proposed modification to the Recovery Period:** None.

(D) **Explanation of all relevant assumptions, variables, and data sources:** See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope and, (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

PROJECT CODE: 23/4-044

PROJECT NAME: Domestic Water Line Replacement from Line Street to Energy Plant

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issues, there is a health risk to building occupants due to dead-end line). The impact associated with resiliency is high (extended steam, chilled water, and turbine shutdown).
The likelihood of these events is medium.

Background: The Energy Plant provides steam, chilled water, and compressed air to core campus buildings. This project replaces the domestic water line serving the building. The domestic water line is aged, possibly original to the building in 1926, and well beyond its expected life. Collapse of this line risks a loss of domestic water service to the building with a complete shutdown of utilities to campus. Additionally, two water lines in the area are dead ends that pose a health safety issue due to stagnant water.

Objectives: The main objectives of this Capital Improvement are:
- Improve Energy Plant resiliency by replacing domestic water service line.
- Improve system water quality by capping dead-end lines.
- Address health concerns associated with the physical conditions of current assets.

Scope of Work: The scope of work of this Capital Improvement is:
- Asphalt and natural surface demolition.
- Existing 8” piping modifications, removal.
- Install new 8” DR18 C900 PVC Water Line and all appurtenances.
- Cap dead end line at the Energy Plant service connection.
- Cap dead end line on the south side of 6th and Line St.
- Bedding and Backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.
A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University and the City of Moscow for the intersection closing and a potential shutdown of the Energy Plant.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $16,524.

**Additional Information:**

![Map of domestic water system in area.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $197,944.

(B) Forecasted annual operations and maintenance costs: +$0. No changes in O&M Costs are anticipated.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope and, (iii) workable solutions for all required coordination with University activity will be achievable. PROJECT CODE: 23/4-045

PROJECT NAME: Domestic Water Line Replacement to Agricultural Science Building

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (future failure will impact building occupants and research).

The likelihood of these events is medium.

Background: This domestic water line serves the Agriculture Science Building. This project removes the old line and installs a new one. At 49 years old, this line is beyond its expected useful life. The line has failed multiple times in the past and leaks. Failure would result in a loss of service to the building, creating a fire and flooding risk and potentially impacting research.

Objectives: The main objectives of this Capital Improvement are:
- Replace domestic water line to building.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:
- Asphalt and natural surface demolition.
- Existing 4" piping modifications, removal.
- Install new 4" DR18 C900 PVC Water Line and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.
The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $20,088.

**Additional Information:**

PROJECT CODE: 23/4-046

PROJECT NAME: Domestic Water Line Replacement to Food Science Building

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: The domestic water service line to the Food Science Building supplies the facility with potable water for occupants, fire suppression, and research applications. At 78 years old, this line is well beyond its serviceable life and in need of replacement. This project replaces the line and optimizes flow to the building by removing unnecessary pipe, valves, and fittings.

Objectives: The main objectives of this Capital Improvement are:

- Replace water line to the Food Science Building.
- Mitigate resiliency issues associated with systems well beyond their serviceable life.
- Improve O&M practices for a safe and reliable operation.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Existing 6” piping modifications, removal (approx. 125’).
- Install new 6” DR18 C900 PVC Water Line and all appurtenances (approx. 125’).
- Remove dead-end pipe and valves.
- Install new three-way valve.
- Bedding and Backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed.
Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $22,356.

**Additional Information:**

![Figure 1. Map of domestic water system in area.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $279,538.

(B) Forecasted annual operations and maintenance costs: +$200. Additional three-way valve will require O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.
(E) Proposed schedule: EPC (Const.) extends through September 2024. EPC (Commiss.) occurs from September 2024 to October 2024.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $277,452.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/4-047

PROJECT NAME: Domestic Water Lines Replacement on Blake Avenue

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (health risks to building occupants). The impact associated with resiliency is high (a failure will impact building occupants).

The likelihood of these events is medium.

**Background:** These domestic water lines serve as a redundant method to supply water to campus from the I-Tank and serves both the Greek Houses along Nez Perce and the South Hill Apartments. At over 70 years old, these lines are well beyond their expected useful life. This project replaced the existing lines and upgrades the size to keep up with campus growth. Failure of these lines risks the ability for the I-Tank to supply campus with water and loss of service to connected buildings.

**Objectives:** The main objectives of this Capital Improvement are:

- Replace the lines serving the Greek Houses and the South Hill Apartments.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Existing 4" piping modifications, removal to Walenta Drive (approx. 1600').
- Existing 6" piping modifications, removal to South Hill Apartments (approx. 750').
- Install new 6" DR18 C900 PVC Water Line and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to
service and the disinfection process will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $199,908.

**Additional Information:**

![Figure 1. Map of Domestic Water System in area with proposed work.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,571,727.

(B) Forecasted annual operations and maintenance costs: $0. No changes in O&M Costs are anticipated.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.
(E) Proposed schedule: EPC (Const.) occurs from July 2025 to October 2025. EPC (Commiss.) occurs from September 2025 to October 2025.

**PROJECT CODE:** 23/6-048  

**PROJECT NAME:** Library and Memorial Gym Sanitary Sewer Major Repairs  

**UTILITY SYSTEM:** Sanitary Sewer  

**DATE SUBMITTED:** December 31st, 2021  

**SAFETY AND RESILIENCY ASSESSMENT:**

The impact associated with safety is **high** (severe physical and life safety issues due to leaking sewage). The impact associated with resiliency is **high** (extended outage and building shutdown).

The likelihood of these events is **high** (inspection shows that failure is imminent).

**Background:** The sanitary sewer lines serving the area between the Library and Memorial Gym are critical to removing waste from multiple buildings. Investigations conducted during Fiscal Year 2019 showed these lines were in extremely poor condition with collapse imminent. Multiple broken sections of pipe are present with heavy grease buildup. This project slip lines and installs new lines to prevent further damage to nearby buildings and disruption to University’s operations. Emergency repairs were needed in FY19 after a section of these sewer lines collapsed, but the upstream lines, in equally poor condition, were not repaired.

**Objectives:** The main objectives of this Capital Improvement are:

- Repair highly damaged pipe before collapse disrupts campus operations.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety/public health concerns due to leaking sewage in core campus areas.
- Change assets in order to achieve required O&M practices in a safe manner.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slip line existing 10” AC pipe at Library (depth=21’, length=60’).
- Slip line existing 8” AC pipe at Library (depth=21’, length=60’).
- Slip line existing 6” AC pipe serving Mem Gym (length=100’).
- Manhole replacement.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be
responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, bypass sewage pumping, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University for any building shutdowns and for required vehicular and pedestrian traffic modifications.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $25,380 and it will also include CCTV inspection and jetting.

**Additional Information:**

![Figure 1. Condition of 10" sewer line after inspection.](image1)

![Figure 2. Map of sanitary sewer system in by Memorial Gym and Library.](image2)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $340,713.

(B) Forecasted annual operations and maintenance costs: +$0. No changes in O&M Costs are expected.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes are not damaged to a point that complete replacement is required, (ii) bypass pumping is
required to keep campus core functions operable, (iii) traffic control and possibly reroute will be required, (iv) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2023. EPC (Commiss.) occurs from September 2023 to October 2023.

(F) Impact on Sustainability: Establishing a reliable sanitary sewer service is critical to public health and to achieving functional campus' operations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $338,148.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/6-049

PROJECT NAME: Sanitary Sewer Slipline on Campus Drive and Blake Avenue

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high.

Background: These sanitary sewer lines serve the Ridenbaugh Hall, the Nicolls Home Economics Building, the Graduate Art Studio, and the Lionel Hampton School of Music. The pipes are 91 years old and well beyond life expectancy. This project will slipline the existing pipes before they collapse. A collapse of the Campus Drive line would risk vehicle access to the Administration building and the historic Camperdown trees in the area.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer lines on Campus Drive and Blake Ave.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slipline the 6” lines from Campus Drive to Blake Avenue (approx. 270’).
- Slipline the 12” lines from Blake Avenue and Sweet Avenue (approx. 690’).
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, bypass sewage pumping, and vehicular and pedestrian traffic management will be developed.
The Concessionaire will coordinate with the University for any building service interruptions and for required vehicular and pedestrian traffic modifications.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $18,036 and it will also include CCTV inspection and jetting.

**Additional Information:**

![Figure 1. Map of sanitary sewer system in area with relevant work.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) **Total Cost:** $211,020.

(B) **Forecasted annual operations and maintenance costs:** +$0. No changes in O&M Costs are expected.

(C) **Proposed modification to the Recovery Period:** None.

(D) **Explanation of all relevant assumptions, variables, and data sources:** See previous narratives. In addition, it is assumed that (i) bypass pumping is required, (ii) a pre/post CCTV inspection will be required, (iii) traffic control will be required, (iv) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.
(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

(F) Impact on Sustainability: Establishing a reliable sanitary sewer service is critical to public health and to achieving functional campus’ operations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $209,412.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/6-050

PROJECT NAME: Sanitary Sewer Manhole Replacements

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (safety risks to building occupants, vehicles, pedestrians, and operational personnel). The impact associated with resiliency is high. The likelihood of these events is high.

Background: Manholes across campus are used to access sanitary sewer lines for inspection and service. When manholes are in too poor condition or not present it severely limits the ability of clearing plugged lines, potentially requiring excavation. This project repairs and replaces aging sewer manholes that are beginning to fail. Problems include collapsing walls, sinking asphalt, plugged lines, and damage to pipes.

Objectives: The main objectives of this Capital Improvement are:

- Replace failing sewer manholes.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Repair and install liners at 11 manholes.
- Remove and replace 2 manholes.
- Bedding and backfill.
- CCTV inspection and jetting.
- Construction supervision.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic will be developed.

The Concessionaire will coordinate with the University for any building shutdowns, traffic re-routes, etc. to allow for campus activities.
Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $47,304.

Additional Information:  

![Figure 1. Poor condition brick manhole by ISUB (left) and by Morrill Hall (right).](image-url)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $596,761.
(B) Forecasted annual operations and maintenance costs: +$0. No changes in O&M Costs are expected.
(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) bypass pumping is required to keep campus core functions operable, (ii) traffic control and possibly reroute will be required, (iii) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

PROJECT CODE: 23/6-051

PROJECT NAME: Sanitary Sewer Slipline on Line Street

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).
The likelihood of these events is high (heavily damaged and collapse is imminent).

Background: These sanitary sewer lines serve the Food Science Building, the Mines Building, the Native American Student Center, and the Janssen Engineering Building (JEB). The pipes are constructed of clay tile and almost 70 years old and are well beyond their life expectancy. A recent sliplining project on a connecting line showed that these lines are in poor condition and need to be repaired soon before they collapse. These lines plug on occasion and require jetting to restore service. The line in the alley between JEB and the Gauss-Johnson Engineering Building (GJ) has a belly in it where it goes under the utility tunnel, which plugs regularly (most recently in September and October 2021). An inspection conducted in October 2021 showed sections of the pipe breaking off, indicating that collapse is imminent. This project sliplines existing pipes and replaces the JEB service line going under the tunnel.

Objectives: The main objectives of this Capital Improvement are:
- Recondition existing sanitary sewer line on Line Street between Idaho Avenue and 6th Street.
- Recondition existing sanitary sewer lines serving the Food Science Building, the Mines Building and the Native American Student Center.
- Remove belly in line between JEB and GJ.
- Install new manholes for improved access.
- Inspect nearby lines to identify future needs.

Scope of Work: The scope of work of this Capital Improvement is:
- Asphalt and natural surface demolition.
- Slipline the 6” line on Line Street (approx. 700’).
- Slipline the 6” lines between the Food Science Building, the Mines Building, and the Native American Student Center (approx. 350’)
- Install new 6” DR18 C900 PVC pipe and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.
**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic will be developed.

The Concessionaire will coordinate with the University for any building shutdowns, traffic re-routes, etc. to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $46,548 and it will also include CCTV inspection and jetting.

**Additional Information:**

---

**Figure 1.** Broken section of pipe in Janssen Engineering service line.

**Figure 2.** Sanitary Sewer map of area.

---

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $575,490.
(B) Forecasted annual operations and maintenance costs: +$500. New manholes will require regular inspects and cleaning.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) bypass pumping is required to keep campus core functions operable, (ii) pre/post CCTV inspection is required, (iii) traffic control and possibly reroute will be required, (iv) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

(F) Impact on Sustainability: Establishing a reliable sanitary sewer service is critical to public health and to achieving functional campus operations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $571,104.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/6-052

PROJECT NAME: Sanitary Sewer Line Replacement at the West Farm

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: These lines provide sanitary sewer service to the Meats Lab, Beef Residence, Farm Ops, and other buildings on the West Farm. These pipes are 60 years old and well beyond life expectancy. This project slip lines the existing pipes before they risk collapse. An additional manhole is needed to allow for access for maintenance.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer lines serving the West Farm.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slipline the 4" lines (approx. 950').
- Repair one manhole at intersection of Farm Road and 6th Street.
- Install one new manhole at Farm Storage Building #1.
- Construction supervision.
- Bedding and backfill.
- Asphalt and natural surface restoration.
- CCTV inspect and jet other connecting lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.
The Concessionaire will coordinate with the University and the buildings’ occupants for the sanitary sewer shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $17,712 and it will also include CCTV inspection and jetting.

**Additional Information:**

![Figure 1. Bricks falling out at a damaged manhole.](image1)

![Figure 2. Sanitary Sewer system in affected area.](image2)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $226,873.

(B) Forecasted annual operations and maintenance costs: +$200. New manhole will require regular cleaning and inspection.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding...
trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2024. EPC (Commiss.) occurs from September 2024 to October 2024.

PROJECT CODE: 23/6-053

PROJECT NAME: Sanitary Sewer Line Replacement at the Bruce M. Pitman Center

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **high** (physical and life safety issues). The impact associated with resiliency is **high** (extended outage and building shutdown).

The likelihood of these events is **medium**.

**Background:** Sanitary sewer service from the Bruce M. Pitman Center comes from 4 points, feeding into a common line running parallel to the City of Moscow sewer line. This project abandons the existing parallel line and connects the Bruce M. Pitman Center directly to the City of Moscow line. These pipes are 73 years old and well beyond life expectancy. They are also back graded and frequently plug due to poor design, causing sewer backups into the building.

**Objectives:** The main objectives of this Capital Improvement are:

- Connect sanitary sewer service from the Bruce M. Pitman Center directly to the City of Moscow lines.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Install 6" DR18 C900 PVC pipe (approx. 80').
- Install service tap and cleanouts (x4).
- Construction supervision.
- Bedding and backfill.
- Asphalt and natural surface restoration.
- Provide bypass pumping during construction.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.
The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $20,844.

**Additional Information:**

![Sanitary sewer system in affected area.](visit-oursite.com)

**Figure 1. Sanitary sewer system in affected area.**

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) **Total Cost:** $186,083.

(B) Forecasted annual operations and maintenance costs: +$0. No changes in O&M costs are anticipated.

(C) **Proposed modification to the Recovery Period:** None.

(D) **Explanation of all relevant assumptions, variables, and data sources:** See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and
hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

PROJECT CODE: 23/6-054

PROJECT NAME: Sanitary Sewer Line Replacement at the Administration Building and Art & Architecture

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: At over 100 years old, the sanitary sewer lines that service the Administration building, Art and Architecture, and Interior Design are well beyond life expectancy. This project slip lines the pipes before collapse. The project also installs a new line serving Interior Design and A&A to reduce hydraulic loading on the existing pipes.

Objectives: The main objectives of this Capital Improvement are:

- Recondition sanitary sewer lines serving the Administration Building and Art and Architecture.
- Install a new sanitary sewer line serving Interior Design.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slip line 8" pipe (approx. 300').
- Slip line 6" pipe (approx. 460').
- Install new 6" pipe (approx. 260').
- Construction supervision.
- Bedding and backfill.
- Asphalt and natural surface restoration.
- Provide bypass pumping during construction.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including
temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $38,772.

**Additional Information:**

![Sanitary sewer system in the affected area.](image-url)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $497,308.

(B) Forecasted annual operations and maintenance costs: +$300. Additional pipe will require cleaning, jetting, and inspection.

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

PROJECT CODE: 23/6-055

PROJECT NAME: Sanitary Sewer Slipline from the Brink and Phinney Halls to the Integrated Research and Innovation Center (IRIC)

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: This line provides sanitary sewer service to the Brink and Phinney Halls but is well beyond its expected life. This project slip lines the existing pipes before they collapse and disrupt the buildings’ occupants. Due to the poor condition of this line, it plugs regularly and requires frequent jetting. An additional manhole is needed to improve the access and the efficiency of the jetting operations.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the existing sanitary sewer line from the SW corner of the Brink and Phinney Halls to the Integrated Research and Innovation Center.
- Install a new manhole for improved access.
- Inspect nearby lines to identify future needs.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slip line the 6” line (approx. 190’).
- Install double manhole and cleanout.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.
The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $19,440 and will also include a CCTV inspection and jetting.

**Additional Information:**

![Figure 1. Sanitary sewer system in affected area.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) **Total Cost:** $174,347.

(B) **Forecasted annual operations and maintenance costs:** +$300. Additional double manhole will require regular cleaning and inspections.

(C) **Proposed modification to the Recovery Period:** None.

(D) **Explanation of all relevant assumptions, variables, and data sources:** See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with
University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2024. EPC (Commiss.) occurs from August 2024 to September 2024.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the sanitary sewer system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $173,016.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/7-056

PROJECT NAME: Library and Memorial Gym Stormwater Major Repairs

UTILITY SYSTEM: Stormwater

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (lines are heavily damaged and collapse is imminent).

Background: The 93 year old stormwater lines serving the area between the Library and Memorial Gym are critical to removing water during rain events. FY19 investigations showed these lines were in extremely poor condition with collapse imminent. This project slip lines and installs new lines to prevent further flooding damage to nearby buildings. These pipes have dozens of infiltrations, cracks, and broken sections and are well beyond serviceable life. The parallel sewer line that is in similar condition collapsed in FY19, emphasizing the urgent need to make these repairs before collapse.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slip line existing 12" AC pipe at Library (depth=21ft, length=170ft).
- Burst existing 10" pipe and replace with on-hand 10" PVC pipe (depth=21ft, length=130ft).
- Cap and abandon in place the existing pipe east of Mem Gym.
- Install new 4" PVC pipe east of Mem Gym at shallow depth (200 ft).
- Install new 10" PVC pipe south of Mem Gym (175ft).
- Bedding and backfill.
- Install new manholes.
- CCTV inspect and jet lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.
A detailed safety plan covering open pit work and vehicular and pedestrian traffic will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University for any building shutdowns, traffic rerouting, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $92,556 and will also include jetting and a CCTV inspection.

**Additional Information:**

![Figure 1. Stormwater system at Memorial Gym and Library.](image1)

![Figure 2. Condition of 12" stormwater pipe after inspection.](image2)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,292,568.

(B) Forecasted annual operations and maintenance costs: $300. Additional pipe will require regular cleaning, jetting, and inspection.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes are not damaged to a point that complete replacement is required, (ii) bypass pumping, traffic and pedestrian control and/or rerouting, and manhole repair by liner will be required, (iii) increased project complexity due to depth of pipes, (iv) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impact may occur and remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

(F) Impact on Sustainability: Achieving adequate stormwater control will help protect campus buildings and keep stormwater quality and control in compliance.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,282,716.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/7-057

PROJECT NAME: Storm Slipline on Campus Drive and Blake Avenue.

UTILITY SYSTEM: Stormwater

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high.

Background: These stormwater lines are 100 years old and well beyond life expectancy. This project slip lines the existing pipes before they collapse. Collapse of the Campus Dr line risks vehicle access to the Administration building and the historic Camperdown trees in the area. The brick manhole by Lionel Hampton is collapsing and poses a safety risk to vehicle and pedestrian traffic.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing stormwater lines on Campus Drive and Blake Avenue.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slip line the 6" line from Campus Dr to Blake Ave (approx. 400').
- Slip line the 6" line from Lionel Hampton to intersection of Blake Avenue and Sweet Avenue (approx. 100').
- Replace one manhole at Lionel Hampton.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

A detailed safety plan covering open pit work and vehicular and pedestrian traffic will be developed. Similarly, a safe return to service will be documented.
The Concessionaire will coordinate with the University for any temporary stormwater provisions.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $18,468 and will also include jetting and a CCTV inspection.

**Additional Information:**

![Figure 1. Stormwater system in the affected area.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $236,595.

(B) Forecasted annual operations and maintenance costs: $0. No changes in O&M Costs are anticipated.

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) bypass pumping will be required, (ii) a complete manhole replacement at Lionel Hampton, (iii) open pit safety protocols, and vehicular and pedestrian traffic control and accommodations will be required, (iv) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impact may occur and remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

(F) Impact on Sustainability: Improved stormwater systems will help maintain stormwater quantity and quality control. Improvement of stormwater systems is required for safety and resiliency of the core campus.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $234,792.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
**PROJECT CODE:** 23/7-058  

**PROJECT NAME:** New Stormwater Line at Art & Architecture  

**UTILITY SYSTEM:** Stormwater  

**DATE SUBMITTED:** December 31st, 2021  

**SAFETY AND RESILIENCY ASSESSMENT:**

The impact associated with safety is **high** (physical and life safety issues). The impact associated with resiliency is **high** (extended outage and building shutdown).

The likelihood of these events is **high** (flooding occurs regularly).

---

**Background:** The existing stormwater line serving Art & Architecture was cut off when Commons was constructed. This has caused flooding issues in the basement of Art & Architecture and creates standing water issues near pedestrian walkways, which freeze in cold weather and pose a pedestrian safety risk. This project restores stormwater service to this area by installing a new line from Art & Architecture to Line Street.

**Objectives:** The main objectives of this Capital Improvement are:

- Correct flooding issues near Art & Architecture by installing a new stormwater line.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve required O&M practices in a safe manner.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Install new 6” SDR 35 PVC pipe (approx. 120’).
- Connect new line to existing storm system.
- Install one new catch basin.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

A detailed safety plan covering open pit work and vehicular and pedestrian traffic will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University to avoid disruptions to events on campus.
**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $16,848 and will also include jetting and a CCTV inspection.

**Additional Information:**

![Figure 1. Stormwater system in the affected area.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $133,316.

(B) Forecasted annual operations and maintenance costs: $200. Additional pipe will require regular cleaning, jetting, and inspection.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding...
trees and vegetation but impact may occur and remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

PROJECT CODE: 23/7-059

PROJECT NAME: Stormwater Catch Basin and Manhole Upgrades

UTILITY SYSTEM: Stormwater

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (safety risks to building occupants, vehicles, and pedestrians). The impact associated with resiliency is high (flooding occurs regularly).

The likelihood of these events is high.

Background: Catch basins collect stormwater runoff and direct it to the creek to prevent flooding. Manholes across campus are used to access stormwater lines for inspection and service. When these fail it severely limits the ability of clearing plugged lines, potentially requiring excavation. This project includes major repairs and replacements for aging catch basins and manholes that are beginning to fail. Problems include collapsing walls, sinking asphalt, plugged lines, and damage to pipes and pose safety risks to vehicle, cyclist, and pedestrian traffic on campus.

Objectives: The main objectives of this Capital Improvement are:

- Replace failing stormwater catch basins and manholes.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Upgrade and install liners at 30 catch basins.
- Remove and replace 14 catch basins.
- Upgrade and install liners at 3 manholes.
- Remove and replace 1 manhole.
- Asphalt and natural surface restoration.
- CCTV inspection and jetting.
- Construction supervision.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

A detailed safety plan covering open pit work and vehicular and pedestrian traffic will be developed. Similarly, a safe return to service will be documented.
The Concessionaire will coordinate with the University for building shutdowns and to avoid disruptions associated with open pit work.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $141,156 and will also include jetting and a CCTV inspection.

**Additional Information:**

---

(F) Impact on Sustainability: This Capital Improvement will improve campus’ safety and stormwater system’s resilience. Stormwater quality will be improved.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,838,484.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/7-060

PROJECT NAME: Stormwater Line Installation from Wallace to Paradise Creek

UTILITY SYSTEM: Stormwater

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).
The likelihood of these events is high.

Background: This stormwater system removes stormwater from areas of campus including JW Martin, ICCU Arena, and Wallace. However, the current system is not designed to handle the current loads, causing flooding in the area regularly. This project installs a new line from the northwest corner of Gooding to Paradise Creek. The new line will reduce the hydraulic loading on the existing system by improving flow, extending the useful life of the connected lines.

Objectives: The main objectives of this Capital Improvement are:
- Increase stormwater capacity to reduce flooding and reduce stress on existing system.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner, improve reliability and stormwater quality.

Scope of Work: The scope of work of this Capital Improvement is:
- Asphalt and natural surface demolition.
- Install new 24" HDPE pipe (approx. 290').
- Install new 24" outfall valve at Paradise Creek.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work and vehicular and pedestrian traffic (including temporary
accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University for a possible shutdown of Paradise Creek Street.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $31,320.

**Additional Information:**

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $301,212.

(B) Forecasted annual operations and maintenance costs: +$800. New pipe will require regular cleaning, jetting, and inspection. Outfall testing as required by MS4 stormwater permit.

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impact may occur, and remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2025. EPC (Commiss.) occurs from September 2025 to October 2025.

(F) Impact on Sustainability: This Capital Improvement will improve campus’ safety and stormwater system’s resilience. Stormwater quality will be improved.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $298,944.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/7-061

PROJECT NAME: Nez Perce Stormwater and Sanitary Sewer Major Repairs

UTILITY SYSTEM: Stormwater and Sanitary Sewer

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high.

Background: These sanitary sewer and stormwater lines are aged and need to be inspected and potentially slip lined. The sanitary sewer line on Nez Perce is in poor condition with many root penetrations. It most recently plugged in September 2021. The stormwater lines in the area have been plugged since the eruption of Mount St. Helens in 1980. These issues leave Nez Perce at risk for flooding and cause slippery conditions for pedestrians in poor weather. Their eventual collapse will risk loss of service to connected buildings and potential building flooding damage.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer line on Nez Perce serving the President’s house and the Golf Course.
- Inspect nearby sanitary sewer and stormwater lines to identify future needs.
- Change assets in order to achieve the required O&M practices in a safe manner and maintain reliable and effective service for both stormwater and sanitary sewers.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slip line the 6” sanitary sewer line on Nez Perce (approx. 1,600’).
- Bedding and backfill.
- CCTV inspect and jet parallel stormwater on Nez Perce (approx. 3,400’).
- CCTV inspect and jet other connecting lines.
- Construction supervision.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including
temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University and building occupants for any shutdowns, as well as for the potential need for parking space closures along Nez Perce.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $25,704 and will also include a CCTV inspection of lines within the scope.

**Additional Information:**

APPENDIX A. Project Sheets for Capital Improvements ....................................................................... 18
I. Introduction

Sacyr Plenary Utility Partners Idaho LLC is excited to submit this Five-Year Plan, that delineates the Capital Improvements proposed to make in each Fiscal Year to the Utility System, including Capital Improvements to address conditions of the Utility System existing prior to the Closing Date.

Throughout this first and second years of the Term, the Concessionaire has been able to further understand the conditions, limitations, and operational status of the Utility System. The most visible result of such steep learning has been the discovery of latent issues with the Utility System that were in critical condition prior to the start of the Term and will continue to be in critical condition until applicable Capital Improvements are completed. As a result, the core focus of this Five-Year Plan is to further the stabilization of the Utility System, prioritizing safety and reliability in accordance with the Performance Standards and Key Performance Indicators, over other potential objectives.

All projects listed in this document are proposed to be performed by Moscow ID Eco District I, LLC, a fully-owned subsidiary of McKinstry Essention, LLC, that serves as Contractor to the Operator within the Long-Term Lease and Concession Agreement for the University of Idaho Utility System.
II. Planning Process

The planning process for Fiscal Year 2024 was built upon a subset of the four founding principles: safety, reliability leading to resilience, operational efficiency, and carbon neutrality. In order of priority, those principles are:

- Provide for the safety of the general public, campus community, and operations personnel.
- Operate, maintain, and plan for reliability and resilience of the Utility System.
- Improve operational efficiency.
- Develop and implement a plan for energy independence and carbon neutrality.

While comprehensive stewardship of the Utility System resources requires that all four of these principles be represented in the planning process, early experiences with the Utility System have revealed a critical need to focus the near-term planning efforts on two of them: safety and resilience. Many components of these systems are at the end of their useful life, historically deficient of proper maintenance, or in a partial state of failure leaving the likelihood of a critical system failure unacceptably high and calling for a critical need to upgrade. Achieving a safe environment and resilience in the existing systems is critical before any substantive gains in operational efficiency or carbon neutrality can happen.

Above all, it is imperative that the safety of the general public, the campus community, and the operations personnel be prioritized. Following closely behind, the focus on safety is that of building resilience, starting with reliability. System failures have revealed substantial reliability issues and the Concessionaire’s team has systematically identified vulnerabilities in the Utility System.

As a result, the planning process for Fiscal Year 2024 is solely focused on safety and resilience for the stabilization of the Utility System, so more progressive long-range planning can commence in the future. Besides the direct safety and business interruption risks, the vulnerabilities identified are direct threats to meeting the Performance Standards and Key Performance Indicators in the Concession Agreement. The Capital Improvements proposed within this Five-Year Plan are specifically identified to manage these risks and constitute a crucial first step in advancing the quality of the Utility System.

A planning process focused on safety and resilience required evaluating the risks associated with the existing systems and their mitigation. This methodical approach characterized the Utility System’s subsystems to evaluate deficiencies and vulnerabilities. In the case of complex systems, such as the Energy Plant, the components of the subsystems were also identified. For each system, subject matter experts were engaged in planning sessions to discuss the condition, needs, and potential vulnerabilities associated throughout the Utility System, and within them, 44 subsystems and approximately 180 component sets. Once each system’s deficiencies and opportunities were identified, project scopes were developed that centered on addressing these safety and resiliency issues. These projects were structured to maximize complementary work to reduce the number of service disruptions or otherwise gain implementation efficiency. While it will be continuously improved over the next several planning cycles, this effort established the concept of system planning for each Utility System.
Vulnerability Assessment

The potential for each Capital Improvement to mitigate risks was established by using a simple vulnerability assessment matrix. This approach evaluated (i) the impact of the risk/vulnerability based on the safety and reliability principles, and (ii) the likelihood of a failure. It is worth noting that all the Capital Improvements identified herein are presented because they mitigate either a significant safety or resiliency risk, or in several cases, both.

Capital Improvements were assigned an impact rating of low, medium, or high from both a safety and a reliability standpoint. The safety sub-rating estimates the impact of a failure, due to the vulnerability, on the health and life safety of the general public, campus community, and operations staff. The reliability sub-rating estimates the impact of a failure, due to the vulnerability, on business interruption impacts, costs of emergency repair/temporary operations, and cascading property damage resulting from failure (floods, fire, freeze up, building shutdown, etc.). Each risk was also assigned a likelihood rating of low, medium, or high, according to the probability that a failure may occur.

Using a simple matrix, Capital Improvements were assigned a phase designator, from Phase 1 to Phase 5. This designation provides guidance about the importance of a Capital Improvement and has too been used to allocate the Capital Improvements included in this plan to each of the five years. A later phase designation should not be construed as diminishing the necessity of the project but rather is a reflection of the reality that all projects cannot be done simultaneously.

![Vulnerability Matrix](image)

Projects with the highest impact and likelihood were ranked as Phase 1 projects, a designation that identifies the risk associated with inaction as unacceptably high. These projects must be implemented to mitigate critical safety and/or reliability risks and have been proposed for Approval on the first Fiscal Year of the Five-Year Plan (i.e., FY24).
These planning efforts have revealed a significant volume of critical (i.e., Phase 1) work and a similar volume of important (i.e., Phase 2, proposed for FY25) work that is imperative to address in the near term. Utility failures carrying unacceptable safety and reliability concerns are very likely to occur without immediate action.

Projects with a lessor phase designation (i.e., Phase 3-5) also have important roles in risk mitigation. While the impact and likelihood of failures due to inaction are projected to be less severe, there are still risks and a plan for immediate implementation is needed.

It is necessary to understand that this vulnerability assessment is a tool for the University and the Concessionaire to compare projects and help inform what projects need to be prioritized. Unknown and unforeseen issues within systems exist and may cause failures that cannot be predicted. These designators are the best indicator available to measure the criticality of a project.

**Annualization of Capital Improvements**

Capital Improvements presented within this submittal have been developed and selected through an exhaustive capital planning process, and urgent and immediate approval and completion of these Capital Improvements is necessary to allow the Concessionaire to operate and maintain the Utility System in full compliance with the Performance Standards and Key Performance Indicators.

While we understand the financial constraints of the University, it is our duty to notify the University that these Capital Improvements are essential for the safe and reliable operations and maintenance of the Utility System, and therefore should be approved and undertaken urgently and immediately.

Nevertheless, in order to facilitate the University's review and comply with the Concession Agreement's requirements for the composition of the Five-Year Plan, we have created a timeline for these investments following the level of criticality of such undertakings. Impact and likelihood may be less severe as the project's phase designation number increases but all of them are critical to aspects of the Utility System, pose significant safety and reliability risks, are essential for continuing compliance with the Performance Standards and Key Performance Indicators, and an accelerated approval of their implementation is needed.

Furthermore, a new tool to facilitate the selection of Capital Improvements proposed within this Five-Year Plan is presented with the summary tables found in the following pages. Capital Improvements not only have been designated a Phase or proposed in a particular Fiscal Year, but they have also been ranked and prioritized by, among other aspects, the criticality and need for urgent Approval. However, it is worth reiterating that, while prioritized, all Capital Improvements proposed should be approved urgently to address safety and resiliency deficiencies.

Lastly, it is worth noting that, given the current macro environment, prices in this Five-Year Plan are assigned a validity period that expires on April 6th, 2023.
III. Supply Use Trends

Supplies expected to be used to operate the Utility System are wood chip fuel, natural gas, and electricity. There is no change from previous years, nor any change expected in the foreseeable future.

The FY24 Supply use per month and yearly trends are shown below. The estimate for Fiscal Year 2024 is emphasized in red for each plot. The estimated usage of Supplies throughout the year is dependent on campus activities, especially whether students are on campus or not, and weather. Supply use also grows with the increased campus population and building square footage.

Wood Fuels

Wood fuel use peaks in the winter with heating loads but is not at its lowest during peak cooling season. This is because steam fired absorption chillers are used in the summer to produce Chilled Water with wood chips. Wood fuel use is instead at its lowest in the shoulder spring/fall months, when the overall HVAC needs of campus are at their lowest. This is partially the reason why planned wood boiler maintenance shutdowns are scheduled in the spring and summer. In a typical year over 90% of the steam produced at the Energy Plant is from the wood boiler. Wood fuel is measured and purchased in bone dry tons (BDTs) instead of units of energy (e.g., MMBTUs) because the energy content for wood varies significantly depending on species and moisture content. As the wood boiler degrades, and its mechanical and electrical systems wear out, unscheduled wood boiler shutdowns will likely increase in both frequency and duration. This may result in decreasing wood fuel use over time.

Natural Gas

Unlike wood fuel, natural gas use at the Energy Plant does not follow a consistent pattern year over year. While it is difficult to predict, there are some common trends. Natural gas is typically used at the Energy Plant to meet peak steam loads when the wood boiler can't keep up with demand and during wood boiler shutdowns. Peak steam loads are in the winter, so there is some natural gas use when temperature drop below freezing. In the summer, there is typically little to no natural gas use.

Scheduled wood boiler shutdowns are not on specific dates, but instead based on the level of maintenance needed and campus loads. To minimize Supply Costs shutdowns are scheduled in the shoulder spring/fall months when loads are at the lowest. Thus, natural gas use is at its highest in the spring and fall. Unscheduled shutdowns occur throughout the year and are likely the driving cause for variability in natural gas use.

Electricity

Electricity use on the East Feed is typically stable throughout the year, with a minor increase late summer during the cooling season and students returning to campus. Electricity use on the West Feed is also stable
but increases during the summer season due to chilled water production at the South Campus Chiller Plant. Historically the East and West Feeds have been balanced 50/50. However, this changed as of spring of 2022, with the addition of the steam turbines and IRIC PV array coming online. Both generating systems are on the East Feed and have been accounted for in the FY24 supply usage estimate. When more data is available about the amount of power generated on campus it is likely that the two feeds will be rebalanced.

APPENDIX A. Project Sheets for Capital Improvements
PROJECT CODE: 24/1-002

PROJECT NAME: Ash Handling System Upgrades

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high. The impact associated with resiliency is high (failure likely to disable the wood fuel boiler).

The likelihood of these events is high (equipment is heavily damaged, failure is imminent).

Background: The ash handling system removes wood ash from the boiler after combustion and is critical for operation. It consists of a series of ash hoppers, augers, and mechanical conveyance systems used to move the ash from the boiler to a truck located outside of the plant for disposal. The wood boiler provides significant economic and environmental benefits to the University ($1.7 million in FY22, in fuel savings by not using natural gas), however, at 36 years old, many of the subsystems are in critical need of upgrade. Most of the existing system is original equipment, well beyond expected operational life, and heavily damaged from years of use. Major components are warped from the heat, leaking, and breaking down frequently, creating severe fire risks.

By November 2022, major components in the ash handling system had failed or displayed signs of imminent failure since this project was originally proposed. It is highly probable that the system will fail as a whole soon, significantly increasing Supply Costs to the University when gas boilers need to be brought online (up to 2 to 5 times more).

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade and improve the ash handling system for the wood boiler to increase operational uptime.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address serious safety concerns associated with the physical condition of current assets.
- Address long term health and safety concerns from ash exposure (per 29 CFR OSHA 1910.134 – respiratory protection).
- Change and improve assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project replaces the existing ash handling system with a new, more efficient system which removes the ash material and separates fine from large ash during the process. The project includes enclosing, isolating, and sealing the system to prevent the release of ash into the Energy Plant environment. Sealing the system will significantly reduce the amount of ash that builds up in the plant, which will reduce worker exposure to
respiratory irritants and increase the expected life of exposed mechanical and electrical systems throughout the plant. Separating fine and large ash generates a potential revenue stream, as fine ash has a higher economic value. A complete redesign and replacement of the system, and an economic feasibility study for separating fine ash (included in the Additional Work), is required to determine operational strategy.

The scope of work of this Capital Improvement is:

- Demolition of the existing ash handling system, including:
  • Ash conveyors and subsystems (x9).
  • Elevating conveyor and subsystems.
- Install new ash handling system including:
  • Fine ash conveyor (x1).
  • Large ash conveyor (x1).
  • Elevating conveyors (x2).

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University for the wood boiler shutdown from spring to fall to minimize the gas use during the construction stage. In addition, the Concessionaire will engage with the relevant University departments to identify potential impacts or benefits from the current ash waste.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $242,660 and will also include (i) a schematic design of ash handling improvements, (ii) a feasibility study for fine ash separation, and (iii) an emergency replacement of heavily damaged components.
Additional Information:

Figure 1. Schematic design of ash handling system.

Figure 2. 3/8” steel plate completely worn through from heavy use.

Figure 3. Elevated conveyance system is twisted and damaged, creating a potential crushing hazard if structural integrity becomes compromised.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $3,349,524.

(B) Forecasted annual operations and maintenance costs: +$6,000. The increase is associated with the fine ash conveyor (a new piece of equipment not previously present) and new system's specific O&M requirements to maintain expected life.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is
assumed that (i) construction will be coordinated with the University and completed within one summer to minimize wood boiler downtime, (ii) sufficient space for parallel fine and large ash conveyance systems will be available. Excluded work includes (i) the repair or replacement of ash hopper firebricks or refractory, and (ii) the repair or replacement of the F700 ash truck.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improved ash handling will increase the reliability of the wood-fueled boiler, reducing the natural gas consumption and greenhouse gas emissions. The collection of fine ash can be used for land applications.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,284,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$7,500, wood fuel, natural gas, and electricity. It is assumed a 1% increase in wood boiler uptime, improved conveyance efficiency.
SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (transformer is showing signs of degradation, flooding occurring in space).

Background: Long term exposure to heat, vibration, and other stresses slowly break down the internal components and insulation of transformers. Eventually these stresses create a short, resulting in damage and breakdown of the transformer. As the transformer ages the likelihood of failure increases, rising significantly once it reaches its end of life.

The dry-type transformer serving the 1970's wing of the Agricultural Science Building is 10 years beyond its useful life and has no record of being tested historically. It is both hot and noisy, indicating failure is likely. It is located in a basement mechanical room which shows regular signs of flooding, posing a high risk of catastrophic damage and potential electrocution risk. These are the same conditions as in the Teaching and Learning Center prior to the flood in 2019 that shut down the building for three weeks. The flooding in this space, coupled with the high room temperature and lack of ventilation makes it a poor location for a transformer serving critical research.

There is no spare transformer on campus if this transformer fails. Given continued market disruptions and very long lead times (over 1 year), a failure here will likely result in an extended building shutdown and severe impacts to nearby buildings such as the 50's wing of the Agricultural Sciences Building, Agricultural Biotechnology Building, and the Teaching and Learning Center. The main switch gear is the same age and should be upgraded at the same time to remain safe and resilient. Main switch gear work is beyond the contractual demarcation point and is the University's responsibility.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a severe safety and resiliency issue.
- Modernize electrical service to building up to the point of demarcation.
- Achieve a safe arc flash condition at the primary equipment to establish necessary PPE for O&M work.
- Implement required O&M for a safe and reliable operation.
**Scope of Work:** This project replaces and relocates the transformer to a more suitable location outside, while also upgrading the feeders and metering. Currently, the primary feeders to the building are routed through the utility tunnel. To reduce the amount of excavation needed, this pathing will be used for the new secondary feeders. The scope of work of this Capital Improvement is:

- Provide new 750 kVA exterior pad-mounted transformer with switch to replace dry-type transformer currently installed on the interior of the building. Thermograph and oil test to establish baseline records.
- Demolition and disposal of existing transformer and building switch in basement.
- Provide new SEL-735 or equivalent electrical meter.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalizer to new transformer. Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service via tunnel network.
- Arc flash analysis and labeling per NFPA 70E.
- Primary switch vault work:
  - Repair damaged items in electrical vaults accessed for transformer replacement.
  - Repair any areas of water infiltration in electrical vault, provide water management system as necessary.
  - Thermograph vault components, establish baseline records.
- Construct brick screen wall between electrical equipment and vegetation to match building.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Initial oil and thermographic baseline tests.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk (safety will need to be aware of and planned for public walk area). Arc Flash PPE required.

The Concessionaire will coordinate with the occupants and the University for the electrical shutdown of the building. Other buildings may be impacted as well.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $141,900 and will also include (i) 30% electrical...
designs to obtain pricing, (ii) 50% architectural design for the decorative screen wall, (iii) conducting a 30-day power study to evaluate load size for transformer sizing, and (iv) coordination with the University for screen wall and equipment placement.

**Additional Information:**

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,974,462

(B) Forecasted annual operations and maintenance costs: +$1,000. The upgraded electric meter will require additional O&M. New oil filled transformer has additional O&M requirements compared to existing dry type.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) lead times for equipment is estimated to be 52 weeks, (ii) new transformer is expected to have the same capacity as existing, dependent on the electrical load studies, (iii) sufficient space is available in the tunnel network for new feeders, (iv) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding vegetation, and (vi) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) the repair or replacement of primary electrical distribution switch, (ii) the restoration of vegetation (owner is University), (iii) the disconnection/reconnection of any irrigation lines (owner is University), (iv) temporary electric generator to support building during shutdown, and (v) the replacement of building main distribution panel (owner is University).
(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from September 2025 to February 2026. EPC (Commiss.) occurs in March 2026. Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,940,400

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$500. Electricity. It is assumed a 1% electrical efficiency improvement based on historic metering.
PROJECT CODE: 24/1-009

PROJECT NAME: Boiler Controls Modernization

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical, life safety, and health issues). The impact associated with resiliency is high (one boiler has been permanently shut down, limited ability to operate during power outages).

The likelihood of these events is high (controls have completely failed on two boilers).

Background: The control systems for each boiler at the Energy Plant are over 30 years old and no longer made or supported by the manufacturer. Currently there are no commercially available replacement parts for the existing systems. The controls for the wood boiler fail regularly, which puts the boiler out of compliance with the University’s Air Quality Permit with Idaho DEQ due to excessive particulate matter, CO, and NOx emissions (Req. 40 CFR EPA Subchapter U, Title V operating permit). The gas boiler controls are currently located at each boiler instead of centralized, significantly increasing response time to problems and reducing the Energy Plant’s ability to monitor equipment. The Chilled Water and Compressed Air system controls are also located far away from the operator’s station. As critical components of the Steam and Chilled Water systems, when these controls fail, the respective utility system also fails. With spare parts no longer available for the boilers, there is risk of permanent boiler shutdowns until the controls are replaced. Shutdown of boilers risks N+1 Performance Standards for the Steam and Condensate system, posing a significant risk to campus.

By July 2022, two gas boilers had experienced combustion control malfunctions due to failed controls since this project was first submitted, risking an explosion if operated. To maintain necessary N+1 redundancy, the remaining functional controls on C Boiler have been removed and used to repair the controls on boiler B and keep it operational. As such, C Boiler is inoperable until a Capital Improvement that addresses this problem is completed. Given the recent failures in 2 of the 3 gas boilers, it is unlikely B Boiler will continue running reliably for much longer. This condition severely limits the Energy Plant’s ability to generate steam if there is a power disruption, or if the wood boiler is not running (such as during regular scheduled maintenance). The loss of B Boiler also risks the ability to meet campus winter heating loads, as it is the largest capacity boiler in the plant, posing a severe life safety risk to campus occupants, especially housing, and freezing pipes in buildings.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Centralize the Energy Plant’s controls to improve response times before severe damage occurs.
- Mitigate severe resiliency issues associated with current controls systems which are well beyond their serviceable
Address serious safety concerns associated with the physical condition of current assets.
- Address long term health and safety concerns from wood dust, ash, temperature, and noise exposure requiring engineering controls (per 29 CFR OSHA 1910.95/1910.120/1910.134).
- Change and reconfigure assets in order to achieve required O&M practices in a safe manner.

**Scope of Work:** This project addresses all of the problems mentioned above by upgrading and centralizing the boiler and utility control systems into one location to improve plant safety and operational efficiency. The scope of work of this Capital Improvement is:

- Demolition of the existing supervisors' office.
- Construction of a 2-story, 30ft x 12ft centralized control room with office space on second story.
- Installation, wiring, and programming of a new SCADA system to include the following systems:
  - Wood boiler (1x).
  - Natural gas boilers (x3).
  - Feedwater pumps (x4).
  - Condensate pumps (x4).
  - Air compressors (x3).
- Integrate the following existing packaged controls into the new SCADA system:
  - Steam turbines (x3).
  - Absorption chillers (x2).
  - Cooling towers (x3).
  - Emergency generator (x1).
- Install a standalone server for data collection and storage.
- Catwalk modification for access to second story.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design, bidding, and as-built documents.
  - O&M manuals.
  - System testing and commissioning.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage, including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

The Concessionaire will coordinate with the University (specifically UI PTS) for potential a construction laydown area in Lot 14.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this
proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $447,260 and will also include (i) the development of 50% electrical and controls engineering documents for vendor package PLC controls and Master Control System integration, (ii) 50% design documents for architectural, structural, mechanical, and electrical of new control room and office, (iii) the development of a scope to define graphical display for monitoring, trending, and metering, and (iv) the development of a scope for a new Plant Master Control System historian to enable logging, trending, and recording key system parameters.

Additional Information:

Figure 1. Existing operator station is manned 24/7 and exposed to environmental hazards.

Figure 2. Example of obsolete gas boiler controls.

Figure 3. Unsafe environmental temperatures at 24/7 manned station.

Figure 4. C Boiler controls removed to support B Boiler.

Figure 5. Obsolete boiler controls.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $4,934,866.

(B) Forecasted annual operations and maintenance costs: +$10,000. The increase is associated with a more complex and expanded control system. Additional controls and server maintenance needs. The new system will have specific O&M requirements to maintain expected life.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) commercially available control systems will be compatible with existing boilers, (ii) sufficient space will exist for the necessary centralized control room and supervisors’ office, and (iii) staged demolition and construction of controls at each boiler will occur, so N+1 redundancy is maintained in the event of a failure. Coordination with the University for other work that may impact this project will occur.

(E) Proposed schedule: Dates may vary.

</table>

(F) Impact on Sustainability: Fewer greenhouse gas emissions and improved air quality in the proximity of the Energy Plant from reduced fuel consumption and higher efficiency.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $4,852,100.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$24,000, wood, natural gas, and electricity. The decrease is associated to (i) a minor electrical load increase, and (ii) improved boiler control (it is assumed a 1% reduction in fuel costs due to improved control of boiler operations based on FY22 data).
PROJECT CODE: 24/3-024

PROJECT NAME: Electrical Transformer and Primary Components Equipment Reserve

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown)

The likelihood of these events is high.

Background: Campus wide, the building electrical services, including conductors, connectors, transformers, and switches are aged, have no record of being tested or maintained, and are a significant risk to the reliability of the campus electrical system. The existing transformer reserve consists of failed, used, and otherwise unknown transformers that cannot be relied upon in the event of a failure. Recent failures indicate that substantial upgrade work is needed to bring the electrical distribution system up to the required operating conditions. This upgrade work is likely to take many years and additional failures are imminent.

Lead times for primary electrical components are very long (more than a year) for high cost assets such as transformers, significantly increasing the risk of an outage. Without this work, extended outages could interrupt University business, cause property damage, and render unsafe occupancy conditions.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve the safety/reliability of the primary electrical distribution system by preparing immediate response to outages.
- Maintain Performance Standard Part V.6, 7, and 8 and mitigate negative impact to Availability KPIs.
- Provide reserve transformers for emergency replacement service.
- Achieve a reserve supply of strategic primary electrical assets such as transformers, elbows, and bushings.
- Establish baseline condition of primary electrical components.
- Procure emergency generation for fast dispatch to address electrical outages due to failures.

Scope of Work: This project establishes mechanisms to respond to electrical distribution outages while permanent solutions are being planned and implemented. These assets are also required to complete planned replacements of primary electrical system components to reduce impact from long lead times. The scope of work of this Capital Improvement is:
- Evaluate existing transformer reserve. Retain, refurbish, or dispose of existing as determined.
- Purchase, receive, and stock an equipment reserve including strategic transformer sizes including one (1) 13.2kV:480V transformer and one (1) 13.2kV:208V transformer.
- Purchase lowboy trailer to transport transformers.
- Purchase portable generation (480V and 208V) for response to emergency power outages.
- Coordinate the equipment reserve with transformer replacements to maintain a rotating stock.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - Report documenting results of the transformer reserve assessment and inventory of in-service equipment.
- Project documents:
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

As part of the safety plan, equipment will be stored safely and prepared for safe deployment.

The Concessionaire will coordinate with the University to provide access to all transformers and vaults required for the Additional Work.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $35,090 and will also include (i) an assessment of the transformer reserve to determine usefulness, and (ii) an assessment of the in-service transformers to determine number, size, and characteristics to stock.

**Additional Information:**

*Figure 1. Portable generation in place while transformer is being removed/replaced.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,698,159.

(B) Forecasted annual operations and maintenance costs: +$750. Additional O&M Costs for new generation.

Figure 2. Replacement transformers can take over a year to procure. Dimensions and electrical specifications are critical.

Figure 3. Existing inventory has no known good spares.
(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) a strategic reserve of primary electric components will allow much more predictable response to electrical failures, (ii) market volatility for primary electric components will not affect lead times or pricing, and (iii) a strategic reserve may serve as rotating stock if sizing is correct for permanent solutions. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacement of in-service transformers, and (ii) any oil sampling, thermography, or other testing of in-service transformers.

(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Commiss.) occurs in September 2025. Dates may vary.

(F) Impact on Sustainability: Improved through the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,668,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. The equipment will be static in reserve during normal operations.
PROJECT CODE: 24/6-048

PROJECT NAME: Sanitary Sewer Major Repairs at the Library and the Memorial Gym

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues due to leaking sewage). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (inspection shows that failure is imminent).

Background: The sanitary sewer lines in this area are critical to removing waste from multiple buildings, including the Art & Architecture North Building, the College of Education, the Memorial Gym, and the Library. Investigations conducted during Fiscal Year 2019 showed these lines are in extremely poor condition with collapse imminent. Multiple broken sections of pipe are present with heavy grease buildup. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area.

Emergency repairs were completed in FY19 after a section of these lines collapsed, but only one section was repaired despite the upstream lines being in equally poor condition. The stormwater lines in this area are also in poor condition and Capital Improvement 24/7-056 Stormwater Major Repairs at the Library and Memorial Gym should be Approved with this project to reduce overall costs and disruption.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Repair highly damaged pipe before collapse disrupts campus operations.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety/public health concerns due to leaking sewage in core campus areas.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project reconditions the above-mentioned sanitary sewer lines to prevent further damage, flooding, and disruption to connected buildings. The scope of work of this Capital Improvement is:
- Asphalt and natural surface demolition.
- Recondition existing 10” AC pipe at Library (depth=21’, length=60’).
- Recondition existing 8” AC pipe (depth=21’, length=60’).
- Recondition existing 6” AC pipe serving Memorial Gym (length=100’).
- Bedding and backfill.
- Bypass pumping to support building operations.
- Recondition manhole.
- Construction supervision.
- CCTV inspect and jet lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, confined space work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $26,730 and it will also include conducting a CCTV inspection and jetting.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $401,032.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manhole are not damaged to a point that complete replacement is required (project will be rescoped and repriced if replacement is necessary), (ii) bypass pumping is required to keep campus core functions operable and is included in the scope, (iii) traffic control and possibly re-route will be required, (iv) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) the replacement of pipes or manholes, (ii) the restoration of vegetation (owner is University), and (iii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.
(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $393,800.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/7-056

PROJECT NAME: Stormwater Major Repairs at the Library and the Memorial Gym

UTILITY SYSTEM: Storm Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (lines are heavily damaged and collapse is imminent).

Background: These stormwater lines serving the area between the Library and Memorial Gym are critical to removing water during rain events. They reduce the likelihood of flooding in core campus buildings from storm events, in particular the special collections area of the Library. At 94 years old these lines are in extremely poor condition and heavily damaged with collapse imminent. These pipes have dozens of infiltrations, cracks, and broken sections that compromise its ability to remove stormwater effectively (see results of FY19 investigation below).

By reconditioning pipes before they collapse their useful life can be extended up to another 50 years, with significant cost savings from reduced excavation work. The sanitary sewer lines in this area are also in poor condition and Capital Improvement 24/6-048 Sanitary Sewer Major Repairs at the Library and the Memorial Gym should be Approved with this project to reduce overall costs and disruption.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project reconditions the line with a technology such as sliplining or cure-in-place (CIPP) lining. Some sections are in too poor of condition for reconditioning and will be burst to make way for new pipe. It also proposes a new stormwater line to reduce hydraulic loading in the existing pipes. The specific technology, methods used, and final configuration will be determined in the Additional Work. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Recondition existing 12” AC pipe at the Library (depth=21’, length=170’).
- Burst existing 10” pipe and replace with on-hand 10” PVC pipe (depth=21’, length=130’).
- Cap and abandon in place the existing pipe east of Memorial Gym.
- Install new 4" PVC pipe east of Memorial Gym at shallow depth (200').
- Install new 10" PVC pipe south of Memorial Gym (175ft).
- Bedding and backfill.
- Install new manholes.
- CCTV inspect and jet lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $96,580.
Additional Information:

Figure 1. Storm Water system at Memorial Gym and Library.

Figure 2. Condition of 12" stormwater pipe after inspection.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,272,361.

(B) Forecasted annual operations and maintenance costs: +$500. Additional pipe will require regular cleaning, jetting, and inspection.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes, catch basins, and manholes are not damaged to a point that complete replacement is required (project will be rescoped and repriced if replacement is necessary), (ii) traffic control and possible re-route will be required, (iii) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) the replacement of pipes, catch basins, or manholes, (ii) restoration of vegetation (owner is University), and (iii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Adequate stormwater control is needed to protect campus buildings and keep the Storm Water system in compliance.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,250,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-037

PROJECT NAME: Fire Hydrant Major Repairs

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issue, lack of emergency response capability due to failures). The impact associated with resiliency is high (an inadequate fire suppression will impact the campus operations)
The likelihood of these events is high.

Background: The fire hydrants on campus provide critical fire protection to campus buildings and occupants. Several hydrants are aged and beyond their life expectancy. Replacement parts are becoming commercially unavailable for older hydrants, and some have failed, posing a severe fire risk to campus. Flow data doesn’t exist for some hydrants due to failure and baseline records need to be established.

Objectives: The main objectives of this Capital Improvement are:
- Improve fire protection on campus.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required the O&M practices in a safe manner.

Scope of Work: This project replaces known failed and aging hydrants. Two new hydrants will be installed with the project to improve fire protection near the Menard Law Building and the Graduate Art Studio. The scope of work of this Capital Improvement is:
- Replace 21 fire hydrants.
- Install 2 new fire hydrants.
- Provide assembly and installation of new hydrants including asphalt repair, excavation, and thrust blocks as necessary.
- Manage outages/utility interruptions required to perform work. Coordinate fire service outages.
- Provide removal and disposal of old hydrants.
- Site sediment control, temporary traffic conditions provided/coordinated.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
• 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

Custom safety plans for each of the 23 construction sites will be developed, including fencing of open pit areas, traffic control, and temporary walkway conditions.

The Concessionaire will coordinate with the University for all construction sites to allow for campus activities and accommodate for vehicular and pedestrian traffic. Coordination will also cover all water line shutdown requirements, and liaison with public safety entities for temporary outages of water systems.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $57,860.

**Additional Information:**

![Failed hydrant on campus near a brush fire in July 2021.](image1)

![Fire crews putting out fire in July 2021.](image2)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $804,572.

(B) Forecasted annual operations and maintenance costs: +$1,200. New hydrants will require annual O&M and rebuilding, ten year paint annualized.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) existing conditions will vary for landscape and hardscape replacement, (ii) water service lines to hydrants will not require replacement or upsizing, (iii) no known underground coordination issues exist, however, detailed utility location will be required, and (iv) coordination for water line and building outages will be necessary. Coordination with the University for other work that may impact this project will occur. Excluded work includes the repair or replacement of service lines or isolation valves to hydrants.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Multiple fire hydrants are not currently functional, presenting a direct threat to emergency response. Adequate emergency response for property and life protection is a fundamental requirement of campus sustainability.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $790,900.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/2-063

PROJECT NAME: Chilled Water Wintertime Capacity Upgrade

UTILITY SYSTEM: Chilled Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (minimal physical and life safety issues). The impact associated with resiliency is high (extended chilled water outages and risk to critical spaces).

The likelihood of these events is high (there is no N+1 redundancy during the winter cooling season).

Background: Chillers are used on campus to provide chilled water for building cooling loads. These loads range from comfort cooling in classrooms and office spaces to high value research and servers. While the peak cooling loads are in summer, mostly for comfort cooling, there is a year round cooling load for critical spaces such as high value research and servers. Wintertime cooling is done at the McClure chiller plant instead of at the main chiller plants. This is done because its cooling tower has an indoor basin, reducing the chances of the tower freezing in cold temperatures. It is the only chiller on campus capable of running in the winter without severe ice buildup and potential damage to equipment. As such there is no winter redundancy for the chilled water system. Any equipment failure or maintenance needed at the McClure plant poses a risk to the critical winter loads.

According to the Performance Standards, the Chilled Water system is required to have N+1 redundancy assuming the largest capacity asset (i.e., chiller) is non-functional. An additional wintertime chiller is needed to meet the requirement and provide for campus growth.

Installing the chiller at the SCCP has several benefits. First, due to the lack of head pressure at the McClure plant, this chiller is not capable of running during the summer to support peak cooling loads. By using the SCCP the new chiller will have sufficient head pressure to run during summer, adding a capacity boost during heat waves, which will help reduce load shedding frequency. Second, pumping costs to recharge the Thermal Energy Storage (TES) tank in the winter will be reduced due to the chiller’s proximity to the tank. Finally, the McClure chiller often ices up and vibrates, which causes disruptions to sensitive laboratory equipment in the building such as lasers. Switching to the SCCP in the winter will reduce these disruptions.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve performance and operating efficiency.
- Increase year-round chilled water capacity.
- Mitigate resiliency issues associated with lack of redundancy.
- Achieve N+1 redundancy for the Chilled Water system.

**Scope of Work:** This project installs a 200-ton, air-cooled chiller at the South Campus Chiller Plant (SCCP) to serve as the primary wintertime chiller. Using an air-cooled chiller with a dry cooler system will provide a reliable means of producing chilled water without the risk of freezing or damaging equipment in cold temperatures.

The chiller proposed in this project, a York YVFA chiller, has a free-cooling hybrid mode that allows it to produce chilled water using the ambient air when temperatures are near freezing. This results in significant energy savings during cold weather. To maximize energy savings the new, high efficiency chiller will serve as the primary wintertime chiller with McClure serving as the backup.

Work is needed to right size the chiller. The Additional Work includes an inventory of existing winter loads and coordination with the University to determine future loads.

The scope of work of this Capital Improvement is:

- Furnish and install one (1) 200-ton air-cooled chiller with dry cooling capability.
- Furnish and install one (1) chilled water pump and one (1) chilled water glycol pump.
- Furnish and install one (1) plate and frame heat exchanger, glycol feeder, expansion tank, and air separator.
- Furnish and install pump VFDs, and pump and chiller feeders.
- Plumbing, mechanical, electrical, and controls modification necessary to connect the new chiller.
- Paint new pipe and pipe stands.
- Start-up, test, and commissioning of new equipment.

While not part of the scope of this project, it is highly recommended that the University service all cooling coils connected to the Chilled Water system before the work. This will assist in right sizing the chillers to potentially reduce overall capital costs, improve building air quality and comfort, and save money due to reduced energy costs.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended an inventory and cleaning of cooling coils on campus to right size chiller and reduce energy costs.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the Additional Work stage.

The Concessionaire will coordinate with the University for potential chilled water disruptions.
Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $21,230 and will also include an assessment of wintertime chilled water loads and coordination with UI HVAC to inventory campus critical loads to right size chiller.

Additional Information:

![Diagram of the SCCP with the proposed new chiller.](image)

Figure 1. Layout of the SCCP with the proposed new chiller.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,659,652.

(B) Forecasted annual operations and maintenance costs: +$20,000. The increase is associated with newly installed equipment (e.g., chiller, pumps, VFDs, valves, heat exchanger).

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the average estimated winter season/process cooling load on campus is 120 tons, which is subject to change during the assessment of campus equipment schedules and trend data, (ii) lead times will not impact schedule, and (iii) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) cleaning and servicing the building level cooling coils (owner is University), and (ii) extension of outside concrete pad to support equipment.

(E) Proposed schedule: Dates may vary.

| Month | 03/23 | 04/23 | 05/23 | 06/23 | 07/23 | 08/23 | 09/23 | 10/23 | 11/23 | 12/23 | 01/24 | 02/24 | 03/24 | 04/24 | 05/24 | 06/24 | 07/24 | 08/24 | 09/24 | 10/24 | 11/24 | 12/24 |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
|       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
|       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
|       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages. Reduced greenhouse gas emissions.

(G) Anticipated tax credits or other benefits: Potentially eligible for Avista Utilities’ Schedule 90 rebate program.

(H) Fee or charge payable to the Operator: $2,608,100.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: approx. -$11,000, electricity. New chiller would be more efficient in winter than the existing system. See below.

PROJECT CODE: 24/4-064

PROJECT NAME: Well #4 Modernization

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (potential impacts to water quality and firefighting capability, known electrical hazards within building). The impact associated with resiliency is high (risk of extended outages and loss of redundancy).

The likelihood of these events is high (equipment is beyond end of life)

Background: The University has owned and operated its own domestic water wells for over 100 years. The locations and depths have changed with the growth of campus and today there are two wells, known as Well #3 and Well #4, north of campus. These wells are critical to the operation of campus, as they are the University’s only reliable source of potable water. The City of Moscow runs at a lower pressure than the University does, preventing them from supporting the University in an outage without major disruptions to campus operations. Because of this, it is vital that the wells are resilient and can operate at all times.

Well #4 was constructed in 1978 and requires upgrades to continue operating reliably. All major components are at or beyond their end of life, including the pump, motor, pipes, disinfection system, and electrical system. The well pump and motor have not been pulled in over 20 years and are in unknown condition. Failure of these components puts the University at risk of a complete campus shutdown, as the system only has one other well, with significantly higher repair costs due to their emergency nature.

Currently, the well is not backed up with emergency power as recommended by IDAPA 58.07.08. Without backup power the system can only provide between 2 to 14 days of domestic water, depending on campus use and storage tank levels before the incident. This is inadequate life support for firefighting, dining, housing, research, and medical treatment on campus, including its 9,500 students, during an extended outage. An electrical generator, with its associated equipment, is necessary to both ensure campus has a continuous supply of domestic water during utility power outages and protect the well pump and motor from poor power quality, voltage spikes/swells, and other electrical issues on the Avista Utilities grid. This was demonstrated by the costly emergency repairs necessary to replace the motor at Well #3 when the Avista transformer lost a phase in 2022.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve performance and operating efficiency of the well.
- Mitigate severe resiliency issues associated with equipment beyond its useful life.
- Provide domestic water during electrical grid failures.

**Scope of Work:** This project modernizes Well #4 by upgrading its major components, including converting the electrical system from 2300V to 480V. To maximize resiliency and project cost savings, the project includes replacing the high cost submersible well motor with a vertical hollow shaft (VHS) motor at ground level. This will eliminate the need to pull the motor in the future and allow for maintenance not previously feasible. Upgrading the well’s electrical system at the same time as installing a generator will reduce overall project costs to the University, as development and construction times are reduced, and uncommon equipment will not be necessary to match the 480V generator with the existing 2300V well. The scope of work of this Capital Improvement is:

- Provide a new vertical hollow shaft motor with insulated lower half coupling for upper bearing, Aegis lower shaft grounding ring, 120V thermal heater in windings, and non-reverse coupling.
- Provide a new vertical hollow shaft pump system to match existing submersible pump curve and base mount and all associated equipment needed for a complete package. Danfoss drive in cabinet with line and load reactors and pressure control equipment.
- Provide new style Cla-Val equipment and all associated valves for water lube pump system and controls.
- Provide labor to pull old submersible pump and install new VHS pump system.
- Demo and install a new power service that will include new 800A 480V 3-phase main service disconnect, dry transformer, and service lateral conduit/wire from utility provided transformer. New metering equipment and all connections to existing building 120/240V single phase system.
- Install 480V, 3-phase diesel generator and transfer equipment. New concrete slab, fencing, underground feeder conduits, wire, load bank equipment, and 72-hour fuel tank base.
- Integrate all new equipment into existing SCADA controls.
- Reconfigure disinfection system.
- Repairs to exterior walls, roof, and façade.
- Install motion sensing security lighting on exterior of well house.
- Upgrade interior lighting to LED and replace inside electric heaters.
- Ventilation upgrades to well room and chemical storage room.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project Documents:
  • Design and as-built documents.
  • O&M Manuals.
  • Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan required for crane operations will be developed during the Additional Work stage.

The Concessionaire will coordinate with the North Farm for potential road access disruptions.
Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $153,010 and it will also include (i) coordination with MIEDI Water Purveyor and IDEQ to determine permitting and approval process, and (ii) developing scope for integrating new components into existing SCADA controls.

Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $5,085,924.

(B) Forecasted annual operations and maintenance costs: +$7,500. Additional equipment such as emergency generator will require service. New motor and electrical equipment are more technologically advanced and will require service.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) well shaft is straight and will not require redrilling to support vertical hollow shaft motor, (ii) lead times on equipment will not delay schedule, and (iii) efforts will be taken to minimize damage to surrounding vegetation, but impacts may occur. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) redrilling well, (ii) primary electrical service repair/replacement (owner is Avista Utilities), (iii) restoration of vegetation (owner is University), and (iv) demolition and disposal of any electrical equipment containing PCBs.

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in February 2025. Dates may vary.

(F) Impact on Sustainability: Improvement due to mitigation of risk of damage and increased electrical efficiency of equipment.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $4,999,500.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$150, electricity. The decrease is associated with an assumed 1% improvement in electrical efficiency.
PROJECT CODE: 24/3-025

PROJECT NAME: Electrical Vault Inspections and Upgrades

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue from electrocution risk). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (many vaults are completely submerged).

Background: The primary electrical system is largely distributed in an underground system including multiple vaults where cables are pulled, terminated, or spliced. These vaults are susceptible to excessive water intrusion. In many cases, primary distribution splices are submerged in water that are not suitably rated for this application. This condition causes severe safety issues for personnel and the campus community as well as severe resiliency issues that prevents the performance of O&M per prudent industry practices.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a severe safety and resiliency issue.
- Maintain Performance Standard Part V.6, 7, and 8 and mitigate negative impact to Availability KPIs.
- Modernize electrical distribution components (vaults) to allow primary electrical system to be adequately maintained per industry practices and Performance Standards.
- Implement required monitoring, water control, and O&M practices for a safe and reliable operation.
- Perform a comprehensive campus-wide electrical distribution study to inform future steps towards a safe and resilient electrical system, necessary in order to provide operations per Performance Standards and the University’s expectations.

Scope of Work: This project remediates water intrusion issues and unsound conditions by removing water, making repairs to the vaults, and installing sump pumps where necessary. Before work is done on the vaults it’s imperative that the condition, capacity, and needs of the campus electrical distribution be well understood. A study to gain this information is necessary as part of the Additional Work. The scope of work of this Capital Improvement is:

- Perform assessment of the campus electrical distribution system:
  - Investigate 85 electrical vaults, primary switches, conductors.
  - Assess condition of underground primary distribution assets.
- Develop a remediation plan for water intrusion and unsound conditions.
- Install sump pumps and water monitoring systems (x10).
- Establish baseline thermography and, where applicable, oil testing.
- Major repairs of nine (10%) electrical vaults.
- Normal repairs of 43 (50%) electrical vaults.
- Minor repairs of 33 (40%) electrical vaults.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
  - Report documenting results of the electrical distribution study.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned for public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University any required periodic restrictions of access to immediate work areas. Planned interruptions to building electrical services may be required. This coordination will also involve potential phasing to minimize disruptions to the buildings’ occupants during shutdowns and will be planned once the Additional Work is complete.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $583,220 and will also include (i) a campus-wide electrical distribution study (investigation of 85 electrical vaults and primary switches, assessment of the condition of primary distribution assets, and development of as-built distribution one-line diagrams, site plans, and drawings).
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

Figure 1. Example of a submerged vault under a primary electric switch.

Figure 2. An electric vault that is completely submerged. Condition of equipment is unknown.

Figure 3. Electrical conduits submerged in vaults.
(A) Total Cost: $5,459,675.

(B) Forecasted annual operations and maintenance costs: +$2,000. The installation of water management systems will increase the O&M requirements.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the scope of this project is highly dependent upon the findings of the Additional Work (project will be rescoped and repriced accordingly), and (ii) for the purposes of indicative pricing, 10 of the underground vaults require water management, 10% require major repairs, 50% require normal repairs, and 40% require minor repairs. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacement or testing of in-service transformers and primary switches, and (ii) the replacement, repair, or inspection of overhead electrical distribution.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $5,366,900.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: +$500, electricity. Additional electrical costs associated with the operation of new sump pumps.
PROJECT CODE: 24/2-065

PROJECT NAME: Chilled Water Capacity Upgrade at the South Campus Chiller Plant

UTILITY SYSTEM: Chilled Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (minimal physical and life safety issues). The impact associated with resiliency is high (extended chilled water outages and risk to critical spaces).

The likelihood of these events is high (the Chilled Water system does not have enough capacity to meet current loads).

Background: Chillers are used on campus to provide chilled water for building cooling loads. These loads range from comfort cooling in classrooms and office spaces to high value research and servers. Historically the chilled water system has had sufficient capacity to meet the needs of campus, however the system has not been upgraded since the construction of the South Campus Chiller Plant (SCCP) in 2010. The oldest chillers in the system, located at the North Campus Chiller Plant (NCCP), have degraded over time as they pass their life expectancy. The chillers at SCCP are the newest, yet have been failing prematurely and require replacement earlier than anticipated, likely due to excessive harmonic distortion. Despite slowly losing capacity over time, especially within the past several years, the demand for chilled water on campus has been growing. This has created a situation where the existing system can no longer support campus during peak loads such as heat waves, leading the University to prioritize some spaces over others in the form of load shedding. By shutting down chilled water to spaces such as offices, the system can support the more critical loads. Without this practice severe damage would occur to equipment across campus, while the low priority loads would lose cooling regardless. Load shedding, once rarely needed, has become common place since 2020 when the temperatures are high. Additional capacity and redundancy are needed to reduce the frequency of load shedding going forward.

The SCCP was originally built to support two additional 500-ton chillers with minimal modification. Space was available for the chillers, cooling towers, pumps, and transformer needed. This changed when the York electric chiller at the NCCP was moved to the SCCP in 2018 to make room for an additional absorption chiller. The York is significantly larger than the other chillers and takes up the space of two chillers, which means there is no room on campus for the additional chillers necessary to keep up with current and future campus loads, or provide N+1 redundancy to the system. Adding capacity to the SCCP will require expanding the building envelope to house additional chillers, adding an additional electrical service, and increasing buried pipe size to support the new capacity.

According to the Performance Standards, the Chilled Water system is required to have N+1 redundancy assuming the largest capacity asset (i.e., chiller) is non-functional. Currently the system does not meet the requirement.
Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- Improve performance and operational efficiency of the Chilled Water system.
- Increase chilled water capacity to support current and future loads.
- Mitigate resiliency issues associated with lack of redundancy.
- Achieve N+1 redundancy for the Chilled Water system as required by the Performance Standards.

**Scope of Work:** This project constructs an addition to the SCCP on the west side of the building sized to support additional capacity. Proposal A installs one new chiller, cooling tower, and associated equipment in one of the new spaces to meet the N+1 requirement. A chilled water model, proposed as part of the Additional Work, is required to right size the chiller to meet campus loads and the Performance Standards. Proposal A is scoped and priced on the assumption that the new chiller will be 1200 tons, the size of the existing York chiller, however this is subject to change.

A Proposal B is also presented and installs a second chiller in the newly constructed space, bringing the system to N+2 redundancy. This will further reduce the frequency of load shedding on campus, significantly improve the system's resiliency and ability to handle heat waves, and provide for long term campus growth. By approving Proposal B, the University will see significant savings from reducing the overall project development, construction, and mobilization time.

The scope of work of this Capital Improvement is:

- **Proposal A:**
  - Expand building envelop of the SCCP to include (i) matching the existing envelope and finish, (ii) expansion of the concrete pad and fencing for cooling towers, and (iii) excavation and shoring of west hillside as needed.
  - Excavation, removal, and replacement of 20" to 30" direct buried piping with hardscape/softscape repair.
  - New electrical service upgrade to support two additional 1200-ton chillers.
  - Upsize primary feeder to support additional electrical load.
  - Upsize chilled water loop pumps and chilled water/condenser water pipe header for two additional 1200-ton chillers.
  - Furnish and install one (1) 1200-ton electric chiller.
  - Furnish and install one (1) cooling tower.
  - Furnish and install associated pumps and piping for the new chiller and cooling tower.
  - Plumbing, mechanical, electrical, and controls modification necessary to connect the new chiller.
  - Paint new pipe and pipe stands.
  - Start-up, test, and commissioning of new equipment.
  - Chilled water modeling software and training to allow ongoing maintenance when future changes are made.

- **Proposal B.** In addition to the scope described above for Proposal A, Proposal B includes:
  - Furnish and install one (1) 1200-ton electric chiller.
  - Furnish and install one (1) cooling tower.
  - Furnish and install associated pumps and piping for the new chiller and cooling tower.
  - Plumbing, mechanical, electrical, and controls modification necessary to connect the new chiller.
  - Paint new pipe and pipe stands.
• Start-up, test, and commissioning of new equipment.

Chillers and production assets are sized to meet the design loads of HVAC systems and process cooling loads. However, the age and condition of those systems play a large role in the ability to provide sufficient chilled water. Systems in poor condition, such as dirty cooling coils in HVAC systems, do not transfer energy efficiently (sufficiently cold chilled water may be available, but the equipment is not capable of utilizing it to its full potential, causing occupant discomfort and wasting energy). While not part of the scope of this project, it is highly recommended that the University service all heat exchangers and retro-commission equipment connected to the Chilled Water system during the modeling effort, and put into place a regular O&M program to complete the work if not currently done. This will assist in right sizing the chillers to potentially reduce overall capital costs, improve building air quality and comfort, save money in reduced energy costs, and extend the useful life of the equipment.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended an inventory of chilled water loads to optimize the model, an O&M program to clean cooling coils, retro-commission AHUs, and service other equipment using chilled water to reduce capacity needs and energy costs.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents for architectural, structural, mechanical, and electrical engineering to provide infrastructure that increases plant capacity.
  - Chilled water model.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the Additional Work stage.

The Concessionaire will coordinate with the University for potential chilled water disruptions.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $507,650 and will also include (i) a Chilled Water system loop modeling and heat transfer analysis to determine necessary capacity, loop constraints, and optimize loop efficiency, and (ii) a 30-day electrical load study (4 meters).
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $17,289,903 (Proposal A), $23,370,631 (Proposal B).

(B) Forecasted annual operations and maintenance costs: +$30,000 (Proposal A), +$51,000 (Proposal B). The increase is associated with newly installed equipment (e.g., chiller cooling tower, pumps, VFDs, valves), and newly constructed building envelope (e.g., electrical, plumbing).

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) additional capacity will be added to the SCCP, if the chilled water model exposes other constraints or a preferred alternate location for the additional capacity, a new Capital Improvement might need to be submitted, (ii) current chiller leads times are estimated to be 50 weeks, (iii) chiller sizing based on the 1200-ton York chiller and actual size will be dependent on the model, and (iv) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) the cleaning and servicing of

Figure 1. Current layout of the SCCP.
building level heat exchangers and other equipment (owner is University), and (ii) the restoration of vegetation (owner is University).

(E) Proposed schedule: EPC (Procur.) extends through July 2025. EPC (Const.) occurs from June 2025 to January 2026. EPC (Commiss.) occurs from January 2026 to February 2026. Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $16,996,100 (Proposal A), $22,973,500 (Proposal B).

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. New chiller acts only as redundant back-up to the existing equipment. Supply Cost changes should be minimal unless new equipment is more efficient than existing, in which case it will serve as the new primary chiller.
PROJECT CODE: 24/3-026

PROJECT NAME: Menard Law Building Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (previous component failures).

Background: Long term exposure to heat, vibration, and other stresses slowly break down the internal components and insulation of transformers. Eventually these stresses create a short, resulting in damage and breakdown of the transformer. As the transformer ages the likelihood of failure increases, rising significantly once it reaches its end of life.

The three transformers at the Menard Law Building are beyond their useful life at over 30 years old and have no record of being tested. The November 2019 failure and emergency repair of the oil filled, 13.2kV disconnect switch in the building indicates that failure is imminent on this equipment of the same age and condition. That failure was the direct cause of the Teaching and Learning Center basement flood that shut the building down for 3 weeks. That emergency repair resulted in spliced high voltage cable, eliminated building disconnect, and unsafe conditions within the Menard Law Building. This presents a highly dangerous condition for personnel and building occupants while leaving property at significant risk of damage.

There is no spare transformer if there is a failure at Menard Law. Given continued market disruptions and very long lead times (over 1 year), a failure here will likely result in an extended building shutdown with potential impacts to other buildings. The main building switch gear is the same age and should be upgraded at the same time to remain safe and resilient. Main switch gear work is beyond the contractual demarcation point and is the University’s responsibility.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a severe safety and resiliency issue.
- Modernize electrical service to building up to the point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
Scope of Work: This project installs a new pad mount transformer on the exterior of the building, replaces the feeders from the nearest primary switch to the building main switchgear, and upgrades the metering associated with it. The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot-style transformers currently installed on the interior of the building. Thermograph and oil test to establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2 kV) concrete encased feeders from existing vault sectionalizer to new transformer. Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to new SEL-735. Replace as necessary.
- Vault work:
  - Repair damaged items in electrical vaults accessed for transformer replacements.
  - Repair any areas of water infiltration in electrical vault, provide water management system.
  - Thermograph vault components to establish baseline records.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned for public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the College of Law and the University for the building shutdown. Other buildings may be impacted as well.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $80,300 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing, and (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $868,675

(B) Forecasted annual operations and maintenance costs: +$750. The upgraded electric meter and new vault sump will require additional O&M. The new transformer will allow for new O&M practices to be implemented, including oil sampling.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) original transformers and switchgear sized to serve electric boilers and chillers that have since been removed, (ii) new transformer is expected to be smaller and more efficient, (iii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees/vegetation but impacts may occur and are not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) VFI switches and appurtenances, SEL-751 relay, switch operators, and microgrid infrastructure, (ii) temporary electric generator to support building during shutdown, (iii) the disconnection/reconnection of
impacted irrigation lines (owner is University), and (iv) the restoration of vegetation (owner is University).

(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from September 2025 to January 2026. EPC (Commiss.) occurs in February 2026. Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $853,600

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$650, electricity. It is assumed a 1% improvement in electrical efficiency based on historic metering.
PROJECT CODE: 24/1-003

PROJECT NAME: Steam Piping Upgrades at the Energy Plant

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and campus steam shutdown).

The likelihood of these events is high (multiple valves have failed).

Background: The steam piping in the Energy Plant is critical for transporting steam produced by the boilers to the tunnel network and reducing pressure to safe levels. Isolation valves in the system are used to provide safe access to critical equipment for service, however many are failing. The newest valves were replaced in a 2002 State of Idaho DPW project and are already failing, exposing operators to severe burns from high pressure steam leaks.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade plant level steam piping to plant operating pressures.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address health concerns that should be physically mitigated.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project replaces the isolation valves in the main steam header at the Energy Plant, all of which are beyond their serviceable life and/or not designed for operating pressures. It also includes rerouting D Boiler’s piping to the main steam header, which will increase resiliency to steam outages. The scope of work of this Capital Improvement is:

- Reconfigure D Boiler 6” piping to connect to the main steam header.
- Replace all high-pressure isolation valves (x19).

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
• As-built drawings of the relevant areas.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

The Concessionaire will coordinate with the University for the replacement of valves that may require steam shutdown.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $58,960 and will also include as-built drawings of the area requiring piping and valve upgrades, which will become part of a master as-built drawing set for the Energy Plant.

Additional Information:

Figure 1. Failed isolation valve preventing safe work on critical systems.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $3,338,022.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) no steam shutdown will be required when connecting D boiler to the main steam header, (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes the replacement or reconfiguration of the steam piping for other boilers or the main header.

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.

(F) Impact on Sustainability: Minimal reduction in fuel, water, and chemical consumption by reducing steam losses during service.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,281,300.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. Minimal savings from reduced losses during service.
CAPITAL IMPROVEMENT PROJECT SHEET – 24/1-004

PROJECT CODE: 24/1-004

PROJECT NAME: Gas Boilers Capital Renewal

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (boilers are aged and well beyond expected life).

Background: The natural gas boilers provide redundancy to the wood boiler and meet peak heating loads on campus. They are critical to the successful operation of the Energy Plant and necessary to achieve Performance Standards and resiliency desires. However, their ages range from 45-81 years old and subsystems are in need of replacement and upgrade, including gas burner packages, valves and FD fans. Non-destructive testing of boiler tubes and exhaust stacks is also necessary. Several single points of failure, or long repair time, issues exist within these systems. Many of these systems are original equipment and are well beyond this serviceable life, posing safety risks from natural gas leaks and boiler tube ruptures. Upgrading these systems will improve efficiency and extend the useful life of the boilers. Complete gas boiler system replacements will be needed without these upgrades.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade gas boilers to extend useful life and improve performance.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project upgrades the subsystems critical to the successful operation of the boilers including gas burner packages, valves, and FD fans. It also includes non-destructive testing of boiler tubes and exhaust stacks to determine their remaining useful life. The scope of work of this Capital Improvement is:

- Replace degraded and ruptured boiler tubes.
- Replace gas burners for all three boilers.
- Replace gas trains for all three boilers.
- Replace all critical valves for all three boilers.
- Replace FD fans, VFDs, and motors for all three boilers.
- Install cascading blowdown systems for Boilers C and D only.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
  - Report documenting results of boiler tube inspections.
  - Report documenting results of boiler exhaust stacks.
  - Equipment selection and preliminary design of stack economizer for Boiler D.

- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

The Concessionaire will coordinate with the University for the staggering of boiler work to maintain the Energy Plant's resiliency and prevent the need for steam shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $207,900 and will also include (i) non-destructive testing of boiler tubes (Boilers B, C, and D), (ii) non-destructive testing for corrosion/wall thickness degradation on all exhaust stacks (Boilers A, B, C, and D), and (iii) equipment selection and preliminary design of stack economizer for Boiler D.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $5,708,096.

(B) Forecasted annual operations and maintenance costs: +$3,600. The increase is associated with an expanded complexity of controls, gas trains, and additional cascading blowdowns.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is
assumed that (i) only 20% of boiler tubes will need to be replaced after non-destructive testing (project will be rescoped and repriced as needed), (ii) exhaust stack replacements are not included, (iii) staged construction to maintain N+1 redundancy to the wood boiler to prevent risk of steam shutdown to campus will be required, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacements of the exhaust stacks (the non-destructive testing included in this project will determine if the exhaust stacks need to be replaced, which would be proposed as a future Capital Improvement), and (ii) an stack economizer on Boiler D (based on the results of the preliminary design and feasibility, the economizer would be proposed as a future Capital Improvement).

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.

(F) Impact on Sustainability: Improved efficiency and performance of the boilers reduces natural gas consumption and corresponding greenhouse gas emissions.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $5,611,100.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$7,300, natural gas. Due to improved efficiency of gas burners and FD fans, it is assumed a natural gas reduction in consumption from 2% burner efficiency increase at current prices based on FY22 data.
PROJECT CODE: 24/1-005

PROJECT NAME: Utility Tunnel Repair on 6th Street

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (tunnel lid is damaged and rebar is corroding).

Background: The utility tunnel network is critical for distributing utilities across campus including steam, chilled water, high voltage power, natural gas, and IT/telecom. Tunnels are critical for protecting utilities from ambient conditions and also serve as the sidewalks of much of campus. The lid on 6th St has been in service for up to 70 years and needs work to prevent collapse. The tunnel lid has cracking, exposed rebar, and ground water intrusions. These sections are supported with non-engineered, temporary screw jacks to prevent collapse in the near future. The risk of collapse poses a severe safety risk to the general public and potential shutdown of all the Energy Plant’s utilities. This was identified in the DPW project in FY19 to replace the tunnel lid at 6th Street and Line Street, but project funding could not support the additional scope.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Extend the useful service life of the existing tunnel.
- Mitigate severe resiliency issues associated with aging systems.
- Address safety concerns associated with tunnel collapse.

Scope of Work: This project replaces and repairs sections of the tunnel lid on 6th St that are showing signs of structural failure, likely due to vehicle traffic and water infiltration.

The scope includes replacing the tunnel lid at the areas where damage is concentrated, specifically at the entrance to the College of Natural Resources (CNR) and the Integrated Research and Innovation Center (IRIC), and at the Central Mall’s pedestrian walkway. It also includes repairs to the sidewalk/tunnel lid where tunnel joints are, as previous repairs are in poor condition and beginning to compromise the tunnel lid by allowing water to infiltrate through the joints (see photos below). These areas can likely be repaired without completely replacing the lid by applying the same methods used at the Line Street tunnel repair project in 2022, significantly reducing overall cost.

The scope of work of this Capital Improvement is:
- Tunnel lid replacements (x2):
  - Drop and protect electrical and communication lines that are within 12” of interior tunnel lid.
  - Blanket utility lines in tunnel to protect from debris.
  - Trench on either side of impacted lid to a depth of approx. 2’.
  - Cut sidewall of impacted tunnel, crosscut, and remove damaged lid.
  - Replace lid with pan deck, repour sidewalks, add weld plates for bike racks.
  - Re-hang electrical and communication lines.
  - Restoration of area to include repaving road, replacing pavers, and replacing truncated dome mats.

- Tunnel lid repairs (x8):
  - Demolition of damaged concrete and sidewalk sections adjacent to repairs.
  - Apply overhead repair mix.
  - Apply reinforcement to area.
  - Clean tunnel lid and apply corrosion inhibitor.
  - Drop IT/telecom from lid as necessary.
  - Seal tunnel joints.
  - Pour new sidewalk sections.

- Provide protection for live utilities during construction.
- Clean work areas as needed.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended that (i) UI ITS identify and remove any abandoned and damaged IT/Telecom lines in construction areas while accessible, and (ii) the replacement of the total length of the sidewalk.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed including the protection of live utilities, the provision of fencing to prevent unauthorized access to construction areas, and open pit work in a core campus area. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University and the City of Moscow for the shutdown of 6th Street. Similarly, coordination will be needed for parking permits, fencing, and storage of materials. Construction will be scheduled during the summer season to reduce impact to both campus’ operations and the City.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital
Improvement. The anticipated cost of such additional work is $131,120 and will also include core drilling and laboratory analysis for tunnel walls and lid to determine their integrity.

Additional Information:

Figure 1. Areas of tunnel on 6th Street with to be replaced and repaired.

Figure 2. Areas that are compromising the structural integrity of the tunnel lid.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $3,574,107.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) tunnel walls and floor will be in good condition and not require repair or replacement, dependent on results of core samples and structural investigation, (ii) underground construction conditions will be reasonable free of obstruction, conflict, hazardous materials that could impede completion, (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the disconnection/reconnection of irrigation lines (owner is University), (ii) the restoration of vegetation (owner is University), (iii) the protection of vegetation around the construction area (owner is University), and (iv) the repair or replacement of the sidewalk outside the work areas (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.
(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,520,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-038

PROJECT NAME: Domestic Water Line Replacement on the Central Mall

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (health risks to building occupants due to dead end line). The impact associated with resiliency is high (future failure will impact core campus).

The likelihood of these events is high (line has collapsed). 

Background: At over 70 years old, this water line collapsed in 2017, creating a dead-end line in the domestic water system that creates a health risk to building occupants.

Objectives: The main objectives of this Capital Improvement are:

- Replace the collapsed domestic water line under the Central Mall.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address health concerns associated with the physical conditions of current assets.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project replaces the existing line and upgrades the size to keep up with campus growth. The water line is intended to create a loop in the distribution system near the Renfrew Hall and the Agricultural Science Building, improving flow and water quality on campus. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Abandon existing 4" piping modifications.
- Install new 6" DR18 C900 PVC water line and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.
Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-base paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $32,560.

Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:
(A) Total Cost: $451,741.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes the protection or restoration of vegetation impacted by construction (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $444,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-051

PROJECT NAME: Sanitary Sewer Line Recondition on Line Street

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **high** (severe physical and life safety issues). The impact associated with resiliency is **high** (extended outage and building shutdown).

The likelihood of these events is **high** (heavily damaged and collapse is imminent).

**Background:** These sanitary sewer lines serve the Food Science Building, the Mines Building, the Native American Student Center, and the Janssen Engineering Building (JEB). The pipes are constructed of clay tile and are almost 70 years old, well beyond their life expectancy. A recent sliplining project on a connecting line showed that these lines are in poor condition and need to be repaired soon before they collapse. These lines plug on occasion and require jetting to restore service. In addition, the line in the alley between JEB and the Gauss-Johnson Engineering Building (GJ) was poorly designed and has a low spot where it goes under the utility tunnel, which plugs regularly due to unauthorized dumping (most recently in September and October 2021). An inspection conducted in October 2021 showed sections of the pipe breaking off, indicating that collapse is imminent.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer line on Line Street between Idaho Avenue and 6th Street.
- Recondition existing sanitary sewer lines serving the Food Science Building, the Mines Building and the Native American Student Center.
- Remove belly in line between JEB and GJ.
- Install new manholes for improved access.
- Inspect nearby lines to identify future needs.

**Scope of Work:** This project sliplines existing pipes connecting to Line Street and replaces the JEB service line going under the tunnel to remove the low spot. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Recondition the 6” line on Line Street (approx. 700’).
- Recondition the 6” lines between the Food Science Building, the Mines Building, and the Native American...
Student Center (approx. 350').
- Install new 6” DR18 C900 PVC pipe and all appurtenances at JEB.
- Install three new manholes at tees.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $46,860.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $638,515.

(B) Forecasted annual operations and maintenance costs: +$1,500. New manholes will require annual inspections and cleaning.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) bypass pumping is required to keep campus core functions operable, (ii) pre/post CCTV inspection is required, (iii) traffic control and possibly re-route will be required, (iv) full pipe replacement between JEB and GJ is expected, (v) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (vi) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes the restoration of vegetation (owner is University).
(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $627,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-050

PROJECT NAME: Sanitary Sewer Manhole Replacements

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (safety risks to building occupants, vehicles, pedestrians, and operational personnel). The impact associated with resiliency is high.
The likelihood of these events is high.

Background: Manholes across campus are used to access sanitary sewer lines for inspection and service. When manholes are in too poor condition or not present, it severely limits the ability of clearing plugged lines, potentially requiring excavation. They also pose a safety risk to operators, pedestrians, and vehicles if they are allowed to deteriorate. Some of the problems that have been identified include collapsing walls, sinking asphalt, plugged lines, and damage to pipes. Reconditioning manholes now reduces the overall cost and disruption to the University by reducing the need for excavation and replacement from waiting for complete failure.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:
- Replace failing sewer manholes.
- Mitigate severe resiliency issues associated with systems that are well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project reconditions manholes where feasible to extend their useful life and replaces heavily damaged manholes that are beginning to fail. The scope of work of this Capital Improvement is:
- Asphalt and natural surface demolition.
- Repair and install liners at manholes (x11).
- Remove and replace manholes (x2).
- Bedding and backfill.
- CCTV inspection and jetting.
- Construction supervision.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $43,560.

**Additional Information:**

![Image](image.png)

*Figure 1. Poor condition brick manhole by ISUB (left) and by Morrill Hall (right).*

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $596,052.
(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 11 manholes are not damaged to a point that complete replacement is required (project will be rescoped and repriced if replacement is necessary), (ii) a pre/post CCTV inspection is required, (iii) bypass pumping is required to keep campus core functions operable and it is included in the scope, (iv) traffic control and possibly re-route will be required, (iii) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) the repair or replacement of pipes, and (ii) the restoration of vegetation (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Establishing a reliable sanitary sewer service is critical to public health and to achieving functional campus' operations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $585,200.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/7-058

PROJECT NAME: Stormwater Line Installation from the Art & Architecture Building to Line Street

UTILITY SYSTEM: Storm Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (flooding occurs regularly).

Background: The existing stormwater line serving the Art & Architecture Building was cut off when the Idaho Commons (now the Idaho Student Union Building ISUB) was constructed in 1998. This has caused flooding issues in the basement of Art & Architecture and creates standing water issues near pedestrian walkways, which freeze in cold weather and pose a pedestrian safety risk.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Correct flooding issues near the Art & Architecture Building by installing a new stormwater line.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project restores stormwater service to this area by installing a new line from the Art & Architecture Building to Line Street. It also includes inspection of the upstream pipe to determine if reconditioning or replacement is necessary. The proposed line may conflict with long term plans of the University and coordination is needed to determine if alternative pathing is necessary. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Install new 6" SDR 35 PVC pipe (approx. 120').
- Connect new line to existing storm system.
- Install one new catch basin.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

A detailed safety plan will be developed during the Additional Work stage.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $14,410.

**Additional Information:**

*Figure 1. Stormwater system in the affected area.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $157,976.

(B) Forecasted annual operations and maintenance costs: +$500. Additional pipe will require regular cleaning, jetting, and inspection.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) connecting pipes will not need to be reconditioned or replaced (project will be rescoped and repriced as necessary), (ii) a pre/post CCTV inspection will be required, (iii) traffic control and possible re-route will be required, (iv) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impact may occur and remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) the reconditioning or replacement of connecting pipes, (ii) the restoration of vegetation (owner is University), and (iii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improved stormwater systems will help maintain stormwater quantity and quality control. Improvement of stormwater systems is required for safety and resiliency of the core campus.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $155,100.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-049

PROJECT NAME: Sanitary Sewer Line Recondition on Campus Drive and Blake Avenue

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (line is well beyond life expectancy).

Background: These sanitary sewer lines serve the Ridenbaugh, Nicolls, Graduate Art Studio, and Lionel Hampton buildings. The pipes are 91 years old and well beyond life expectancy. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as slip lining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscaping the area. Collapse of the Campus Drive line risks vehicle access to the Administration building and the historic Camperdown trees in the area.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer lines on Campus Drive and Blake Ave.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project reconditions these pipes and manholes to extend their useful life. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slipline the 6” line from Campus Drive to Blake Avenue (approx. 270’).
- Slipline the 12” line from Blake Avenue and Sweet Avenue (approx. 690’).
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.
There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- **Additional Work (Preliminary Engineering Assessment):**
  - 50% design documents.
- **Project documents:**
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, confined space work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $17,380 and it will also include conducting a CCTV inspection and jetting.

**Additional Information:**

*Figure 1. Map of sanitary sewer system in area with relevant work.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $226,281.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manhole are not damaged to a point that complete replacement is required (project will be rescoped and repriced if replacement is necessary), (ii) a pre/post CCTV inspection will be required, (iii) bypass pumping is required to keep campus core functions operable and it is included in the scope, (iv) traffic control and possible re-route will be required, (v) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (vi) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) the replacement of pipes or manholes, (ii) the restoration of vegetation (owner is University), and (iii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Establishing a reliable sanitary sewer service is critical to public health and to achieving functional campus operations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $222,200.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/7-057

PROJECT NAME: Stormwater Line Recondition on Campus Drive and Blake Avenue

UTILITY SYSTEM: Storm Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (pipes are well beyond their life expectancy).

Background: These stormwater lines serve the areas by Ridenbaugh Hall, the Nicolls Building, the Graduate Art Studio, and the Hampton Music Building. The pipes are over 100 years old and well beyond life expectancy. As they age, the likelihood of collapse increases, risking potential flooding in the area until it can be repaired.

By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area. Collapse of the Campus Drive stormwater line risks vehicle access to the Administration building and the historic Camperdown trees in the area.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing stormwater lines on Campus Drive and Blake Avenue.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project reconditions these pipes and manholes mentioned above to extend their useful life. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Recondition the 6” line from Campus Drive to Blake Avenue (approx. 400’).
- Recondition the 6” line from the Hampton Music Building to the intersection between Blake Avenue and Sweet Avenue (approx. 100’).
- Replace one manhole at the Hampton Music Building.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

A detailed safety plan covering open pit work, confined space work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $18,480.

**Additional Information:**

![Figure 2. Map of stormwater system in affected area.](image-url)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $262,127.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manholes are not damaged to a point that complete replacement is required, and stormwater lines between the Administration Building and the Niccolls Building along Campus Drive will not need to be reconditioned or replaced (project will be rescoped and repriced as necessary), (ii) a pre/post CCTV inspection will be required, (iii) traffic control and possible re-route will be required, (iv) underground construction conditions will be reasonably free of obstruction, conflict, and hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) reconditioning of pipes near the Niccolls Building, (ii) replacement of pipes or manholes, (iii) restoration of vegetation (owner is University), and (iv) disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improved stormwater systems will help maintain stormwater quantity and quality control. Improvement of stormwater systems is required for safety and resiliency of the core campus.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $257,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-040

PROJECT NAME: Backflow Assemblies Replacement at the South Hill Apartments

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issues in confined spaces). The impact associated with resiliency is high (extended outage and building shutdown).
The likelihood of these events is high (backflows cannot be accessed).

Background: The backflow assemblies serving each building at the South Hill Apartments complex are located in crawlspaces with very limited access. In nine locations the assemblies are far from the access point and create severe safety risks for workers. Due to the safety hazard these assemblies can’t be tested as required by regulations and risk loss of water service to the occupants until the buildings are compliant. Access is needed to each assembly from outside the building instead of the crawlspace. The meters for each building are aged and no longer functional. They need to be replaced and located with the assemblies for accurate billing.

Objectives: The main objectives of this Capital Improvement are:
- Eliminate unsafe work conditions by moving backflow assemblies out of crawlspaces.
- Increase occupant safety by making presently inaccessible backflow assemblies maintainable.
- Bring the South Hill Apartments up to code.
- Restore metering for auxiliaries billing.

Scope of Work: The scope of work of this Capital Improvement is:
- Inspect and replace all backflow assemblies as needed.
- Move 9 backflow assemblies to accessible locations.
- Install 30 new backflow prevention assemblies and domestic water flow meters for each building.
- Construct 18 new enclosures outside the buildings for each assembly.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.
**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan for work in confined spaces will be developed.

The Concessionaire will coordinate with the University and the building’s occupants for any shutdowns.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $97,460.

**Additional Information:**

![Figure 1. Map of apartment complex with access locations and backflow assemblies marked.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,336,636.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) new backflow prevention assemblies and metering in serviceable configuration, and (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) the repair or replacement of building level pipes (owner is University), and (ii) the restoration of vegetation (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: This Capital Improvement will enhance the public health safety of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,312,300.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-039

PROJECT NAME: Domestic Water Vault Improvements at the Sheep Center

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **high** (safety risk to the operators). The impact associated with resiliency is **high** (potential loss of service to the Sheep Center).

The likelihood of these events is **high**.

Background: The domestic water service to the Sheep Center and the Soil Stewards Student Farm north of campus comes in at a vault near Well #3. The vault is unfinished and has a shed constructed over it. The vault floods seasonally, submerging the backflow prevention valves, meter, and other equipment needed to supply the Sheep Center with water. Though only 10 years old, equipment is already in poor condition and pipes are leaking due to these conditions.

Objectives: The main objectives of this Capital Improvement are:

- Reconfigure the domestic water vault to extend the useful life of the equipment.
- Mitigate an unsafe condition for operators and resiliency of service to the Sheep Center due to difficulty of access.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project runs power to the vault from Well #3, relocates equipment out of the vault, and improves the overall condition of the shed to extend its useful life. Installing insulation and heat will help minimize the mold growing on the interior walls of the shed.

The scope of work of this Capital Improvement is:

- Natural surface demolition and excavation.
- Run power to vault.
- Relocate water flow meter and backflow prevention station, replumb.
- Install finishes to shed including flooring, insulation, lighting, and electric heat.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

While the scope of this project includes running power to the shed, significant cost savings could be realized by connecting to the Avista Utilities high voltage distribution line nearby instead. The Additional Work includes coordination with the University and Avista Utilities to explore this alternative.
There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based point, which originated prior to Closing.

A detailed safety plan covering open pit work, an excavated site, and water service rerouting will be developed. Documentation including the disinfection and backflow prevention testing, and an official notice of return to service will be provided.

The Concessionaire will coordinate with the University with regard to the Sheep Center and the Soil Stewards Student Farm for shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $27,390 and it will include coordination with the University and Avista Utilities to explore the alternative of connecting to Avista Utilities’ distribution line instead of supplying power from Well #3.

**Additional Information:**

*Figure 1. Interior vault at shed is in poor condition.*

*Figure 2. Leaks from pipe less than 10 years old.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $386,495.

(B) Forecasted annual operations and maintenance costs: +$250. Increase associated with annual maintenance for new structure and heater.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the restoration of vegetation (owner is University), and (ii) the temporary supply of domestic water during shutdown.

(E) Proposed schedule: Dates may vary.

| EPC (Dev.) | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     |
| EPC (Const.) | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     |
| EPC (Commiss.) | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     | ☐     |

(F) Impact on Sustainability: This Capital Improvement will increase the electrical use due to additional heating. Metered water use, and an effective backflow prevention will protect the campus community.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $380,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: +$200, electricity. Increase is associated with the use of the seasonal electric heater.
PROJECT CODE: 24/3-066

PROJECT NAME: Microgrid Expansion, Phase I

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low. The impact associated with resiliency is high (loss of chilled water production to campus).

The likelihood of these events is medium (no backup power to the North Campus Chiller Plant).

Background: The University began the process of installing steam turbines at the Energy Plant in 2018, with the project nearing completion in 2022. This has been a major success for the University, with large energy savings and reduction in greenhouse gases that the University will benefit from for years to come. The turbines however are only the beginning of the broader vision of energy independence on campus. To further that vision, the turbine project also created a microgrid at the Energy Plant, the University’s first, to act as the foundation of a transformed campus electric grid.

Microgrids are groups of loads and distributed energy resources which can act independently of the utility grid. When power from the grid goes down, the microgrid is capable of islanding itself to continue operations using its own electricity generation. Once power is restored the microgrid then reconnects to the grid. This improves reliability and resilience of the connected loads, with power outages often going unnoticed. The Energy Plant is currently the only building on campus with this ability.

As the microgrid on campus grows, more buildings will be connected and supported. The first step is to connect the North Campus Chiller Plant (NCCP), located at the Energy Plant, to the microgrid. The NCCP has a different electrical service than the rest of the Energy Plant and is not protected by the microgrid during power outages. An extended power outage risks a complete stop to chilled water production on campus, risking damage to critical equipment such as servers (while equipment may have backup power, they do not have backup cooling). Some loads critical to Energy Plant operations, such as air compressors for pneumatic controls and pumps are fed from the NCCP instead of the Energy Plant itself, which risks a complete plant shutdown regardless of the microgrid. Connecting the NCCP to the microgrid will reduce this risk. In addition, since the Living Learning Communities (LLC) are connected to the NCCP, this project has the benefit of supporting the dorms’ entire electric load during power outages.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:
- Mitigate a severe resiliency issue to chilled water production.
- Expand campus microgrid to improve turbine performance.
- Support student living spaces during power outages.

**Scope of Work:** This project expands the microgrid in the first of what will be many phases, growing to include the NCCP. The scope of work of this Capital Improvement is:

- Connect the NCCP electrical service to the Energy Plant’s microgrid.
- Install necessary automated primary switching and relays in the campus ring bus.
- Repair any damaged items in the electrical vaults accessed.
- Repair any areas of water infiltration in electrical vault.
- Furnish and install one (1) SEL-735 meter for the NCCP.
- Furnish and install one (1) SEL-735 for primary electric meter at the LLC.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the Additional Work stage.

The Concessionaire will coordinate with the University and the LLC occupants for a potential electrical shutdown. An electrical shutdown of Energy Plant may be necessary, with subsequent impact to steam, chilled water, and compressed air production.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $97,680 and will also include a 30-day power study on the NCCP and the LLC to evaluate impacts to the microgrid.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,506,795.

(B) Forecasted annual operations and maintenance costs: +$2,000. The upgraded switches, meters, and other equipment will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (ii) a replacement of the NCCP electrical panel will not be necessary, and (iii) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) a temporary electric generator to support buildings during shutdown, (ii) the repair or replacement of the main distribution panel of the NCCP, and (iii) the repair or replacement of the NCCP transformer.

Figure 1. The NCCP is not connected to the microgrid.
(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improved through the mitigation of potential damages and a potential reduction in natural gas use during power outages by utilizing wood.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,480,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/1-012

PROJECT NAME: Steam and Condensate Distribution Upgrades

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues associated with steam pipe rupture). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium (piping is beyond useful life).

Background: The steam and condensate piping in the tunnel network is critical for distributing heat to campus buildings safely. The lines by the Idaho Student Union Building (ISUB) are over 95 years old, threaded, and beginning to rust, posing a high safety risk to operators and pedestrians if the pipe ruptures. Rupture poses an extreme safety risk to pedestrians and operators from exposure to high pressure, high temperature steam, reduced steam service from pressure loss to all buildings, decreased condensate return rate, and severe damage to all utilities in the tunnel until the pipe can be isolated. Years of water damage are eroding the outside of the pipe, increasing the likelihood of failure. The lines on 6th St are at least 59 years old and too small to meet current or future steam loads. The 6th Street line will need to be upgraded before additional buildings such as the Kibbie Dome or the Hartung Theatre are connected to the network. Additional isolation valves will improve resiliency and add the ability to redirect steam to buildings in the event of a failure.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade major steam lines to support campus growth.
- Mitigate severe resiliency issues associated with aging systems.
- Improve overall resiliency by adding isolation valves at key locations.
- Address safety concerns associated with the physical conditions of current assets.

Scope of Work: This project upsizes major sections of the system and upgrades valves and expansion joints. Most of these systems are beyond or approaching their end of serviceable life. While all steam and condensate piping on campus will need to be replaced within the next 50 years, along with their associated valves, supports, and insulation, this project addresses the most vulnerable and high risk sections. The scope of work of this Capital Improvement is:

- Replace 8” steam and 4” condensate lines from Idaho Avenue to University Avenue (approx. 325’).
- Upgrade 6” steam and 5” condensate lines on 6th Street from the Central Mall to the Wallace Residence Center to 10” and 6” (approx. 670’).
- Upgrade 5" condensate line on 6th Street from Line Street to the Central Mall to 6" (approx. 425').
- Replace aged expansion joints.
- Replace condensate receivers and pumps (x2).
- Install additional condensate sampling points.
- Install double block and bleed isolation valves at key locations.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended that UI ITS identify and remove any abandoned and damaged IT/Telecom lines in construction areas.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
  - Steam and condensate flow model.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed including the protection of live utilities, the provision of fencing to prevent unauthorized access to construction areas, and confined space work. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University for the steam and condensate pipe construction during the summer season to reduce impact to campus.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $57,200 and will also include (i) a steam and condensate distribution system walkthrough to obtain exact quantities of valves, sampling points, and expansion joints, (ii) the development of a steam and condensate system flow model to ensure pipe sizing is adequate for current and future growth (including the collection and analysis of building steam load data to ensure pipe sizing is adequate).
Additional Information:

Figure 1. 6th Street steam and condensate pipes to upgrade.

Figure 2. Steam and condensate pipes to replace by ISUB.

Figure 3. 95-year old threaded pipes pose a safety hazard. Pipe is rusting (right).
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $6,414,216.

(B) Forecasted annual operations and maintenance costs: +$9,000. The increase is associated with additional isolation valves and equipment required maintenance.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 30 expansion joints (approx. 10% of the system) will be replaced, 5 condensate sampling points will be added, and 10 additional isolation valves will be added, (ii) the Additional Work may identify additional needs to be presented in a future Capital Improvement, (iii) proposed pipe sizing is adequate, but may change depending on the results of the flow study, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the repair or replacement of tunnel or other utilities, and (ii) the demolition of abandoned utilities identified.

(E) Proposed schedule: EPC (Const.) extends through April 2025. EPC (Commiss.) occurs in May 2025. Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $6,314,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/1-010

PROJECT NAME: Wood Boiler Capital Renewal, Phase I

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and wood boiler shutdown).

The likelihood of these events is medium (equipment is aged and in poor condition).

Background: The wood-fueled boiler provides significant economic and environmental benefits to the University, however, at 35 years old, many of the subsystems are in critical need of replacement, including the woodchip grate system, refractory, internal components, and fans. Several single points of failure, or long repair time, issues exist within these systems. Most of these systems are original equipment, well beyond serviceable life, and damaged from years of heavy use. Improvements will increase efficiency, extend the useful life of the boiler, reduce Supply Costs to the University by decreasing boiler downtime, and increase the resiliency of this system, a critical aspect to achieve Performance Standards and associated resiliency goals of the University. The alternative to these upgrades would be either a complete replacement of the boiler and associated fuel and ash handling systems, switch to natural gas fuel at significantly higher Supply costs, or transition away from central steam heating to campus.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the wood boiler to extend its useful service life.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Mitigate single point of failure risks by keeping N+1 critical spares on hand.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project upgrades the boiler subsystems including the woodchip grate system, refractory, internal components, and fans. Each of the subsystems addressed is critical to the operation of the wood fuel boiler. The scope of work of this Capital Improvement is:

- Recondition throat.
- Firebox:
  - Replace step grates.
• Improve failing grate supports, linkages, and hydraulic ram systems.
• Replace all spray on refractory.
- Replace ash hopper firebricks with refractory.
- Boiler bank:
  • Non-destructive testing of boiler tubes and retube as needed (20% retube assumed).
  • Rebuild steam drum diverter, mud drum diffusers, and water column.
- Replace soot blower lances (x8), gear trains, and soot blower valves.
- ID fan – replace rotor.
- FD fan – replace with upsized unit.
- Under-fire fan – replace unit.
- Over-fire fan – replace unit.
- Replace all critical valves.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
  • Report documenting results of non-destructive boiler tube tests.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

The Concessionaire will coordinate with the University the project schedule to occur during the lowest steam use to reduce natural gas costs during shutdown. Wood boiler shutdown can be done without an impact to steam customers.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $260,480 and will also include non-destructive testing on the boiler tubes.
Additional Information:

![Figure 1. Exposed firebrick in boiler.](image)

![Figure 2. Refractory needs to be replaced.](image)

![Figure 2. Refractory needs to be replaced to protect boiler structure and operators.](image)

![Figure 4. Condition of boiler tubes is unknown.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,593,877.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 20% of boiler tubes will need to be replaced, dependent on results from the non-destructive testing, and (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the repair or replacement of the ash conveyance system, (ii) the repair or replacement of the air preheater,
(iii) the repair or replacement of the economizer, and (iv) the replacement of feedwater or any steam piping.

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.

(F) Impact on Sustainability: Improved wood boiler efficiency reduces natural gas use during peak loads.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,549,800.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$15,000, wood fuel, natural gas, electricity. The decrease is associated with an improved efficiency of the boiler and subsystems. It is assumed a 1% decrease in wood boiler downtime and improved operations based on FY22 data.
SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: Long term exposure to heat, vibration, and other stresses slowly break down the internal components and insulation of transformers. Eventually these stresses create a short, resulting in damage and breakdown of the transformer. As the transformer ages the likelihood of failure increases, rising significantly once it reaches its end of life.

These transformers are beyond their useful life at over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. The transformers are located within the building, also posing a significant risk to the building envelope if they fail.

There is no spare transformer if there is a failure. Given continued market disruptions and very long lead times (over 1 year), a failure here will likely result in an extended building shutdown with potential impacts to other buildings. Given that these transformers support a major server for campus, a failure would result in disruptions to the University’s operations, research, and network across campus. The main building switch gear is the same age and should be upgraded at the same time to remain safe and resilient. Main switch gear work is beyond the contractual demarcation point and is the University’s responsibility.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to the point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
- Maintain Performance Standard Part V.3, 4, 6, and 8 and minimize KPI Events.
**Scope of Work:** This project installs a new pad mount transformer on the exterior of the building, replaces the feeders from the nearest primary switch to the building main switchgear, and upgrades the metering associated with it. The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot-style transformers currently installed on the interior of the building. Thermograph and oil test. Establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalized to new transformer. Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to SEL-735. Replace as necessary.
- **Vault work:**
  - Repair damaged items in electrical vaults accessed for transformer replacements.
  - Repair any areas of water infiltration in electrical vault, provide water management system.
  - Thermograph vault components, establish baseline records.

Beyond the Concessionaire's Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building's main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned for public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the occupants and the University for the electrical shutdown of the building, including UI ITS for the server shutdown. Other buildings may be impacted as well.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $80,300 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.
Additional Information:

![Figure 1. Aged transformer and electrical equipment in Administration South Building basement.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $825,018.

(B) Forecasted annual operations and maintenance costs: +$750. The upgraded electric meter and new vault sump will require additional O&M. The new transformer will allow for new O&M practices to be implemented, including oil sampling.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the new transformer is likely to be smaller and more efficient, depending on the results of the power study, (ii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) VFI switches and appurtenances, SEL-751 relay, switch operators, and microgrid infrastructure, (ii) temporary electric generator to support building during shutdown, (iii) the disconnection/reconnection of impacted irrigation lines (owner is University), and (iv) the restoration of vegetation (owner is University).
(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from September 2025 to January 2026. EPC (Commiss.) occurs in February 2026. Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $790,900.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible.
PROJECT CODE: 24/3-030

PROJECT NAME: College of Natural Resources Building
Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: Long term exposure to heat, vibration, and other stresses slowly break down the internal components and insulation of transformers. Eventually these stresses create a short, resulting in damage and breakdown of the transformer. As the transformer ages the likelihood of failure increases, rising significantly once it reaches its end of life.

These transformers are beyond their useful life at over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. These transformers are located within the building, also posing a significant risk to the building envelope if they fail.

There is no spare transformer if there is a failure. Given continued market disruptions and very long lead times (over 1 year), a failure here will likely result in an extended building shutdown with potential impacts to other buildings. The main building switch gear is the same age and should be upgraded at the same time to remain safe and resilient. Main switch gear work is beyond the contractual demarcation point and is the University’s responsibility.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to the point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
Scope of Work: This project installs a new pad mount transformer on the exterior of the building, replaces the feeders from the nearest primary switch to the building main switchgear, and upgrades the metering associated with it. The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot-style transformers currently installed on the interior of the building. Thermograph and oil test to establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalizer to new transformer. Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to SEL-735. Replace as necessary.
- Vault work:
  - Repair damaged items in electrical vaults accessed for transformer replacements.
  - Repair any areas of water infiltration in electrical vault, provide water management system.
  - Thermograph vault components, establish baseline records.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned for the public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the occupants and the University for the electrical shutdown of the building. Other buildings may be impacted as well.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $80,300 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $938,080.

(B) Forecasted annual operations and maintenance costs: +$750. The upgraded electric meter and new vault sump will require additional O&M. The new transformer will allow for new O&M practices to be implemented, including oil sampling.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the new transformer will likely be smaller and more efficient depending on the results of the power study, (ii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) VFI switches or appurtenances, SEL-751 relay, switch operators, microgrid infrastructure, (ii) temporary electric generator to support building during shutdown, (iii) the disconnection/reconnection of the impacted irrigation lines (owner is University), and...
(iv) the restoration of vegetation (owner is University).

(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from September 2025 to January 2026. EPC (Commiss.) occurs in February 2026. Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $921,800

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,200, electricity. It is assumed a 1% improvement in electrical efficiency based on historic meter data.
SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown)

The likelihood of these events is medium.

Background: Long term exposure to heat, vibration, and other stresses slowly break down the internal components and insulation of transformers. Eventually these stresses create a short, resulting in damage and breakdown of the transformer. As the transformer ages the likelihood of failure increases, rising significantly once it reaches its end of life.

These transformers are beyond their useful life at over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. The transformers are located within the building, also posing a significant risk to the building envelope if they fail.

There is no spare transformer if there is a failure. Given continued market disruptions and very long lead times (over 1 year), a failure here will likely result in an extended building shutdown with potential impacts to other buildings. The main building switch gear is the same age and should be upgraded at the same time to remain safe and resilient. Main switch gear work is beyond the contractual demarcation point and is the University’s responsibility.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to the point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
- Maintain Performance Standard Part V.3, 4, 6, and 8 and minimize KPI Events.
Scope of Work: This project installs a new pad mount transformer on the exterior of the building, replaces the feeders from the nearest primary switch to the building main switchgear, and upgrades the metering associated with it. The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot-style transformers currently installed on the interior of the building. Thermograph and oil test to establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalizer to new transformer. Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Vault work:
  • Repair damaged items in electrical vaults accessed for transformer replacements.
  • Repair any areas of water infiltration in electrical vault, provide water management system.
  • Thermograph vault components, establish baseline records.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned for public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the occupants and the University for the electrical shutdown of the building. Other buildings may be impacted as well.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $80,300 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $808,226.

(B) Forecasted annual operations and maintenance costs: +$750. The upgraded electric meter and new vault sump will require additional O&M. The new transformer will allow for new O&M practices to be implemented, including oil sampling.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the new transformer will likely be smaller and more efficient depending on the results of the power study, (ii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) VFI switches and appurtenances,
SEL-751 relay, switch operators, and microgrid infrastructure, (ii) temporary electric generator to support building during shutdown, (iii) the disconnection/reconnection of impacted irrigation lines (owner is University), and (iv) the restoration of vegetation (owner is University).

(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from September 2025 to January 2026. EPC (Commiss.) occurs in February 2026. Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $794,200.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$400, electricity.
PROJECT CODE: 24/3-032

PROJECT NAME: Theophilus Tower Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium (equipment is aged).

### Background:

Long term exposure to heat, vibration, and other stresses slowly break down the internal components and insulation of transformers. Eventually these stresses create a short, resulting in damage and breakdown of the transformer. As the transformer ages the likelihood of failure increases, rising significantly once it reaches its end of life.

These transformers are beyond their useful life at over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. The transformers are located within the building, also posing a significant risk to the building envelope if they fail.

There is no spare transformer if there is a failure at the Swimming Center Building. Given continued market disruptions and very long lead times (over 1 year), a failure here will likely result in an extended building shutdown with potential impacts to other buildings. The main building switch gear is the same age and should be upgraded at the same time to remain safe and resilient. Main switch gear work is beyond the contractual demarcation point and is the University’s responsibility.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

### Objectives:
The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to the point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
- Maintain Performance Standard Part V.3, 4, 6, and 8 and minimize KPI Events.

### Scope of Work:
This project installs a new pad mount transformer on the exterior of the building, replaces the feeders from the nearest primary switch to the building main switchgear, and upgrades the metering associated with
it. The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot style transformers currently installed on the interior of the building. Thermograph and oil test to establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalizer to new transformer. Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam and condensate, and domestic water meters to SEL-735. Replace as necessary.
- Vault work:
  • Repair damaged items in electrical vaults accessed for transformer replacements.
  • Repair any areas of water infiltration in electrical vault, provide water management system.
  • Thermograph vault components to establish baseline records.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned for public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the occupants and the University for the electrical shutdown of the building. Other buildings may be impacted as well.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $80,300 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.
Additional Information:

![Aging transformers and electrical equipment below the swimming pool.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $825,018.

(B) Forecasted annual operations and maintenance costs: +$750. The upgraded electric meter and new vault sump will require additional O&M. The new transformer will allow for new O&M practices to be implemented, including oil sampling.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the new transformer will likely be smaller and more efficient depending on the results of the power study, (ii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) VFI switches and appurtenances, SEL-751 relay, switch operators, and microgrid infrastructure, (ii) temporary electric generator to support building during shutdown, (iii) the disconnection/reconnection of impacted irrigation lines (owner is University), and (iv) the restoration of vegetation (owner is University).
(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from September 2025 to January 2026. EPC (Commiss.) occurs in February 2026. Dates may vary.

| Additional Work | 03/23 | 04/23 | 05/23 | 06/23 | 07/23 | 08/23 | 09/23 | 10/23 | 11/23 | 12/23 | 01/24 | 02/24 | 03/24 | 04/24 | 05/24 | 06/24 | 07/24 | 08/24 | 09/24 | 10/24 | 11/24 | 12/24 | 01/25 |
|-----------------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| EPC (Dev.)      |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
| EPC (Procur.)   |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
| EPC (Const.)    |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
| EPC (Commiss.)  |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $810,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$250, electricity. It is assumed a 1% improvement in electrical efficiency based on historic meter data.
**PROJECT CODE:** 24/3-035  
**PROJECT NAME:** West Farm Primary Distribution Improvements  
**UTILITY SYSTEM:** Electric  
**DATE SUBMITTED:** February 1, 2023  

**SAFETY AND RESILIENCY ASSESSMENT:**  
The impact associated with safety is medium (degraded overhead, electrical safety concerns). The impact associated with resiliency is high (extended outage and building shutdown). The likelihood of these events is high.

**Background:** Electric loads at the West Farm are met with an overhead 4160V electrical distribution system. This system is well beyond its useful life and failures are common, with two occurring in FY21. Currently the West Farm received power from only one overhead line, creating a single point of failure that can impact multiple buildings. This project is required to eliminate unplanned outages and meet Performance Standards and Availability KPIs.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:
- Improve the safety and reliability of the Primary Electrical Distribution system at the West Farm.
- Eliminate aging overhead primary distribution infrastructure.
- Maintain Performance Standard Part V.6, 7, and 8 and mitigate negative impact to Availability KPIs.
- Established baseline condition of primary electrical components.

**Scope of Work:** This project removes the overhead system, moves it underground, and connects it to the campus loop. Aged pole mounted transformers would be replaced with pad mount transformers, increasing resiliency, and increasing response time. This upgrade will improve efficiency, safety, and eliminate single points of failure to reduce disruptions to West Farm operations. The scope of work of this Capital Improvement is:
- Remove overhead existing 4160V distribution including poles, transformers, conductors.
- Install new pad mount transformers, vaults, sectionalizing cabinets, duct banks, conduits, and wires for connection to the existing 13.2kV campus primary.
- Install underground 13.2kV campus primary encased in concrete at point of utility service.
- Provide secondary feeders from pad-mounted transformers to existing building electrical services and reconnect.
- Provide new SEL 735 meters on all building electrical services. Commission meters and establish data management.
Beyond the Concessionaire's Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building's main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
  - Baseline oil samples and thermography.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit and electrical work will be developed.

The Concessionaire will coordinate with the University and Avista Utilities for electrical shutdowns.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $143,550 and will also include power studies on each building to right size transformers.

**Additional Information:**

*Figure 1. Aging poles, cross bars and mount transformers that pose failure risks.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $10,270,321.

(B) Forecasted annual operations and maintenance costs: +$10,000. Pad mount transformers, vaults, and meters will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) estimated lead time for equipment is 52 weeks, (ii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iv) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) alternative power generation, such as portable generators to provide power to buildings during construction, (ii) restoration of vegetation (owner is University), (iii) modification of electrical transmission lines and equipment on Avista Utilities’ lines (owner is Avista Utilities), and (iv) replacement of building main distribution panels (owner is University).

(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from August 2025 to January 2026. EPC (Commiss.) occurs in January 2026. Dates may vary.
(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $10,095,800.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. Minor efficiency increase from higher efficiency transformers and reduced distribution losses.
PROJECT CODE: 24/4-042

PROJECT NAME: Backflow Assemblies Replacement at the McClure Hall

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCE ASSESSMENT:

The impact associated with safety is **medium** (life safety issues due to water quality). The impact associated with resiliency is **high** (extended outage and building shutdown).

The likelihood of these events is **medium** (single points of failure).

---

**Background:** The backflow assemblies serving McClure Hall are not up to code as they lack redundant valves. These assemblies are aged and beginning to fail. Currently water service must be shut off to service the valves, disrupting the building’s occupants. Without redundant backflow devices the building will lose domestic water service if they fail, posing a life safety risk.

**Objectives:** The main objectives of this Capital Improvement are:

- Replace the McClure Hall backflow assemblies to improve resiliency.
- Eliminate single points of failure.
- Bring the McClure Hall up to code.
- Change assets in order to achieve the required O&M practices in a safe manner.

**Scope of Work:** This project replaces both potable and non-potable assemblies with dual-valve systems. The scope of work of this Capital Improvement is:

- Demo and remove existing 4” backflow preventer for potable system.
- Install new 4” dual-valve backflow preventer.
- Demo and remove existing 3” backflow preventer for non-potable system.
- Install new 3” dual-valve backflow preventer.
- Replace two flow meters.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended the removal of any unnecessary bypasses to reduce O&M Costs on the University’s side of the Line of Demarcation.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
• O&M manuals.
• Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan including standard domestic water protocols will be developed.

The Concessionaire will coordinate with the University and the building’s occupants for shutdowns.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $9,020.

Additional Information:

Figure 1. Backflow assemblies in the McClure Hall are not up to code.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $100,709.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) isolation valves are in operable condition, (ii) there will be sufficient clearance for additional pipework and meters, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes the replacement of isolation valves.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $99,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/2-021

PROJECT NAME: Chilled Water Distribution Upgrades, Phase I

UTILITY SYSTEM: Chilled Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (flooding risk). The impact associated with resiliency is medium (extended outage and building shutdown).

The likelihood of these events is high (multiple joints have failed in the past).

**Background:** Chilled water is distributed through miles of direct buried piping to campus buildings for cooling needs. Since the South Campus Chilled Plant (SCCP) was constructed the operating pressure of the distribution network has increased due to the height of the Thermal Energy Storage Tank. While this improves overall performance, the increased pressure has put additional stress on pre-existing pipes that were not designed for it. Design deficiencies include pipe and fitting selection not suitable for pressure levels and inadequate thrust blocks to restrict pipe movement. Multiple joints in the system have failed because of this in recent years, causing unplanned outages and flooding until repaired. Upgrades are needed across the system to improve resiliency and prevent loss of service to critical cooling loads such as research and servers. A chilled water model is needed to identify the highest pressures in the system and most likely points of failure, further safety and resiliency risks, and support campus growth. Remediation of the inadequate piping systems will likely require multiple projects.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- Address design deficiencies in the chilled water distribution network.
- Mitigate resiliency issues associated with inadequate piping construction details.
- Address safety concerns associated with the physical conditions of current assets.

**Scope of Work:** This project provides a solution for the highest risk joints in the existing system before failure risks unplanned outages. This project’s Additional Work will determine the construction plan and extent of projects required. The scope of work of this Capital Improvement is:

- Replace glued joints with flanged joints (x10).
- Provide excavation, demolition, bedding, backfill, surface restoration, etc.
- Model the Chilled Water system to identify deficiencies, restrictions, and support future growth.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.
**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
  - Chilled water model.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A construction safety plan will be developed including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University for any chilled water shutdown to buildings as needed and for potential road and walkway closures.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $248,050 and will also include (i) the development of a chilled water system flow model, and (ii) the development of a construction plan to repair at-risk joints.

**Additional Information:**

*Figure 1. Joint failed at the North Campus Chiller Plant in January 2021.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $965,710.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) as-builts of previous chilled water line construction projects will be available, (ii) the replacement of ten (10) 12” joints in hardscape and softscape areas will be performed, (iii) the Additional Work and flow study may identify additional needs to be presented in a future Capital Improvement, (iv) necessary pipe sizing may change depending on the flow study, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extenders through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.
(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $949,300.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-043

PROJECT NAME: Domestic Water Line Replacement on University Avenue

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues, risk to firefighting capability). The impact associated with resiliency is high (a future failure will impact core campus).

The likelihood of these events is medium (line is aged and has failed in the past).

Background: This domestic water line serves multiple campus buildings and allows for sections of the distribution system to be isolated as needed. At almost 100 years old, the line is well beyond its life expectancy and has failed multiple times in the past. Loss of this line creates fire and flooding risks as well as loss of services to connected customers.

Objectives: The main objectives of this Capital Improvement are:

- Replace the aged domestic water line on University Avenue from Ash Street to the Memorial Gym.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Provide for future needs of campus.

Scope of Work: This project replaces the line and upsizes it to provide for campus growth. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Abandon existing 6" piping modifications.
- Install new 8" DR18 C900 PVC water line and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
• Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and the water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $101,640.

**Additional Information:**

![Figure 1. Map of domestic water system in affected area.](image-url)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,358,484.

(B) Forecasted annual operations and maintenance costs: +$0.
(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the restoration of vegetation (owner is University), and (ii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,335,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-044

PROJECT NAME: Domestic Water Line Replacement to the Energy Plant

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues, health risk to building occupants due to dead-end line). The impact associated with resiliency is high (extended steam, chilled water, and turbine shutdown).

The likelihood of these events is medium (line is aged).

Background: The Energy Plant provides steam, chilled water, and compressed air to core campus buildings and is critical to campus operations. While the steam plant has a high condensate return rate back from campus, it still requires domestic water make-up for to the steam system as well as equipment such as cooling towers. The domestic water line to the building is almost 50 years beyond its useful life and needs to be replaced before collapse. Failure of this line would result in a complete shutdown of most utilities to campus buildings. Additionally, two water lines nearby are dead-ends that pose a health safety issue due to stagnant water.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve the Energy Plant’s resiliency by replacing the domestic water service line.
- Improve the system’s water quality by capping dead-end lines.
- Address health concerns associated with the physical conditions of the current assets.

Scope of Work: This project removes the aged domestic water line to the Energy Plant and caps the two dead-end lines. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Remove existing 8” piping modifications.
- Install new 8” DR18 C900 PVC Water Line and all appurtenances.
- Cap dead-end line at the Energy Plant’s service connection.
- Cap dead-end line on the south side of 6th Street and Line Street.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.
Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and the water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University and the City of Moscow for the closing of the intersection and a potential shutdown of the Energy Plant.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $14,740.

Additional Information:

Figure 1. Map of domestic water system in affected area.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $224,242.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the restoration of vegetation (owner is University), and (ii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $220,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-045

PROJECT NAME: Domestic Water Line Replacement to the Agricultural Science Building

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (future failure will impact building occupants and research).

The likelihood of these events is medium (line has reached its end of life).

Background: This domestic water line serves the Agriculture Science Building. At 50 years old, this line has reached its expected useful life. The line has failed multiple times in the past and leaks. Failure would result in a loss of service to the building, creating a fire and flooding risk, and potentially impacting research.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Replace domestic water line to the building.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project removes the old water line mentioned above and installs a new one. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Remove existing 4” piping modifications.
- Install new 4” DR18 C900 PVC water line and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and the water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $19,030.

Additional Information:

Figure 1. Map of the Domestic Water system in area with proposed work.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $273,576.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the restoration of vegetation (owner is University), and (ii) disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $268,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-046

PROJECT NAME: Domestic Water Line Replacement to the Food Research Center

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium (line is well beyond its useful life).

Background: The domestic water service line to the Food Research Center supplies the facility with potable water for occupants, fire suppression, and research applications. At 78 years old, this line is well beyond its serviceable life and in need of replacement before it collapses. Its flow path is also sub-optimal, as repairs and modifications were made historically that sacrificed long term efficiency for building uptime during construction.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Replace water service line to the Food Research Center.
- Mitigate resiliency issues associated with systems well beyond their serviceable life.
- Improve O&M practices for a safe and reliable operation.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: This project replaces the line mentioned above and optimizes flow to the building by removing unnecessary pipe, valves, and fittings. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Remove existing 6" piping modifications (approx. 125').
- Install new 6" DR18 C900 PVC water line and all appurtenances (approx. 125').
- Remove dead-end pipe and valves.
- Install new three-way valve.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and the water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $20,790.

**Additional Information:**

---

*Figure 1. Map of the Domestic Water system in affected area.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $291,515.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the restoration of vegetation (owner is University), and (ii) disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $286,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-047

PROJECT NAME: Domestic Water Line Replacement on Blake Avenue

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (health risks to building occupants). The impact associated with resiliency is high (a failure will impact building occupants).

The likelihood of these events is medium.

Background: These domestic water main lines serve as a redundant method to supply water to campus from the I Tank, while also serving the Greek Houses along Nez Perce Drive, Targhee Hall, and the South Hill Apartments. At over 70 years old, these lines are well beyond their expected useful life and need to be replaced before collapse. Failure of these lines risks the ability for the I Tank to supply campus with water and loss of service to connected buildings.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Replace the domestic water main line serving the Greek Houses and the South Hill Apartments.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project replaces the existing lines mentioned above and upgrades their size to keep up with campus growth. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Remove existing 4" piping modifications to Walenta Drive (approx. 1600').
- Remove existing 6" piping modifications to South Hill Apartments (approx. 750').
- Install new 6" DR18 C900 PVC water line and all appurtenances.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.

The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $200,860.

Additional Information:

Figure 1. Map of Domestic Water System in area with proposed work.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,653,907.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) proposed pipe sizes are contingent on the hydraulic needs of the Domestic Water system, to be confirmed by the University after project DPW21-254 is completed, (ii) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the repair or replacement of service lines to the Greek Houses or the Targhee Hall, (ii) the repair, replacement, or installation of domestic water meters, (iii) the restoration of vegetation (owner is University), and (iv) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,603,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-052

PROJECT NAME: Sanitary Sewer Line Recondition at the West Farm

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium (pipes are beyond life expectancy).

Background: These lines provide sanitary sewer service to the Meats Lab, Beef Residence, Farm Ops, and other buildings on the West Farm. They are well beyond their life expectancy at over 60 years old and need to be addressed before collapse. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as slip lining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscaping.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer lines serving the West Farm.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project sliplines the existing pipes before they risk collapse and installs an additional manhole to allow for access for maintenance. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Recondition the 4” lines (approx. 950’).
- Repair one manhole at intersection of Farm Road and 6th Street.
- Install one new manhole at Farm Storage Building #1.
- Construction supervision.
- Bedding and backfill.
- Asphalt and natural surface restoration.
- CCTV inspect and jet other connecting lines.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University and the buildings' occupants for the sanitary sewer shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $17,930.

**Additional Information:**

![Figure 1. Sanitary Sewer system in affected area.](image1)

![Figure 2. Bricks falling out at a damaged manhole.](image2)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $249,100.

(B) Forecasted annual operations and maintenance costs: +$500. New manhole will require regular cleaning and inspection.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manholes are not damaged to a point that complete replacement is required (project will be rescoped and repriced if replacement is necessary), (ii) a pre/post CCTV inspection is required, (iii) bypass pumping is required to keep campus core functions operable and it is included in the scope, (iv) traffic control and possible re-route will be required, (v) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (vi) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacement of pipes or manholes, (ii) the restoration of vegetation (owner is University), and (iii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

PROJECT CODE: 24/6-053

PROJECT NAME: Sanitary Sewer Line Replacement at the Bruce M. Pitman Center

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium (pipes are beyond life expectancy and plug regularly).

Background: Sanitary sewer service from the Bruce M. Pitman Center comes from four points, feeding into a common line running parallel to the City of Moscow sewer line. These pipes are well beyond their life expectancy at 74 years old and need to be addressed before they collapse. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. Due to poor design and construction, the pipes are also backgraded and frequently plug, causing sewer to back up into the building.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Connect sanitary sewer service from the Bruce M. Pitman Center directly to the City of Moscow lines.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project abandons the existing parallel line and connects the building directly to the City of Moscow line at the four locations. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Install 6” DR18 C900 PVC pipe (approx. 80’).
- Install service tap and cleanouts (x4).
- Construction supervision.
- Bedding and backfill.
- Asphalt and natural surface restoration.
- Provide bypass pumping during construction.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and disruptions due to open pit work.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $19,580.

**Additional Information:**

![Sanitary sewer system in affected area.](image.jpg)

*Figure 1. Sanitary sewer system in affected area.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $211,909.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) bypass pumping is required to keep campus core functions operable and it is included in the scope, (ii) traffic control and possibly re-route will be required, (iii) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity and the City of Moscow will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the removal of existing pipes or manholes; to be abandoned on place, (ii) restoration of vegetation (owner is University), (iii) the disconnection/reconnection of irrigation lines (owner is University), and (iv) the installation of grease traps or oil separators (owner is University).

(E) Proposed schedule: Dates may vary.

</table>

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the sanitary sewer system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $207,900.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-054

PROJECT NAME: Sanitary Sewer Line Replacement at the Administration Building and Art & Architecture Building

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: These sanitary sewer lines provide service to many core buildings including the Administration Building, the Art & Architecture Building, and the Life Sciences (South) Building. At 75-100 years old these pipes are well beyond their life expectancy and need to be addressed before they collapse. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition sanitary sewer lines serving multiple core campus buildings.
- Install a new sanitary sewer line serving Virtual Technology & Design and Art & Architecture.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: This project sliplines the pipes before they collapse. To address hydraulic loading issues the project also includes new lines from the Art & Architecture North Building and the Virtual Technology & Design Building. However, these new lines may conflict with long term plans of the University and preliminary coordination is needed with the University to determine if alternative pathing is necessary. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Recondition 8" pipe (approx. 300').
- Recondition 6" pipe (approx. 460').
- Install new 6" pipe (approx. 260').
- Replace damaged manhole.
- Construction supervision.
- Bedding and backfill.
- Asphalt and natural surface restoration.
- Provide bypass pumping during construction.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and disruptions due to open pit work.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $39,050 and it will also include coordination with University on alternative pathing.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $520,328.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manholes selected for reconditioning are not damaged to a point that complete replacement is required (project will be rescoped and repriced if replacement is necessary), (ii) a pre/post CCTV inspection will be required, (iii) bypass pumping is required to keep campus core functions operable and it is included in the scope, (iv) traffic control and possible re-route will be required, (v) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (vi) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vii) workable solutions for all required
coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacement of pipes or manholes except where specified, (ii) the restoration of vegetation (owner is University), and (iii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

|                | 03/23 | 04/23 | 05/23 | 06/23 | 07/23 | 08/23 | 09/23 | 10/23 | 11/23 | 12/23 | 01/24 | 02/24 | 03/24 | 04/24 | 05/24 | 06/24 | 07/24 | 08/24 | 09/24 | 10/24 | 11/24 | 12/24 |

| EPC (Dev.)     |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
| EPC (Const.)   |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
| EPC (Commiss.) |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $511,500.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-055

PROJECT NAME: Sanitary Sewer Line Recondition from the Brink and Phinney Halls to the Integrated Research and Innovation Center

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (line is beyond useful life).

Background: This line provides sanitary sewer service to the Brink and Phinney Halls but is well beyond its expected life and plugs regularly, requiring frequent jetting. As pipes age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as slippining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the existing sanitary sewer line from the SW corner of the Brink and Phinney Halls to the Integrated Research and Innovation Center (IRIC).
- Install a new manhole for improved access.
- Inspect nearby lines to identify future needs.

Scope of Work: This project slippines the existing pipes before they risk collapse and installs an additional manhole to allow for access for maintenance. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Recondition the 6" line (approx. 190').
- Install double manhole and cleanout.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.
There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University and the buildings’ occupants for the sanitary sewer shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $18,150.

**Additional Information:**

![Figure 1. Sanitary sewer system in affected area.](image-url)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $194,365.

(B) Forecasted annual operations and maintenance costs: +$500. New manhole will require regular cleaning and inspection.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manhole(s) are not damaged to a point that complete replacement is required (project will be rescoped and repriced if replacement is necessary), (ii) a pre/post CCTV inspection will be required, (iii) bypass pumping is required to keep campus core functions operable and it is included in the scope, (iv) traffic control and possible re-route will be required, (v) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (vi) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (vii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacement of pipes or manholes, (ii) the restoration of vegetation (owner is University), and (iii) the disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the sanitary sewer system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $191,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
**PROJECT CODE:** 24/7-059

**PROJECT NAME:** Stormwater Catch Basin and Manhole Upgrades

**UTILITY SYSTEM:** Storm Water

**DATE SUBMITTED:** February 1, 2023

**SAFETY AND RESILIENCY ASSESSMENT:**

The impact associated with safety is medium (safety risks to building occupants, vehicles, and pedestrians). The impact associated with resiliency is medium (flooding occurs regularly).

The likelihood of these events is high (assets are in poor condition).

---

**Background:** Catch basins collect stormwater runoff and direct it to the creek to prevent flooding. Manholes across campus are used to access stormwater lines for inspection and service. When these fail, it severely limits the ability of clearing plugged lines, potentially requiring excavation. Problems include collapsing walls, sinking asphalt, plugged lines, and damage to pipes. All pose safety risks to vehicular and pedestrian traffic on campus.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- Replace failing stormwater catch basins and manholes.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve required O&M practices in a safe manner.

**Scope of Work:** This project includes major repairs and replacements for aging catch basins and manholes that are beginning to fail. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Major repair and install liners at 30 catch basins.
- Remove and replace 14 catch basins.
- Major repair and install liners at 3 manholes.
- Remove and replace 1 manhole.
- Asphalt and natural surface restoration.
- CCTV inspection and jetting.
- Construction supervision.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

A detailed safety plan covering open pit work and vehicular and pedestrian traffic will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University for building shutdowns and to avoid disruptions associated with open pit work.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $141,130 and will also include conducting a CCTV inspection and jetting.

**Additional Information:**

![Figure 1. Catch basin on Campus Drive.](image1)

![Figure 2. Catch basin on Rayburn Street.](image2)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,863,576.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) the repair or replacement of pipes, and (ii) the restoration of vegetation (owner is University).

(E) Proposed schedule: Dates may vary.
(F) Impact on Sustainability: This Capital Improvement will improve campus’ safety and stormwater system’s resilience. Stormwater quality will be improved.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,830,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/7-060

PROJECT NAME: Stormwater Line Installation from the Wallace Residence Center to Paradise Creek

UTILITY SYSTEM: Storm Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (physical and life safety issues). The impact associated with resiliency is medium (extended outage and building shutdown).

The likelihood of these events is high (excessive hydraulic loading).

Background: This stormwater system removes stormwater from areas of campus including the J.W. Martin Lab, the ICCU Arena, and the Wallace Residence Center. However, the current system is not designed to handle the current loads, causing flooding in the area regularly.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Increase stormwater capacity to reduce flooding and reduce stress on the existing system.
- Inspect nearby lines to identify future needs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve the required O&M practices in a safe manner, improve reliability and stormwater quality.

Scope of Work: This project installs a new line from the northwest corner of the Gooding Wing to Paradise Creek. The new line will reduce the hydraulic loading on the existing system by improving flow, extending the useful life of the connected lines. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Install new 24" HDPE pipe (approx. 290').
- Install new 24" outfall valve at Paradise Creek.
- Bedding and backfill.
- Construction supervision.
- CCTV inspect and jet other connecting lines.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University for a possible shutdown of Paradise Creek Street and Stadium Drive.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $31,570 and it will also include conducting a CCTV inspection and jetting of other connecting lines.

**Additional Information:**

*Figure 1. Stormwater system in the affected area.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $346,961.

(B) Forecasted annual operations and maintenance costs: +$1,000. New pipe will require regular cleaning, jetting, and inspection. Outfall testing as required by MS4 stormwater permit.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonable free of obstruction, conflict, and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) reconditioning or replacement of connecting lines, and (ii) restoration of vegetation (owner is University).

(E) Proposed schedule: EPC (Commiss.) occurs in February 2025. Dates may vary.

(F) Impact on Sustainability: This Capital Improvement will improve campus’ safety and stormwater system’s resilience. Stormwater quality will be improved.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $341,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/7-061

PROJECT NAME: Stormwater and Sanitary Sewer Major Repairs on Nez Perce Drive

UTILITY SYSTEM: Storm Water and Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (lines are aged and plugged).

Background: These stormwater and sanitary sewer lines are aged and in poor condition, with frequent failures. The sanitary sewer line on Nez Perce suffers from many root penetrations as well. It most recently plugged in September 2021. The stormwater lines in the area have been plugged since the eruption of Mount St. Helens in 1980. These issues leave Nez Perce at risk for flooding and cause slippery conditions for pedestrians in poor weather. Their eventual collapse will risk loss of service to connected buildings and potential building flooding damage.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer line on Nez Perce Drive serving the President's house and the Golf Course.
- Inspect nearby sanitary sewer and stormwater lines to identify future needs.
- Change assets in order to achieve the required O&M practices in a safe manner and maintain reliable and effective service for both the stormwater and sanitary sewers.

Scope of Work: This project proposes reconditioning the sanitary sewer line and clearing the restoring function to the stormwater line via jetting, reconditioning, or replacement, dependent on the results of the Additional Work. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Slip line the 6" sanitary sewer line on Nez Perce Drive (approx. 1,600').
- Bedding and backfill.
- CCTV inspect and jet parallel stormwater on Nez Perce Drive (approx. 3,400').
- CCTV inspect and jet other connecting lines.
- Construction supervision.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.
Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core campus area, and vehicular and pedestrian traffic (including temporary accommodations) will be developed. Similarly, a safe return to service will be documented.

The Concessionaire will coordinate with the University and building occupants for any shutdowns, as well as for the potential need for parking space closures along Nez Perce Drive.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $25,740 and will also include conducting a CCTV inspection and jetting.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $264,731.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes, catch basins, and manholes will be able to be reconditioned and replacement will not be needed (project will be rescoped and repriced as necessary), and (ii) efforts will be taken to minimize damage to surrounding trees and vegetation but impacts may occur. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) replacement of pipes, (ii) restoration
of vegetation (owner is University), and (iii) disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

</table>

(F) Impact on Sustainability: This Capital Improvement will improve campus’ safety and stormwater system’s resilience. Stormwater quality will be improved. Sanitary sewer operation is critical to public health and to prevent environmental contamination.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $259,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
**PROJECT CODE:** 24/3-036

**PROJECT NAME:** Primary Electric Switch Upgrades

**UTILITY SYSTEM:** Electric

**DATE SUBMITTED:** February 1, 2023

**SAFETY AND RESILIENCY ASSESSMENT:**

The impact associated with safety is low. The impact associated with resiliency is medium (impacting critical loads on campus).

The likelihood of these events is high (grid disruptions increasing in frequency).

---

**Background:** Campus is served by two Avista 13.2KV services with pole mounted fuse disconnects. This type of utility service is antiquated and substandard for a campus of this complexity. The 24/7 nature of a campus with residents, research, and critical systems demands a modernized primary electrical service. Failure at either of the two points of service will result in widespread electrical outages for campus that requires a manual process to address. Additionally, future microgrid and generation projects at the University will require that the point of service switching is upgraded.

In the past year, multiple Avista related incidents have caused damage to key utility assets: a thunderstorm caused an electrical failure on a chiller at the South Campus Chiller Plant, a transformer failure caused damage to Well 3, and a series of power bumps caused electrical damage to the disinfection system of the Reclaimed Water plant. Each one of these compromised the ability to produce and distribute utilities on campus.

The root cause of the various power disruptions are unknown, however considering the global supply chain issues it is likely that disruptions will continue and potentially worsen into the future, with time to restore service also increasing. Measures need to be taken on campus to protect critical utility assets, research, and other high cost equipment from future power quality problems.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- This project improves the safety and reliability of the Primary Electrical Distribution system and is necessary to maintain Performance Standard Part V.6, and 8 by replacing antiquated manual switching and reducing the amount of overhead electrical service.
- Upgrade the Primary Switching at two points of service from Avista to make these critical switching locations modern and capable of handling microgrid interconnection issues such as back feed protection.
- Coordinate requirements, construction, cost, and ownership with Avista.
- Re-establish primary electric metering and data management after implementation.
- Upgrade the primary electrical conductors at the points of service to the first sectionalizer.

**Scope of Work:** This project modernizes the electrical service from Avista at both the East and West point of service. This modernization will move the campus toward a more durable utility situation and will help mitigate the risks associated with widespread outages.

This project proposes modification to the primary points of presence with Avista by installing protective relays to protect campus infrastructure from power quality issues such as voltage sags, voltage spikes, over-current, phase loss, or over/under frequency. This will have the added benefit of extending the life of electrical equipment across campus and may reduce peak demand charges from Avista. No passive or active harmonic filtration or power factor correction equipment is included at this time.

The scope of work of this Capital Improvement is:

- Remove overhead existing 12.3 kV distribution including poles and switches serving the East and West Feeds.
- Provide new 13.2 kV, pad-mounted, motor operated switches with protective relays.
- Reinstall and commission SEL metering at East and West Avista points of service.
- Backfill and restore surface to match existing.
- Start-up, test, and commission new equipment.
- Coordinate with Avista to install point of service equipment that meets interconnectivity requirements.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit and electrical work will be developed.

The Concessionaire will coordinate with the University for any interruptions to campus services.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $130,240 and will also include (i) 30% electrical design to obtain pricing, (ii) a power quality study at both interconnection points to determine power quality issues, (iii) coordination with the University for electrical gear locations, and (iv) coordination with Avista Utilities on scope, ownership, operation, and potential cost sharing of this Capital Improvement.
Additional Work of this project includes an evaluation of the electrical meter data available for the two primary feeds to determine the appropriate equipment and scope of work to protect campus. Project pricing and scope will be modified based on the evaluation. Further work and coordination with Avista is necessary for potential cost sharing, identifying ownership, etc. which will be part of the Additional Work and development stages.

Additional Information:

*Figure 1. West campus utility feed, mechanical switching, and overhead distribution.*

*Figure 2. East campus utility feed.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,700,658.

(B) Forecasted annual operations and maintenance costs: + $5,000. Motor operated switches will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) no passive/active harmonic filtration or power factor correction equipment will be needed as a result of the power quality study (if needed, project will be rescoped and repriced), (ii) coordination with Avista will result in costs incurred to develop this project, (iii) Avista will require upgraded switching/controls for on-campus generation interconnection, (iv) Avista will participate in scoping and cooperate on ownership/cost issues, (v) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, and (vi) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) passive/active harmonic filtration or power factor correction equipment, (ii) temporary electric generators to support buildings during shutdown, and (iii) primary electrical service repair/replacement on Avista Utilities owned equipment.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,657,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible, electricity. Potential peak demand charge reduction, savings unknown until new equipment is in operation.
PROJECT CODE: 24/1-013

PROJECT NAME: Emergency Generator at the Energy Plant

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (loss of heat in winter). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is low.

Background: The emergency back-up generator is critical for providing power to the Energy Plant during total electrical outages. At 180 kW it is too small to support much of the electrical load of the building, creating a slow response time to power outages as systems are brought online one by one to ensure the generator doesn’t trip. Most of these systems are 26 years old and beyond their serviceable life.

Though the turbines are expected to provide power during an Avista outage, the generator is still necessary to provide “black start” functionality if there is an outage while the turbines are offline. Each of the subsystems addressed is critical for the successful operation of the Energy Plant during such an outage. Without power there would be a complete steam and compressed air loss to campus buildings. Modernizing the generator and connecting to the Energy Plant microgrid will provide for an automatic start-up and synchronization with the turbines, reducing potential interruptions to plant operations or campus when power from the utility is lost or restored.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade the generator to provide “black start” capability.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.

Scope of Work: This project upgrades the system by upgrading the aging generator and electrical components, and connecting them to the microgrid. The generator will be sized to support B Boiler, as its response time is shorter than the wood boiler, and it will take less electrical power to bring B Boiler online. Once there is enough steam from B Boiler to spin up a turbine, the turbine will take over the full load of the building. At that point the operations team will bring the wood boiler online.

The scope of work of this Capital Improvement is:
- Remove the existing generator, fuel storage tank, ATS, and emergency panel ‘X’.
- Install a new 208V, 3-phase, 300 kW diesel generator with 24-hour belly tank on the exterior of the building.
- Install new ATS and emergency panel to support electric loads of the natural gas boilers.
- Upgrade the emergency electrical system and connect to the microgrid controls.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the construction schedule during summer hours to reduce impacts to the Energy Plant parking lot.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $82,170 and will also include the provision of a power study for proposed emergency generator circuits.

**Additional Information:**

*Figure 1. Aged generator at the Energy Plant.*

*Figure 2. Existing fuel tank to be removed.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $779,964.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) work can be done without shutting down the Energy Plant, and (ii) suitable space is available outside the building for the new generator. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) any repairs or upgrades to the electrical system outside of the emergency circuit, and (ii) any repair or replacement of electrical systems not specified.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Minor impact from larger diesel generator's fuel consumption.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $766,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/1-015

PROJECT NAME: Utility Tunnel Upgrades

UTILITY SYSTEM: Steam and Condensate, Chilled Water, Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended utility outages and building shutdowns).
The likelihood of these events is low.

Background: The utility tunnel network is critical for distributing utilities across campus including steam, chilled water, high voltage power, natural gas, and IT/telecom. The systems within the tunnels that remove water and keep operators and pedestrians safe are critical for preventing flooding damage to utilities and the tunnel walls as well as reducing the risk of severe life safety hazards such as electrocution or natural gas leaks. Many of these components are not suited for the environment or are at the end of life and are in need of upgrades. The existing sump pumps are not rated for high temperature water and fail often. Much of the racking used to support pipes is heavily damaged from rust and corrosion over time, posing a safety and resiliency risk. Lighting systems are inadequate, causing unsafe conditions.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Extend the useful life of the tunnel system by implementing effective water management to reduce water intrusion damage.
- Mitigate resiliency issues by replacing damaged/inadequate utility racking.
- Address safety concerns presented by the physical condition of existing tunnel systems.
- Prevent unplanned outages by replacing degraded iron pipe with copper.

Scope of Work: This project upgrades the systems within the tunnels described above, that remove water and keep operators and pedestrians safe. The scope of work of this Capital Improvement is:

- Conduct thorough assessment to provide water management, racking, lighting, and piping improvements throughout the tunnel system.
- Replace sump pumps with high temperature pumps and standardize (x10).
- Convert remaining lights to LED.
- Replace damaged utility racking.
- Upgrade corroded iron compressed air pipes to Type K copper.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended
that UI ITS identify and remove any abandoned and damaged IT/Telecom lines in construction areas.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University and the buildings’ occupants for any potential utility shutdowns.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $58,960 and will also include a tunnel investigation to identify exact quantities of light fixtures, damaged racking, and length of iron pipe.

**Additional Information:**

---

**Figure 1.** Iron compressed air lines need to be removed.

**Figure 2.** Sump pumps are failing.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,920,151.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 25% of lighting still needs to be converted to LED, 5% of utility racking requires replacement, 300’ of iron pipe requires replacement, and (ii) utility racking will be able to be repaired or replaced without shutting down utility service. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacement of existing LED lighting, and (ii) the demolition and disposal of abandoned utilities.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Minor improvement from more efficient electrical loads and extended useful life of the tunnel system.
(G) Anticipated tax credits or other benefits: Potential Avista Utilities’ Schedule 90 rebate program.

(H) Fee or charge payable to the Operator: $1,892,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. The reduction from lighting energy savings will be offset by operational sump pumps.
PROJECT CODE: 24/2-067

PROJECT NAME: Chilled Water Capacity Upgrade at the North Campus Chiller Plant

UTILITY SYSTEM: Chilled Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (minimal physical and life safety issues). The impact associated with resiliency is high (extended chilled water outages and risk to critical spaces).

The likelihood of these events is low (equipment is at end of life).

Background: The North Campus Chiller Plant (NCCP) is critical for supplying chilled water to the campus buildings. The NCCP is co-located with the Energy Plant as the absorption chillers use steam as their heat source, significantly improving the wood boiler’s summer performance. This allows the University to generate chilled water at a lower cost than using electric chillers. The chillers and cooling towers at NCCP are well beyond their serviceable life and in need of replacement. Both chillers are operating at a reduced capacity (approx. 50%) and their cooling towers are heavily scaled, reducing performance. Neither the cooling towers nor pumps were sized for their respective chillers, limiting the plant’s ability to keep up with campus demands. Loss of these components at the NCCP impacts campus operations by triggering potential load shedding, while also increasing Supply Costs to the University when electric chillers need to be brought online to make up for the loss in capacity.

The existing space used by NCCP was never designed or intended to support chilled water production. Currently, major equipment is installed across three levels within the Energy Plant itself, leading to operational inefficiencies and difficulty replacing equipment. There is no room to expand the plant with additional chillers without relocating. Since every major piece of equipment at the NCCP needs to be replaced, it may be more beneficial to the long term goals of the University to construct a new chilled water plant to the east of the Energy Plant.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resiliency, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve performance and operating efficiency.
- Increase chilled water capacity.
- Mitigate resiliency issues associated with system beyond their serviceable life.
- Provide N+1 redundancy to winter cooling season.

Scope of Work: This project upgrades the plant with new chillers, cooling towers, and pumps to improve performance, efficiency, resiliency, and total capacity. An indoor basin will be installed for the cooling towers to
allow for operation during winter, providing redundancy to the McClure Chiller Plant, as well as a common header for the condenser loop to provide redundancy to the cooling towers. Since McClure is the only source of chilled water in the winter, adding redundancy reduces the likelihood of a complete shutdown and loss to critical servers and research if a failure occurs. Like-for-like chiller replacements are proposed, however larger capacity chillers will be investigated in the Additional Work.

The Additional Work of this project includes a facility condition assessment to determine the feasibility of continuing operations of the NCCP in its current location. Coordination with the University will be necessary at this stage to determine the feasibility of constructing a new plant and potentially present a new Capital Improvement.

The scope of work of this Capital Improvement is:

- Re-pipe condenser loop for cooling towers to operate on a common header.
- Install an indoor basin to allow for cold weather operation.
- Replace primary and secondary chilled water pumps and VFDs (x5).
- Replace single-effect absorption chillers (x2).
- Replace cooling towers (x3).
- Upgrade controls and monitoring.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
  - Facility condition assessment.
  - Chilled water model.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A safety plan, including accommodations around the public sidewalk and the road, will be developed.

The Concessionaire will coordinate with the University for potential chilled water disruptions.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $380,050 and will also include a (i) Chilled Water system loop modeling and heat transfer analysis to determine the necessary capacity, loop constraints, and optimize loop efficiency, and (ii) a facility condition assessment of the NCCP.
Additional Information:

Figure 1. Exterior of the NCCP.

Figure 2. The NCCP’s pumps installed in basement. Space is limited, reducing the ability to maintain equipment properly.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $12,489,269.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pricing is based on upgrades to the existing location, (ii) lead times will not impact schedule, and (iii) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) the construction of a building to support new equipment, (ii) structural modifications to the existing building to support new equipment, (iii) the repair, replacement, or upgrade to the electrical service, and (iv) the replacement or upgrade to the underground chilled water piping.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $12,300,200.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. New equipment will likely be more efficient.
PROJECT CODE: 24/6-068

PROJECT NAME: Sanitary Sewer Service Lines Recondition on 6th Street

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some low safety risks from sanitary sewer). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is low (lines are aged, J.W. Martin Lab has regular issues based on occupant behavior).

Background: The sanitary sewer lines serving the Engineering Annex, Environmental Health & Safety (EHS), Agricultural Education, and the Palouse Research, Extension and Education Center (PREEC) Greenhouse buildings on Sixth Street are all aged and either beyond or approaching their life expectancy (the oldest of which is 57 years old). As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the pipe collapses, the University will see significant cost savings and less disruption, as there is minimal trenching needed. Waiting to replace the pipe could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area, on top of the unanticipated disruption to occupants.

The services lines for J.W. Martin Lab are in poor condition due to unauthorized dumping from building occupants. It was also not constructed correctly and has low spots, or “bellies”, in it, which cause poor flow rates and makes it more likely that sewer will back up into the building. Further, the 4” lines are too small and not maintainable due to the lack of access.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition and upgrade existing sanitary sewer lines on several buildings located on 6th Street.
- Upsize and redesign J.W. Martin Lab services lines to address issues.
- Inspect nearby lines to identify future needs.

Scope of Work: This project includes jetting, inspection, and reconditioning of the sanitary sewer lines serving the Engineering Annex, EHS, Agricultural Education, and the PREEC Greenhouse buildings. This project also removes the entire service for the J.W. Martin Lab, upgrades the common sections to 6”, and installs a manhole and cleanouts so that scheduled maintenance can be performed. The scope of work of this Capital Improvement is:
- Engineering Annex, EHS, and Agricultural Education:
  • Asphalt and natural surface demolition and restoration.
  • Bypass pumping.
  • Recondition 4" pipe (approx. 310').
  • Construction Supervision.
  • Pre-cleaning and CCTV inspection.
  • Post-cleaning and CCTV inspection.
- PREEC Greenhouse buildings:
  • Asphalt and natural surface demolition and restoration.
  • Bypass pumping.
  • Recondition 6" pipe (approx. 370').
  • Construction Supervision.
  • Pre-cleaning and CCTV inspection.
  • Post-cleaning and CCTV inspection.
- J.W. Martin Lab:
  • Asphalt and natural surface demolition and restoration.
  • Bypass pumping.
  • Demolition and removal of 4" pipe (approx. 430').
  • Installation of 4" service lines (approx. 100').
  • Installation of 6" pipe (approx. 340').
  • Recondition 6" pipe (approx. 50').
  • Install double cleanouts (x8).
  • Install one new manhole.
  • Construction Supervision.
  • Pre-cleaning and CCTV inspection.
  • Post-cleaning and CCTV inspection.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- CCTV inspection report.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and
traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $44,330 and will also include a CCTV inspection and jetting.

**Additional Information:**

![Figure 1. Utility map of area.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $793,429.

(B) Forecasted annual operations and maintenance costs: +$620. New manhole and clean outs will allow for new O&M practices to be implemented, including jetting and camera inspections every 5 years.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) Engineering Annex, EHS, Agricultural Education, and PREEC Greenhouse buildings’ sanitary sewer service lines will be able to be reconditioned and replacement will not be needed, (ii) vegetation will be restored with like for like replacements at the direction of UI Landscaping, (iii) lead time uncertainty will not affect construction schedule. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) disconnection/reconnection of irrigation lines (owner is University), (ii) inspection, reconditioning, or replacement of City of Moscow sanitary sewer lines (owner is City of Moscow), (iii) maintenance of newly planted vegetation post construction (owner is University), and (iv) installation or repairs.
of grease/oil separators or other equipment (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $779,900.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some low safety risk from sanitary sewer). The impact associated with resiliency is medium (extended outage and building shutdown).

The likelihood of these events is low (line has reached its end of life).

Background: These sanitary sewer lines serve the north and south concourses of the Kibbie Dome, the Facilities Services complex, and the South Campus Chiller Plant. These pipes are aged at over years old and are beyond their life expectancy. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing the proposed work before the pipe collapses, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area. It is recommended that Capital Improvement 24/6-077 Sanitary Sewer Recondition from West Kibbie Dome to Perimeter Drive be bundled with this project to minimize costs and timeline.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the existing sanitary sewer lines on the west side of the Kibbie Dome.
- Inspect nearby lines to identify future needs.

Scope of Work: This project reconditions the pipes and manholes mentioned above to extend their useful life. The project also includes cleaning and inspecting the Poultry Hill sanitary sewer service lines to assess their condition and readiness for future needs but does not include reconditioning since the only occupied building is being demolished. These pipes will be reconditioned or replaced at a later date, depending on the University's future needs for the site. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Bypass pumping.
- Recondition 8" main line (1350').
- Repair and install manhole liners (x6).
- Construction supervision.
- Pre-cleaning and CCTV inspection.
- Post-cleaning and CCTV inspection.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $23,320 and will also include conducting a CCTV inspection and jetting along Perimeter Drive (1,350’) and the service line for Poultry Hill (450’).
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $424,622.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes will be able to be reconditioned and replacement will not be needed, (ii) Poultry Hill service lines will not be reconditioned, and (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) reconditioning of Poultry Hill services lines, (ii) restoration of vegetation (owner is University), and (iii) inspection, reconditioning, or replacement of City of Moscow sanitary sewer lines (owner is City of Moscow).

(E) Proposed schedule: Dates may vary.

Figure 1. Map of sewer lines in affected area.
### (F) Impact on Sustainability: None.

### (G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

### (H) Fee or charge payable to the Operator: $418,000.

### (I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

### (J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-070

PROJECT NAME: Sanitary Sewer Line Recondition on Rayburn Street

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **low** (some low safety risks from sanitary sewer). The impact associated with resiliency is **high** (extended outage and multiple building shutdown).

The likelihood of these events is **low** (line has reached its end of life).

---

**Background:** These sanitary sewer main and service lines support buildings along Rayburn Street including major buildings such as Agricultural Biotechnology, the Renfrew Hall, the Menard Law Building, the Library, the Kibbie Dome, and the Physical Education Building (PEB). These pipes are aged and have reached their life expectancy. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area. It is recommended that Capital Improvement 24/6-048 Library and Memorial Gym Sanitary Sewer Major Repairs be bundled with this project to minimize costs and timeline.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- Recondition the existing sanitary sewer lines on Rayburn Street from 6th Street to the Radio-TV Center.
- Inspect nearby lines to identify future needs.

**Scope of Work:** This project reconditions the pipes and manholes mentioned above to extend their useful life. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Bypass pumping.
- Recondition 6” pipes (420’).
- Recondition 8” pipes (525’).
- Recondition 10” pipes (515’).
- Recondition 12” pipes (950’).
- Repaid and install manhole liners (x7).
- Pre-cleaning and CCTV inspection.
- Post-cleaning and CCTV inspection.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $56,760 and will also include conducting a CCTV inspection and jetting.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $997,861.

(B) Forecasted annual operations and maintenance costs: +$0. No change anticipated.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manholes will be able to be reconditioned and replacement will not be needed, and (ii) efforts will be taken to minimize damage to surrounding trees and vegetation but impacts may occur. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) restoration of vegetation (owner is University), and (ii) inspection, reconditioning, or replacement of City of Moscow sanitary sewer lines (owner is City of Moscow).
(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $982,300.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-071

PROJECT NAME: Sanitary Sewer Line Recondition from the Theophilus Tower to 6th Street

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some low safety risks from sanitary sewer). The impact associated with resiliency is high (extended outage and multiple building shutdowns).

The likelihood of these events is low (lines are beyond their life expectancy but can be reconditioned).

Background: These sanitary sewer lines serve the Shoup Hall, the McConnell Hall, the Theophilus Tower, and the Living Learning Communities (LLC). These pipes are well beyond their life expectancy at up to 66 years old and need to be addressed before collapse. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as slilining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscaping.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer lines for housing buildings located on 6th Street.
- Mitigate a resiliency issue associated with pipes beyond their useful life.
- Inspect nearby lines to identify future needs.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Bypass pumping.
- Recondition 4’’ pipes (115’’).
- Recondition 6’’ pipes (360’’).
- Recondition 8’’ pipes (200’’).
- Recondition 10’’ pipes (115’’).
- Recondition 12’’ pipes (325’’).
- Repair and install manhole liners (x4).
- Pre-cleaning and CCTV inspection.
- Post-cleaning and CCTV inspection.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $18,810 and will also include conducting a CCTV inspection and jetting.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $343,050.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manholes will be able to be reconditioned and replacement will not be needed, and (ii) efforts will be taken to minimize damage to surrounding trees and vegetation but impacts may occur. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) restoration of vegetation (owner is University), and (ii) inspection, reconditioning, or replacement of City of Moscow sanitary sewer lines (owner is City of Moscow).

(E) Proposed schedule: Dates may vary.

Figure 1. Map of sewer lines in affected area.
(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $337,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-072

PROJECT NAME: Sanitary Sewer Service Lines Recondition at the Wallace Residence Center

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some safety risks from sanitary sewer). The impact associated with resiliency is medium (extended outage and multiple building shutdowns).

The likelihood of these events is medium (lines are beyond their life expectancy and impacted from unauthorized dumping).

Background: These sanitary sewer lines serve the Wallace Residence Center complex. The pipes are well beyond their life expectancy at 60 years old and need to be addressed before collapse. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the service lines can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area.

These lines also suffer from regular, unauthorized dumping by building occupants, particularly from cooking grease and rags. These contaminants cause build up along the pipe walls that reduce flow rates, which eventually will cause a complete blockage to the line. Depending on the age and condition of the pipe, clearing the blockage may not be possible without damage, ultimately requiring the pipe to be replaced sooner than expected. Grease also makes its way to the City of Moscow main lines, causing disruptions to other entities and exposes the University to fines from the City. While not in this project, it is recommended that the University inspect and service any grease/oil separators and add them where appropriate to reduce these problems.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer lines for the Wallace Residence Center complex.
- Mitigate a resiliency issue associated with pipes beyond their useful life
- Inspect nearby lines to identify future needs.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Bypass pumping.
- Recondition 4" pipes (55').
- Recondition 6" pipes (300').
- Recondition 8" pipes (1,000').
- Recondition 10" pipes (330').
- Repair and install manhole liners (x9).
- Pre-cleaning and CCTV inspection.
- Post-cleaning and CCTV inspection.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended the servicing, repair, and/or installation of grease and oil separators.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $31,680 and will also include conducting a CCTV inspection and jetting.
Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $584,414.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes and manholes will be able to be reconditioned and replacement will not be needed, and (ii) efforts will be taken to minimize damage to surrounding trees and vegetation but impacts may occur. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) restoration of vegetation (owner is University), (ii) disconnection/reconnection of irrigation lines (owner is University), (iii) repairs or replacement of grease and oil separators (owner is University), and (iv) inspection, reconditioning, or replacement of City of Moscow sanitary sewer lines (owner is City of Moscow).
(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $575,300.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/8-073

PROJECT NAME: Compressed Air Upgrades

UTILITY SYSTEM: Compressed Air

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (high noise levels pose long term health risk to operators). The impact associated with resiliency is low (risk of extended outages and loss of redundancy).

The likelihood of these events is high (equipment is well beyond its useful life).

Background: Compressed air is produced at the Energy Plant for use in campus buildings. Most compressed air is used for HVAC pneumatic controls, however there are other uses on campus including research and bicycle air stations. There are three air compressors at the Energy Plant, all of which are aged with high runtimes, yet can be rebuilt to continue operation. Two air dryers remove moisture before distributing to campus, one of which is beyond useful life and should be replaced. The space also requires modification to reduce noise levels and improve ventilation. The air compressors generate significant heat that needs to be rejected, which is currently done with campus chilled water. This is an opportunity to capture the waste heat and utilize it elsewhere.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve performance and operating efficiency of the Compressed Air system.
- Add N+1 redundancy to critical sub-systems to improve reliability.
- Mitigate resiliency issues associated with equipment beyond its useful life.
- Mitigate health hazards with engineered solutions.

Scope of Work: This project rebuilds all three air compressors. To improve N+1 redundancy it also replaces the failing desiccant air dryer with a refrigerant dryer and installs a parallel oil separator. Noise levels will be reduced by a combination of modifying the layout of equipment, installing sound deadening material, or other engineered solutions as appropriate.

To improve overall energy efficiency, heat recovery technology will be explored in the Additional Work of this project. Besides improving the Energy Plant’s efficiency, this would also reduce the chilled water load on campus. Based on the results of the assessment, the project will be repriced and rescoped to include waste heat recovery or a future Capital Improvement will be proposed. The scope of work of this Capital Improvement is:

- Major rebuild of three (3) existing air compressors.
- Furnish and install one (1) refrigerant dryer.
- Install one (1) oil separator.
- Plumbing, mechanical, electrical, and controls modification necessary to connect the new equipment.
- Start-up, test, and commissioning of the new equipment.
- Make ventilation and sound reduction improvements to space.
- Assess feasibility of heat recovery system for compressor cooling needs.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the Additional Work stage.

The Concessionaire will coordinate with the University and buildings’ occupants for any potential interruptions to compressed air availability.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $52,580 and will also include conducting a feasibility assessment for the installation of heat recovery technology.

**Additional Information:**

*Figure 1. Compressors are aged, but still serviceable.*

*Figure 2. Sound dampening needed around compressors.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $437,709.

(B) Forecasted annual operations and maintenance costs: +$200. New equipment will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that pricing is based on an estimated 2024 design and construction and that air compressors are rebuildable (project will be rescoped and replacement is necessary). Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) replacement of air compressors, (ii) repair or replacement of existing refrigerant dryer, (iii) repair or replacement of existing oil separator, and (iv) installation of waste heat recovery equipment.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: Equipment should qualify for Avista Utilities' Schedule 90 rebate.

(H) Fee or charge payable to the Operator: $430,100.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$3,000, electricity. Compressors should be more efficient after completion of the Capital Improvement. No data is available on existing electricity usage, and it is assumed that Compressed Air system accounts for 1% of the Energy Plant electrical load.
PROJECT CODE: 24/4-074

PROJECT NAME: Well #3 Modernization

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (potential impacts to water quality and firefighting capability, known electrical hazards within building). The impact associated with resiliency is high (extended outages and loss of redundancy).

The likelihood of these events is low (equipment is beyond end of life)

Background: The University has owned and operated its own domestic water wells for over 100 years. The locations and depths have changed with the growth of campus and today there are two wells, known as Wells #3 and #4, north of campus. These wells are critical to the operation of campus, as they are the University’s only reliable source of potable water. The City of Moscow runs at a lower pressure than the University does, preventing them from supporting the University in an outage without major disruptions to campus operations. Because of this, it is vital that the wells are resilient and can operate at all times.

Well #3 was constructed in 1964. It was pulled in 2001 for service and again in 2022 after an electrical failure on the Avista grid damaged the motor. While the pump and motor were addressed, the other major components at Well 3, including its electrical service, are still original equipment and well beyond their expected life. Replacement is needed to ensure successful operation of the well and to reduce the risk of another electrical failure damaging the high cost motor that was just pulled.

Currently, the well is not backed up with emergency power as recommended by IDAPA 58.07.08. Without backup power the system can only provide between 2 to 14 days of domestic water, depending on campus use and storage tank levels before the incident. This is inadequate life support for firefighting, dining, housing, research, and medical treatment on campus, including its 9,500 students, during an extended outage. An electrical generator, with its associated equipment, is necessary to both ensure campus has a continuous supply of domestic water during utility power outages and protect the well pump and motor from poor power quality, voltage spikes/swells, and other electrical issues on the Avista Utilities grid.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve performance and operating efficiency of the well.
- Mitigate severe safety and resiliency issues associated with equipment beyond its useful life.
- Provide domestic water during electrical grid failures.
Scope of Work: This project modernizes Well #3 by upgrading its major components, including converting the electrical system from 2300V to 480V. To maximize resiliency and project cost savings, the project includes replacing the high cost submersible well motor with a vertical hollow shaft (VHS) motor at ground level. This will eliminate the need to pull the motor in the future and allow for maintenance not previously feasible. Upgrading the well’s electrical system at the same time as installing a generator will reduce overall project costs to the University, as development and construction times are reduced, and uncommon equipment will not be necessary to match the 480V generator with the existing 2300V well. The scope of work of this Capital Improvement is:

- Provide new vertical hollow shaft motor with insulated lower half coupling for upper bearing, Aegis lower shaft grounding ring, 120V thermal heater in windings, and non-reverse coupling.
- Provide new vertical hollow shaft pump system to match existing submersible pump curve and base mount and all associated equipment needed for a complete package. Danfoss drive in cabinet with line and load reactors and pressure control equipment.
- Provide new style Cla-Val equipment and all associated valves for water lube pump system and controls.
- Provide labor to pull old submersible pump and install new VHS pump system.
- Demo and install a new power service that will include new 800A 480V 3-phase main service disconnect, dry transformer, and service lateral conduit/wire from utility provided transformer. New metering equipment and all connections to existing building 120/240V single phase system.
- Install 480V, 3-phase diesel generator and transfer equipment. New concrete slab, fencing, underground feeder conduits, wire, load bank equipment, and 72-hour fuel tank base.
- Integrate all new equipment into existing SCADA controls.
- Reconfigure disinfection system.
- Install motion sensing security lighting on exterior of well house.
- Upgrade interior lighting to LED and replace inside electric heaters.
- Ventilation upgrades to well room and chemical storage room.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project Documents:
  - Design and as-built documents.
  - O&M Manuals.
  - Commissioning report.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan required for crane operations will be developed during the Additional Work stage.

The Concessionaire will coordinate with the Sheep Farm for potential road access disruptions.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform...
additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $153,010 and it will also include (i) coordination with MIEDI Water Purveyor and IDEQ to determine permitting and approval process, and (ii) developing scope for integrating new components into existing SCADA controls.

Additional Information:

![Figure 1. Well being pulled during emergency 2022 repairs.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $5,085,924.

(B) Forecasted annual operations and maintenance costs: +$7,500. Additional equipment such as emergency generator will require service. New motor and electrical equipment are more technologically advanced and will require service.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) well shaft is straight and will not require redrilling to support vertical hollow shaft motor, (ii) lead times on equipment will not delay schedule, and (iii) efforts will be taken to minimize damage to surrounding vegetation, but impacts may occur. Coordination with University for other work that may impact this project will occur. Excluded work includes (i) redrilling well, (ii) primary electrical service repair/replacement (owner is Avista Utilities), (iii) restoration of vegetation (owner is University), and (iv) demolition and disposal of any electrical equipment containing PCBs.
(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in February 2025. Dates may vary.

(F) Impact on Sustainability: Improvement due to mitigation of risk of damage and increased electrical efficiency of equipment.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $4,999,500.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$100, electricity. The decreased is associated with an assumed 1% improvement in electrical efficiency.
PROJECT CODE: 24/1-016

PROJECT NAME: Condensate Return System Upgrades

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **low** (unsafe working conditions). The impact associated with resiliency is **medium** (potential risk to building envelope).

The likelihood of these events is **low**.

**Background:** The condensate return system is critical to boiler operations and is in need of upgrades. These systems are beyond expected life and should be replaced before failure. The main hot well tank is 95 years old, underground, in an unknown condition. Loss of these tanks risks a steam system shutdown and structural damage to the building envelope of the Energy Plant.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- Upgrade condensate return system to improve performance.
- Mitigate resiliency issues associated with systems approaching end of life.
- Address safety concerns that should be physically mitigated.
- Improve O&M practices for a safe and reliable operation.

**Scope of Work:** This project addresses issues in the system to improve performance, resiliency, and safety. The scope of work of this Capital Improvement is:

- Replace condensate pumps at the hot well tanks and install VFDs (x4).
- Install exhaust fans in the hot well room.
- Recondition the hot well tanks and reline (x2).
- Replace critical valving in the hot well room.
- Install flash tank to capture high pressure steam losses.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
• Design and as-built documents.
• O&M manuals.
• Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $57,090 and will also include a structural assessment of the hot well tanks.

Additional Information:

![Aged condensate pumps in hot well room.](image1.png)

Figure 1. Aged condensate pumps in hot well room.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,830,672.
(B) Forecasted annual operations and maintenance costs: +$1,500. The increase is associated with the additional flash tank and exhaust fans.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) hot well tanks will still have useful life left if relined, no major structural repairs or replacement will be needed, and (ii) staged construction will occur so no steam shutdown will be required. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the replacement of hot well tanks, and (ii) the replacement of feedwater pumps and piping.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: Improvement from more efficient pumps. Reduced flash steam losses.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,800,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,000, electricity, wood fuel, natural gas. The decrease derives from the new VFDs and reduced steam losses.
PROJECT CODE: 24/1-014

PROJECT NAME: Energy Plant Building Envelope Upgrades

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (physical and life safety issues). The impact associated with resiliency is medium (plant security issues).

The likelihood of these events is medium.

Background: The exterior envelope of the Energy Plant has been in disrepair for some time, with the last major improvement 35 years ago with the addition of the wood boiler. Many portions of the building are original from 1926. Upgrades are needed for the plant to continue operation for the next 50 years. Security additions at doors and windows are needed to prevent unauthorized access. Providing a setback from the building is recommended for protecting pedestrian in the parking lot from falling objects and glass. Many of these issues can be addressed while also improving the general appearance of the building.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve the general condition of the Energy Plant to extend useful life.
- Increase security and prevent unauthorized access.
- Address safety and security concerns presented by degraded condition of existing assets.
- Address long term health concerns from ash exposure.

Scope of Work: This project addresses the many significant safety issues for both plant operators, and vehicle and pedestrian traffic outside by improving security, replacing damaged doors and windows, reconditioning brickwork, and reroofing. The scope of work of this Capital Improvement is:

- Replace all exterior doors and install card access locks.
- Replace windows with safety glass. Recondition all window operating mechanisms.
- Replace failed roof exhaust fans.
- Replace roof.
- Connect roof drains to stormwater collection system instead of sewer.
- Recondition brickwork and repaint sheet metal exterior.
- Plant a tree row on east side of building to reduce safety risks in parking lot.
- Upgrade exterior lighting and Bay 3 to LED lights.
There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the partial closing of Lot 14 and adjacent sidewalks during construction, as well as for a potential reconfiguration of the parking lot.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $151,030 and will also include the preliminary architectural and engineering design documents to include windows, landscape tree planting, and exterior façade re-finishing.

**Additional Information:**

*Figure 1. Many broken windows, exhaust fans need to be replaced.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $4,078,318.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 40% of brickwork will be repointed, and (ii) trees will be planted away from utilities and their ownership turned over to the University after construction. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) any structural repairs to building envelope, (ii) abatement of hazardous materials including asbestos and lead paint (owner is University), and (iii) maintenance of trees after project completion (owner is University).

(E) Proposed schedule: EPC (Const.) extends through April 2025. EPC (Commiss.) occurs in May 2025. Dates may vary.

(F) Impact on Sustainability: Improvement as a result of a new tree row that will act as a carbon sink improving local air quality.
(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $4,013,900.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. Any LED savings will be offset by additional loads.
Background: The feedwater system is critical to boiler operations and is in need of replacement. Most of these systems are original equipment and are well beyond this serviceable life and becoming unrepairable. The feedwater piping to Boiler D is of an unknown age and likely not up to code. The current pipe layout in the Energy Plant is a result of efforts to minimize cost and maximize uptime during construction over the years. As a result, piping often does not follow an optimum path and has excessive bends, which increases losses in the system.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve performance of the feedwater system.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns presented by condition of existing assets.
- Improve O&M practices for safe and reliable operation.

Scope of Work: This project addresses issues in the system to improve performance, resiliency, and safety. The scope of work of this Capital Improvement is:

- Upgrade feedwater pumps and VFDs (x4).
- Optimize feedwater pipe layout in the Energy Plant.
- Replace distribution valves (x15, 4" valves; x2, 6" valves).
- Replace Boiler D piping (approx. 175').

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

The Concessionaire will coordinate with the University for a potential interruption of steam supply to campus.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $91,190 and will also include non-destructive testing of the 2,500 gal feedwater tank to determine remaining useful life.

**Additional Information:**

![Figure 1. Aged feedwater pump.](image1)

![Figure 2. 64-year-old feedwater pump is leaking heavily, reducing performance.](image2)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,939,253.

(B) Forecasted annual operations and maintenance costs: +$0.
(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) a 2% increase in the feedwater pump efficiency, and (ii) the 2,500 gal feedwater tank still has useful life and does not need to be replaced. Coordination with the University for other work that may impact this project will occur. Excluded work includes the replacement of the feedwater tank.

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.

(F) Impact on Sustainability: Minor improvement from reduced losses in pipe network.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,906,300.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$600, electricity, wood fuel, natural gas. The decrease is associated with reduced losses in the pipe network and increased pump efficiency.
PROJECT CODE: 24/1-017

PROJECT NAME: Wood Boiler Capital Renewal, Phase II

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (long term health risks). The impact associated with resiliency is medium (extended outage and wood boiler shutdown).

The likelihood of these events is low (equipment is aged and in poor condition).

Background: The wood fuel boiler provides significant economic and environmental benefits to the University, however, at 35 years old, many of the subsystems are in critical need of upgrade, including those associated with improving performance and managing emissions. Each of the subsystems addressed is critical to the successful operation of the wood fuel boiler and is in serious need of upgrades. Several single points of failure, or long repair time, issues exist within these systems. Most of these systems are original equipment and are well beyond their serviceable life. Upgrading these systems is critical to plant reliability, will improve efficiency, extend the useful life of the boiler, and reduce Supply Costs to the University.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the wood boiler to extend its useful service life.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address health concerns presented by the condition of existing systems.
- Allow O&M practices for a safe and reliable operation.

Scope of Work: This project upgrades the boiler subsystems associated with improving performance and managing emissions described above. The scope of work of this Capital Improvement is:

- Replace economizer.
- Refurbish air pre-heater and improve access.
- Repaint and insulate the boiler skin.
- Replace emissions land.
- Emissions management improvements.
- Upgrade damper controls for over and under fire fan flow.
- Efficiency and balancing study to optimize operation.
There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the construction schedule during the lowest steam use to reduce natural gas costs during shutdown. The wood boiler shutdown can be done without an impact to steam customers. Similarly, coordination will occur for the use of Lot 14 as a laydown area.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $319,440 and will also include (i) an engineering assessment on emissions control method modernization, (ii) an engineering assessment on insulating the boiler skin, and (iii) a non-destructive testing of the air preheater tubes.

**Additional Information:**

*Figure 1. Exterior walls of boiler warping from age and heat.*

*Figure 2. Exterior walls need insulation to improve performance.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $3,297,320.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 20% of air preheater tubes will need to be replaced, (ii) exhaust stack will still have useful life and will not need to be replaced, (iii) construction will be staged across two summer seasons to ensure the wood boiler is operational during the heating season to reduce Supply Costs to the University, and (iv) wood fuel requirements will be reduced by 5% based on FY22 data. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the non-destructive testing or replacement of wood boiler exhaust stack, it will be completed as part of Capital Improvement 24/1-004, and (ii) the repair or replacement of the ash conveyance system.

(E) Proposed schedule: EPC (Const.) extends through June 2025. EPC (Commiss.) occurs in July 2025. Dates may vary.

(F) Impact on Sustainability: Improvement in wood boiler efficiency will reduce the use of natural gas during peak loads. Reduction in campus greenhouse gas emissions.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,241,700.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$50,000, wood fuel. The decrease is associated with the improved efficiency of the boiler and its subsystems.
PROJECT CODE: 24/1-018

PROJECT NAME: Wood Fuel Storage Conveyance System Upgrades

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is medium (some mitigation required). The impact associated with resiliency is medium (further degradation will become more impactful).

The likelihood of these events is low.

Background: The Fuel Storage conveyance system has been in service since 2010 and requires upgrades. The mechanical measurement, unloading, and conveyance systems all require improvements in order to provide reliability of operation and allow an adequate O&M practice. Periodic material jams and inadequate lighting present a safety concern to operations staff. The tipper hydraulic system needs to be located away from wood fuels that pose a fire hazard. Unacceptable safety concerns are being managed by implementing protocols in an interim, but need to be addressed.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:
- Improve wood handling performance at the Wood Chip Storage Facility.
- Mitigate a severe safety and resiliency issue.
- Upgrade conveyance to increase reliability.
- Mechanical and lighting upgrades to improve safety.
- Implement required O&M practices for a safe and reliable operation.

Scope of Work: This project addresses these issues by upgrading the load scale, tipper hydraulics, and conveyor belt. It also includes a lighting upgrade with motion sensors to improve operator safety and security. The scope of work of this Capital Improvement is:
- Replace load scale and upgrade electronics.
- Replace tipper pins and upgrade hydraulics.
- Improve tipper chute to eliminate jamming.
- Replace conveyance belt and source spare material.
- Install yard lighting and motion sensors.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.
Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University to communicate a construction plan, and for a potential interruption to the West Farm road access.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $131,340.

Additional Information:

*Figure 1. Tipper hydraulics surrounded by flammable material.*
*Figure 2. Wood chip conveyance system.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,056,350.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the transformer will have sufficient power for new loads, (ii) construction will be scheduled during the spring season to reduce impact to site operations, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes the replacement or upgrade of the transformer, primary feeders, or building switchgear.

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.

(F) Impact on Sustainability: Improved wood fuel conveyance efficiency reduces moisture content in wood fuel, which results in lower fuel consumption.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,038,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$5,000, wood fuel. Minor decrease from improved conveyance efficiency. It is assumed a 0.5% reduction in wood fuel.
PROJECT CODE: 24/1-019

PROJECT NAME: Wood Fuel Storage Facility Upgrades

UTILITY SYSTEM: Steam and Condensate

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (some mitigation required). The impact associated with resiliency is low (further degradation will become more impactful).

The likelihood of these events is low.

Background: The Fuel Storage Facility has been in service since 2010 and is critical to the supply of high-quality solid fuel to the wood boiler. Multiple issues have been identified that impact the long term success of the facility. The lack of stormwater collection on the south side of the building has resulted in groundwater seeping into the wood fuel and is also eroding the area underneath the hardscape. These voids pose a risk to the structural integrity of the facility and need to be repaired before major damage occurs. The wet wood fuel also negatively impacts the Energy Plant’s efficiency and is a risk to the wood boiler as rocks and mud make their way into the fuel supply. Further, facility access is unrestricted, and instances of unauthorized vehicle and pedestrian access occur frequently. This is a public safety and security concern as property damage or personal injury could occur while heavy machinery is operating in the area. There have also been multiple occurrences of theft of the Sub-operator’s property that need to be addressed.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Increase the Energy Plant’s resilience and efficiency by maintaining high fuel quality.
- Remove stormwater from the area to protect fuel quality and the building’s foundation.
- Improve safety and security of the Storage Facility by installing controlled access.
- Replace the horizontal surfaces (apron and roadways) to maintain high quality fuel free of debris.

Scope of Work: This project addresses these concerns by identifying the locations and severity of voids forming under the hardscape and making repairs. It addresses the root cause by installing stormwater drainage south of the building and directing water to the west, away from the wood fuel and hardscape. Finally, security is addressed with a gate and card access at the primary entrance of the facility. The scope of work of this Capital Improvement is:

- Repair portion of damaged hardscape, to include concrete demolition and restoration.
- Install stormwater collection system for the roof and south side of building.
- Excavation, backfill, and bedding for stormwater system.
- Install a gate and card access at the Storage Facility entrance.
There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
  - Geotechnical report.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed including construction perimeter fencing and restricted access.

The Concessionaire will coordinate with the University, including Facilities Services and users of the West Farm, for potential access disruptions.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $105,820 and will also include a geotechnical evaluation of the hardscape to identify the location and magnitude of existing voids (2 bore holes, 2 test pits).

**Additional Information:**

![Figure 1. Wood Chip Storage Facility location behind Facilities Services.](image-url)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $630,006.

(B) Forecasted annual operations and maintenance costs: +$500. The increase is associated with the maintenance of the new gate and the management of the stormwater system.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pavement will need to be resurfaced every 10 years, (ii) pumped ground water removal systems will not be required, (iii) a 40’x40’ patch of the worst concrete section (may vary on results of the geotechnical evaluation), (iii) efforts will be made to mitigate impact on surrounding vegetation but impacts may occur, and their remediation is not included in this scope, (iv) workable solutions for all required coordination with University activity will be achievable, and (v) a 0.1% reduction in wood fuel requirements from reduced moisture content. Coordination with the University for other work that may impact this project occur. Excluded work includes the restoration of vegetation (owner is University).

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.

(F) Impact on Sustainability: Improved fuel quality by reducing moisture and debris helps achieve a higher efficiency for the wood boiler operations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $619,300.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,000. The decrease is associated with a more efficient operation due to reduced-moisture fuel.
PROJECT CODE: 24/3-075

PROJECT NAME: Campus Primary Distribution Improvements

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (overhead distribution lines pose life safety risk). The impact associated with resiliency is high (single points of failure to half of campus electric grid).

The likelihood of these events is low (exposed to environmental hazards).

Background: The University owns and operates its own electric grid. Power is delivered to campus from two feeds by Avista Utilities, known as the East and West Feeds. While the entire East Feed is underground and protected from environmental hazards, a large portion of the West Feed is still overhead. This poses an inherent risk to campus operations from animals, downed trees, weather, and other hazards as these 13.2 kV lines serve 50% of the campus load. Single points of failure are present that need to be addressed to reduce the chance of campus wide outages.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Improve the safety and reliability of the Primary Electrical Distribution system on the west side of campus.
- Eliminate aging overhead primary distribution infrastructure.
- Maintain Performance Standard Part V.6, 7, and 8 and mitigate negative impact to Availability KPIs.
- Establish baseline condition of primary electrical components.

Scope of Work: This project removes the overhead distribution, installs it in underground duct bank, and replaces aging pole mount transformers with pad mount ones. This will improve the resiliency and safety of the electrical system on the west side of campus and improve the overall electrical efficiency. The scope of work of this Capital Improvement is:

- Remove overhead existing 13.2 kV distribution including poles, transformers, and conductors.
- Provide new pad mount transformers, vaults, sectionalizing cabinets, duct banks, conduits, and wires.
- Install underground 13.2 kV campus primary encased in concrete.
- Backfill and restore surface to match existing.
- Arc flash analysis and labeling per NFPA 70E.
- Provide new secondary feeders from pad-mounted transformers to existing building electrical services and reconnect.
- Provide new SEL 735 meters on all building electrical services. Commission meters and establish data management.
- Oil and thermography testing of new transformers and primary switches to establish baselines.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) a replacement and evaluation of the building’s main distribution panels and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.
  - Oil and thermography testing results.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage.

The Concessionaire will coordinate with the University and Avista Utilities for electrical shutdowns.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $383,130 and will also include conducting 30-day power studies at each building to right size transformers.

**Additional Information:**

*Figure 1. Map of overhead lines to be replaced.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $21,254,574.

(B) Forecasted annual operations and maintenance costs: +$8,000. Pad mount transformers, vaults, and meters will require additional O&M not present in existing equipment.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) estimated lead time for equipment is 52 weeks, (ii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) alternative power generation, such as portable generators to provide power to buildings during construction, (ii) restoration of vegetation (owner is University), (iii) modification of electrical transmission lines and equipment on Avista Utilities’ lines (owner is Avista Utilities), and (iv) replacement of building main distribution panels (owner is University).

(E) Proposed schedule: EPC (Procur.) extends through August 2025. EPC (Const.) occurs from August 2025 to January 2026. EPC (Commiss.) occurs in January 2026. Dates may vary.
(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $20,893,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. Minor efficiency increase from higher efficiency transformers and reduced distribution losses.
PROJECT CODE: 24/4-076

PROJECT NAME: I Tank Recoat

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some life safety risks due to water quality and structural damage to tank). The impact associated with resiliency is low (potential loss of redundancy to system).

The likelihood of these events is medium (existing coat is beyond expected life and showing signs of wear).

Background: The I Tank was constructed in 1951 and has been a historic icon on campus since. The exterior was last recoated in 1999 using an aluminum-based coating that has aged well, but after over 20 years of service is showing signs of fading and deterioration. The interior was last recoated in 1990 and needs to be redone. Recoating increases the useful life of the tank by reducing corrosion that can pose both a health issue due to contaminated drinking water and a severe life safety issue if the structural integrity of the tank becomes compromised.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Increase life expectancy of the I Tank.
- Mitigate safety and resiliency issues associated with end-of-life coatings.

Scope of Work: This project includes a full preparation and recoating of both the interior and exterior surfaces of the tank to include all supports, braces, struts, tension rods, and appurtenances. It also includes repainting of the existing University of Idaho “I” icons. While the icons do not currently match the University’s current brand, the icons are proposed to be repainted “as-is” to match their existing colors and dimensions due to their historic character. The scope of work of this Capital Improvement is:

- Mobilization of all required material, labor, and equipment.
- Containment of all materials being removed from tank, staging, and delineation of job site.
- Abrasive blasting of interior, exterior, bracing, struts, piping, and all other accessories.
- Application of coating of interior, exterior, bracing, struts, piping, and all other accessories.
- Repainting of “I” icon.
- Waste disposal of abrasive blasting media and original coating.
- Disinfection of tank per University’s and/or IDEQ’s requirements.
- Replacement and installation of an FAA-certified LED beacon light.
There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the Additional Work stage.

The Concessionaire will coordinate with the University for any laydown areas and impacts to the telecommunications equipment.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $49,940 and it will also include (i) the verification of paint/coating colors with the University, (ii) a review of health and safety requirements for confined space and fall protection plans, (iii) the development of a preliminary order of operation for tank drain down, and (iv) the creation of a constructability plan.

**Additional Information:**

*Figure 1. Current I Tank to be repainted to match existing.*

*Figure 2. Post construction photo taken in 1952 with original icon.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $3,939,385.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pricing is based on like-for-like repaint of “I” icon, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation, and (iii) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) the restoration of vegetation (owner is University), (ii) the removal and reinstallation of telecommunications equipment (University’s responsibility), and (iii) any repairs to any structural damage identified.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,870,900.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/6-077

PROJECT NAME: Sanitary Sewer Line Recondition from West Kibbie Dome to Perimeter Drive

UTILITY SYSTEM: Sanitary Sewer

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some low safety risks from sanitary sewer). The impact associated with resiliency is medium (extended outage and multiple building shutdowns).

The likelihood of these events is low (line has reached its end of life).

Background: These sanitary sewer lines serve the north and south concourses of the Kibbie Dome, the Track and Field Complex restrooms, and the South Campus Chiller Plant. These pipes are aged at 52 years old and have reached their life expectancy. As they age, the likelihood of collapse increases, risking sewer backing up into the buildings and potential flooding in the area until it can be repaired. By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area. It is recommended that Capital Improvement 24/6-069 Sanitary Sewer Recondition on Perimeter Drive be bundled with this project to minimize costs and disruptions.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing sanitary sewer lines on the west side of the Kibbie Dome.
- Inspect nearby lines to identify future needs.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Bypass pumping.
- Recondition 4” line from the Track and Field Complex restrooms (165’).
- Recondition 6” line from the south concourse of Kibbie Dome (446’).
- Recondition 8” main line (1,301’).
- Repair and install manhole liners (x6).
- Construction Supervision.
- Pre-cleaning and CCTV inspection.
- Post-cleaning and CCTV inspection.

There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $26,950 and will also include conducting a CCTV inspection and jetting.

**Additional Information:**

![Figure 1. Main pipe installed with the Track and Field complex project in 1970.](image-url)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $492,785.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes will be able to be reconditioned and replacement will not be needed, and (ii) efforts will be taken to minimize damage to surrounding trees and vegetation but impacts may occur. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) restoration of
vegetation (owner is University), (ii) disconnection/reconnection of irrigation lines (owner is University), and (iii) inspection, reconditioning, or replacement of City of Moscow sanitary sewer lines (owner is City of Moscow).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $485,100.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is low (some safety risks from flooding). The impact associated with resiliency is medium (potential flooding to nearby buildings).

The likelihood of these events is low (line is beyond end of life but can be reconditioned).

Background: This stormwater line serves areas and buildings along Rayburn Street. At over 55 years old these pipes are aged and have reached their life expectancy. As they age, the likelihood of collapse increases, risking flooding in the area and potential damage to buildings until they can be repaired. By reconditioning the pipes while still intact, using a technology such as sliplining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area. It is recommended that Capital Improvement 24/7-056 Stormwater Major Repairs at the Library and the Memorial Gym be bundled with this project to minimize costs and timeline.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Recondition existing stormwater line on Rayburn Street from 6th Street to the Physical Education Building.
- Inspect nearby lines to identify future needs.

Scope of Work: This project also addresses an illicit configuration at the Agricultural Science Building, where the existing catch basin drains to the sanitary sewer system instead of the stormwater system. The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Bypass pumping.
- Slip line 8” pipes (800’).
- Reconfigure Agricultural Science Building’s 8” pipes to drain to the stormwater system.
- Recondition 12” pipes (905’).
- Recondition 15” pipes (700’).
- Repair and install manhole liners (x12).
- Repair and install catch basin liners (x12).
- Pre-cleaning and CCTV inspection.
- Post-cleaning and CCTV inspection.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $74,140 and will also include a CCTV inspection and jetting.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,302,603.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes, catch basins, and manholes will be able to be reconditioned and replacement will not be needed, (ii) efforts will be taken to minimize damage to surrounding trees and vegetation but impacts may occur. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) restoration of vegetation (owner is University), and (ii) disconnection/reconnection of irrigation lines (owner is University).
(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,280,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/7-079

PROJECT NAME: Stormwater Line Recondition on Stadium Drive

UTILITY SYSTEM: Storm Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some safety risks from flooding). The impact associated with resiliency is medium (potential flooding to nearby buildings).

The likelihood of these events is low (line is beyond end of life but can be reconditioned).

Background: This stormwater line serves areas along Stadium Drive, including the ICCU Arena. These pipes are aged and have reached their life expectancy. As they age, the likelihood of collapse increases, risking flooding in the area and potential damage to buildings until it can be repaired. By reconditioning the pipes while still intact, using a technology such as slip-lining or cure-in-place-pipe (CIPP) lining, the services can be expected to last many more decades. By completing this work before the collapse, the University will see significant cost savings and less disruptions, as there is minimal trenching needed. Waiting to replace the pipes could cost up to five times more due to the excavation, demolition, and repairs needed to asphalt and landscape the area.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives:

- Recondition existing stormwater line on Stadium Drive from 6th Street to the ICCU Arena.
- Inspect nearby lines to identify future needs.

Scope of Work:
The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Bypass pumping as necessary.
- Recondition 12" pipes (1250').
- Repair and install manhole liners (x10).
- Repair and install catch basin liners (x10).
- Pre-cleaning and CCTV inspection.
- Post-cleaning and CCTV inspection.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Deliverables: The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit work, and vehicular and pedestrian traffic management will be developed.

The Concessionaire will coordinate with the University and any activities on campus for any building shutdowns and traffic re-routing, etc.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $30,250 and will also include conducting a CCTV inspection and jetting along Stadium Drive (1,250') and the service line to the Hartung Theatre (630').

Additional Information:

Figure 1. Stormwater map of affected area.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $552,008.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pipes, catch basins, and manholes will be able to be reconditioned and replacement will not be needed, (ii) efforts will be taken to minimize damage to surrounding trees and vegetation but impacts may occur, and (iii) service lines to Hartung Theatre will be cleaned and inspected for potential future work but reconditioning or replacement is not included. Coordination with the University for other work that may impact this Capital Improvement will occur. Excluded work includes (i) reconditioning or replacement of Hartung Theatre stormwater pipes, (ii) restoration of vegetation (owner is University), and (iii) disconnection/reconnection of irrigation lines (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $543,400.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
**PROJECT CODE:** 24/1-020

**PROJECT NAME:** Water Treatment Improvements, Phase II

**UTILITY SYSTEM:** Steam and Condensate

**DATE SUBMITTED:** February 1, 2023

**SAFETY AND RESILIENCY ASSESSMENT:**

The impact associated with safety is **low**. The impact associated with resiliency is **low**.

The likelihood of these events is **low**.

---

**Background:** The Hot Lime Softening (HLS) tanks and associated feedwater and condensate chemistry subsystems are critical for protecting the boilers and steam distribution systems from scaling that reduces efficiency and risks significant damage such as damaged/destroyed boiler internals, steam and condensate main degradation, and steam trap failure. There are two HLS systems within the Energy Plant, which allows for redundancy and continuous boiler operation during maintenance. These systems experience heavy, frequent fouling due to the type of fluids used, which reduces efficiency. Combined with the convoluted, poorly optimized flow path between the tanks this results in excessive losses and higher pumping costs.

HLS tank #1 is 58 years old and needs to be replaced as most of the system is well beyond its serviceable life. Replacement is critical for the future reliability of the Energy Plant.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

**Objectives:** The main objectives of this Capital Improvement are:

- Right size the Energy Plant’s water treatment system.
- Mitigate resiliency issues associated with systems beyond their serviceable life.
- Improve O&M practices for a safe and reliable operation.

**Scope of Work:** This project replaces the HLS #1 tank as well as the scaled pipe network between the tanks to improve performance. The scope of work of this Capital Improvement is:

- Remove and replace HLS #1.
- Optimize flow path between the HLS tanks to provide redundancy and improve efficiency.
- Replace scaled piping between the HLS tanks.
- Replace distribution valves between HLS tanks.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:
- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University a potential interruption to Lot 14 to locate a construction staging area.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $79,530.

**Additional Information:**

![Figure 1. Aged HLS #1.](image1)

![Figure 2. Aged Hot Lime Softener #1.](image2)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,070,178.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) HLS tank will be replaced with a tank of similar size, and (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) any repairs to or the replacement of HLS #2, and (ii) the repair or replacement of booster pumps, backwash pumps, or other equipment associated with the charcoal and zeolite systems.

(E) Proposed schedule: EPC (Const.) extends through February 2025. EPC (Commiss.) occurs in March 2025. Dates may vary.

(F) Impact on Sustainability: Some improvement from reduced energy consumption and water losses.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,035,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. Minimal savings from improved flow path and reduced pumping costs.
PROJECT CODE: 24/2-023

PROJECT NAME: Emergency Generator at the South Campus Chiller Plant

UTILITY SYSTEM: Chilled Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is low. The impact associated with resiliency is low (extended outage and building shutdown).
The likelihood of these events is low.

Background: The South Campus Chiller Plant (SCCP) is not backed up with emergency power. Without power, chilled water cannot be distributed to campus buildings with year-round critical cooling loads during outages. Cooling loads on campus would be met as long as the Thermal Energy Storage (TES) tank is charged. These subsystems are critical to the successful operation of the chilled water system. Installing a generator improves resiliency and mitigates risk to critical campus cooling loads such as research and servers.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:
- Provide chilled water to critical campus cooling loads during power outages.
- Mitigate resiliency issues associated with a lack of backup power.

Scope of Work: This project installs a generator sized to support the TES tank and associated pumping needed to distribute chilled water to campus, but not to run the chillers or cooling towers to produce chilled water. This is a first step towards supplying chilled water to campus during a power outage to achieve Performance Standards. Future Capital Improvements will be proposed to operate chillers and cooling towers during outages.

The scope of work of this Capital Improvement is:
- Install a 480V, 3-phase, 300kW diesel generator with 24-hour belly tank on exterior of building.
- Install ATS, emergency panel, circuits, and controls to support chilled water circulation pumps, TES tank sensors, and controllers.
- Connect Water Systems SCADA panel to emergency circuit.
- Construct enclosure and fencing around generator.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.
Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report as applicable.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A safety plan will be developed including the protection of live utilities, the provision of fencing to prevent unauthorized access to construction areas, and confined space work. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University for potential chilled water disruptions.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $72,050 and will also include an electrical load assessment to right size the new generator.

Additional Information:

Figure 1. Potential exterior locations for the generator.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $671,431.

(B) Forecasted annual operations and maintenance costs: +$5,400. The increase is associated with labor and fuel cost for regular service checks on new equipment.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the generator does not need to be sized to support chilled water production to reduce cost and footprint, and (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this project will occur. Excluded work includes (i) the repair or replacement of the building's electrical systems, and (ii) the protection or restoration of impacted vegetation (owner is University).

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: There will be a minor impact from the fuel consumption of the diesel generator.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $660,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/4-080

PROJECT NAME: Golf Course Water Tank Recoat

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (some life safety risks due to water quality and structural damage to tank, difficulty to access beacon safely). The impact associated with resiliency is low (potential loss of redundancy to system).

The likelihood of these events is low (existing coat is reaching expected life and showing signs of wear).

---

Background: The Golf Course Water Tank was constructed in 1979. Its exterior was recoated in 2008 and is showing some signs of fading and deterioration as it ages. The interior, however, has never been recoated and is beyond its life expectancy. Recoating increases the useful life of the tank by reducing corrosion that can pose both a health issue due to contaminated drinking water and a severe life safety issue if the structural integrity of the tank becomes compromised.

Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:

- Increase life expectancy of the Golf Course Water Tank.
- Mitigate safety and resiliency issues associated with end-of-life coatings.

Scope of Work: This project includes a full preparation and recoating of both the interior and exterior surfaces of the tank to include all supports and appurtenances. When the tank was last recoated the “University of Idaho” icons were repainted, however the University may desire new icons and colors. Coordination with the University will occur during the Additional Work stage so the new icon can be priced appropriately. The scope of work of this Capital Improvement is:

- Mobilization of all required material, labor, and equipment.
- Containment of all materials being removed from tank, staging, and delineation of job site.
- Abrasive blasting interior, exterior, supports, and all other accessories.
- Application of coating interior, exterior, supports, and all other accessories.
- Repainting of “University of Idaho” or different icons depending on University’s direction.
- Waste disposal of abrasive blasting media and original coating.
- Disinfection of tank per University’s and/or IDEQ’s requirements.
- Replacement and installation of an FAA-certified LED beacon light.
- Install safety ladder on top of the tank to access beacon light.
There is no related work beyond the Line of Demarcation associated to this Capital Improvement.

**Deliverables:** The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  - 50% design documents.
- Project documents:
  - Design and as-built documents.
  - O&M manuals.
  - Commissioning report.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the Additional Work stage.

The Concessionaire will coordinate with the University for any laydown areas.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $56,980 and it will also include (i) the verification of paint/coating colors and icon design with the University, (ii) a review of health and safety requirements for confined space and fall protection plans, (iii) the development of a preliminary order of operation for tank drain down, and (iv) the creation of a constructability plan.

**Additional Information:**

> Figure 1. Existing Golf Course Water Tank. New color and icons will be coordinated with the University.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $7,070,519.

(B) Forecasted annual operations and maintenance costs: +$0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pricing is provided for the “University of Idaho” icons if repainted as-is, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation, and (iii) workable solutions for all required coordination with University activity will be achievable. Excluded work includes (i) the restoration of vegetation (owner is University), and (ii) any repairs to any structural damage identified.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $6,947,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 24/3-081

PROJECT NAME: North Farm Agrisolar Array

UTILITY SYSTEM: Electric

DATE SUBMITTED: February 1, 2023

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is n/a. The impact associated with resiliency is n/a (supports future resiliency improvements via reduced disruptions from power outages).

The likelihood of these events is n/a.

Background: There are multiple potential sites for utility-scale solar arrays on campus, with the most promising locations at the dairy and sheep farms. This project continues the University’s effort to reduce energy costs and greenhouse gas emissions by installing two ground-mounted photovoltaic (PV) arrays (the Generating Facility). Two sites are proposed, with a total capacity of 7.34 MWdc, which will be connected to the West Feed. Connecting to the West Feed will allow for future integration with the campus microgrid, reducing the impact of outages on the Avista grid, and the “behind the meter” approach will ensure the University realizes the maximum potential energy savings.

Coordination with the College of Agricultural and Life Sciences (CALS) will be needed to utilize these sites, as they are used to support their operations, and this is an opportunity to work with CALS to jointly benefit both efforts. The project proposes co-locating one of the arrays with the sheep farm. The sheep will keep vegetation from interfering with the PV modules, reducing the overall O&M needs, while the sheep benefit from grazing and shade in the summer. This serves the University’s educational and research goals as a platform and collaboration opportunity between the Colleges of Agriculture and Life Sciences, Engineering, and Business. While specific sites are proposed here, ground mount PV arrays are flexible and coordination with CALS is needed to determine the most suitable locations to support both needs.

Besides the large economic and educational benefits, this project will significantly reduce the University’s carbon footprint by reducing the amount of fossil fuel-derived electricity it purchases, which is vital to meet the University’s 2030 carbon neutrality goal. The project also qualifies for the Solar Investment Tax Credit (ITC) program as part of the Inflation Reduction Act, passed in 2022, with up to 40% of the project cost covered as a direct cash rebate. There is also a potential to coordinate with the Department of Energy (DOE), the National Renewable Energy Laboratory (NREL), and Avista Utilities for grants and other additional funding. It is highly recommended that this project be approved for construction before these opportunities expire.

 Approval of this Capital Improvement is necessary to mitigate a variety of risks, claims and damages (including those associated with life safety, property damage, system downtime, system resilience, operational interruption), as well as compliance with Performance Standards and Key Performance Indicators.

Objectives: The main objectives of this Capital Improvement are:
- Reduce electricity costs for the University.
- Reduce campus’ greenhouse gas emissions as part of the 2030 carbon neutrality goal.
- Support agricultural research and educational opportunities via combined land use.
- Provide for future microgrid expansion to increase resiliency to utility power outages.

Scope of Work: The scope of work of this Capital Improvement is:

- Installation, connection, integration, and commission of a 4.981 MWdc fixed tilt, ground-mounted PV array at the Dairy Farm.
- Installation, connection, integration, and commission of a 2.397 MWdc fixed tilt, ground-mounted PV array at the Sheep Farm.
- Construct access roads to sites.
- Install permanent fencing around sites.
- Install high voltage transmission lines necessary to connect sites to the West Feed.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement. This will be confirmed during the Additional Work stage.

Deliverables: The deliverables of this Capital Improvement are:

- Additional Work (Preliminary Engineering Assessment):
  • 50% design documents.
  • Incentive award documentation, if applicable.
- Cost proposal for fixed-priced construction will include:
  • Utility provider interconnection upgrade budget, if applicable.
  • List of inclusions, exclusions, and potential allowances to carry, if any.
  • Pricing expiration date and timeline for the commitments the University needs to make to hold pricing.
  • Proposed construction schedule.
- Project documents:
  • Design and as-built documents.
  • O&M manuals.
  • Commissioning report.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage.

The Concessionaire will coordinate (i) with the University and the farms for potential site locations and the interaction between the PV array and the farm operations, (ii) with University and Avista for interconnection requirements, and (iii) the City of Moscow as needed.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $536,470 and will also include (i) engagement with the
University and other stakeholders as needed to secure approval of the Generating Facility locations and design constraints, (ii) coordination with Avista Utilities for the interconnection applications and any studies necessary to determine the design, infrastructure upgrades, and interconnection costs for the Generating Facility, as applicable (pricing assumes standard interconnection review and approval with no system impact studies required), (iii) coordination and processing of applications to secure available incentives from Avista Utilities or other entities, if available, (iv) coordination with Avista Utilities as needed regarding programmatic requirements, (v) compliance with applicable permitting requirements, (vi) geotechnical study, (vii) title report and land surveys (easements, underground utilities, elevations/topography), as needed, (viii) 50% plans (architectural, electrical, structural), (ix) arborist report, as needed, and (x) planning and zoning pre-application submittals, coordination, and approval of the project concept for the Generating Facility, if applicable.

Additional Information:

Figure 1. Potential PV site at the Dairy Farm.

Figure 2. Examples of agrisolar projects with co-located sheep and PV arrays.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $19,822,953.

(B) Forecasted annual operations and maintenance costs: +$60,864. Arrays, high voltage transmission lines, and step up transformers will need additional O&M including module replacements, inspections, thermography, monitoring, and cleaning. Vegetation and pest management will be the University’s responsibility. No ongoing land use cost is anticipated.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) a conversation will be held between the Concessionaire and the University, prior to the approval of the Additional Work to provide a feasibility study, understand their expected return on investment, (ii) the Additional Work and indicative budgets will be rescoped and/or repriced as needed to account changes in system type/location, planning/zoning requirements, University requests, Utility Provider requirements, and other unforeseen circumstances, (iii) indicative Budget estimate does not include ITC credit or other funding opportunities, (iv) it is assumed that the existing overhead power lines from the North Farms will be in suitable condition to support the solar array, (v) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion (vi) workable solutions for all required coordination with the University, Avista Utilities, and the Idaho Public Utility Commission will be achievable. Excluded work includes (i) battery storage, (ii) system impact study, (iii) utility curtailment controls, non-export controls, telemetry, or interconnection upgrades, (iv) maintenance of vegetation after construction (owner is University), (v) disconnection/reconnection of any irrigation lines (owner is University), and (vi) replacement or repairs of existing overhead power lines.

(E) Proposed schedule: Dates may vary.

(F) Impact on Sustainability: An 11% reduction in total carbon footprint of campus (based on FY20 GHG data). Improvement due to a reduction in the purchase of electricity from Avista.

(G) Anticipated tax credits or other benefits: 40% of Capital Improvement may be covered by an Investment Tax Credit. There is a potential opportunity for grant funding via DOE/NREL and support from Avista.

(H) Fee or charge payable to the Operator: $19,500,800.
(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$617,459, electricity. It is assumed a typical generation at a rate of $0.061 per kWh. Added generation may change University’s rate schedule with Avista.
STRATEGIC INITIATIVES FUND (SIF)

INVESTING IN OUR FUTURE

The Strategic Initiatives Fund (SIF) is a single-purpose 501(c)(3) that invests, manages, and distributes the net closing proceeds from the P3 transaction.

Governance:

- SIF Board of Directors (UI CFO, SBOE member, current Legislator)
- Investment and spending policies to achieve the maximum value to current and future beneficiaries over 50 years. Two-part Spending formula for the Long Term Account:
  - Rate Spend = maximum of 2.5% rolling average of most recent 12 quarter-end market values
  - Corpus Spend = (most recent Dec 31 market value – Rate Spend) / years remaining in Agreement

SIF investment balances, December 31, 2023:

- Long Term Account – funds distributions to the University for strategic initiatives: $142.7 million
- Utility Subsidy Account – funds the utility fee costs that exceed University current resources: 19.8 million
- Terminal CapEx Account – held until termination to fund balance of CapEx project payments: 0.9 million
- Total investment account balance 12/31/2023: $163.4 million
INVESTING IN OUR FUTURE

Investments in three strategic initiatives – $19.8M over three years:

- **Student Success**
  - Scholarships: $925,000
  - Online Excellence: $1,000,000
  - Recruitment & Retention: $325,000
  - Total Student Success: $6,900,000

- **Research & R1 Goal**: $10,500,000

- **Telling Our Story**: $2,359,991

**Total distributions to the University**: $19,759,991
OUTCOMES & ROI

STUDENT SUCCESS, RESEARCH & MARKETING

CUMULATIVE DATA FY22 THROUGH YTD FY24 (USING FY21 AS BASE YEAR EXCEPT WHERE NOTED)

Enrollment
- Total enrollment up 10% headcount / 7% FTE
- Tuition revenue up $11.3M / 12%
- Auxiliary revenue up $5.1M / 24%
- Largest two freshman classes in history
- On-campus housing occupancy up 22% (A)
- On-campus dining up in all categories

Research
- Proposals submitted ($) up 15% (A)
- Awards received ($) up 30%
- Research expenditures up 30%
- Largest awards in University history
- Increase in post-docs and grad student positions

(A) Using FY20 as base year for Auxiliaries revenue and housing occupancy due to the COVID impact in FY21 (Fall 2020 – Spring 2021), and also for Research Awards
SUBJECT
Program Progress Reports

REFERENCE
December 2013        The Board approved amendments to Policy III.G. that require institutions to provide a report on graduate programs approved by the Board.
October 2019         The Board approved a first reading of proposed amendments to Policy III.G. requiring review of all new baccalaureate degree programs at all public postsecondary institutions.
December 2019        The Board approved a second reading of proposed amendments.
April 2021           The Board was presented with program progress reports for baccalaureate and graduate programs offered by Idaho public institutions.
April 2022           The Board was presented with program progress reports for baccalaureate and graduate programs offered by Idaho public institutions.
April 2023           The Board was provided with program progress reports for baccalaureate and graduate programs offered by Idaho public institutions.

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies and Procedures, Section III.G.9, Postsecondary Program Review and Approval

BACKGROUND/DISCUSSION
Board Policy III.G.9. requires all institutions to provide an initial progress report on new graduate and baccalaureate programs approved by the Board. This provision was added in response to Board member inquiries regarding the status of new programs and whether institutions met their projected enrollments from initial proposal submission. This report is provided to Board members to help evaluate whether programs are meeting expectations regarding continued student interest and sustainability.

Board staff, with input from the Council on Academic Affairs and Programs, developed a template and a timeline to determine when programs will be reviewed.

- Baccalaureate programs - reviewed after six years of implementation.
- Master’s programs - reviewed after four years of implementation.
- Doctoral programs - reviewed after six years of implementation.

In accordance with Board Policy III.G.9.b, Boise State University, Idaho State University, Lewis-Clark State College, and University of Idaho have submitted progress reports for this review cycle.
IMPACT

Program progress reports provide the Board with updates on new baccalaureate and graduate programs and whether institutions met intended goals and benchmarks.

ATTACHMENTS

Attachment 1 – Program Progress Reports

BOARD STAFF COMMENTS AND RECOMMENDATIONS

The following represents a summary of results for each of the 21 programs reviewed, whether initial enrollment and graduate projections were achieved, and future plans for either boosting numbers, planned marketing strategies, or considerations for program discontinuation.

Five (5) programs reported they exceeded their projections for enrollment and/or graduates.

For the 11 programs that did not fully meet their initial projections, institutions cited the following factors that may have impacted growth: faculty turnover, effects of the COVID-19 pandemic, changes to certification requirements, delivery options available to students, or limited resources at the time of implementation. Institutions will continue to monitor program progress for sustainability of these programs. Long-term sustainability of all programs, including those that have not met initial projections, will be monitored through the regular Program Prioritization process as described in Board Policy III.F.

Boise State University

The Bachelor of Arts in Global Studies was approved by the Board in February 2017 and implemented Fall 2017. The program projected an initial enrollment of 20 students in its first year with increment increases of 20 enrollments each year thereafter. According to the numbers reported, the program surpassed projections in the first two years of the program with 24 enrollments in Fall 2017 and 53 in Fall 2018. The program maintained steady enrollment until Fall 2020 when numbers dipped to 60 enrollments compared to the 80 projected. The program reports this was primarily due to the COVID-19 pandemic. The number of graduates met or exceeded projections except in FY23. The report noted that the program underwent a thorough revision of curriculum and program learning outcomes, which were implemented in Fall 2023. To further increase enrollment, the program plans to initiate marketing and recruitment efforts with a focus on Idaho high school graduates. The program anticipates the enrollment numbers will grow and stabilize at approximately 60 students. While this number is lower than initially projected, it better reflects the student demand.

The Bachelor of Arts in Special Education was approved in April 2017 and implemented in Fall 2017. The program reports that enrollment exceeded expectations with approximately twice as many students enrolled per year. The program projected 2-10 enrollments over six years. The program's actual enrollments were five in year one with approximately 11-22 enrollments over five years. The program reports that the number of graduates fluctuated from year to year but has largely been within projections. There were no graduates reported for FY23; however. Boise State reports that the program is sustainable at its current enrollment numbers.

The Bachelor of Arts in Urban Studies and Community Development was approved in December 2016 and implemented in Fall 2017. The program projected 20 initial enrollments in Fall 2017 and anticipated an increase by 20 enrollments each year to reach 120 by year six. The program reported that while current enrollments are encouraging, those did come in below initial projections with 10 in Fall 2017 and 24-35 over six years. The program cites this is partly due to the pandemic’s impacts on the program’s ability to offer experiential learning opportunities and on faculty’s ability to promote the program within the institution and region. The graduate numbers have largely met expectations with four
The graduates in FY19 compared to zero projected and reached 12 by FY22. The program reports that they implemented a comprehensive curriculum revision in Fall 2023 to address the lower-than-expected enrollment. Boise State reports that the program is expected to be sustainable with an enrollment of approximately 40 students and graduates of 10 per year.

The **online Bachelor of Business Administration in Management** was approved by the Board in February 2017 and implemented Fall 2017. The program featured a robust enrollment exceeding 300 actively enrolled students in Fall 2023 and 317 graduates from the 2018-2023 academic years. While enrollment numbers have been healthy with 31 initial enrollments and a range of 112-306 over the last six years, those did not fully meet projections, which were 30-440 over six years. The program indicated this was partly due to lower initial enrollment numbers at the start of the program caused by unforeseen circumstances like the pandemic and job market shifts. Despite this, the program remains confident that their high-quality online program will continue to expand and eventually meet their enrollment targets, albeit over a slightly longer timeframe than initially projected. The program reports that the number of graduates exceeded initial annual targets but fell short of projected numbers in the last few years. It’s important to note that the estimated numbers were based on the higher enrollment projections. Additionally, the university notes that initial projections in 2017 were based on limited resources at the time. Since then, Boise State has adopted new tools to better estimate student headcount projections for online programs. The program noted they anticipate approximately 125 students will graduate in FY24.

The **online Master of Science in Genetic Counseling** was approved by the Board in October 2017 and implemented Fall 2019. The program reports that they experienced high demand and fluctuating enrollment over the years. The program projected 10 initial enrollments beginning in Fall 2019 to reach 33 in Fall 2023. Actual enrollments came in slightly higher in the first initial year with 12 enrollments and 24 in Fall 2020 compared to 22 projected. The numbers fluctuated over the last three years but did not increase in Fall 2022 as expected. The program cites this is partly due to the pandemic related to labor market issues in the health care industry, which significantly affected genetic counseling and available clinical supervisors and sites. Additionally, the program notes that many health care programs are experiencing the unintended consequences of the Idaho Abortion Law that went into effect in July 2023, which has impacted the availability of clinical sites. This has hindered the ability of the program to seek other new clinical rotation sites and is contributing to the program’s limited enrollment growth current and future. The program reports that the number of graduates has consistently met projections with 11 reported in FY21 compared to the 9 initially projected and 12 in FY22. There was a slight dip in FY23 with 10 enrollments due to the loss of one student because of the pandemic and two students who took a break but returned the following year. The program noted they anticipate 14 students to graduate after Spring 2024 semester. The program
plans to continually review and monitor the availability of clinics both in Idaho and nationally as states may pass new laws that can impact clinical availability, and clinical experience is necessary to complete this degree program. To address this, the program is doing two things: 1) working on identifying and engaging with new clinics nationwide as much as possible, and 2) adjusting the enrollment numbers in the program depending on the clinical placement availability. The program anticipates the enrollment will likely be more limited in the future and will adjust expected enrollment accordingly.

The Ph.D. in Ecology, Evolution, and Behavior was approved by the Board in February 2016 and implemented in Fall 2017. The program initially projected enrolling an average cohort of seven students per year. Based on the information provided, actual numbers superseded enrollment projections starting in Fall 2018 with 15 enrollments and reached 34 in Fall 2023. The program estimated that graduates would be expected after six years of implementation and reported that they saw their first doctoral graduate within four years of implementation. However, they indicated the initial average of 6.5 per year was not fully met. The primary factor cited was the limited availability of funding for graduate assistant (GA) lines. The proposal initially requested 22 GA lines; however, due to expiration of one-time funds and other budget reductions, the program is currently limited to 11.5 GA lines. Due to this limitation, the number of graduates would be expected to be closer to 3.5 graduates, which would align with the actual number of graduates reported (4 graduates in year six).

Idaho State University
The Master of Arts in Spanish was approved in December 2018 and implemented Fall 2019. The program initially projected two enrollments at implementation in FY20 and 7-30 over the next five years. Actual numbers superseded projections with 46 enrollments in FY21 and 127 by FY23. The program projected four graduates by FY23 and exceeded this number with 12 graduates and 24-35 graduates over the subsequent two years. Due to part-time enrollments, most of which are working professionals and teachers, the average time to completion varied. The program adjusted staffing and course schedules to meet the demands for additional summer course offerings and has also implemented a new admissions process that provides better admissions assessment criteria and a more holistic view of applicant that will achieve greater student success.

The Master of Science in Clinical Psychopharmacology was approved by the Board in December 2018 and implemented Fall 2019. The program admits licensed psychologists full-time or part-time in either a track to train psychologists who intend to prescribe medications that includes additional clinical training hours and synchronous course work; or an online, didactic-only track that includes asynchronous course work. The program initially projected four students at implementation with 8-18 enrollments over the next five years. Based on the information provided, the program did not fully reach enrollment projections with
actual enrollment ranging from 3-13 over a five-year period. The program also reports that initial graduate projections were not met with two in FY21 and three in FY22 compared to the 4-6 projected. The primary factor for low enrollment is when originally launched, the program only offered in-person synchronous course work and clinical training hours, with no online or clinical training hours option. This meant that practicing psychologists were having to relocate to Boise, leaving behind their practices, to matriculate into the program. The program has since added an asynchronous, online program without the requirement of clinical training hours (which are available to practicing psychologists outside of ISU’s program). This has led to the subsequent expansion in enrollment with their current year's cohort standing at 13 (seven more than two years ago). ISU believes the addition of the new online track will allow the program to meet enrollment and graduation projections within the next two to four years. ISU also notes that Clinical Psychopharmacology programs are evaluated by the American Psychological Association Designation Committee for Education and Training Programs in Psychopharmacology for Prescriptive Authority and was initially granted APA designation for three years on January 6, 2021.

The Master of Science in Nutrition initial proposal comprised two tracks: one that included a Dietetic Internship and one that did not. Adding the master's degree was in response to a change to the profession of requiring a graduate degree to sit for the national exam for dietitians that went into effect January 1, 2024. The program initially projected 22 enrollments at implementation and 40 enrollments for each of the following five years. The program reported 18 enrollments at implementation and has remained stable in the low 30s for the last three years. The program notes that numbers provided in the report include five enrollments in the MS in Nutrition track. Due to lower numbers, the program focused its limited resources on the MS in Nutrition, Dietetic Internship track. The last graduate from the MS in Nutrition was Fall 2022. The program initially projected 18 graduates in FY21 and anticipated reaching 22 by year four. Based on the information provided, graduate numbers were not fully reached with 13-16 graduates over four years reported. The program believes the expansion of the undergraduate Didactic Program in Dietetics to the Meridian campus in Fall of 2024 will allow them to reach initial enrollment and graduation projections in the next review window.

Lewis-Clark State College
The Bachelor of Arts/Bachelor of Science, Psychology: Secondary Education major was approved in March 2017 and implemented Fall 2017. The program initially projected six enrollments in FY18 to reach 21 enrollments by FY21. Based on the information provided the program did not meet enrollment projections reporting four students in FY19 and 1-4 enrollments for subsequent years. The program projected one graduate in FY19 to reach two by FY22. To date, the program has not had any graduates. As the numbers suggest, traditional enrolled students have not seemed to gravitate to this program. The program indicates that one reason might be that, unlike other Secondary
Education degrees, Psychology: Secondary Education is not a single subject teaching endorsement and does not include coursework for a second endorsement. Consequently, students earning the degree would need to earn an additional 20 credit endorsement to be eligible for Idaho certification. Compared to other Secondary Education areas, there are far fewer online and virtual remote course options for Psychology: Secondary Education. To attract more students, Psychology faculty members are increasingly expanding the number of online courses being offered.

The Bachelor of Arts/Bachelor of Science, Secondary Education: Communication Arts was approved in May 2017 and implemented Fall 2017. The program reports they had an average enrollment of 3.4 students per year. Initial enrollment projections were three in FY18 and the program anticipated reaching 10 in FY21 and for subsequent years. Based on the information provided, the program did not fully meet enrollment projections with five reported starting in FY20 and a range of 3-7 enrollments for subsequent years. The program projected one graduate starting in FY21 with 1-2 graduates for subsequent years. To date, the program has not had any graduates. The program was introduced following a request from Teacher Education faculty due to shortages of teachers certified to teach communication arts. Initially designed for post-baccalaureate candidates seeking certification through alternative pathways, the program was deemed necessary to meet state certification requirements, which mandated a traditional certification route through a bachelor’s degree program. However, recent changes in the state’s education policies now allow certified English teachers to also teach speech/communication classes, rendering the separate communication arts endorsement less essential for most Idaho school districts. Consequently, the program is under review for discontinuation, pending further discussion with Teacher Education faculty and assessment.

The Bachelor of Arts/Bachelor of Science in Sports Media Studies was approved in May 2017 and implemented in Fall 2017. The program reports that they had an average enrollment of 9 students per year. Initial enrollment projections were 10 in the first year to reach 50 by year six. Based on the information provided the program did not reach enrollment projections and reported an enrollment of three students at implementation with a range of 4-15 enrollments for subsequent years. The program projected three graduates by year three with 3-7 for the ensuing years. Based on information provided, actual graduate numbers were not fully reached with one graduate reported in FY20 and 1-3 for the subsequent years. Lewis-Clark State College indicates the Sports Media Studies degree program was launched during a period of high enrollment and popularity for sport-related programs at LC. Leveraging existing coursework and faculty resources from Kinesiology, Sports Management, and Communication Arts, the program adopted an interdisciplinary approach without creating new curriculum or hiring additional staff. Internship opportunities were integrated into the curriculum, utilizing resources such as the Sports Information
team, student-run newspaper, and local media outlets. However, despite these efforts, enrollments in Kinesiology and Sports Management declined shortly after the program’s inception, and Sports Media Studies struggled to gain momentum. Despite challenges, the institution remains hopeful about the potential of the Sports Media Studies degree, as it is part of a broader range of programming, with costs embedded within existing "parent" programs. To help increase enrollment, faculty have plans to refine the program and expand both synchronous and asynchronous online course options making the Sports Media Studies major more accessible to distance learners.

University of Idaho
The Bachelor of Science in Entomology was approved in January 2017 and implemented summer 2017. The program initially projected 20 enrollments in FY18 and anticipated reaching 25 by FY23. The program reported five enrollments in spring 2018 and had 6-13 enrollments in subsequent years. While projections were not fully reached, the program reports that the program is growing and has doubled from six students in FY23 to 13 students in FY24. The program projected 20 graduates in FY19 with a range of 20-25 thereafter. Based on the information provided, the program did not meet graduate projections.

The Bachelor of Arts/Bachelor of Science in Film and Television Studies (renamed Film and Television program) was approved in February 2017 and implemented in Fall 2017. The program initially projected 40 total enrollments in FY18 with a range of 65-80 for the ensuing years. Based on the information provided, the program did not fully meet enrollment projections with seven initial enrollments and 22-56 enrollments in subsequent years. Both degrees, however, have experienced steady enrollment growth for the past six years and current enrollments suggest continued rate of growth into the future. The program provides that enrollment growth was slow in the first year because there were process delays before the programs could be advertised and the subsequent pandemic slowed program growth. University of Idaho believes the Film and Television degree programs will continue to attract, retain, and graduate students.

In 2017, U of I’s College of Agricultural Life Sciences went through a significant reorganization that included creating new departments, creating new majors and converting program emphases to stand-alone majors. Those relevant to this review were converting Sustainable Cropping Systems to Crop Science, Environmental Horticulture to Horticulture and Urban Agriculture, Plant Biotechnology to Biotechnology and Plant Genomics, and creating a new Crop Management major. The program notes that the Crop Science major and Crop Management major were combined into one major titled Crop Science and Management in Fall 2023. This progress report is reflective of the five majors as part of the reorganization.
- **Horticulture and Urban Agriculture.** This major projected 26 enrollments starting FY18 to reach 39 in year five and reported 19 enrollments in FY20 compared to the 32 projected and reached 33 enrollments in FY22 compared to the 39 projected. Graduate numbers were achieved starting in FY19 with seven graduates and experienced a slight decrease in numbers in subsequent years.

- **Crop Science.** This major projected 16 enrollments starting in FY18 to reach 22 by year five and achieved those projections starting in FY20 with 19-27 enrollments over three years. Graduate numbers were not fully reached but steady in FY19 and FY20 with four graduates compared to the five projected with a slight dip in FY21. Numbers increased to 9 graduates in FY23.

- **Biotechnology and Plant Genomics.** This major projected eight enrollments in FY18 to reach 14 by year five and achieved those projections in FY20 with 10-19 enrollments over three years. Graduate numbers were not fully reached but steady for the first three years and reached projections by FY22.

- **Crop Management.** This major projected eight enrollments in FY17 to reach 60 by FY22. The program reported eight enrollments in FY20 and reached 16 enrollments in FY22. Based on the information provided, enrollment projections were not fully met. The program projected four graduates starting in FY19 with a range of 8-15 in the subsequent three years. The actual numbers reported were below this threshold with 1-5 graduates.

Over the last two years, the College has experienced faculty turnover. Teaching faculty vacancies temporarily reduced recruitment efforts and delayed offering some courses, while other courses have been taught on overload until new hires can be brought on board. The program has replaced some vacated positions and will continue to fill empty positions to teach plant science courses. With each new hire, the course load per position becomes more manageable for the associated teaching allocation.

**The Bachelor of Science in Medical Sciences** was approved in February 2017 and implemented in Fall 2017. The program reports that enrollments in this major started relatively high in the first year primarily due to enrolled students changing to the new major. The program projected 50 enrollments in the first year to reach 75 by year six. Based on the information provided, the program met and surpassed enrollment projections with 156 enrollments in FY19 compared to the 55 projected and reaching 194 in FY23 compared to the 60-75 projected for the following four years. The program projected five graduates by year three of the program and started showing graduates earlier with one graduate in FY18 and 4-45 over four years with a decrease in FY23 with 25 graduates.
The Master of Science in Plant Pathology was approved by the Board in August 2018 and implemented in summer 2019. The program notes that the first enrollments occurred in Fall 2019. The program projected 11 enrollments in FY20 to reach 13 by year six. Based on the information provided, the program did not fully reach the enrollment projections with two initial enrollments in FY20 and an average of five enrollments for subsequent years. The program projected three graduates in FY20 with 3-4 projected for ensuing years. Actual numbers of graduates were one in FY20 with five reported in FY22, one in FY24 and zero in FY21 and FY23.

The Bachelor of Science in Soil and Water Systems was approved in January 2017 and implemented summer 2017. The program provides that as of Fall 2023, they enrolled 64 students across three majors (Environmental Soil Science, Agricultural Systems Management and Water Science and Management). The Water Science and Management major slightly missed its enrollment target, with 7 students reported versus an expected 9, due primarily to recruitment challenges and significant faculty turnover just prior to the pandemic. Initial enrollments were projected at 15 enrollments in Fall 2018 and 20-30 enrollments for subsequent years. Based on the information provided, the program did not meet enrollment projections with two initial enrollments in FY19 and 2-6 enrollments for the ensuing years. The program projected one graduate in FY19 with a range of 5-7 over three years. The program did not fully reach projections and graduated two in FY22. Other years did not have graduates reported. The program is actively working to increase enrollment in this degree to ensure its sustainability. They have also hired a new hydrologist and initiated the recruitment of an irrigation specialist to bolster curriculum and attract more students. The COVID-19 pandemic’s timing also adversely affected recruitment. Given the critical importance of water resources management in the State and the Western U.S., this major is pivotal. With strategic faculty enhancement and improved recruitment efforts, the program is confident in achieving significant enrollment growth.

Elements for Report

1. Executive Summary of the program report

Established in fall 2017, Boise State's Bachelor of Arts in Global Studies program was a pioneering initiative, one of the first of its kind in the Intermountain West and Pacific Northwest. Conceived in 2016 with strong support from then-Mayor David Bieter, the Idaho Department of Commerce, and the Agency for New Americans, the program garnered widespread endorsement from across the university. Over 12 departments embraced and contributed to the curriculum, solidifying the program's interdisciplinary foundation and setting it on a path for success.

While the initial three years of the Global Studies program saw enrollments align with projections, enrollment numbers in the last few years have fallen short of expectations. The number of graduates has exceeded or at least kept with projections except in FY23. The most significant factor in declining enrollments was the COVID-19 pandemic. During the pandemic, travel and lock-down restrictions significantly curtailed study abroad, internships and experiential learning. In response, the program underwent a thorough curriculum revision and a revision of its program learning outcomes, both implemented in fall 2023. This proactive approach demonstrates the program's commitment to continuous improvement and ensuring graduates are well-equipped for success in the evolving global landscape.

Boise State's 2024 Academic Portfolio Optimization report by Hanover Research Services identified International Policy Analysis, a field under Global Studies, as an emerging academic area with high growth potential. In accordance, we expect the enrollment numbers will grow again and stabilize at approximately 60 students, lower than initially projected and based on our more recent and more complete understanding of student demand. The program is sustainable with an enrollment of 60 students and graduates of approximately 15 per year.

To increase enrollments, we have initiated marketing and recruitment efforts targeting Idaho high school graduates from across the state. In addition, in summer of 2024, we are launching a fully online 7-week version of Global Studies 101. Global Studies 101 is a “Foundations of the Discipline” course in the social sciences at Boise State. Offering a fully online course will increase accessibility for all students and increase program visibility.

2. Brief overview of the program
Housed within the School of Public Service's Department of Global Studies, the Bachelor of Arts in Global Studies empowers students to thrive in an interconnected world. Three emphasis areas – Global Environment (replaced the Word Economics emphasis, which had low enrollments), International Governance and Development, and World Cultures – equip students with interdisciplinary expertise gleaned from collaboration across three colleges: Arts and Sciences, Business and Economics, and Education. This dynamic program fosters ethical, civically engaged citizens prepared to navigate the complex, diverse, and ever-evolving realities of our global community and workforce.

<tbody>
<tr>
<td>Program:</td>
<td>BA Special Education</td>
</tr>
</tbody>
</table>

### Elements for Report

1. **Executive Summary of the program report**

   Launched in Fall 2017, Boise State's Bachelor of Arts in Special Education directly addressed critical needs identified by various stakeholders. Local school districts, facing a growing teacher shortage, advocated for a program to quickly equip new educators. The program provided a smooth transition for students with Associate's degrees in related fields from two-year institutions seeking special education certification. Recognizing the evolving interests of some students, the program offered flexibility for those exploring multidisciplinary studies, psychology, or other areas before committing to special education. This innovative approach empowers students to pursue dual majors or a standalone major in special education, even if they haven't identified it as their initial focus. Notably, in 2017, Idaho had only one other bachelor's program in special education, highlighting the program's significant contribution to the state's educational landscape by filling a crucial gap and offering unique flexibility for aspiring educators.

   Enrollment in Boise State's Bachelor of Arts in Special Education program has exceeded expectations (approximately twice as many students enrolled per year than is estimated to be in this specialized and small program). Program is sustainable at its current enrollment numbers. Number of students graduated has fluctuated from year over year, but has been largely within projections.

2. **Brief overview of the program**

   Housed within the College of Education's Early and Special Education Department, the Bachelor of Arts in Special Education program at Boise State University was specifically designed to address a critical and long-standing shortage of qualified special education teachers in the region. The program offers a streamlined and efficient path to earning special education teacher certification. The BA in Special Education program encompasses a broad range of exceptionalities, covering students from kindergarten through grade 12. Graduates of Boise State's BA in Special Education program are equipped to confidently teach in any special education classroom or program, with certification options spanning: P-12, P-8, and K-12.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>Boise State University</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>BA Urban Studies and Community Development</td>
</tr>
</tbody>
</table>

1. Executive Summary of the program report

Launched in 2017, the Bachelor of Arts in Urban Studies and Community Development cultivates skilled urban analysts equipped with in-depth understanding of how cities, communities, and regions operate, particularly within the Intermountain West. At that time (and is still the case), there were no similar undergraduate programs at other Idaho public institutions. The program’s graduates are empowered to pursue diverse careers, including community development administrators, economic development analysts, city managers, and transportation directors. The program garnered critical support from the then-mayors of Meridian, Coeur d’Alene, Eagle, and Middleton.

As Idaho grows, demand for graduates in this field is expected to be relatively high. Boise State’s 2024 Academic Portfolio Optimization report by Hanover research characterized Idaho’s and the region’s labor demand in Urban Studies and Community Development as a “high growth” area. This is reflected in the program’s impressive record placing graduates in professional positions at government agencies (including the cities of Meridian, Caldwell, Eagle, and Boise), planning firms, and nonprofit organizations within the state and region.

While current enrollment figures are encouraging, they are below initial projections. This is partly due to unexpected events, such as the pandemic’s impacts on enrollments, on the program’s ability to offer experiential learning opportunities, and on faculty’s ability to promote the program within the institution and the region. However, number of graduates have largely met expectations, showing the efficiency in the program getting students to the graduation. In response to the lower than expected enrollments, the program implemented a comprehensive curriculum revision in Fall 2023. This revision introduced several new URBAN courses, enhancing student flexibility and offering significant benefits for transfer students. Program leadership is currently working to identify additional opportunities to align the curriculum with area community college programs and to market the degree within our region. Newer studies and experience lead us to reconsider the initial enrollment estimates and lower them to 40 students per year. The program is expected to be sustainable with an enrollment of approximately 40 students and graduates of 10 per year.

2. Brief overview of the program

The complex world of urban issues and community development is the focus of the interdisciplinary Bachelor of Arts in Urban Studies and Community Development, housed within the Department of Urban Studies and Community Development. This unique
program leverages the expertise and collaboration of various colleges, including Arts and Sciences, Health Sciences, Business and Economics, and Engineering, to equip graduates with the skills needed to tackle the Intermountain West's specific challenges. Through a diverse blend of classroom learning, hands-on projects, partnerships with local communities, research opportunities, and interdisciplinary collaboration, students gain the knowledge and experience to become a changemaker, prepared to address real-world urban issues and community development needs.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>Boise State University</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>BBA Management (online)</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

   Launched in Fall 2017, our Bachelor of Business Administration (BBA) in Management program delivers accessible, high-quality business education to students seeking flexibility due to work or personal commitments. Aligned with the Complete College Idaho initiative, the program empowers Idahoans to elevate their education and career prospects. Notably, U.S. News & World Report ranks our program #23 nationally, placing it within the top 12% of all online BBA in Management programs nationwide.

   The BBA in Management program boasts robust enrollment, exceeding 300 actively enrolled students in fall 2023, and 317 total completions spanning from 2018-2023. While enrollment is very healthy and continues to grow every year, it fell short of the aspirational goals listed in the original State Board proposal. This was partly due to lower new start numbers caused by unforeseen external influences like the pandemic and job market shifts, and partly because students are graduating with the degree in fewer semesters than projected in the initial proposal. With an increased pace to degree, the cumulative number of students enrolled in the program will not compound in the initial manner projected. We expect that this high quality, fully online program will continue to grow and reach numbers expected, however, it will likely take a few extra years. A robust marketing and recruitment campaigns are actively running to attract and enroll future students in the program. This program intentionally serves Idahoans from across the state, with over 28% of enrolled Idaho students from rural communities. The number of graduates has exceeded annual targets initially, but has fallen short of projections in the last few years (those estimates of graduate numbers were based on higher enrollment projections). We anticipate that approximately 125 students will graduate in FY24. We are very pleased with the growth of this program and the program demonstrates an increasingly successful track record of converting enrolled students into graduates.

   Additionally, the initial projections in 2017 were based on limited resources at the time. Since 2017, Boise State has adopted new tools to better estimate student headcount projections for online programs.

2. Brief overview of the program

   Offered fully online through the Department of Management in the College of Business and Economics, the Bachelor of Business Administration in Management equips students
for diverse career paths. With newly added emphasis areas in either Entrepreneurship or Resort and Hospitality Management, the program provides a strong foundation in business principles while fostering specialized skills. Students gain practical experience through hands-on coursework, develop valuable technical skills, and build a network of connections with learners across the country.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>Boise State University</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>MS Genetic Counseling</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

Dedicated to expanding access to the genetic counseling profession, the Master of Science (MS) program integrates the rigorous standards of the Accreditation Council for Genetic Counseling (ACGC) into an innovative, fully online learning experience. Established in 2019, this accredited program addresses the increasing demand for online genetic counseling education, empowering qualified individuals to pursue this rewarding career path regardless of geographic limitations or other constraints. By providing a comprehensive curriculum that fosters skilled and empathetic healthcare professionals, the program ensures graduates are well-prepared to meet the evolving needs of diverse communities. The program achieved the coveted full program accreditation status in October of 2023 for a period of 6 years.

Since its launch in 2019 as the then only fully online MS in Genetic Counseling program in the Western region, Boise State's program has experienced both high demand and fluctuating enrollment. During the planning phase, the program had projected to grow from 12 per cohort to 14 per cohort in FY 2022. While initial enrollments in fall 2019, 2020 and 2021 surpassed projections, demonstrating its popularity, enrollment did not increase in fall 2022 as expected. This is attributed to pandemic related labor market issues in the health care industry which significantly affected genetic counseling and available genetic counseling clinical supervisors and sites. Additionally, many health care programs, including genetic counseling are experiencing the unintended consequences of the Idaho Abortion Law that went into effect in July 2023. To date, the program has lost 12 sites and anticipates several other sites that will not renew their Clinical Affiliation Agreements. This also hinders the ability of the program to seek out new clinical rotation sites and contributes to the program’s limited enrollment growth now and in the future. The program had 2 students that required a temporary break in 2022 but resumed their education the following year which appears as an uptick in enrollment in fall 2023. It should be noted that the program was successful in supporting these students through life events that interrupted their studies and will have these students graduate in 2024. To date the program has lost only 1 student to attrition in 5 cohorts. Importantly, numbers of graduate have consistently met projections, highlighting the program's effectiveness in nurturing skilled genetic counseling professionals.

2. Brief overview of the program
Offered fully online within the College of Health Sciences' School of Allied Health, the Master of Science in Genetic Counseling equips graduates to address emerging trends in the field. These trends include leveraging advancements in genetics and genomics, serving underrepresented and rural communities, developing business acumen, and collaborating effectively with other healthcare professionals. The program adheres to rigorous Quality Matters™ standards for online course design, fostering an interactive learning environment. Students gain experience through diverse clinical rotations across the Western region while honing their interprofessional communication and business skills to serve culturally, economically, and socially diverse communities.

New Program Review

Institution: Boise State University
Program: Ph.D. Ecology, Evolution, and Behavior

Elements for Report

1. Executive Summary of the program report

The interdisciplinary Ph.D. in Ecology, Evolution, and Behavior (EEB) offers a cutting-edge approach, empowering graduates to solve critical ecological challenges through the lens of diverse scientific disciplines. Launched in 2017, the program immerses students in Idaho's diverse habitats, providing unique learning and research opportunities with renowned natural resources. Students actively collaborate with faculty and field scientists, gaining valuable experience through partnerships with organizations like the Intermountain Bird Observatory, U.S. Geological Survey, and international collaborators such as the Peregrine Fund and Gorongosa National Park in Mozambique.

Enrollment in the Ph.D. program has grown to a consistent 7 - 9 new incoming students per year, with the Fall 2023 cohort welcoming 7 students, meeting the proposal enrollment projections. The proposal projected that the first students would graduate from the program after six years in the program, however, we are excited to report that we saw our first doctoral graduates within four years of implementation. While the year 6 expected number of graduates did not meet initial projection of approximately 6.5 per year, the growth of the program has been limited by available funds, in particular dedicated GA lines. The proposal and projections sent to the state board in 2017 called for 22 GA lines yet due to the expiration of one-time funds and other budget reductions, the program is currently limited to 11.5 GA lines, about half of what was expected. Given that the program has averaged 11.75 GA lines from 2018 to 2023, the adjusted number of graduates would be expected to be closer to 3.5 graduates per year after 6 years in the program. Thus, the program meets projected number of graduates in year 6 given the resources provided and are currently available.

Even with these limitations in resources, the number of PhD students has markedly increased over the years, partially driven by external grants secured by faculty. For example, in Fall 2019 about 30% of enrolled students were grant funded, whereas in Fall 2023 that number increased to approximately 65%.

2. Brief overview of the program

Boise State University's Ph.D. in Ecology, Evolution, and Behavior, housed within the Department of Biological Sciences, equips scientists to tackle complex environmental challenges. With a unique emphasis on Global Change Biology, the program trains its graduates to use theories from diverse fields – biology, physics, and social science – to
contribute to both fundamental research and real-world problem-solving. By studying complex ecosystems and their interacting inhabitants, students gain the expertise to provide actionable and understandable knowledge to policymakers and the public. Areas of particular strength include raptor biology, community and population ecology, biogeochemistry, human behavioral ecology, and human-environment systems.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>Idaho State University</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>Master of Arts in Spanish</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

The Department of Global Studies & Languages submitted the proposal to establish a Master of Arts in Spanish to meet a proven need for additional post-baccalaureate Spanish language education options in the state of Idaho as well as the surrounding region. The program was designed to meet the needs of both traditional graduate students, as well as educators seeking further certification and degrees. The initial projections called for 2 students to be enrolled in the first year, with the program enrolling 7 students in year two and slowly increasing in size over the next 5 years. As is clear based on the data below, we have greatly exceeded the proposed 5-year enrollment target, and currently have roughly 110 students enrolled in the program. Due to the part-time nature of many students (a good portion of whom are working professionals and teachers in particular), the average time to complete the program varies – and staffing and course schedules have been adjusted within the department to meet the expressed desire for additional summer course offerings. In the Fall of 2023, a new admissions process was put in place that provides better admissions assessment criteria and a more holistic view of the applicant – this will lead to even greater student success within the program moving forward.

2. Brief overview of the program

The MA in Spanish is an academically rigorous, advanced program of study in Spanish Language, Literature, and Cultural Analysis. The degree is offered fully online and comprised of a 30-credit program of study that provides high school teachers of Spanish and other individuals seeking to reach an advanced level of proficiency the opportunity to attain the qualifications and language skill level required to participate effectively in a variety of educational and professional settings. Students are encouraged to personalize their program of study by including nine credits of elective coursework in Spanish, Spanish for the Professions, or in another approved area of study. Students may begin their studies year-round, applying for the Fall, Spring, or Summer semester.

3. Enrollment and Graduates

   a. In the tables below, show the actual enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

<td>Program:</td>
<td>Master of Science in Clinical Psychopharmacology</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

The Idaho State University Master of Science in Clinical Psychopharmacology (MSCP) is a post-doctoral program intended to train clinical psychologists in the safe and effective use of psychotropic medication. The program admits licensed psychologists full-time or part-time in either a track to train psychologists who intend to prescribe medications that includes additional clinical training hours and synchronous course work; or an online, didactic-only track that includes asynchronous coursework. The online, didactic-only track enrolled the first cohort of students in the Fall 2022 semester. The clinical faculty in the department of Clinical Psychopharmacology in the L.S. Skaggs College of Pharmacy, provide services to the community at the Idaho State University Integrated Mental Health Clinic in Meridian, ID. This clinic also serves as a training site for students, which is unique amongst MSCP programs nationally.

In 1991, the US Department of Defense was the first to grant prescription privileges to military psychologists through a psychopharmacology training program. Since then, states have granted prescriptive authority to psychologists beginning with New Mexico in 2002, followed by Louisiana (2004), Illinois (2014), Iowa (2016), Idaho (2017), and most recently Colorado in 2023. Currently, there are just over 300 prescribing psychologists in US and the US military. Idaho currently has 11 licensed prescribing psychologists. Idaho State University’s MSCP program initially joined Fairleigh Dickinson University, New Mexico State University, Alliant California School of Professional Psychology, and The Chicago School of Professional Psychology as the only schools offering the MSCP degree in the US – at the time ISU was the only MSCP program in a College of Pharmacy. Since the launch of ISU’s MSCP program in 2019, Drake University started an MSCP program in the Fall 2022 semester that is also housed in a College of Pharmacy. Antioch University Seattle and the University of Colorado Denver are slated to launch MSCP programs in the Fall 2024 semester. Currently, there are over 1400 graduates of MSCP programs nationwide. Most of those graduates have not pursued prescriptive authority but value the MSCP education and training to inform their clinical practice and provide consultation. Of the current MSCP programs, New Mexico State University is the most similar to ISU. The program at New Mexico State University was established in 1999 and has 103 graduates and 25 students currently enrolled. Fairleigh Dickinson University and Alliant California School of Professional Psychology are the most established programs. The program at Fairleigh Dickinson University has 486 graduates and 100 students currently enrolled. The program at Alliant California School of Professional Psychology has 627 graduates and 25 students currently enrolled. The program at Idaho State University is primarily supported by appropriated funds, but also generates revenue through online program fees and the operation of the Integrated Mental Health Clinic.
Future goals for the Idaho State University MSCP program are to grow enrollment in the program and to expand clinical services offered in Meridian. It should be noted that the program has not met its initial enrollment projections. The primary reason for this is that when originally launched, the program only offered in person synchronous course work and clinical training hours, with no online or sans clinical training hours option. This option meant that we were requiring practicing psychologists to relocate to Boise, leaving behind their practices, in order to matriculate into the program. The addition of an asynchronous, online program without the requirement of clinical training hours (which are available to practicing psychologists outside of our program) has led to the subsequent expansion in enrollment with our current year’s cohort standing at 13 (7 more than 2 years ago). We believe the addition of the new online track will allow us to meet our enrollment and graduation projections within the next 2-4 years.

2. Brief overview of the program

The MSCP program at Idaho State University is 38 credits or the equivalent to two years of full-time didactic coursework. Students pursuing prescriptive authority can complete an additional 2 credits of supervised clinical training. In the first half of the MSCP program, students complete foundational courses in anatomy and physiology, pathophysiology, neuroscience, pharmacology, neuropharmacology, and physical assessment. In the second year, students complete integrated coursework in psychopharmacotherapeutics, research methods, and professional, ethical, and legal issues. The curriculum in the Idaho State University MSCP program is primarily guided by Idaho state statute, under the Board of Psychologist Examiners and guidelines established by the American Psychological Association (APA) for MSCP program designation (equivalent to program accreditation).

Idaho Title 54, Chapter 23, 54-2317, outlines that the students achieve clinical competency in areas including basic science, neuroscience, physical assessment and laboratory exams, clinical medicine and pathophysiology, clinical and research pharmacology and psychopharmacology, clinical pharmacotherapeutics, research, and professional, ethical, and legal issues. The statute also states that the MSCP program shall satisfy the requirements to become designated a post-doctoral education and training program in clinical psychopharmacology by the APA.

The APA states that “training of psychologists in the practice of psychopharmacology is based on two foundations. The first is rigorous education in the psychological sciences with training as a practitioner of psychological interventions. The second is a firm grounding in the basic medical sciences that form the basis for utilizing biological interventions in a safe and effective manner.” APA first developed the Model Education and Training Program in Psychopharmacology for Prescriptive Authority in 1996 and it has subsequently been revised in 2009 and 2019. APA’s recommended curriculum promotes integrating knowledge, skills, and attitudes fundamental to professional practice with psychopharmacologic interventions. This represents a movement to a competency-based education and training model, like that of other healthcare professions. The APA recommended curriculum mirrors that of Idaho statute but is expanded to include systems
of care (coordination of care with different medical specialties, consultations and referrals, and coordination and consultation in long-term care). The APA additionally has recommended supervised clinical experiences in physical assessment and a prescribing psychology fellowship that includes acute, short-term, maintenance medication strategies, polypharmacy, tapering/discontinuing medications, and integrating other forms of psychological care into the treatment plan, preferentially including exposure to inpatient, consultation/liaison, emergency department, and outpatient care. MSCP programs are evaluated by the APA Designation Committee for Education and Training Programs in Psychopharmacology for Prescriptive Authority (RxP Designation Committee) based on the curriculum requirements.

Idaho State University’s MSCP program was initially granted APA designation for 3 years on January 6th, 2021. The program has subsequently successfully undergone an interim review in 2022 and a full program review in 2023. In 2023, the program was granted a 5-year designation status through 2028 with a curriculum that meets both the Idaho statute and APA designation criteria.

<tbody>
<tr>
<td>Program:</td>
<td>Master of Science in Nutrition with Dietetic Internship</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

When the department submitted the Master of Science in Nutrition request there were two tracks: Master of Science in Nutrition and Master of Science in Nutrition with Dietetic Internship (MS/DI). The MS/DI was built upon the long existing dietetic internship post baccalaureate certificate program housed at ISU for 20 years. Adding a master’s degree to the program was in response to a change to the profession of requiring a graduate degree to sit for the national registration exam for dietitians that went into effect January 1, 2024. The program was an early adopter and experienced a drop in the number of applications. Many students wanted to complete their internships without earning a graduate degree while that was still an option for practicing as a dietitian. Although the program did not fill all 18 available seats, the headcount numbers were consistent since the beginning. This trend improved in FY 2024 when the program filled to full capacity of 18 seats. The requirement to have a graduate degree for eligibility to take the registration exam for dietitians is now in effect. Additionally, the department is increasing its undergraduate degree capacity by adding programming on the Meridian campus. Both changes will ensure that the program will fill to capacity going forward.

The program admission process into the MS/DI is rigorous and is reflected in the graduation rates. They have been excellent as nearly all students who begin the program graduate. Since program implementation only three students withdrew from the program. This will continue to be the case as entrance standards remain in place.

The numbers below include five students in the MS in Nutrition track that did not include an internship component. The program made the decision to focus its limited resources on the MS/DI and the last graduate from the MS in Nutrition track was fall 2022.

2. Brief overview of the program

The MS/DI seats students on both the Pocatello and Meridian campuses and provides both a graduate degree and about 1,200 hours of supervised practice that prepares students to take the national registration exam for dietitians. Admission to the program occurs in the spring and students begin coursework the next fall. Their first semester (fall 1) is online coursework as the program does not have the clinical facility capacity to support two overlapping cohorts completing supervised practice. Supervised practice begins in spring semester, continues through summer semester, and graduation occurs their second fall (fall 2) semester. After
successful completion of program requirements students are awarded a Dietetic Internship verification statement and are eligible to sit for the national exam.

It should be noted that the program did not meet its projected enrollment or graduation numbers over this review window. Initial projections were 22 enrollments at inception growing to 40 students. The program implemented with 18 and has remained stable in the low 30s for the last three years. Graduations per year have hovered around 15 on average. We know that substantive workforce need for registered dieticians exists, and the recent approval of the Department of Nutrition and Dietetics’ expansion of the undergraduate Didactic Program in Dietetics (DPD) to the Meridian campus to begin in Fall of 2024 should shore up this pipeline and let us reach our initial enrollment and graduation projections in the next review window. The undergraduate Didactic Program in Dietetics allows students to enter the DPD in their junior year and progress into the MS/DI program following its completion.

<th>Institution:</th>
<th>Lewis-Clark State College</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>Sports Media Studies BA/BS UG (420)</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

   The number of Sports Media Studies majors has been below the estimated/aspirational enrollments included in the original Sports Media Studies BA/BS proposal submitted to the State Board of Education.

   The average enrollment has been nine students per year. The major, however, is part of a larger Communication Arts program in the Division of Humanities, which had a Fall 2023 enrollment of 42 (as measured by head count upon Fall Census Day Report). The Sports Media Studies BA/BS coursework also supports other majors, such as Business and Communication BA/BS UG (225), Communication Arts BA/BS UG (405), Communication Arts: Secondary Education BA/BS UG (405.32), Exercise Science BA/BS UG (314), Kinesiology BA/BS UG (310), and Kinesiology: Secondary Education BA/BS UG (310.32), and vice versa. For example, the Sports Media Studies requirements closely align with the requirements for the Communication Arts major and the Kinesiology major. That means higher course enrollments for courses included in all three programs, while giving flexibility to students interested in both media studies and kinesiology.

   Communication Arts faculty members have been expanding both synchronous and asynchronous online courses options, offering almost all COMM course requirements that are part of the Sports Media Studies program either fully online or as virtual courses. This should increase future enrollment by making the degree more accessible to distance learners.

2. Brief overview of the program

   As outlined in the 2023-2024 LC State catalog (http://catalog.lcsc.edu/academic-programs/physical-life-movement-sport-science-division/baccalaureate-degrees/sports-media-studies-ba-bs/#text), the Sports Media Studies BA/BS UG (420) program combines coursework from multiple academic disciplines to prepare students to work in the dynamic, exciting fields of sport journalism, sport broadcasting, digital sports production, and sport media relations. Students enjoy internships in high school athletics and within college/university athletic departments. They also work with local newspapers, media outlets, and sport businesses. The degree is part of both the Humanities Division and the Physical, Life, Movement & Sport Sciences Division.
Students in this program have two academic advisors: one from the Humanities Division and one from the Physical, Life, Movement and Sport Sciences Division.

As part of the Sports Media Studies BA/BS UG program, students complete 21.0 credits of coursework toward the General Education core requirements. Students also complete 63.00 credits of program-specific coursework, with a heavy focus on communications (COMM) courses, English (ENGL) courses, kinesiology (KIN) courses, and health (HLTH) courses. Additionally, students complete roughly 20 elective credits. For students pursuing the BA, rather than the BS distinction, 4-16 of the elective credits are in a second or heritage language.

3. Enrollment and Graduates

a. In the tables below, show the actual enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

<tbody>
<tr>
<td>Program:</td>
<td>Secondary Education: Communication Arts</td>
</tr>
<tr>
<td></td>
<td>BA/BS UG (405.32)</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

The number of Secondary Education: Communication Arts majors has been below the estimated/aspirational enrollments included in the original Secondary Education: Communication Arts BA/BS proposal submitted to the State Board of Education.

The average enrollment has been about 3.4 students per year. The major, however, is part of a larger Communication Arts program in the Division of Humanities, which had a Fall 2023 enrollment of 42 (as measured by head count upon Fall Census Day Report). The Secondary Education: Communication Arts BA/BS coursework also supports other majors, such as Business and Communication BA/BS UG (225), Communication Arts BA/BS UG (405), and numerous other education degree pathways, and vice versa. For example, the Communication Arts: Secondary Education requirements closely align with the requirements for the Communication Arts major and other secondary education majors. That means higher course enrollments for courses included in numerous programs, while giving flexibility to students interested in both communication arts and education.

Communication Arts faculty members have been expanding both synchronous and asynchronous online courses options, offering almost all COMM course requirements that are part of the Communication Arts: Secondary Education program either fully online or as virtual courses. The same is true for the Education course requirements for the program. This should increase future enrollment by making the degree more accessible to distance learners.

2. Brief overview of the program

As outlined in the 2023-2024 LC State catalog (http://catalog.lcsc.edu/academic-programs/humanities-division/baccalaureate-degrees/communication-arts-secondary-education-ba-bs/), the Secondary Teacher Education program at LC State prepares teacher candidates for certification in grades 6-12. It requires 27 credits of Education coursework in professional foundations and studies and 13 credits during internship. Students apply for admission to the program after successfully completing nine credits of Education coursework in professional foundations.

Secondary Teaching Certificates (6-12) are endorsed for subject areas according to Idaho Teacher Certification standards. All certificates require a minimum of 30 semester credits.
for a major endorsement area and 20 semester credits for a minor endorsement area, or a minimum of 45 semester credits for a single endorsement.

Students in the Secondary Education Teacher Certification program are expected to provide evidence through performance that they have met Idaho's requirements for certification and become dedicated and knowledgeable professionals, content specialists, competent educational designers, capable educational facilitators, insightful educational evaluators, reflective professionals, and culturally responsive professionals before being recommended for secondary teacher certification.

The degree in Secondary Education: Communication Arts is part of both the Humanities Division and the Teacher Education and Mathematics Division. Students in this program have two academic advisors: one from the Humanities Division and one from the Teacher Education and Mathematics Division.

3. Enrollment and Graduates

a. In the tables below, show the actual enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>Lewis-Clark State College</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>Psychology: Secondary Education BA/BS</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

The Psychology: Secondary Education BA/BS serves current and aspiring teachers who desire a Psychology endorsement. The major also provides a strong grounding in the field of Psychology.

The number of Psychology: Secondary Education majors has been below the estimated/aspirational enrollments included in the original Psychology: Secondary Education BA/BS proposal submitted to the State Board of Education (SBOE). The enrollment typically has been about two students per year between FY17-18 and FY23-24. However, the content coursework required for the Psychology: Secondary Education major is virtually identical to the content coursework required for the Psychology major. That major had an average enrollment of about 110 between FY17-18 and FY22-23. The required Secondary Education coursework for Psychology: Secondary Education is virtually identical to the coursework required for all other Secondary Education degrees (such as English: Secondary Education and Social Sciences-History: Secondary Education). As a result, the existence of the Psychology: Secondary Education major has helped boost Psychology and Secondary Education course enrollments.

2. Brief overview of the program

Psychology involves in the scientific study of the mind and behavior. The Psychology: Secondary Education BA/BS serves students interested in becoming teachers with an endorsement in Psychology as well as current teachers interested in pursuing an additional endorsement in this content area. By helping to prepare students to go into teaching, the degree is intended to address Idaho’s ongoing teacher shortage.

The required Psychology courses are consistent with American Psychological Association (APA) guidelines. Thus, the Psychology: Secondary Education major provides a strong grounding in the field of Psychology, especially in the areas of Social Psychology and Research Methods. Students gain knowledge about human beings and how Psychology can help benefit people.

As with all LCSC Secondary Education majors, Psychology: Secondary Education requires 27 credits of Education coursework and 12 internship (student teaching) credits. Students apply for admission to the program after successfully completing nine credits of Education coursework in professional foundations.

The above is modified from the 2023-24 LCSC catalog descriptions for the Psychology BA/BS and the Psychology: Secondary Education BA/BS majors.

Elements for Report

1. **Executive Summary of the program report**
   The Entomology (B.S.) program within the Department of Entomology, Plant Pathology and Nematology is a small but growing part of the department. After low enrollment for several years, the program is growing in numbers, doubling from six students in FY23 to 13 students in FY24. Graduates often pursue graduate school at UI.

2. **Brief overview of the program**
   The Entomology (B.S.) program within the Department of Entomology, Plant Pathology and Nematology is designed to provide an overall background in the discipline of Entomology. It stresses the importance of insects in agricultural and natural systems. Classwork focuses on introducing students to the discipline and focuses on economic and ecological aspects of insect biology. Classwork focuses on understanding insect ecology and management. The classes have both lecture and laboratory components. Students are encouraged to pursue independent projects mentored by departmental faculty.

3. **Enrollment and Graduates**
   a. In the tables below, show the **actual** enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>University of Idaho</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>Film and Television Studies BA</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report
   The Film and Television Studies program, renamed the Film and Television program in 2022-23, has degree offerings for a B.A. and a B.S. that have the same major course work requirements. The combined degree offerings have resulted in year-by-year gains in enrollment in all but one year during which enrollments stayed the same. Enrollments increased 700 percent in the six-year reporting period. Between FY 21 and FY 23, enrollment grew 22 percent. There are 56 primary majors in the B.A. and B.S. programs. Graduation rates for the programs have also risen year by year. Three years after implementation, there were 5 graduates, and this figure rose 180 percent to 14 in FY 23. Enrollments and graduation figures indicate a sustainable academic program.

2. Brief overview of the program
   The Film and Television program is an interdisciplinary degree that prepares students for a variety of careers in cinema, television and video production. The degree blends film and television production coursework with screenwriting and film histories, theories and aesthetics, allowing students to build their own areas of specialization. Film and Television is taught using the film school model, whereby students will learn how to think critically and historically about film and culture while learning the fundamentals of film writing and filmmaking.

3. Enrollment and Graduates
   a. In the tables below, show the actual enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

<tbody>
<tr>
<td>Program:</td>
<td>Horticulture and Urban Agriculture; Biotechnology and Plant Genomics; Crop Science; Crop Management; Crop Science &amp; Management, BS.Pl.Sc</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report
Horticulture and Urban Agriculture, Biotechnology and Plant Genomics, and Crop Science & Management (B.S. Plant Science) are the three current programs within the Department of Plant Sciences. Horticulture and Urban Agriculture and Biotechnology and Plant Genomics were both initiated in Fall 2017, at the same time as Crop Science and Crop Management were initiated. In Fall 2023 Crop Science and Crop Management were combined into one major, Crop Science and Management. From 2003 until 2017 a single program, Sustainable Landscape and Cropping Systems (B.S. Ag. L.S.) covered these programs (and others) as emphasis areas, during this time the B.S. Plant Science was inactive. Starting in FY 2018 enrollment in Plant Science programs increased yearly through FY 2022 nearly doubling over that time, with a small decrease in FY2023 and into FY 2024 (Table 1). It is widely believed that program names with readily identifiable names are attractive to students and are largely responsible of enrollment gains. The number of students completing a program have gradually increased since 2017 (Table 2). The last two years have seen significant efforts to rebuild faculty instructor numbers after a series of retirements. The department is currently negotiating a control environment agriculture faculty hire to attract students to the production of food in urban settings.

2. Brief overview of the program
Horticulture and Urban Agriculture, Biotechnology and Plant Genomics, and Crop Science & Management (B.S. Plant Science) are designed to provide basic and advanced topics in the areas of horticulture, biotechnology and crop science and management. Emphasis is on the importance of plants in agricultural systems. All three programs provide basic plant science background, while upper-level courses specialize in the three discipline areas. Upper-level courses include core agricultural systems in Idaho including potato, cereals, forage and vegetable crops. Students have the opportunity to select courses across disciplines allowing for customized curriculum. Many of the classes have both lecture and laboratory components. Students are required to obtain hands-on experience in the plant sciences prior to graduation.

3. Enrollment and Graduates
a. In the tables below, show the actual enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>University of Idaho</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>Medical Sciences BS</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report

The Medical Sciences BS is currently one of four bachelor’s degree majors within the Department of Biological Sciences at the University of Idaho. As of Fall 2023 semester, medical sciences majors constituted 58% of the students in these four programs. Enrollments in the Medical Sciences BS degree started relatively high in the first year due to enrolled students changing to the new major. Enrollments grew dramatically over the first two years and have remained stable over the past four years. While degree completions have varied year-to-year, the current 5-year graduation rate is 83%. According to the most recent senior survey data, 85% of Medical Sciences graduates were satisfied or very satisfied with the education they received within their field. In summary, the Medical Sciences BS is a rigorous and popular degree program in the Department of Biological Sciences. It supports the critical need for healthcare professionals in Idaho, which has the fewest physicians per capita in the U.S.

2. Brief overview of the program

The Medical Sciences Degree Program at the University of Idaho is a comprehensive and dynamic academic program designed to provide students with a solid foundation in the biomedical sciences. Rooted in a commitment to excellence in education, research, and service, this program prepares students for a variety of careers in the rapidly evolving field of healthcare. Students in the Medical Sciences program take a comprehensive range of coursework in fundamental concepts of biology and chemistry, critical thinking, leadership and professional conduct, psychology, global and cultural competence, and biomedical specialty areas. Recognizing the diverse career paths within the medical sciences, the program offers flexibility for students to tailor their coursework based on individual interests. This adaptability allows students to specialize in areas such as medical research, healthcare administration, or pre-professional tracks for advanced degrees in medicine or other allied health professions. Students have the opportunity to engage in cutting-edge research under the guidance of experienced faculty members. The program emphasizes hands-on laboratory experiences, fostering critical thinking and problem-solving skills essential for success in both academic and professional settings. The program recognizes the importance of practical experience in healthcare settings, and thus provides credits for internships in various healthcare-related settings.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>University of Idaho</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>Plant Pathology MS</td>
</tr>
</tbody>
</table>

Elements for Report

1. Executive Summary of the program report
   The Plant Pathology (M.S.) program within the Department of Entomology, Plant Pathology and Nematology is a small but stable part of the department. After a slow initial year, the number of graduate students has remained steady for the past four years. EPPN does not currently have a Ph.D. program in Plant Pathology. This means that although they may be pursuing research in a sub-discipline of Plant Pathology and working with faculty in Plant Pathology, the students are frequently enrolled in other departments within the college. The program would benefit from the department having an active Ph.D. program, which is now being pursued and should be active starting in 2025.

2. Brief overview of the program
   The Plant Pathology (M.S.) program within the Department of Entomology, Plant Pathology and Nematology is designed to provide an overall background within the field of Plant Pathology. Classwork focuses on introductory plant pathology and microbiology. Several disciplines are covered in these classes, while others are more specialized and include subdisciplines such as Bacteriology and Mycology. The research conducted by students is guided by faculty mentors with expertise in Nematology, Mycology and/or Bacteriology. The research component is primarily focused on agricultural systems, but projects are also be conducted in natural ecosystems.

3. Enrollment and Graduates
   a. In the tables below, show the actual enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

New Program Review

<table>
<thead>
<tr>
<th>Institution:</th>
<th>University of Idaho</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program:</td>
<td>Soil and Water Systems BS</td>
</tr>
</tbody>
</table>

**Elements for Report**

1. **Executive Summary of the program report**
The Water Science and Management bachelor's degree, proposed before the establishment of the SWS department, began enrolling students in Fall 2018 and has since reached an enrollment of six students, with the first two graduating in 2022. The Covid pandemic impacted enrollment growth. The program, primarily attracting students from California and Idaho, has undergone faculty changes and adapted by increasing remote course offerings. Following State Board of Education recommendations, the degree's credit requirement was reduced from 128 to 120 to align with other programs. Continuous annual assessments have led to curriculum updates, specifically incorporating more math and engineering skills into the major's courses.

2. **Brief overview of the program**
The Water Science and Management degree (within the B.S.S.W.S.) prepares students for expertise in water resource management across agriculture, forestry, and rangeland ecosystems. This curriculum is designed to contribute to sustainable agricultural practices amidst water constraints, ensuring food and water security. It includes advanced mathematical and GIS-based mapping courses, equipping graduates for roles such as quantitative hydrologists, irrigation and precision agriculture technicians, and watershed management specialists. The program targets full-time students aiming for careers in soil and water quality protection, conservation, and management, responding to the growing demand for such professionals against a backdrop of anticipated water shortages and agricultural needs.

3. **Enrollment and Graduates**
   a. In the tables below, show the **actual** enrollment in the program and number of graduates from the program. Please note cohort years will precede fiscal year description (i.e., FY19 would have Fall 2018 cohort). OSBE will provide projections from the institution’s original proposal.

IDAHO DIGITAL LEARNING ACADEMY

SUBJECT
Annual Report

APPLICABLE STATUTE, RULE, OR POLICY
Idaho Code § 33-5501
IDAPA 08.04.01 Rules Governing the Idaho Digital Learning Academy

BACKGROUND/DISCUSSION
According to IDAPA 08.04.01 Rules Governing the Idaho Digital Learning Academy, dba Idaho Digital Learning Alliance (IDLA) an annual report is required to be submitted each year to the State Board of Education. This request is to meet the requirements as outlined in the rule. This report will include Accreditation, Acceptable Use, and an Idaho Digital Learning Alliance fee schedule in order to be in compliance with statute and State Board rule.

The 2002 Idaho Legislature created the Idaho Digital Learning Alliance as an online, school-choice learning environment (Title 33 Chapter 55, Idaho Code). Idaho Digital Learning Alliance is a statewide virtual school providing Idaho students and school districts with greater access to a diverse assortment of courses and opportunities. IDLA was created to address the educational needs of all Idaho students: traditional, home schooled, at-risk, and gifted learners and is a service to Idaho students and all Idaho School Districts. Rigorous online courses delivered by highly qualified Idaho faculty assists the state in preparing Idaho students to meet Idaho’s high school graduation requirements, Idaho standards, and the increased demand from colleges and industry and Idaho’s workforce.

IDLA’s leadership team presented this report to the Planning, Policy and Governmental Affairs Committee on April 1, 2024.

IMPACT
Idaho Digital Learning Alliance served approximately 44,432 enrollments during academic year 2022-2023, which is a 1% increase from 2021-2022. Nearly 100% of high schools in Idaho participated in 2022-2023. The number one reason for taking Idaho Digital Learning Alliance courses is identified as “Classes not offered locally” with “Online Course Preference” taking the second position. Other reasons include scheduling conflicts; advanced placement; dual credit; early graduation; foreign languages; and credit recovery.

ATTACHMENTS
Attachment 1 – IDLA Annual Report

BOARD ACTION
This item is for informational purposes only.
2023-2024 Idaho Digital Learning Alliance Fee Policy

Fees for Idaho Digital Learning Alliance: The fee schedule for 2023-2024 is determined upon a per-enrollment basis. An "enrollment" is defined as one (1) student enrolled in one (1) Idaho Digital Learning Alliance course. Idaho Digital Learning Alliance enrollment fees outlined in this Fee Policy apply to all Idaho Digital Learning Alliance courses unless noted otherwise below.

Idaho Digital Learning Alliance Per-Enrollment Cost: The cost for one (1) enrollment is $75 for Idaho students.

Advanced Placement/Dual Credit Courses: Courses designated as "Advanced Placement or Dual Credit" will not incur a per-enrollment cost unless courses are delivered in a custom session (see Custom Session Courses below). Schools cannot request Advanced Opportunity funding for Advanced Placement or Dual Credit classes that are delivered through a custom session.

In collaboration with Idaho Digital Learning Alliance, School Districts shall assist students with the obtainment of college credit, examinations, and materials such as textbooks (see Textbooks section in District MOU).

Advanced Opportunities: Idaho Digital Learning Alliance (IDLA) supports students that have access to Advanced Opportunities funds. IDLA does not invoice schools/students for courses marked for Advanced Opportunities funding. These courses are directly funded by the State Department of Education. IDLA will not process a payment or payment reversal of Advanced Opportunities outside of the fiscal year, July 1st through June 30th. If a course is marked in error for Advanced Opportunities and it is not funded, IDLA will invoice the school/district of enrollment directly.

Scholarships: Qualifying students must be registered with an Idaho public school. Each student must be registered by their local school's Idaho Digital Learning Alliance site coordinator. The site coordinator must request a scholarship from the local Regional Coordinator. The scholarship is for $50 of the $75 Idaho Digital
Learning Alliance enrollment fee. Scholarships are limited; the remaining course fee balance of $25 will be invoiced to the school/district for payment.

Scholarships can not be applied to:

- Students registered in Custom Session courses.
- Students registered for Advanced Opportunities funding.
- Students registered for AP/DC Courses - Exams or textbooks.
- If a student fails to successfully complete a course for which a scholarship has been applied, the student is ineligible for a future scholarship until successfully completing one subsequent IDLA course.

Custom Session Courses: Any courses requested and implemented through Idaho Digital Learning Alliance’s Custom Course program will incur costs based on the Custom Session Policy (see Idaho Digital Learning Alliance website for information and request form). This includes district requests for Hybrid Custom Sessions. All Custom Sessions require a minimum of 12 students and will incur costs based on the following fee structure:

Idaho Digital Learning Alliance reserves the right to modify the fee policy. Districts will be notified of any changes.

Idaho Digital Learning Alliance Refund Policy

Idaho Digital Learning Alliance requires that all drops are requested or confirmed by the Site Coordinator during the school year. Drop requests initiated by a parent or guardian will be accepted for summer courses only. For a course fee to be eligible for a refund and for a student to be exempt from a grade report, a drop must be initiated during the following times:

Orientation: If the student does not complete orientation, they will not be enrolled in classes and a full refund of fees will be granted.

All cohort and credit recovery sessions:
- **6, 9, or 10 weeks or Custom Sessions:** The Idaho Digital Learning Alliance Office must be notified by Friday of the 2nd week of class to receive a full refund and remove the student from the course.
- **16-week session:** The Idaho Digital Learning Alliance Office must be notified by Friday of the 3rd week of class to receive a full refund and remove the student from the course.
Flex sessions:
- The drop deadline for all flex classes is 14 days after the student gains course access.
- If a student is inactive in class for 14 consecutive days, the instructor may initiate a drop process. The Site Coordinator either confirms the drop or can request additional time for the student to become active in the course.

After the drop deadline:
- Grades will be reported for all students remaining in courses regardless of completion, and the full fee will be invoiced to the district.
- Exceptions to the drop deadline may be requested by the district for extenuating circumstances.
IDAHO DIGITAL LEARNING ALLIANCE ACCEPTABLE USE POLICY

Proper use and behavior in a distance learning environment will be determined by your school’s existing guidelines covered in the district’s Acceptable Use Policy (AUP) and the Idaho Digital Learning Alliance’s Acceptable Use of Technology Policy. Idaho Digital Learning Alliance Acceptable Use of Technology Policy (AUP) Computers, computer networks, and the internet provide essential tools that support distance learning and Idaho Digital Learning Alliance. All students are expected to use Idaho Digital Learning Alliance and the resources provided to access Idaho Digital Learning Alliance for purposes appropriate to the education environment. You must refrain from any use that is not consistent with the policies, purposes, or objectives of either the hosting district or Idaho Digital Learning Alliance.

Prohibited uses of technology

- The use of communication tools (email, discussion boards, web pages, chat, and others) should not be used for any communication that is:
  - defamatory
  - inaccurate
  - abusive
  - rude
  - obscene
  - profane
  - sexually explicit
  - threatening
  - harassing
  - racially offensive
  - illegal
  - encouraging the use of illegal materials
  - inconsistent with the policies, purposes, or objectives of either the hosting district or the Idaho Digital Learning Alliance
- Impersonating another individual, including, but not limited to, the use of another user’s login or password, communicating or completing work on behalf of another individual, or mocking others in a derogatory manner.
- Revealing personal or private information to others such as home address, age, gender, phone number, etc. You should also be cautious when releasing this information about yourself.
- The use of AI tools, such as ChatGPT, is allowed for the purpose of self-learning, ideation, and inspiration. However, direct plagiarism or copying and pasting of AI-generated work as student-generated work will be treated as plagiarism. Students are expected to use the tool in accordance with academic integrity guidelines and cite any text generated by the tool.
● Disrupting the use of technology by another user or service. This includes but is not limited to, attempts to harm or destroy data, uploading and/or creating computer viruses, uploading and/or downloading information without need, sending or receiving data with the intent to degrade network performance, etc.
● Violation of any local, state, or federal regulation or statute.
● You will not use Idaho Digital Learning Alliance resources to sell or offer to sell any goods or services without prior approval of both the hosting district Board and the Idaho Digital Learning Alliance board.

Security and Privacy Risks Associated with Personal Device Use

● Personal Device Use: Students using personal devices such as laptops, tablets, and smartphones to access distance learning resources should ensure that their devices have updated operating systems, antivirus software, and firewalls to protect against malware, viruses, and other online threats.
● Personal Information: Students should avoid sharing personal information such as their full name, address, phone number, email address, or any other sensitive information online. Unless directed to do so by the content or teacher, personal information should not be added to online tools or resources.
● Passwords: Where possible, students should use their Google or Microsoft accounts provided by their school for login. If passwords must be used, students should use strong passwords for their online accounts and avoid sharing them with others. They should also avoid using the same password for multiple accounts and change them frequently.
● Public Wi-Fi: Students should avoid using public Wi-Fi networks to access distance learning resources as they are often unsecured and can pose security risks. Instead, they should use a secure network or a personal hotspot.
● Screen Sharing: Students should be cautious when screen sharing during virtual meetings or sessions, especially if they are using personal devices. They should ensure that they are not sharing any personal or sensitive information unintentionally.
● Reporting Security Incidents: Students should report any security incidents, breaches, or suspicious activity to their teachers or administrators immediately. Idaho Digital Learning Alliance Rights and Responsibilities
● Idaho Digital Learning Alliance reserves the right to monitor all activity, and record voice, text, and video correspondence related to Idaho Digital Learning Alliance courses or sites.
● Idaho Digital Learning Alliance reserves the right to block or remove any material that is not consistent with the policies, purposes, or objectives of either the host district or Idaho Digital Learning Alliance.
● IDLA may require the enabling and use of a camera and microphone to assist in proctoring or live instruction to complete a course.
Opinions, advice, services, and all other information expressed by Idaho Digital Learning Alliance staff, students, information providers, or instructors are those of the individual and do not represent the position of Idaho Digital Learning Alliance.

Discipline

Student discipline for violation of any part of the policies, rules, or procedures of Idaho Digital Learning Alliance shall be based on the severity of the infraction.

- If the Idaho Digital Learning Alliance teacher or monitor feels your behavior is not consistent with the policies, purposes, or objectives of the hosting district, or Idaho Digital Learning Alliance, the teacher will notify your site coordinator.
- The site coordinator is then responsible for bringing the matter before the appropriate school administrator(s) for disciplinary action.
- The teacher may also wish to hold a conference with you and your parents.
- The Idaho Digital Learning Alliance board of directors also reserves the right to enact additional disciplinary action including the ability to revoke the offending student’s privilege of using Idaho Digital Learning Alliance.
SUBJECT
Strategic Plans – Postsecondary Institutions and Agencies under the Board’s Governance

REFERENCE
April 2021 The Board reviewed the institution, agency, and special and health programs FY2022-FY2026 strategic plans.
June 2021 The Board approved the institution and agency FY2022 – FY2026 strategic plans and delegated approval of the FY2022 – FY2026 special and health programs strategic plans to the Executive Director.
October 2021 The Board was presented with the institution and agencies performance measure reports and progress toward meeting their FY2021-FY2025 strategic plan goals.
December 2021 The Board discussed changes to the K-20 FY2023-FY2027 Strategic Plan, including the addition of three postsecondary education focus areas.
February 2022 The Board approved changes to the K-20 FY2023-FY2027 Strategic Plan, including the addition of three postsecondary education focus areas.
April 2022 The Board discussed progress and priority areas for the institution FY2023-2027 Strategic Plans.
October 2022 The Board was presented with the institution and agencies performance measure reports and progress toward meeting their FY2022-FY2026 strategic plan goals.
December 2022 The Board discussed changes to the K-20 FY2024-FY2028 Strategic Plan.
February 2023 The Board approved the K-20 Education FY2024-FY2028 Strategic Plan, including additional definition of some performance measures.
April 2023 The Board discussed institution and agency FY2024-FY2028 strategic plans.
June 2023 The Board approved the Institution and Agency Strategic Plans as submitted.

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section I.M.1.
Idaho Code §§ 67-1901 -67-1903

BACKGROUND/ DISCUSSION
The institutions and agencies under the oversight of the Board are required to submit an updated strategic plan each year. At a minimum, the plans must encompass the current year and four years going forward. The Board planning calendar schedules these plans to come forward annually at the April and June Board meetings. This timeline allows the Board to review the plans, ask questions
or request changes in April, and then have them brought back to the regular Board meeting in June with changes if needed, for final approval while still meeting the state requirement that the plans be submitted to the Division of Financial Management (DFM) by July 1 of each year. Once approved by the Board, the Office of the State Board of Education submits all of the plans to DFM.

Board policy I.M. sets out the minimum components that must be included in the strategic plans and defines each of those components. The Board’s requirements are in alignment with DFM’s guidelines, and the requirements set out in sections 67-1901 through 67-1903, Idaho Code. Each strategic plan must include:

1. A comprehensive mission and vision statement covering the major programs, functions and activities of the institution or agency. Institution mission statements must articulate a purpose appropriate for a degree granting institution of higher education, with its primary purpose to serve the interests of its students and its principal programs leading to recognized degrees. In alignment with regional accreditation, the institution must articulate its purpose in a mission statement, and identify core themes that comprise essential elements of that mission.

2. General goals and objectives for the major programs, functions and activities of the organization, including a description of how they are to be achieved.
   i. Institutions (including Career Technical Education) shall address, at a minimum, instructional issues (including accreditation and student issues), infrastructure issues (including personnel, finance, and facilities), advancement (including foundation activities), and the external environment served by the institution.
   ii. Agencies shall address at a minimum, constituent issues and service delivery, infrastructure issues (including personnel, finance, and facilities), and advancement (if applicable).
   iii. Each objective must include at a minimum, one performance measure with a benchmark.

3. Performance measures must be quantifiable indicators of progress.

4. Benchmarks for each performance measure must be at a minimum, for the next fiscal year and include an explanation of how the benchmark level was established.

5. Identification of key factors external to the organization that could significantly affect the achievement of the general goals and objectives.
6. A brief description of the evaluations or processes to be used in establishing or revising general goals and objectives in the future.

7. Institutions and agencies may include strategies at their discretion.

Board policy I.M. also requires each plan to be submitted in a consistent format. The Planning, Policy and Governmental Affairs committee established the current template for strategic plan submittal and the Board adopted it at the April 2017 Board meeting.

In addition to the goals, objectives and performance measures chosen by each institution and agency, the Board has historically required a set number of uniform “systemwide” postsecondary performance measures. At the December 2017 Regular Board meeting, the Board discussed and approved the current systemwide performance measures. These systemwide performance measures are targeted toward measuring outcomes that are impacted by the implementation of the Complete College America Game Changers. The systemwide performance measures are required by the Board to be reported consistently across institutions. While each institution is required to include the systemwide performance measures in their strategic plans and performance measures reports, each institution currently sets their own benchmarks. In addition to these systemwide performance measures, systemwide performance measures in the Board’s K-20 Education Strategic Plan that are dependent on data from the postsecondary institutions are required by the Board to be reported consistently between all eight postsecondary institutions.

The postsecondary systemwide performance measures set by the Board are:

**Timely Degree Completion**
I. Percent of undergraduate, degree-seeking students completing 30 or more credits per academic year at the reporting institution
II. Percent of first-time, full-time, freshmen graduating within 150% of time
III. Total number of certificates/degrees produced, broken out by:
   a) Certificates of at least one academic year
   b) Associate degrees
   c) Baccalaureate degrees
IV. Number of unduplicated graduates, broken out by:
   a) Certificates of at least one academic year
   b) Associate degrees
   c) Baccalaureate degrees

**Remediation Reform**
V. Percent of undergraduate, degree-seeking students taking a remediation course completing a subsequent credit bearing course (in the area identified as needing remediation) within a year with a "C" or higher

Math Pathways
VI. Percent of new degree-seeking freshmen completing a gateway math course within two years

Guided Pathways
VII. Percent of first-time, full-time freshmen graduating within 100% of time

In addition to including the systemwide performance measures, the Board has consistently requested the benchmarks contained within the strategic plans be aspirational benchmarks, not merely a continuation of the “status quo.”

All of the strategic plans are required to be in alignment with Idaho’s K-20 Education strategic plan, approved by the Board in February.

IMPACT
OSBE Staff will proceed with submitting Board-approved strategic plans to DFM on behalf of the institutions, agencies, and special and health programs by the DFM deadline of July 1, 2023.

Attachment 09 – North Idaho College
Attachment 10 – Idaho Department of Education
Attachment 11 – University of Idaho
Attachment 12 – Idaho Division of Vocational Rehabilitation

BOARD STAFF COMMENTS AND RECOMMENDATIONS
The Board reviewed the attached strategic plans during the April meeting work session.

Board staff has discussed with the Division of Financial Management the requirement that the Special and Health programs also submit strategic plans. At this time, the Division of Financial Management staff have agreed that these plans will not need to be submitted this year. Based on this approval, only the postsecondary institution and agency strategic plans will be brought forward for approval by the Board at the June 2023 Board meeting. The Special Programs and Health Programs have submitted strategic plans to the Board Office, should Board members wish to review them. If they are required to be submitted to the Division of Financial Management this year, Board staff will include delegation of their approval to the Executive Director.

Staff recommends that the Board approve the institution and agency strategic plans as presented in Attachments 3-15.

**BOARD ACTION**

I move to approve the institution and agency strategic plans as presented in Attachments 3-15.

MISSION STATEMENT
VISION
STRATEGIC PLAN
MAPPING OF STRATEGIC PLAN TO THE SBOE STRATEGIC PLAN
KEY EXTERNAL FACTORS

Blueprint for Success
2021 - 2028
Boise State University
Strategic Plan

Mission
Boise State University provides an innovative, transformative, and equitable educational environment that prepares students for success and advances Idaho and the world.

Vision
To be a premier student-success driven research university innovating for statewide and global impact.

STRATEGIC PLAN GOALS AND OBJECTIVES

Goal 1: Improve Educational Access and Student Success
Enhance the comprehensive student experience with a focus on student success and post-graduate outcomes.

Objective A: Create and enact a comprehensive, strategic enrollment and student success plan, including components related to supporting the whole student, recruitment, retention, graduation, and addressing equity gaps.

$^5$ SBOE required metric: math pathways. Based on cohorts of incoming first-time bachelor degree seeking students (full- plus part-time) who complete a gateway course or higher within two years (e.g., students who entered in fall 2018 and completed a gateway math or higher by the end of summer 2020 are reported for FY20, etc.).

$^6$ SBOE required metric: timely degree completion. Percent of undergraduate, degree-seeking students completing 30 or more credits across one year (defined as summer, fall, and spring terms). Based on end-of-term data. Degree-seeking status is determined as of fall semester unless the student was not enrolled in fall, in which case summer is used; spring term is used for those students enrolled only for the spring term. Excludes students who earned degrees during the reported year and who did not reach the 30-credit threshold. Includes students meeting the criteria regardless of full- or part-time status or the number of terms enrolled in that year. Students enrolled part-time or for a partial year, especially for only one term, would not be expected to complete 30 credits; thus, the denominator may be inflated resulting in a lower percentage reported.

$^7$ SBOE required metric: reform remediation. Percent of undergraduate, degree-seeking students who took a remedial course and completed with a C- or above a subsequent credit-bearing gateway course (Math 123 or above, English 101P or above) within one year of taking the remedial course (e.g., students who took remedial course in fall 2019 and completed a subsequent course by the end of fall 2020). Math remediation defined as Math 025, 103, and 108 and English remediation defined as English 101P. The data shown for FY20 reflects students who took remedial during FY19 and completed the subsequent credit-bearing course by FY20.

$^8$ SBOE required metric: degree completion. Reflects the number of awards by level (first plus second major as reported to IPEDS). This is greater than the distinct numbers of graduating students because some graduating students received multiple awards.
Objective B: Integrate career education and experiential learning opportunities into the curriculum and the student experience to improve career readiness and post-graduation outcomes.

\(^9\) All NCAA Division I Athletic Departments must report Federal and NCAA Graduation Success Rate annually. The NCAA Graduate Success Rate is based on graduation in 10 full-time semesters (or transferring to another institution on track for 10 semester graduation) for those on any athletic-related financial aid.

\(^{10}\) Target represents the 75th percentile of all NCAA Division I athletic departments.

\(^{11}\) Boise State generally administers the National Survey of Student Engagement (http://nsse.indiana.edu/), or NSSE, every three years, with slight disruption in this schedule due to the global pandemic. NSSE gathers information from first-years and seniors on a variety of aspects of their educational experiences. Because NSSE is administered by a substantial number of institutions, Boise State is able to benchmark itself against peer institutions; peer institutions were selected based on a set of criteria to identify Urban Peers. The (+) and (–) symbols denote statistically higher and lower than peers, respectively, whereas (=) indicates that Boise State is statistically the same as peers.

\(^{12}\) High Impact Practices (HIPs) are widely known to positively affect student learning and retention. HIPs include service-learning, internships, research with faculty, study abroad, learning communities, and capstone courses. Comparisons are made to a set of Urban Peer institutions.

\(^{13}\) Service-learning courses community experiences were impacted by the Covid-19 pandemic. Some high-enrollment courses removed their experiential component or moved to “field observation.”

\(^{14}\) Unduplicated number of students with internship credit in a given year; these include courses numerically identified as 293, 493, and 590.

---

\(^{17}\) Boise State’s Strategic Enrollment and Retention Plan (SERP) specifies targets for access and progression for four groups identified as traditionally underserved: Rural, Hispanic/Latinx, First Generation, and Pell-eligible. The access measures are focused on bachelor’s degree-seeking students.

\(^{18}\) Pell-eligible is defined as Pell-eligible at the time of entry to the university. Given the changes in the Federal calculation for Pell eligibility, we will continue to monitor and adjust these targets as needed.

\(^{19}\) Achievement of targets will, in five years, close by half the gap between the composition of Boise State cohorts and the percent in Service Region 3’s population as of the 2020 census. In the case of Hispanic/Latinx, the Service Region 3 population is limited to individuals 18 to 24 years old.

\(^{20}\) Dual/concurrent enrollment credits and students are measures of activity that occur over the entire year at multiple locations using various delivery methods. When providing measures of this activity, counts over the full year (instead of by term) provide the most complete picture of the number of unduplicated students enrolled and the numbers of credits earned. Reflects data from the annual Dual Credit report to the Board.

\(^{21}\) Decline in resident student enrollment in FY 2021 is mostly in non-degree seeking undergraduate student numbers (including the dual enrollment) and was largely due to the impacts of the global pandemic.

<sup>22</sup> Distinct number of graduates who began college as residents from a rural area in Idaho. The definition for this measure was updated in 2020 to align with Boise State’s new efforts to serve rural communities in Idaho. Rural is defined as all places outside of “Urban Areas and their Places” as specified by the U.S. Census Bureau.

<sup>23</sup> Distinct number of graduates who are Hispanic/Latino.

<sup>24</sup> First-generation is defined as students whose parents/guardians have not completed bachelor’s degrees.

<sup>25</sup> Denotes students who were Pell eligible during any point of their enrollment at Boise State.

<sup>26</sup> Includes baccalaureate recipients in transfer cohorts whose institution prior to their initial Boise State enrollment was one of the four Idaho community colleges.

<sup>27</sup> Service-learning courses community experiences were impacted by the Covid-19 pandemic. Some high-enrollment courses removed their experiential component or moved to “field observation.”

---

\(^{28}\) Indicates the number of officially enrolled students in a major or certificate that is delivered online.

\(^{29}\) Boise State generally administers the National Survey of Student Engagement (http://nsse.indiana.edu/), or NSSE, every three years, with slight disruption in this schedule due to the global pandemic. The (+) and (–) symbols denote statistically higher and lower than peers, respectively, whereas (=) indicates that Boise State is statistically the same as peers.

\(^{30}\) Boise State generally administers the National Survey of Student Engagement (http://nsse.indiana.edu/), or NSSE, every three years, with slight disruption in this schedule due to the global pandemic. The (+) and (–) symbols denote statistically higher and lower than peers, respectively, whereas (=) indicates that Boise State is statistically the same as peers.
**Goal 2: Innovation for Institutional Impact**
Expand and implement leading-edge innovations to provide access to integrated high-quality teaching, service, research and creative activities.

**Objective A:** Create an enduring culture of innovation.

**Performance Measures:**

31 The Vertically Integrated Projects (VIPs) initiative unites students with faculty research in a team-based context. Students earn credit for participation, however, not all student participants sign up for credit. Only those students who are enrolled in VIP for credit are reported. Boise State is a member of the VIP national consortium that includes more than 20 universities and is hosted by Georgia Tech.

32 Excludes no-cost extensions. Includes new grants only within “research-basic” or “research-applied” types. Represents per-grant, not per-person grant dollars. A new protocol for calculating these measures was implemented in fall 2019 and all data provided reflect this method.
Goal 3: Advance Research and Creative Activity
Advance the research and creative mission of the university community by fostering transformational practices, and supporting faculty, staff, and student excellence in these pursuits.

Objective A: Provide the physical space, policies, information systems, technology, budgetary and human resources to sustain and grow research and creative activities.

Performance Measures:

35 Boise State generally administers the National Survey of Student Engagement (http://nsse.indiana.edu/), or NSSE, every three years, with slight disruption in this schedule due to the global pandemic.

36 Definitions of the classifications show are as follows: R2: Doctoral Universities – Higher research activity; R3: Doctoral Universities – Moderate research activity (as of 2018, Carnegie no longer has the R3 category, implementing a new Doctoral/Professional Universities category instead).
Goal 4: Foster Thriving Community
Promote and advance a fair, equitable, and accessible environment to enable all members of the campus community to make a living, make a life and make a difference.

Objective A: Advance a learning and working environment dedicated to the flourishing, sense of belonging, and freedom of expression among all students, faculty, staff, alumni, and friends of the university.

Performance Measures:

39 Boise State conducts the National College Health Assessment through the American College Health Association. The survey is conducted on a regular cycle, typically every two years. The survey instrument changed in 2019-20, so prior comparisons are not available. Response rates were 14.9% in FY20 (MoE +/- 3.5%) and 12.0% in FY22 (MoE +/- 3.9%).

40 Boise State Human Resources conducted a campus-wide Listening Tour Survey in 2019 and a Work Well Survey in 2022. Some questions were updated or changed between the two surveys, and the survey is subject to ongoing improvements.
Objective B: Create a comprehensive, whole-employee experience that aligns university resources and is designed to enhance employee well-being and career growth at the university.

41 Boise State conducts the National Faculty & Staff Health Assessment through the American College Health. The survey cycle is being adjusted in FY23 and the survey will resume in FY24. The response rates were as follows: 2021 was 24.5% (MoE +/- 3%); 2019 was 28.4% (MoE +/- 3%).

42 Turnover is defined as the total number of separations in a fiscal year (7/1-6/30) divided by the average employee count (averaging the count at the first of each quarter [1/1, 4/1, 7/1, 10/1]). Includes only benefit-eligible employees - professional, classified, and faculty.
**Objective C:** Create a transparent, centralized business operations model that responsibly uses university resources, supports collaboration, furthers academic-athletic connections, and promotes consistency across individual campus units.

**Performance Measures:**

---

43 Expense information is from the Cost of College study, produced yearly by Boise State’s controller office. Includes the all categories of expense: Instruction/Student Services (Instruction, Academic Support, Student Services, Library), Institutional/Facilities (Cultural, Religious Life and Recreation; Museums, Gardens, etc.), Net Cost of Intercollegiate Athletics, Net Cost of Other Auxiliary Operations, Plant Operations, Depreciation: Facilities, Depreciation: Equipment, Facility Fees Charged Directly to Students, Interest, Institutional Support), and Financial Aid. “Undergrad only” uses Undergrad costs and the sum of EWA weighted SCH for remedial, lower division, upper division. “Undergrad and Graduate” uses undergraduate and graduate expenses, and includes EWA weighted credit hours from the undergraduate and graduate levels. “EWA-resident weighted SCH” refers to those credits not excluded by EWA calculation rules, which exclude non-residents paying full tuition and WUE students that exceed the cap. Inflation adjustment is made using a CPI Calculator ([https://www.bls.gov/data/inflation_calculator.htm](https://www.bls.gov/data/inflation_calculator.htm)) with FY19 as the base year.

44 Expense information as in previous footnote. “EWA-resident Total SCH” refers to all credits, residents, and nonresident, weighted using standard EWA calculation rules. Inflation adjustment is made using the CPI Calculator with FY19 as the base year.

45 WICHE average from Table 1a of annual Tuition and Fees report. We use the unweighted average without California. A typical report can be found at [http://www.wiche.edu/pub/tf](http://www.wiche.edu/pub/tf).
Objective D: Foster a sustainable campus that is both environmentally and socially responsible as well as economically feasible.

46 Includes the unduplicated number of annual baccalaureate degree graduates divided by the IPEDS annual undergraduate FTE. It should be noted that IPEDS includes the credits taken by degree seeking and non-degree seeking students in calculating FTE.

47 Includes the unduplicated number of annual baccalaureate degree graduates divided by the fall semester FTE of juniors and seniors. FTE are determined using total fall credits of juniors and seniors divided by 15. This measure depicts the relative efficiency with which upper-division students graduate by controlling for full and part-time enrollment.

48 Includes unduplicated number of annual graduate certificates and master’s and doctoral degree graduates divided by the IPEDS annual graduate FTE. It should be noted that IPEDS includes credits taken by degree seeking and non-degree seeking students in calculating FTE.

49 Additional information on the STARS program may be found at https://stars.aashe.org/about-stars/
Goal 5: Trailblaze Programs and Partnerships

By partnering with industry, government, and community organizations, enhance and foster path breaking interdisciplinary programs and activities that transcend traditional fields of study.

Objective A: Leverage existing partnerships and programs and develop new opportunities with Idaho employers and private partnerships to address workforce, research, educational, service, and athletic needs.

50 Additional information on the Carnegie Foundation Community Engagement Classification may be found at [http://nerche.org/index.php?option=com_content&view=article&id=341&Itemid=618#CECdesc](http://nerche.org/index.php?option=com_content&view=article&id=341&Itemid=618#CECdesc).

51 Partnerships are characterized as collaborations for the mutually beneficial exchange of knowledge and resources with entities external to the university. Partner organizations may include any type of public, non-profit, or private organization; each organization is counted once even if multiple engagements exist.

52 Helper-Helper platform used to track volunteerism and other student-athlete development opportunities. Opportunities include volunteer hours at local K-12 schools, assisting individuals with special needs, and mental health and wellness programming. Data represents opportunities provided; 81% of 350 student-athletes participated in 4 or more events.
**Objective B:** Expand partnerships across Idaho to ensure rural communities have access to high-quality educational programming that fits their needs.

<sup>53</sup> BroncoLife CONNECT provides student-athletes an opportunity to learn about career paths while networking with employers and industry business professionals.

<sup>54</sup> Boise State’s Community Impact Program launched in fall 2020 and is focused on rural communities. The program is offered through a hybrid format and engages communities in McCall, Mountain Home, and Payette.

<sup>55</sup> Distinct number of graduates who began college as residents from a rural area in Idaho. The definition for this measure was updated in 2020 to align with Boise State’s new efforts to serve rural communities in Idaho. Rural is defined as all places outside of “Urban Areas and their Places” as specified by the U.S. Census Bureau. Data for all reported years reflect the new definition and goals.

<sup>56</sup> Includes baccalaureate recipients in transfer cohorts whose institution prior to their initial Boise State enrollment was one of the four Idaho community colleges.
**Objective C:** Create interdisciplinary structures to facilitate meaningful connections and experiences for students, faculty, and staff.

**Performance Measures:**

**Key External Factors**

A wide variety of factors affects Boise State University’s ability to implement the strategic plan. Here we present five factors that we regard as impediments to progress, the first two of which can be influenced by the state government and its agencies, and one external factor that may help accelerate our progress.

**Higher education budget funding and tuition.** Lack of consistent funding for the Enrollment Workload Adjustment (EWA) while the university experienced substantial enrollment growth has resulted in a substantial per-student EWA-weighted funding deficit relative to the average of the other three public four-year institutions. Boise State University has $8.9 million in cumulative unfunded EWA. Although Boise State observed decreases in weighted resident student credit hours over the last two years, we had an overall increase in unweighted resident credit hours between FY22 and FY23. The decreases in weighted resident credit hours are due to: (1) decreases in upper division and graduate credits, which are weighted more heavily than lower division credits (where we observed increases); (2) large cumulative increases in our numbers of undergraduate degree completers—i.e., approximately 200 more bachelor’s degree graduates from FY21 to FY22, and 200 plus increases from FY19 to FY20 and FY20 to FY21—meaning that we had fewer seniors in our pipeline as students are completing their degree programs more efficiently; (3) some decreases in credit hours in heavily weighted fields such as health, business, and education (likely due to

---

5 The Vertically Integrated Projects (VIPs) initiative unites students with faculty research in a team-based context. Students earn credit for participation, however, not all student participants sign up for credit. Only those students who are enrolled in VIP for credit are reported. Boise State is a member of the VIP national consortium that includes more than 20 universities and is hosted by Georgia Tech.
lingering effects of the pandemic). Moreover, our inflation-adjusted tuition has been declining in the last five years, negatively influencing our ability to implement our new strategic plan, Blueprint for Success. The FY24 published tuition of $8,783 for undergraduate full-time for Idaho residents is $7,372 when inflation-adjusted to the FY19 base year, thus, making the inflation-adjusted tuition approximately 9 percent lower than the published rate of $8,060 in FY19.

Compliance and Administrative oversight. Increases in state and federal compliance requirements are a growing challenge in terms of cost and in terms of institutional effectiveness and efficiency. Boise State University is subject to substantial administrative oversight through the State of Idaho Departments of Administration and Human Resources as well as other Executive agencies. Significant operational areas subject to this oversight include capital projects, personnel and benefit management, and risk and insurance. The additional oversight results in increased administrative and project costs due to multiple layers of review. The current system places much of the authority with the Department of Administration and the other agencies, but funding responsibility and ultimate accountability for performance with the State Board of Education and the University. As a result, two levels of monitoring and policy exist, which is costly, duplicative, and compromises true accountability.

Global Pandemic. The global pandemic, which created large new expenses and lost revenues in higher education, continues to affect our operations. Mental distress and burnout among students, faculty and staff remain. New cohorts of college students are more likely to have experienced learning loss while in high school (due to remote education and other stressors of the pandemic), which impacts their academic success in the university.

Effects of the economy and the market conditions. Increasing inflation, in particular the increases in cost of housing in the Boise metro area, and insufficient increases in state salaries are negatively impacting our ability to recruit and retain staff and faculty. This is impacting morale and well-being of our community, and these increased costs are exceeding our ability to offset our current revenue streams. In addition, a strong job market with higher entry-level wages and lower employment in the State affecting the college-going rates as fewer high school graduates are choosing to enroll in college.

Financial Aid Impacts: There are several recent changes to Financial Aid that may impact our enrollment in unpredictable ways. The Idaho Launch Scholarship program is in its first year and while we hope many of the Idaho students will choose to enroll at Boise State, this scholarship may help students see other possibilities around post high school plans that we cannot predict. Changes to the Free Application for Federal Student Aid (FAFSA) have proven difficult and unpredictable for students and parents. The financial aid application data is yet to be provided to schools which is months behind past years' schedule and leads to delayed aid offers to students. This will result in families having a shorter time frame for making enrollment decisions. The Federal Government also made changes to the Pell Grant eligibility; it is anticipated that more students will qualify for the Pell grant but we are still unclear of its impacts on the Boise State student population.

Positive External Factor: Increasing collaborations among universities and colleges, and with industry / community partners. Presidents of all universities have been committed to working together and expanding both collaborative academic and research programming across institutions. In addition, expanded efforts to
collaborate with industry and community partners will increase applied research opportunities and allow for the development of programming with expected high community impact.

Evaluation Process

Boise State reviews its strategic plan and considers amendments to the Blueprint for Success through an annual review of divisional strategic plan reporting. The six vice presidents of the university receive reports from every unit within their division that detail progress to date on the Blueprint for Success and their plans and recommendations for the coming year. Each division compiles these unit-level reports and provides an executive-level summary to the University Strategic Planning Council (USPC), a group composed of representatives from across all divisions in the university. In turn, the USPC provides a comprehensive summary for the President and Executive Team detailing progress and achievements on the strategic plan from across the institution.

Parallel to this process, a strategic planning data group tracks and assesses progress made on the metrics for the plan. In addition, feedback and ideas are always welcome “off cycle” through communication with the USPC or divisional teams. This process allows every level of the institution to chart their progress, provide feedback, and offer new directions for the plan. This information provides the basis for changes or amendments to the plan, something ultimately finalized at the Executive Team level.
## Boise State University Strategic Plan Goals

<table>
<thead>
<tr>
<th>Goal 1: Improve educational access and student success</th>
<th>Goal 2: Innovation for institutional impact</th>
<th>Goal 3: Advance research and creative activity</th>
<th>Goal 4: Foster thriving community</th>
<th>Goal 5: Trailblaze programs and partnerships</th>
</tr>
</thead>
</table>

### Institution/Agency Goals and Objectives

**GOAL 1: EDUCATIONAL READINESS:** Provide a rigorous, uniform, and thorough education that empowers students to be lifelong learners and prepares all students to fully participate in their community and postsecondary and workforce opportunities by assuring they are ready to learn at the next educational level.

- **Objective A:** Literacy - Provide effective literacy instruction across grades K-3.
- **Objective B:** Mathematics - Provide effective mathematics instruction across grades 6-8.
- **Objective C:** Graduation - Increase Idaho’s high school graduation rate.

**GOAL 2: EDUCATIONAL ACCESS** - Increase access to Idaho’s robust educational system for all Idahoans, regardless of socioeconomic status, age, or geographic location.

- **Objective A:** Advanced Opportunities – Increase high-school student participation in advanced opportunities.
- **Objective B:** Student Engagement - Increase high-school student engagement in exploring postsecondary opportunities.
- **Objective C:** College-Going - Increase the rate at which high school graduates pursue postsecondary opportunities.

**GOAL 3: EDUCATIONAL ATTAINMENT (opportunity)** – Idaho’s public colleges and universities and career technical education programs fuel a strong workforce pipeline evidenced through a greater numbers of student completing certificates and/or degrees, including workforce credentials.

- **Objective A:** First-Year Student Retention - Increase the retention rate of first-year students into the second year.
- **Objective B:** Timely Degree Completion – Increase on-time degree completion.
- **Objective C:** Educational Attainment – Increase completion of certificates and degrees through Idaho’s educational system.
Boise State Cybersecurity Report to the State Board of Education

February 2024

Executive Order 2017-02 requires Boise State University to incorporate the NIST Cybersecurity Framework (CSF) into our IT Risk Management frameworks and also to implement CIS Critical Security Controls (CSC) 1-6 across the University’s critical network infrastructure systems.

CSF is just one component of Boise State’s IT Risk Management framework. To measure our Security Effectiveness we partner with BitSight to provide real-time feedback on University systems CSF maturity. Average BitSight maturity is an A, immediately mitigating issues on the report that impact scoring, whereas the higher education industry has maintained a D average. CSC Controls have been documented and on a maturity scale we are a level 2 with work left to do. Critical Security Controls 1-6 will be an ongoing process as we strive towards a level 3 maturity.

In the past 12 months we have:
- Reviewed, updated, and published revised versions of OIT Policies:
  - 8020 Server Administration
  - 8030 Desktop, Laptop, and Tablet PC Computing Standards
  - 8050 Software Patch Management
  - 8060 Information Privacy and Data Security
  - 8090 Telephone Services
  - 8120 Identity Theft Prevention Program
  - 8150 Information Technology Governance
  - 8180 Information Technology Change Management
- Conducted external penetration test and review of critical systems
- Implemented new endpoint protection solution, shifting from JAMF Protect to Microsoft Defender

In the next 12 months we plan:
- Continuing maturity growth of CSF and CSC as outlined by State, reevaluating maturity based on CSCv8 controls
- Reduce attack surface by removal of unused student accounts
- Implementation of new Endpoint Detection and Response (EDR) and Cloud Application Security Broker (CASB) tooling
- Implementation of new university data-retention policies
- Revision of data classification policies

TECHHELP

Mission
TechHelp will be a respected, customer-focused, industry recognized organization with strong employee loyalty, confidence of its business partners and with the resources and systems in place to achieve the following sustained annual results in 2024:
- 100 manufacturers reporting $120,000,000 economic impact
- 500 jobs created and retained
- > $20,000 and < $50,000 Net Income

Vision
TechHelp is Idaho’s Manufacturing Extension Partnership (MEP) center. Working in partnership with the state universities and the Idaho Manufacturing Alliance (IMA), we provide assistance to manufacturers, food and dairy processors, service industry and entrepreneurs to grow their revenues, to increase their productivity and performance, and to strengthen their global competitiveness.

“Our identity is shaped by our results.”

Goal 1: Economic Impact on Manufacturing in Idaho
Deliver a quantifiable positive return on both private business investments and public investments in TechHelp by adding value to the manufacturing client and the community.

Objective A: Offer technical consulting services and workshops that meet Idaho manufacturers’ product and process innovation needs, resulting in new and retained jobs and economic impact in the form of sales, savings, and investment.

College of Eastern Idaho

Strategic Plan 2025-2029

June 1, 2024
MISSION STATEMENT

To provide open-access to affordable, quality education that meets the needs of students, regional employers, and community.

VISION STATEMENT

Our vision is to be a superior community college. We value a dynamic environment as a foundation for building our college into a nationally recognized community college role model. We are committed to educating all students through progressive and proven educational philosophies. We will continue to provide high quality education and state-of-the-art facilities and equipment for our students. We seek to achieve a comprehensive curriculum that prepares our students for entering the workforce, articulation to advance their degree, and full participation in society. We acknowledge the nature of change, the need for growth, and the potential of all challenges.

</tbody>
</table>
Key External Factors

1. Increased need for a more flexibly educated workforce

CEI has the largest workforce program in the state and a fifty-year history of providing employer-driven, market-responsive education. Institutional sustainability demands that workforce and credit-bearing programs purposefully collaborate. Credit-bearing students need more short-term credentials to prove their performance on key industry requirements, and workforce students need clear pathways and stackable credentials that re-invite them back as lifelong learners. We are purposefully developing bridges across the silos in program review, data collection, educational pathways, and others. We are also developing cross marketing on and off campus, so all stakeholders know the full range of our educational resources.

2. Inflation and population growth pressure

Inflation, supply chain complications, and job market pressure require extraordinary care to ensure that our resources are best allocated to achieve mission fulfillment. CEI is a human-centric organization. Employees are our greatest resource and investing in their success will ensure effective recruiting and retention. We will continue to identify ways to minimize expenses, develop public-private partnerships, and develop alternate revenue sources to ensure that we can always move the mission forward.

3. Greater need for nimble educational programming

CEI is committed to increasing stakeholder guidance, both on- and off-campus. We know that those closest to the problems will have the most specific answers, and our administration needs open, supported pathways to get unfiltered feedback. To strengthen on-campus channels, administration clarified reporting pathways, and it seeks bilateral communication through the Senates, committees, and campus-wide strategic conversations. We established faculty-inclusive/led committees that will deepen our academic freedom, academic integrity, professional development programs, prior learning assessment, and others. Overseen by the Academic Standards Committee, these committees will be working through an organized, shared process that identifies key research, develops published processes, evaluates their efficacy, and shares results throughout our community. Off campus, our administrators have set a goal to strengthen our K-12, advisory boards & community outreach. We use our Futuring Summits and other venues to discuss those expansions, share insights, and use that knowledge to create pragmatic, measurable priorities.

4. Careful conservation and growth of stakeholder investment

Our administration has used a futuring process since CEI’s inception. Futuring is an evolutionary process that combines regular conversations and collaborative research to assess our strategic position. We identify current and emerging patterns, trends, and expectations to define our future direction, and we determine the most effective measures to evaluate each developmental stage. Futuring allows us to continually realign our mission, planning, and intended outcomes of our programs and services to meet market needs and stakeholder expectations. We review our achievement indicators, which prompt new research questions. Each investigation clarifies short-term goals that lead us to our desired future.
Each year, administration invites a broad range of content experts to a futuring summit to study economic trends, industry trends, and stakeholder expectations. We are developing a research-based, data-driven development process that develops those identified trends into actionable tasks. This will allow us to best leverage our limited material and human resources, while minimizing risk.

5. Greater proof of higher education’s value to its stakeholders

We have clear, published course-level and program-level outcomes. We are consciously developing the program-level outcomes to create a comprehensive, connected, and cohesive curriculum that is aligned with market needs. As a new institution, we are only just building enough student populations to expand our range of consistent credit-bearing programs. Even the definition of a program is receiving careful evaluation. Our faculty are researching widely to ensure that we build enough pathways that students can transfer easily into their program of choice. That is being balanced against the need for broadly available course offerings that can be completed on a clear track, on time, and with guidance on price-to-earnings implications.

COLLEGE OF SOUTHERN IDAHO
2024-2028 (FY2025-FY2029)
STRATEGIC PLAN

OUR MISSION

To provide quality educational, social, cultural, economic, and workforce development opportunities
that meet the diverse needs of the communities we serve.

OUR VISION

To improve the quality of life of those impacted by our services.

OUR VALUES

- **Community:** The College of Southern Idaho, the Magic Valley’s community college, commits to
effectively serving the educational, intellectual, cultural, and economic needs of the communities
we serve.

- **Equity:** The College of Southern Idaho recognizes and embraces the value that people of diverse
backgrounds and perspectives offer us all. As such, the College is a place of fairness, diversity,
civility, and collegiality, and celebrates the benefits of learning and growth that come from a
commitment to equity.

- **Innovation:** The College of Southern Idaho exemplifies a spirit of innovation that positions the
College as an educational and community leader throughout our service area.

- **Quality:** The College of Southern Idaho ensures that offerings meet or exceed the level of quality
demanded by stakeholders, and honor the substantial investment that users make in the College.
OUR STRATEGIC PLAN

Guided by the values of community, equity, innovation, and quality, the College of Southern Idaho pursues the following Strategic Goals, as established by the College of Southern Idaho Board of Trustees, and the President of the College of Southern Idaho.

STRATEGIC GOAL 1: STUDENT ACCESS

Strategy #1: The College of Southern Idaho will provide quality and innovative educational programs that align with student needs, workforce demands, and employment opportunities.

Objective 1.1: Collaborate with K-12 partners to increase participation in higher education.

Performance Measures:

1.1.1 Grow dual credit enrollment at a rate that matches or exceeds the growth of Region IV school districts (Source: State Board of Education Dual Credit Report)

<table>

<td>4,500</td>
</tr>
</tbody>
</table>

Benchmark: 4,200 (by 2025)
STRATEGIC GOAL 2: STUDENT RETENTION

Strategy #2: The College of Southern Idaho will provide high-impact learning and student support systems that provide a sense of belonging for our diverse student population and that enhance persistence and retention.

Objective 2.1: Establish robust systems and processes that support student retention.

Performance Measures:

2.1.1 Increase the percentage of new first-time, full-time, degree seeking students retained or graduated the following year (excluding death or permanent disability, military, foreign aid service, and mission) (Source: IPEDS)

<table>

Benchmark: 67% (by 2025)

# FY 2029 benchmarks have not yet been set by the college for these metrics and/or cannot be set due to the benchmark being reliant on data from previous years.

** This benchmark has been established by the Idaho State Board of Education.

KEY EXTERNAL FACTORS:

There are numerous external factors that could impact the execution of the College of Southern Idaho’s Strategic Plan. These include, but are not limited to:

- Changes in the unemployment rate which has been shown to significantly impact enrollment.
- Changes in local, state, and/or federal funding levels.
- Changes to accreditation requirements.
- Circumstances of and strategies employed by our partners (e.g., K-12, higher education institutions, local industry).
- Emergencies (pandemics, natural disasters, etc.).
- Legal and regulatory changes.
EVALUATION PROCESS:
The College of Southern Idaho Strategic Plan is evaluated annually by its locally elected Board of Trustees. Benchmarks are established and evaluated throughout the year by the college employees. The college reports on achievement of benchmarks annually to the College of Southern Idaho Board of Trustees and to the Idaho State Board of Education.

NOTES:

1. The college has set a benchmark for dual credit growth that matches the growth rate of student enrollment in K-12 school districts in Region IV of the State of Idaho (Region IV Enrollment vs CSI Dual Enrollment report). This measure is updated annually and supports the Idaho State Board of Education’s Goal 2.A.I (90% or more of high school graduates are funded for one or more advanced opportunity). Region IV enrollment growth source: https://www.sde.idaho.gov/finance/#attendance.

2. The college is working to increase the immediate Region IV “go on” rate in general, as well as the proportion who attend CSI. This benchmark has been set based upon Utah’s pre-pandemic “go on” rate. This measure supports the Idaho State Board of Education’s Goals 2.C.I and 2.C.II (60% or more of HS graduates attend college within 1 year; 80% or more within 3 years). Data has been updated from FY20, FY21, and FY22 due to updated “go on” data being released by the Idaho State Board of Education.

3. Growth rates have been established based upon a current uptick in interest in the trades and Idaho Launch marketing and funding. Following this initial jump in enrollment, a more sustainable 3% growth rate has been established.

4. The college has established a goal of enrolling 4500 non-dual credit students per semester by 2029. This measure supports the Idaho State Board of Education’s Goals 2.C.I and 2.C.II (60% or more of HS graduates attend college within 1 year; 80% or more within 3 years).

5. The college has established a goal of increasing FTE to 4,500 in the fall of 2029. This measure supports the Idaho State Board of Education’s Goals 2.C.I and 2.C.II (60% or more of HS graduates attend college within 1 year; 80% or more within 3 years).

6. The benchmark for first-time, full-time, degree seeking students for FY25 has been set as a stretch benchmark considering several college initiatives focused on retaining students, and in line with Amarillo College (TX), a CSI’s established peer comparator institutions that is exemplary in this area. The FY29 benchmark reflects the Idaho State Board of Education’s established goal for this metric. This measure supports the Idaho State Board of Education’s Goal 3.A.I (75% or more of students retained to the second year). The most recent data reflects an entry cohort one year prior to FY date. For example, FY23 data reflects a Fall 2021 entry cohort.

7. English and math remediation and subsequent completion benchmarks reflect the decreasing populations of students being placed into remediation. The gateway math completion metric reflects ongoing work in this area. The FY25 benchmark demonstrates CSI’s continued commitment to helping students complete a gateway math course as quickly as possible, while the FY29 benchmarks match the State Board of Education’s previous state goal.

8. This benchmark has been established considering recent positive trends in this area and several initiatives the college has undertaken to increase completion rates. The benchmark also aligns with the exemplary success rates shown at Hutchinson Community College, a CSI’s established benchmark institution. The full group of CSI peer institutions has an average 150% of time graduation rate of 35%. This measure supports the Idaho State Board of Education’s Goal 3.B.I (50% per year). The college has chosen to set a benchmark for the 150% of time completion rate, but not for the 100% of time completion rate. This is due to the lack of availability of comparison data for peer institutions at the 100% time to completion rate. However, the college does recognize the Idaho State Board of Education’s Goal of 30% in this area and has already exceeded that target.

9. Benchmarks reflect targets previously established by the Idaho State Board of Education. Benchmarks have been set for the numbers of certificates and degrees completed each year, rather than for the number individual graduates.

10. In recognition of data showing that students who complete 30 or more credits per year have more long-term success in college than students who do not and are more likely to complete a certificate or degree, the college is working to encourage students to enroll in 30 or more credits per year. This measure supports the Idaho State Board of Education’s Goal 3.A.II (55% or more per year).
11 The college has worked to reduce the number of credits earned at graduation through advising and the use of focused graduation plans.

12 Research at CSI has revealed that the most significant predictor of college success for entering students is high school grade point average. Further, data show that males, and students who self-identify as Hispanic, tend to arrive at CSI with lower high school grade point averages than other populations. With the goal of addressing equity issues within college completion, CSI has elected to track the success of students who arrive at CSI with a low high school grade point average, and to strategically direct services toward them in order to close achievement gaps between those students and students who enter with a grade point average of 3.0 or higher.

13 This benchmark has been established based upon an average of the past four years of placement. (Source: Idaho CTE Follow-Up Report)

14 The college is working to better support students who intend to transfer after graduation. (Most recent data reflects an entry cohort three years prior to FY date. For example, FY23 data reflects fall 2019 entry cohort.)

<tr>
<td>Strategy #1: The College of Southern Idaho will provide quality and innovative educational programs that align with student needs, workforce demands, and employment opportunities.</td>
<td></td>
</tr>
</tbody>
</table>

Objective 1.1: Collaborate with K-12 partners to increase participation in higher education.
Strategic Plan

FY2025 - FY2029

We prepare Idaho's youth and adults for high-skill, in-demand careers.
Strategic plan

Mission statement
The mission of Idaho’s career technical education (CTE) system is to prepare Idaho’s youth and adults for high-skill, in-demand careers.

Vision statement
The vision of Idaho Division of Career Technical Education (IDCTE) is to be:
1. A premiere educational opportunity for students and adults to gain relevant workforce and leadership skills in an applied setting;
2. A gateway to meaningful careers and additional educational opportunities; and
3. A strong talent pipeline that meets Idaho business workforce needs.

Goal 1
Educational system alignment
Ensure that all components of the educational system are integrated and coordinated to maximize opportunities for all students.

Objective A: Alignment of CTE programs between the technical colleges and ensure that secondary program standards align to those postsecondary programs.

Performance Measure:
1. Percent of secondary programs that have been reviewed and revalidated to meet current industry standards.

Baseline data/Actuals: Baseline FY23 – begin work

<table>
<thead>
<tr>
<th>Year</th>
<th>Percent of Programs Aligned</th>
</tr>
</thead>
<tbody>
<tr>
<td>FY21</td>

<td>N/A</td>
</tr>
<tr>
<td>FY23</td>
<td>6 of 55 = 11%</td>
</tr>
</tbody>
</table>

Benchmark: Align 20% of programs by FY2029.

Objective B: Technical assistance and support for CTE programs – Provide timely, accurate, and comprehensive support to CTE programs that meets the needs of administrators and instructors at both the secondary and postsecondary levels.

Performance Measure:
1. The overall satisfaction levels of respondents with the support and assistance provided by CTE.

Baseline data/Actuals: Initial Survey 2016

<table>
<thead>
<tr>
<th>Year</th>
<th>Satisfaction Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>FY21</td>

<td>FY23</td>
<td></td>
</tr>
<tr>
<td>FY24</td>
<td></td>
</tr>
</tbody>
</table>

Benchmark: Maintain 3.5 or higher annually
Benchmark: Maintain overall satisfaction levels of 3.5 or higher.¹

Objective C: Data-informed improvement – Develop quality and performance management practices that will contribute to system improvement, including current research, data analysis, and strategic and operational planning.

Performance Measures:

I. Design and develop a career technical education data management system to encompass program and educator data.
   Baseline data/Actuals: 2022 development began

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td></td>
<td>45% over five years</td>
<td>60% over five years</td>
</tr>
</tbody>
</table>

Benchmark: All secondary programs are subject to a visit on a 5-year rotation.³

Objective D: Funding Quality Programs – Secondary and postsecondary programs will include key components that meet the definition of a quality program and are responsive to the needs of business and industry.

Performance Measure:

I. Develop and implement a secondary program assessment model that clearly identifies the elements of a quality program.
   Baseline data/Actuals: FY2017: Develop a plan for program assessment.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Used stakeholder feedback used to develop Program Quality Measures: Piloted model:</td>
<td>Program review documents were piloted and final documents included feedback: Programs (25) started</td>
<td></td>
<td></td>
<td>Implement in FY2023</td>
<td>Fully implemented</td>
</tr>
</tbody>
</table>
Benchmark: Identify schedule to comprehensively assess high-quality secondary CTE programs with qualitative and quantitative review. This Program Quality Initiative is a subset of the Division’s overall secondary program review process.

Objective E: Create systems, services, resources, and operations that support high performing students in high performing programs and lead to positive placements.

Performance Measures:

I. Secondary student pass rate for Technical Skills Assessment (TSA).
   Baseline data/Actuals: Baseline FY17 – 56
   Benchmark FY24 – 68.3
   Benchmark: 68.3 pass rate by FY2024.

II. Positive placement rate of secondary concentrators (includes postsecondary education, advanced training, military, service program or employment).
    Baseline data/Actuals: Baseline FY15 – 94.1
    Benchmark: Maintain placement rate at or above 95 percent.

III. Implementation of competency-based SkillStack® microcredentials for all relevant programs of study.
    Baseline data/Actuals: Baseline FY16 – 0
    Benchmark: By FY2025, implement SkillStack® for 100 percent of programs.

IV. Number of programs that align with industry-driven standards and outcomes.
    Baseline data/Actuals: FY2017 Actual – 37
    Benchmark: Align 100 percent of programs by FY2024.
Goal 2

Educational readiness

Provide a rigorous, uniform, and thorough education that empowers students to be lifelong learners and prepares all students to fully participate in their community, and postsecondary and workforce opportunities by assuring they are ready to learn at the next educational level.

Objective A: Increased retention of qualified career technical education instructors.

Performance Measure:

I. Number and percent of instructors with limited occupation specialist certificates earning their standard occupational specialist certificate within three years or based on cohort year.

Baseline data/Actuals: TBD

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Benchmark: TBD (New Measure)

Objective A: Workforce Training – Non-credit training will provide additional support in delivering skilled talent to Idaho’s employers.

Performance Measure:

I. The percent of Workforce Training students who complete their short-term training.

Baseline data/Actuals: FY2018 – Identify Baseline

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>90</td>
<td>92</td>
<td>89</td>
<td>90</td>
<td>90</td>
<td>90</td>
</tr>
</tbody>
</table>

Benchmark: 90 percent average completion.

Objective B: Adult Education programs will assist adults in becoming literate and obtaining the knowledge and skills necessary for employment and economic self-sufficiency.

Performance Measure:

I. Percent of participating students making measurable improvements in basic skills necessary for employment, college, and training (i.e., literacy, numeracy, English language, and workplace readiness).

Baseline data/Actuals: FY2016 – 23

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>22%</td>
<td>32%</td>
<td>37%</td>
<td>TBD</td>
<td>TBD</td>
<td>TBD</td>
</tr>
</tbody>
</table>

Benchmark: By FY2025, xx% of participating students make measurable progress.
**Objective C:** Centers for New Directions (CND) — CNDs will help foster positive student outcomes, provide community outreach events and workshops, and collaborate with other agencies.

**Performance Measure:**
1. Percent of positive outcomes/retention that lead to completing a CTE program of study, entering employment or continuing their training.
   - Baseline data/Actuals: FY 2016 — 89

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

<td>67</td>
<td>67</td>
<td></td>
<td></td>
<td>67</td>
<td>69</td>
</tr>
</tbody>
</table>

Benchmark: 67% positive outcome rate annually.

**Goal 3**

Educational attainment
Idaho’s public colleges and universities will award enough degrees and certificates to meet the education and forecasted workforce needs of Idaho residents necessary to survive and thrive in the changing economy.

**Objective A:** Talent Pipelines/Career Pathways — CTE students will successfully transition from postsecondary education to the workplace through a statewide career pathways model.

**Performance Measures:**
1. Positive placement rate of postsecondary program completers (includes additional postsecondary education, advanced training, military, service program or employment).
   - Baseline data/Actuals: Baseline FY15 — 84.7

<table>
<thead>
<tr>

<td>1,099 (25% Improvement)</td>
<td>1,319 (50% Improvement)</td>
</tr>
</tbody>
</table>

Benchmark: By FY2029, 50% improvement of non-secondary students earning microcredentials.\(^{xii}\)

Goal 4

Workforce Readiness

The educational system will provide an individualized environment that facilitates the creation of practical and theoretical knowledge leading to college and career readiness.

Objective A: CTE concentrators will demonstrate college and career readiness.

Performance Measure:

1. Percent of secondary concentrators who meet workforce readiness and CTE diploma requirements.
   Baseline data/Actuals: Baseline FY22 – 25%

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1,685 of 6,806</td>
<td>2,394 of 7,035</td>
<td></td>
<td></td>
<td>40%</td>
<td>60%</td>
</tr>
</tbody>
</table>

Benchmark: 60% of secondary concentrators earn workforce readiness and CTE diploma by 2029.\(^{xiii}\)

Objective B: Increase use of microcredential platform by CTE instructors for tracking student progress for pathway completion.

Performance Measure:

1. Percent of secondary CTE concentrator teachers that actively track student progress through the microcredential platform.
   Baseline data/Actuals: FY2020 – Identify Baseline

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>147/426= 35%</td>
<td>202/430= 47%</td>
<td>252/453= 56%</td>
<td></td>
<td>75%</td>
<td>90%</td>
</tr>
</tbody>
</table>

Benchmark: 90% of secondary CTE concentrator instructors track progress by 2029.

Key external factors

- Lack of knowledge, perceptions, and stigma regarding career opportunities available through career technical education. As the labor market and overall economic conditions improve, fewer students are expected to enroll in postsecondary CTE programs.
- Policies, practices, legislation, and governance external to IDCTE.
- Ability to attract and retain qualified instructors, particularly those who are entering teaching from industry.
• Timely access to relevant, comprehensive, and accurate data from external reporting sources affects the ability of IDCTE to conduct statewide data analyses.

Evaluation process
Objectives will be reviewed at least annually (more frequently if data is available). The IDCTE Leadership Team will review the data in terms of its alignment with objectives and assess progress toward reaching benchmarks. As necessary, the team will identify barriers to success, strategies for improvement, and any additional resources necessary to make measurable progress. As appropriate, IDCTE will make requests through its budget and legislative requests to support the agency’s goals and objectives.

I Based on survey results intended to improve communication and feedback with secondary and postsecondary stakeholders. FY20 results only include a response from secondary stakeholders.
II Based on IDCTE goal to improve data accuracy and reduce reporting burden on districts.
III Based on IDCTE goal to improve program assessment process. Counts do not include program reviews conducted during desk audits. Visits include the following approved programs: clusters, pathways, middle school and individualized occupational training.
IV Federally negotiated benchmark. Five year benchmark unavailable due to federal timeline.
V Based on IDCTE goal to improve program assessment process.
VI IDCTE goal to coincide SkillStack® rollout with the completion of program alignment and standard setting.
VII Based on goal to ensure high completion rate for short term training and to better meet workforce needs by increasing the talent pipeline.
VIII Federally negotiated benchmark. Results lower due to COVID-19. Five-year benchmark unavailable due to federal timeline.
IX Based on goal of continuing current outcome rates. Results lower due to COVID-19.
X Based on IDCTE goal to ensure high placement rates for CTE programs. Based on students who participated in follow-up survey.
XI Based on goal to improve positive placement rate at the secondary level and to better meet workforce needs by increasing the talent pipeline. Data includes students identified through National Clearinghouse data. This matches OSBE methodology.
XII Non-secondary students include those associated with workforce training centers, Idaho Department of Correction/Juvenile Corrections and other educational entities outside of secondary programs.
XIII Numbers are reported by the districts and include duplicate students if students belong to more than one pathway and earn criteria for the diploma in multiple pathways.
College of Western Idaho
Strategic Plan 2025 – 2029

STATUTORY AUTHORITY
This plan has been developed in accordance with Northwest Commission on Colleges and Universities (NWCCU) and Idaho State Board of Education standards. The statutory authority and the enumerated general powers and duties of the Board of Trustees of a junior (community) college district are established in Sections 33-2101, 33-2103 to 33-2115, Idaho Code.

MISSION STATEMENT
College of Western Idaho is committed to empowering students to succeed by providing affordable and accessible education to advance the local and global workforce.

VISION STATEMENT
The College of Western Idaho will be a best-in-class community college that provides quality, affordable, and accessible education by delivering innovative and cost-effective programming that empowers students, leads to economic and social mobility, and meets evolving community needs.

GOAL 1: Student Success
CWI values its students and is committed to supporting their success in reaching their educational and career goals.

Objective 1A: Advance Student Success by Optimizing the Student Lifecycle

Performance Measures:

1. Number of degrees/certificates produced annually (IPEDS Completions)

<table>
<thead>
<tr>
<th></th>
<th></th>

<td>&gt;=300</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>&gt;=350</td>
</tr>
</tbody>
</table>

Benchmark (state-wide performance measure): Number of degrees produced annually (IPEDS completions) will meet or exceed $1,121$ degrees by 2029. The benchmark was established based on past years’ performance and with the intent of being a stretch goal that is specific, measurable, attainable, relevant, and time-bound (SMART).
Benchmark (state-wide performance measure): Number of certificates of at least one year produced annually (IPEDS completions) will be meet or exceeds 350 certificates by 2029. The benchmark was established based on past years’ performance and with the intent of being a stretch goal that is specific, measurable, attainable, relevant, and time-bound (SMART).

II. Number of unduplicated graduates (IPEDS Completions)

<table>

**Benchmark (state-wide performance measure):** Percentage of first-time degree seeking students completing a gateway math course within two years of enrollment will meet or exceed 38% by 2029. The benchmark was established based on past years’ performance and with the intent of being a stretch goal that is specific, measurable, attainable, relevant, and time-bound (SMART).
Key External Factors
There are a number of key external factors that can have significant impact on CWI’s ability to fulfill the mission and institutional priorities in the years to come. Some of these include:

- Continued revenue. 36% of CWI’s total revenue comes from State of Idaho provided funds (General Fund, CTE, and Liquor Fund). Maintaining parity with the state’s other community colleges is a stated objective within our strategic plan. Ongoing state funding is vital to the continued success of CWI.

- Enrollment. CWI is actively engaged in recruiting and retention efforts in all areas of student enrollment. With nearly 30% of revenue generated from student tuition and fees, it is critical that CWI reach out in meaningful ways to its service area to support ongoing learning opportunities for the community and maintain fiscal stability for the college.

Evaluation Process
The College of Western Idaho is currently operating in its Comprehensive Strategic Plan for 2024-2026 and created associated performance metrics and benchmarks. Evaluations are initiated at regular intervals, the scope and timing of which are determined by the lifecycle of the necessary processes and the impact to our students and institution.

When improvements are determined to be necessary, scope and impact to the student or business processes are then evaluated, desired outcomes are determined, and a stated goal is formulated and then measured against existing goals or strategies to determine if it can be incorporated into existing structure or would be stand alone in nature. Once a new goal is incorporated, an evaluative process will be created, benchmarking will be established and recurring evaluations made.
MISSION STATEMENT
We harness the power of public media to encourage lifelong learning, connect our communities, and enrich the lives of all Idahoans. We tell Idaho’s stories.

VISION STATEMENT
Inspire, enrich and educate the people we serve, enabling them to make a better world.

SBoE GOAL 1: EDUCATIONAL READINESS (student-centered)
Provide a rigorous, uniform, and thorough education that empowers students to be lifelong learners and prepares all students to fully participate in their community and postsecondary and workforce opportunities by assuring they are ready to learn at the next educational level.

IdahoPTV Objective:

Objective: Be a relevant, educational and informational resource to all citizens.

Performance Measures:
I. Number of educational outreach and training events for teachers, students and parents.\(^1\)

KEY EXTERNAL FACTORS

Funding – Idaho Public Television’s funding depends upon a combination of State General Funds; an annual grant from the Corporation for Public Broadcasting that receives its revenue from Congress; Federal grants; and private donations from individuals, corporations and foundations. All four of these sources are subject to changes in economic conditions, political considerations, and competition from other non-profits and government entities. Historically the largest portion of funding for Idaho Public Television comes from voluntary private contributions. Idaho Public Television ranks in the top one-third of Public Broadcasting Service (PBS) stations nationwide for overall donor revenue and donor retention. Average contribution per donor is $152.29 per year. Philanthropic giving is directly affected by many external factors such as global events, federal and state charitable giving laws, and inflated cost-of-living factors that diminish discretionary giving budgets. In FY 2024 IdahoPTV received funding for infrastructure projects from the Idaho Permanent Building Fund Advisory Council to replace aging transmitters and antennas at four of five of our hilltop sites around the state. Although these funds are helpful and are used to replace vital infrastructure projects for broadcasting content they also assist with public safety aspects of our work.

Regulatory Changes – With the greatest portion of Idaho Public Television funding coming from private contributions, the changes to federal tax policy have the distinct potential to negatively impact charitable giving. In addition, Idaho Public Television operates under numerous other rules and regulations from entities such as the Federal Aviation Administration, Federal Communications Commission, Department of the Interior, Department of Agriculture, Department of Education, Department of Homeland Security, and others. Changes to those policies and regulations could impact operations.

Broadband/New Media Devices – As viewers increasingly obtain their video content via new devices (computers, tablets, smartphones, smart TVs, etc.), in addition to traditional broadcast, cable and satellite, Idaho Public Television must invest in the technology to meet our viewers’ needs and to make sure our content and services are available when and where viewers want to access them. The ability of public television stations to raise private contributions and other revenue via these new platforms continues to be a significant challenge.

ATSC 3.0 – Recently, the FCC adopted standards for a new, improved television technology. Like the move from analog to digital, this new standard will make all previous television equipment obsolete for both the broadcaster and the consumer. Currently, adoption of this new standard is voluntary, but we expect that eventually it will become mandatory. Planning for this new standard is already underway; and as equipment is replaced, every effort is being made to ensure it is upgradable to the new standard. Significant new funding will need to be obtained to
make this technology change happen. There will be small competitive federal grants to assist stations to transition equipment to this new standard, which is tied to public safety.

Political Environment – In 2022 the Idaho GOP drafted and passed a resolution encouraging “the Idaho Legislature to divest the State of Idaho from Idaho Public Television in such a way that allows continued operation in the private sector AND does not hinder State-originated EAS service to the public.” While this may pose a challenge at some point in the future, it also provides IdahoPTV with an opportunity to educate and inform legislators on the importance of IdahoPTV’s role in the statewide Emergency Alert System (EAS).

Aging Equipment and Public Safety – Much of the equipment in our statewide broadcast network has been depreciated, and the expected lifespan has been surpassed. A long-range plan and funding strategy have been developed, and we are looking at avenues in state government, private and federal grants, as well as other private funds, to support capital replacement. IdahoPTV is working closely with the Idaho Military Division-Public Safety Communications to ensure that digital microwave connectivity for our signal and that of first responders is available. We work with Idaho Office of Emergency Management to build upon existing strategies and explore emerging technologies in emergency communication, an area of mutual interest. This effort seeks to leverage best practices and technological advances to ensure that within their shared service areas, the public is provided with vital emergency information and crisis related communication such as: providing live broadcast and media pool coverage of disaster related events; transmission of mandatory national alerts via the Emergency Alert System, including geo-targeted Amber Alerts, weather and emergency information distributed to all broadcast markets in the state; the backup alert signals for wireless carriers in the state called Wireless Emergency Alerts (WEA), which is currently delivered using PBS’ Warning, Alert and Response Network (WARN) and IdahoPTV’s infrastructure.

EVALUATION PROCESS

Idaho Public Television uses the following methods to evaluate our services:

We are a member of the Organization of State Broadcasting Executives (OSBE), an association of chief executive officers of state public broadcasting networks, whose members account for almost half of the transmitters in the public television system. OSBE gathers information, keeps years of data on file, and tracks trends. OSBE members are represented on the policy teams for our national organizations, including PBS, America’s Public Television Stations, and National Educational Telecommunications Association.

We have a statewide advisory Friends board, currently 28 directors and 16 emeritus directors, with broad community and geographic representation. This board meets formally on a quarterly basis. It serves as a community sounding board to provide input.

Through Nielsen data, Google Analytics, Domo Business Analytics (in partnership with PBS analytics) and other research information, we have access to relevant metrics to make informed and successful marketing and programming decisions. Viewership helps determine which content is most relevant to the community we serve and how to best serve the people of Idaho. We also receive feedback from the community regarding our work. Our production team ascertains issues in the community and uses this information to plan local program productions. We prepare and post on the FCC website lists of programs we air that provide the station’s most
significant treatment of community issues. We are also required to submit to the FCC and public all sponsors that appear on our air.

IdahoPTV continues to do qualitative and quantitative research on existing programs. Surveys have been conducted and research has been executed by external entities to design content, define platform use, and metrics for success. It has proved a useful tool to launch a new series or re-engineer an existing one. External groups have provided surveys and analytics, demographic data, environmental scans, content audits and communications plans. We have also used surveys and other analytical tools to look at what our education department is doing for Idaho communities and how people see our work. We see this as a way to better understand and serve all Idahoans on all platforms.

_______________

1. Benchmark is based on an analysis of historical trends combined with desired level of achievement.

## Institution/Agency Goals and Objectives

### GOAL 1: EDUCATIONAL READINESS (student-centered) – Provide a rigorous, uniform, and thorough education that empowers students to be lifelong learners and prepares all students to fully participate in their community and postsecondary and workforce opportunities by assuring they are ready to learn at the next educational level.

Objective: Be a relevant, educational and informational resource to all citizens.

### GOAL 2: EDUCATIONAL ACCESS – Increase access to Idaho’s robust educational system for all Idahoans, regardless of socioeconomic status, age, or geographic location.

Objective A: Maintain a digital statewide infrastructure in cooperation with public and private entities.

Objective B: Nurture and foster collaborative partnerships with other Idaho state entities and educational institutions to provide services to the citizens of Idaho.

Objective C: Provide access to IdahoPTV new media content to citizens, anywhere, that supports participation and education.

Objective D: Broadcast educational programs and provide related resources that serve the needs of Idahoans, which include children, ethnic minorities, learners, and teachers.

Objective E: Contribute to a well-informed citizenry.
| Objective F: Provide relevant Idaho-specific information. | ✓ |  |
| Objective G: Provide high-quality, educational television programming and new media content. | ✓ |  |
| Objective H: Operate an effective and efficient organization. | ✓ |  |

**GOAL 3: EDUCATIONAL ATTAINMENT** – Idaho’s public colleges and universities and career technical education programs fuel a strong workforce pipeline evidenced through a greater numbers of student completing certificates and/or degrees, including workforce credentials.

Key External Factors

Several external factors affect Idaho State University’s ability to achieve strategic plan goals, to include:

- Extraordinary inflation in wages, materials, and services and unfunded CEC have been outpacing state support levels for several years
- Idaho’s low go-on rates and increasing external competition for Idaho students
- Increased compliance, reporting, and administrative burdens

Evaluation Process

Idaho State University has implemented a new Planning and Institutional Effectiveness Framework, designed to support and further ISU’s mission. The integrated framework forms the basis for ongoing and systematic assessment, adaptation, and improvement.

Throughout FY2024, the Planning and Institutional Effectiveness Steering Committee has reviewed and streamlined elements of the framework to support our accreditation and strategic plan more seamlessly. As part of this effort, we have identified nine high-level “Mission Fulfillment Measures” and developed online dashboards that show longitudinal progress toward established thresholds. We have also updated our strategic plan objectives and performance measures to 1) align with Mission Fulfillment Measures, 2) reflect State Board of Education system-wide measures, and 3) focus on measurable outcomes.

On an annual basis, the Planning and Institutional Effectiveness Steering Committee reviews progress toward mission fulfillment and strategic plan goals and objectives, reports on progress to Administrative Council, Leadership Council, and the campus community, and recommends priority actions to address performance gaps and opportunities.

Appendix B: Special Appropriations Strategic Plans

Idaho Dental Education Program

Vision
The Idaho Dental Education Program envisions an elite educational program; graduating competent and ethical dentists who benefit the residents of Idaho as professionals.

Mission
The Mission of the Idaho Dental Education Program is to provide Idaho residents with access to quality educational opportunities in the field of dentistry. We provide Idaho with outstanding dental professionals through a combination of adequate access for residents and the high quality of education provided. The graduates of the Idaho Dental Education Program will possess the ability to practice today’s dentistry. Furthermore, they will have the background to evaluate changes in future treatment methods as they relate to providing outstanding patient care.

Goal 1: Provide access to a quality dental education for qualified Idaho residents

Objective A: Access - Provide dental education opportunities for Idaho residents

INFORMATIONAL - PPGA
Department of Family Medicine

Vision
To improve lives by serving on the forefront of healthcare and education.

Mission
Through interprofessional clinical education we develop compassionate, skilled healthcare providers who better lives and communities.

Goal 1: Expand to a new facility

Objective A: Establish an expanded, modern interprofessional healthcare training facility.

Idaho Museum of Natural History

**Vision**
To shape the future by understanding Idaho’s natural history and creating unforgettable educational experiences.

**Mission**
Inspire appreciation and curiosity for Idaho’s natural history through its exploration and preservation.

**Goal 1: Demonstrate the IMNH’s essential value**

Objective A: Increase the museum’s audience and engagement with customers, collaborators, and partners.

* COVID impacts
Appendix C: Objective and Performance Measure Updates

In FY2024, ISU’s Planning and Institutional Effectiveness Steering Committee updated strategic plan objectives and performance measures to 1) align with Mission Fulfillment Measures, 2) reflect State Board of Education system-wide measures, and 3) focus on measurable outcomes. We also removed goals and time horizons from indicator language as these are reflected in benchmarks. These updates are reflected in the following redline.

Goal 1: Increase student access, opportunity, retention, and success.

Objective 1.1-A: Increase access and enrollment using targeted recruitment efforts

Measures:

1.1.a. Increase by 7% the total number of enrolled degree-seeking students by FY2028.
1.A.1 Fall degree-seeking student enrollment: all students  
Rationale: Clarified that these enrollment data are for fall term, removed goals and time horizons from indicator language as they are reflected in benchmarks

1.1.b. Increase by 7.5% first-generation student enrollment rates by FY2028
1.A.2 Fall degree-seeking student enrollment: first-generation students  
Rationale: Clarified that these enrollment data are for fall term, removed goals and time horizons from indicator language as they are reflected in benchmarks

1.1.c Increase by 5% the enrollment rate of the number of undergraduate students from rural Idaho by FY28
1.A.3 Fall degree-seeking student enrollment: rural Idaho students  
Rationale: Clarified that these enrollment data are for fall term, removed goals and time horizons from indicator language as they are reflected in benchmarks

1.A.4 Percent of cost of attendance covered by grant or scholarship aid (New)  
Rationale: This is a Mission Fulfillment measure and correlates to access and retention (enrollment).

Objective 1.2 B: Improve student retention by strengthening student’s ISU experience

1.2.a. Increase by 7% the fall-to-fall, full-time, first-time bachelor degree-seeking retention rate by FY28
1.B.1 First-time, full-time bachelor degree-seeking student fall to fall retention  
Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks. Aligned indicator language with Mission Fulfillment and State Board of Education language.
1.2.b Increase by 7% the percent of new degree-seeking freshmen completing a gateway math course within two years by FY28

1.B.2 Percent of undergraduate, degree-seeking students completing 30 or more credits per academic year at the institution (new)

*Rationale: Moved up from Objective C (Graduation Rate)*

1.B.3 Percent of new degree-seeking freshmen completing a gateway math course within two years

*Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks.*

1.2.c Increase to 75% the percentage of students who register for the next semester prior to leaving on a break by FY28

*Rationale: Struck this measure as it is more of a tactic than a performance outcome.*

1.B.4 Percent of undergraduate, degree-seeking students taking a remediation course completing a subsequent credit-bearing course within a year with a "C" or higher. (New)

*Rationale: Required state reporting measure; indicates success of remedial education strategies.*

Objective 1.3 C: Improve ISU's graduation rate

1.C.1 Number of degrees and certificates awarded (New)

*Rationale: Mission fulfillment and required state reporting measure.*

1.C.2 % of total credentials conferred that are STEM field (New)

*Rationale: Required state reporting measure.*

1.C.3 Percent of first-time full-time freshman graduating within 100% of time

*Rationale: Required state reporting measure.*

1.3.a Increase by 9% the percent of first-time, full-time freshmen graduating within 150% of time by FY2028

1.3.b Increase by 5% the percentage of undergraduate and graduate degrees awarded by FY28.

*Rationale: Reflected in measure 1.C.1*

1.3.c Increase by 16% the percent of undergraduate, degree-seeking students completing 30 or more credits per academic year by FY28.

*Rationale: Moved to Objective B: Improve student retention.*

1.3.d Increase by 8% the percent of first-time, full-time bachelor degree-seeking freshmen graduating within 150% of time.

1.C.4 Percent of first-time, full-time freshman graduating within 150% of time

*Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks. Aligned indicator language with Mission Fulfillment and State Board of Education language.*
Goal 2: Strengthen Programmatic Excellence

Objective 2.1 A: Attract, support, and retain outstanding faculty and staff
2.1.a Increase by 5% the percentage of faculty and staff who feel satisfied with Idaho State University as their current employer by FY28
2.A.1 Percent of faculty and staff who express satisfaction with Idaho State University as their employer
   Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks.
2.1.b Improve employee retention, so retention is higher than peer group for staff by FY28
2.A.2 Professional staff employee retention relative to peers
   Rationale: Clarified this measure is related to professional staff. Removed goals and time horizons from indicator language as they are reflected in benchmarks.
2.1.c Improve faculty retention so retention is at or above peer comparison for faculty by FY28
2.A.3 Faculty employee retention relative to peers
   Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks. Separated out professional staff and faculty to better understand trends and opportunities.
2.1.d Create at least 10 "career ladder" opportunities that allow staff to progress in the roles by FY28
   Rationale: Struck this measure as it is more of a tactic than a performance outcome.

Objective 2.2 B: Enhance ISU's infrastructure
2.2.a Improve the quality of ISU campus buildings by reducing deferred maintenance by $24M by FY28
2.B.1 Deferred maintenance expenditures
   Rationale: Clarified measure language. This measure directly impacts ISU's age of facilities, fiscal sustainability, and bond rating.
2.2.b Remodel 55 classrooms to meet the new classroom technology standard and adhere to a central repair and replacement schedule by FY28
   Rationale: Struck as this is more of a specific strategy than a strategic performance measure.
2.2.c To support effective governance, evaluate 100% of ISU's existing policies by FY28
   Rationale: Struck as this is not an outcome-focused measure related to infrastructure.

Objective 2.3: Increase the number of nationally recognized programs
2.3.a Increase by ###% the number of nationally recognized top 100 programs by FY28
2.3.b Increase by 7% the number of ISU students completing a capstone/senior project by FY28
2.3.c Increase by 3% the percentage of ISU’s KDHS programs that meet or exceed the first-time pass rate measured against the national average by FY28
   Rationale: Struck this objective as there is no validated data source and we want to focus more on outcomes than volume.
Objective 2.4 C: Align ISU’s programs with community, regional, and national needs

2.4.a Increase by 65 the number of certificates and other stackable "microcredentials" offered at ISU by FY28

2.4.b Increase by 7.5% the number of ISU students graduating with degrees that align with Idaho Department of Labor "Hot Jobs" list.

2.4.c By 2028, 90% of college’s programs will complete alumni graduate surveys to identify changing trends in employer skill development. 

Goal 3: Cultivate External Partnerships

Objective 3.1: Increase the number of relationships with corporate, non-profit, and government entities

3.1.a Increase by 100 the number of corporate donors providing student education funding by FY28

3.1.b Increase by ###% the number of new/existing ISU partnerships resulting in CPIs/Internships and/or clinical opportunities for ISU students.

3.1.c Increase by ###% the perception of regional partners that ISU provides its graduates with the skills needed to succeed in their organizations by FY28

Rationale: Struck this objective as there is no validated data source and we want to focus more on outcomes than volume (see maximize objective below).

Objective 3.2 A: Maximize the impact of new and existing regional partnerships to support ISU’s mission.

3.2.a Increase by ###% the number of student competitions, workshops, and other professional development events sponsored by or in partnership with corporate, non-profit, or governmental partners by FY28.
**Rationale:** Struck because there is not a valid data source, and this is more volume- than outcome-oriented.

3.2.b Increase to 40% the number of off-campus CPI by FY28

3.A.2 Percentage of off-campus Career Path Internship placements

**Rationale:** Removed goals and time horizons from indicator language as they are reflected in benchmarks.

3.2.c Increase by ##% the number of VIP visits from existing and new partners to ISU in a year by FY28

**Rationale:** Struck because this is not tracked and is not an outcome-based performance measure.

**Objective 3.3 B: Expand collaborations with K-12 and post-secondary educational institutions**

3.3.a Increase by 59 transfer rates from Idaho community colleges to ISU by FY28

3.B.1 Transfer rates from Idaho Community Colleges to Idaho State University

**Rationale:** Removed goals and time horizons from indicator language as they are reflected in benchmarks.

3.3.b Improve by 12 the number of university collaborations that result in establishing 4+1 and 3+2 degree options by FY28

**Rationale:** Struck because this does not represent the breadth of pathway partnerships. We are reviewing options for a more comprehensive measure.

3.3.c Facilitate outreach programs that bring 60 high school counselors to one of ISU’s campuses by FY28

**Rationale:** Struck because this is more of a strategy than an outcome-based measure.

3.B.2 Early College program enrollment (New)

**Rationale:** This measure speaks to the effectiveness of our relationships with K-12 partners and directly impacts student access and success.

**Goal 4: Expand research, clinical, and creative activities**

**Objective 4.1 A: Enhance the faculty’s ability to initiate research and innovative projects**

4.1.a Office for Research will host 5 workshops/meetings per year that educate faculty and researchers on compliance or other research issues by FY28

**Rationale:** Struck as this is more of a tactic than a performance outcome.

4.1.b Engage 2 first-time proposal submitters per year to receive grant writing help

**Rationale:** Struck as this is more of a tactic than a performance outcome.

4.1.c Increase by 1 per year the number of faculty/researchers that apply for Office for Research Internal grants by FY28

**Rationale:** Struck as this is more of a tactic than a performance outcome.

4.A.1 F&A distributed to colleges, researchers, and PIs (New)

**Rationale:** This correlates to university support for initiating research and innovative projects.
4.A.2 Three-year rolling average of eternal grant proposals submitted (New)
  Rationale: This correlates to the impact of university support for initiating research and innovative projects. Reformatted from prior measure 4.2.b.

Objective 4.2 B: Increase productivity in research, scholarly, and creative activities
4.2.a Increase by 15% ISU’s total dollar amount of IPEDs reported research expenditures by FY28
4.B.1 Total annual research expenditures
  Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks. Aligned language with Mission Fulfillment measure.
4.2.b 10% increase to the three-year rolling average number of external grant proposals submitted by FY28
  Rationale: Moved to 4.A.2 as it better aligns with that objective.
4.2.c Increase by 3 per year the number of faculty members who submit external grant proposals through the Office for Research.
  Rationale: This is captured in 4.A.2

Objective 4.3: Capitalize on ISU clinical services as a source for clinical research
Objective C: Engage students in Interprofessional Education and/or clinical research
  Rationale: Reworded for clarity
4.3.a Increase by 12% the percentage of KDHS students that participate in interprofessional education/clinical research opportunities by FY28
4.C.1 Percent of KDHS students that participate in interprofessional education/clinical research opportunities
  Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks.
4.3.b Increase by 10% the percentage of KDHS faculty that participate in interprofessional educational/clinical research opportunities by FY28
4.C.2 Percent of KDHS faculty that participate in interprofessional education/clinical research opportunities
  Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks.
4.3.c Increase by # the number of faculty workload hours assigned to clinical services research by FY28
  Rationale: Struck as there is not a valid data source, and this is not an outcome-based measure.

Objective 4.4 D: Enhance ISU student research, clinical, and creative opportunities
4.4.a Increase by 75% the number of graduate students participating in Graduate School research/creative activity symposium/3MT by FY28
4.4.b Increase by 25 the number of students who participate in the ISU undergraduate research symposium by FY28
4.D.1 Number of ISU students participating in undergraduate or graduate research/creative activity symposia/events  
   *Rationale: Collapsed graduate and undergraduate participation for more reliable data*

4.4.c Increase by 9% the number of undergraduate degree-seeking students enrolled in course-based undergraduate research by FY28  
   *Rationale: Struck as we do not have a valid data source for this measure.*

4.D.2 Number of theses and dissertations completed (New)  
   *Rationale: This is directly correlated to student research success.*

**Goal 5: Energize the Bengal community**

**Objective 5.1 A: Enhance student life and engagement**

5.1.a Increase by 74% the number of students participating in career-related internships/practica by FY28

5.A.1 Student Employment FTE disaggregated by Career Path Internship, College Work Study, Graduate Assistant, and Other Student Employment
   *Rationale: We want to capture all types of student employment as they are directly correlated to student engagement and student success.*

5.1.b #% of students living in ISU's housing score the quality of their accommodations a four or higher out of a total of five by FY28
   *Rationale: Stuck because it is narrow and subjective.*

5.1.c Increase by 777% the number of students who actively participate in formal mentoring programs with other students, faculty and staff, and ISU alumni by FY28
   *Rationale: Stuck because there is not a valid data source.*

5.A.2 Number of students who participate in student events and activities (New)
   *Rationale: This is a direct measure of student engagement.*

**Objective 5.2 B: Increase faculty and staff connection, engagement, and recognition**

5.2.a Increase by 20% faculty attendance in workshops, panels, and other events hosted by ISU's Program for Instructional Effectiveness by FY28
   *Rationale: Stuck because there is not a valid data source, and the Program for Institutional Effectiveness does not encapsulate all faculty development and engagement activities. We are exploring alternate measures.*

5.2.b Increase by 9% the overall faculty/staff pride in working for ISU by FY28
   *Rationale: Struck because this is subjective and loosely correlated with the objective. We are capturing the percent of faculty and staff who express satisfaction with Idaho State University as their employer in measure 2.A.1.*

5.2.c Increase by 47% the number of faculty and staff nominees in the "Be a Bengal" program

5.B.1 Number of faculty and staff nominees for the Be a Bengal Program
   *Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks.*
5.B.2 ISU employee contributions to Bengal Giving Day (New)
   *Rationale: Participation in Bengal Giving Day reflects employee connection and engagement.*

5.B.3 Employee attendance at University Town Halls (New)
   *Rationale: Town Halls are a primary mechanism for facilitating university-wide dialog and discussion.*

5.B.4 ISU Today Open Rates (New)
   *Rationale: ISU Today provides bi-weekly updates, information, and announcements; open rates reflect interest, connection, and engagement.*

Objective 5.3 C: Increase alumni connections to and participation with ISU.

5.3.a Increase by 20% the value of endowed scholarships funded by alumni during the scholarship campaign.

5.C.1 Foundation Fundraising
   *Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks. Aligned with Mission Fulfillment measure.*

5.3.b Increase by 3,300 the number of ISU alumni participants attending campus events by FY28

5.C.2 Alumni participation in ISU events
   *Rationale: Removed goals and time horizons from indicator language as they are reflected in benchmarks.*

5.3.c Increase by 60% the number of alumni that attend alumni homecoming events by FY28
   *Rationale: Struck as this is included in 5.C.2 and the objective is not specific to homecoming.*

Objective 5.4 D: Increase ISU’s impact on its communities

5.4.a Increase by ##% the number of community events ISU participates in by FY28
   *Rationale: Stuck as there is not a valid data source and this is a volume rather than outcome-based measure.*

5.4.b Increase by 21% the percentage of students participating in course-based community-engaged learning by FY28
   *Rationale: Stuck as there is not a valid data source.*

5.4.c Increase by 10% attendance at ISU athletic events
   *Rationale: Stuck as there is not a valid data source and this is a volume rather than outcome-based measure.*

5.D.1 Number of ISU Clinics and Pharmacy clients served (New)
   *Rationale: This is a Mission Fulfillment measure and directly speaks to ISU’s health mission.*

5.D.2 Continuing Education and Workforce Training enrollment (New)
   *Rationale: This is a Mission Fulfillment measure and reflects the relevancy and alignment of our non-credit offerings with community needs*

MISSION STATEMENT

Lewis-Clark State College prepares students to become successful leaders, engaged citizens, and lifelong learners.

VISION STATEMENT

Idaho’s college of choice for an educational experience that changes lives and inspires a commitment to Idaho’s learning and civic engagement.

Goal 1: Strengthen and Optimize Instructional and Co-curricular Programming

Objective A: Optimize course and program delivery options

*Performance Measure 1: Number of online and evening/weekend programs.*

Definition: The number of degrees or certificates offered online or during evening or weekend hours.

Benchmark: Based upon current planning processes, LC State anticipates adding online degrees/certificates and evening & weekend programs of study beginning with the FY21 academic year forward. Note that LC State’s relative percentage of fully online offerings is planned to remain at approximately 20% of the overall program mix.

¹ List of online programs available here: [http://catalog.lcsc.edu/programs/#filter=.filter_42](http://catalog.lcsc.edu/programs/#filter=.filter_42)

² The following programs/credentials are offered during evenings &/or weekends: Web Design & Development (cert., AAS, BAS), Business Administration (BA/BS), & Interdisciplinary Studies (BA/BS). A portion of these programs is available through weekend and evening delivery and number of the courses are offered online. Liberal Arts and Business Administration Associates degrees moving towards evening/weekend delivery.
**Performance Measure 2: Proportion of courses in which course content is delivered online**

**Definition:** The proportion of courses in which course content (e.g., syllabi & student grades) is delivered using an online learning management system (LMS).

**Benchmark:** One hundred percent (100%) of courses have content available to students through the LMS.

³ Seventy one percent (71%) of sections were reviewed. Metric shows the proportion of sections reviewed with course content posted on LMS.
Objective B: Ensure high quality program outcomes

Performance Measure 1: Licensing & certification

Definition: The proportion of LC State test takers who pass, or their average test scores, on professional licensure or certification exams.

Benchmark: Meet or exceed national or statewide averages.

**Objective C:** Optimize curricular & co-curricular programming through *Connecting Learning to Life* initiative

*Connecting Learning to Life* has been verified as a curricular component of LC State 2- and 4-year degree programs, making experiential and applied learning a signature hallmark of an LC State education. ‘Connecting’ experiences fall under *applied learning* or *experiential learning*. Defined broadly to include internships, practica, apprenticeships, service learning, research, co-curricular engagement, etc., students complete applied or experiential learning within their chosen majors; and /or may reach outside their major for hands-on, co-curricular experiences. Performance measures are added or modified when plans result in measurable outcomes.

---

**Notes:**

5. Excludes tests 5003, 5004, and 5005, which are required for elementary certification, but which test background subject area content that is not taught in the Division of Teacher Education programs or majors connected to certification.

6. Preliminary figure: LC State has not received test results back from Idaho Division of Licensing for its program assessment.

7. *Applied learning* = hand's on application of theory.

8. *Experiential learning* = the process through which students develop knowledge, skills, and values from direct experiences outside a traditional academic setting.
Performance Measure 1: Curricular programing of applied and experiential learning opportunities

Definition: Courses, programs of study, majors, minors and certificates that serve as avenues of applied or experiential learning opportunities.

Benchmark: All programs of study offer graduates opportunities for applied &/or experiential learning. Long-term goals include expanding the development of signature certificates (currently LC State has three: Cybersecurity, Writing for the Web and Social Media, and Entrepreneurship) and new, interdisciplinary degree options through which “academic” and career-technical courses may be woven together.

Performance Measure 2: Co-Curricular programing of applied and experiential learning opportunities

Definition: Co-curriculum programming engaging students in applied &/or experiential learning outside of their chosen program’s curriculum. Examples displayed in the table below. Micro-credentials, now measurable, identified in table below.

Benchmark: 100% of LC State graduates participate in applied &/or experiential learning.

9 Anticipated completions for FY24.
Goal 2: Optimize Student Enrollment, Retention and Completion

Objective A: Increase the college’s degree-seeking student enrollment

*Performance Measure 1: Direct from high school enrollment*

Definition: The FTE of undergraduate degree-seeking, entering college students (measured at fall census) who graduated from high school the previous spring term.

Benchmarks derived from financial modeling of institutional viability and expansion. Based upon financial modeling of campus viability, LC State would like to be 3,000 total FTE or experience a growth of 10% from current FTE by FY 25, necessitating a 1.6 percent increase annually. How that campus-wide goal extrapolates to direct high school enrollment is articulated in the table below.

<table>

**Performance Measure 2: Adult enrollment**

Definition: The FTE of degree-seeking students (measured at fall census) who are above the age of 24.

Benchmarks derived from financial modeling of institutional viability and expansion\(^\text{10}\). Based upon financial modeling of campus viability, LC State would like to be 3,000 total FTE or experience a growth of 10% FTE by FY25, necessitating a 1.6 percent increase annually. How that campus-wide goal extrapolates to adult enrollment is articulated in the table below.

\[\text{INFORMATIONAL - PPGA}\]

\[\text{ATTACHMENT 8}\]
**Performance Measure 3: Online Headcount**

Definition: The headcount of degree-seeking students (measured at fall census) who are taking courses online (both entirely online and partly online schedule of courses).\(^{11}\)

Benchmarks derived from financial modeling of institutional viability and expansion\(^{10}\). Based upon financial modeling of campus viability, LC State would like to be 3,000 total FTE or experience a growth of 10% FTE by FY 25, necessitating a 1.6 percent increase annually. How that campus-wide goal extrapolates to online headcount is articulated in the table below\(^{12}\).

<table>
<thead>
<tr>
<th>Online Headcount</th>

\(^{11}\) Same definition as that used on the IPEDS Fall Enrollment Survey.

\(^{12}\) This benchmark assumes that a 10% growth in FTE would also equate a 10% growth in headcount.

\(^{13}\) Figure is preliminary.
**Performance Measures 4: Direct transfer enrollment**

Definition: The FTE of degree-seeking, entering transfer students (measured at fall census) who attended another college the previous spring or summer terms.

Benchmarks derived from financial modeling of institutional viability and expansion\(^\text{10}\). Based upon financial modeling of campus viability, LC State would like to be 3,000 total FTE or experience a growth of 10% FTE by FY 25, necessitating a 1.6 percent increase annually. How that campus-wide goal extrapolates to direct transfer enrollment is articulated in the table below.

\(^\text{14}\) Co-enrollment agreements exist with College of Western Idaho, College of Eastern Idaho, College of Southern Idaho, North Idaho College, Walla Wall Community College.
Performance Measure 5: Nonresident enrollment

Definition: The FTE of degree-seeking students (measured at fall census) who are not residents of Idaho.

Benchmarks derived from financial modeling of institutional viability and expansion. Based upon financial modeling of campus viability, LC State would like to be 3,000 total FTE or experience a growth of 10% FTE by FY 25, necessitating a 1.6 percent increase annually. How that campus-wide goal extrapolates to nonresident enrollment is articulated in the table below.

Key External and Internal Factors

In terms of factors influencing strategic plan goals, enrollment-related external factors include a reduction in the Lewiston High School graduating class, a strong jobs market, and the recovery of business operations from the Coronavirus pandemic. As a consequence, LC State’s achievement of some of its strategic plan goals has been impacted, both positively and negatively. Successes include online course and program offerings. These offerings swelled with students taking online coursework during FY’s 21 & 22, and have since returned to pre-pandemic levels. Somewhat surprisingly, despite pandemic-related challenges and disruptions, the proportion of LC State freshmen who finished their bachelor’s degree within 150% normative time (i.e., 6 years) increased significantly. These students started college in the fall of 2017, prior to pandemic operations and persisted at higher rates than observed historically. Moreover, by examining LC State’s normative time to degree (100% time) graduation rates and credential output, students appear to be opting for short term credentialing (associates degrees and

³⁷ This item includes state scholarships awarded to the student, for the Opportunity Scholarship, and therefore may be resistant to change from institutional effort. FY 18 dollars include $223k in state scholarships and $625k in opportunity scholarships.

³⁸ Including grants that do not have restrictions or reporting requirements.

³⁹ Benchmark reflects $100,000 above the baseline, which is the historical four-year average of total grant funds ($5,135,809).
certificates) when they had initially sought to pursue a bachelor’s degree. In these ways, LC State has improved its success rates and credential outputs. LC State, on the other hand, has struggled attracting an entering class composed of students coming directly from high school and directly from another institutional of higher education (i.e., direct transfer). These metrics are likely impacted by the shrinking graduating class size at LC State’s primary ‘feeder’ school, Lewiston High School, and a strong jobs market. While the majority of LC State’s remedial students succeeded in subsequent college-level coursework and completed gateway math classes early during their college attendance, performance on these metrics fell shy of LC State’s rigorous performance goals. And finally, it was observed this year that professional credentialing associations and public licensing offices experienced delays communicating testing and licensing results to LC State. Therefore, recent outcomes in metrics assessing licensing and certification among completers in social work and workforce training programs of HVAC, plumbing and electrical apprenticeships were not available to report in this strategic plan.

The following assumptions about external and internal factors will continue to impact the institution as the FY 2025 Strategic Plan is implemented.

Lewis-Clark State College...

1. Will continue to be a modestly selective admission institution with a greater than 95% acceptance rate, serving a substantial number of first-generation students, admitting students with various degrees of college preparation.
2. Will serve both residential and non-residential students, including those who commute, take online courses, are place-bound (e.g., incarcerated), and are working adults.
3. LC State is maintaining its aspirational goal to serve 3,000 FTE, which is particularly challenging in a post-pandemic world, punctuated by declining local, regional and national high school graduating classes.
4. Will continue to forge strategic partnerships with other institutions, agencies, businesses, and organizations and the community at large for mutual benefit particularly as it relates to LC State’s graduate credentialling.
5. Will continue to promote its brand and share its successes with multiple audiences, including prospective students.
6. Will continue to recruit faculty, staff and students across a wide range of demographics.
7. Relies on ongoing efforts to maximize operational efficiencies (e.g., program prioritization and internal resource reallocation); and increasing and leveraging grants, private fundraising to complement tuition revenue and reduced state support.
8. Will continue to assess its programs and services (program performance – program prioritization) to determine their efficacy and viability.
9. Master planning was engaged. The plan updated, submitted and approved by the SBOE. The plan can be found at: Microsoft Word - FY2021 Campus Master Plan - External - FINAL (lcsc.edu).
10. Will advocate for increased per-capita investment in LC State via state funding in support of LC State’s mission, strategic goals, position and role in Idaho’s education ecosystem as a small school experience.

Evaluation Process

LC State’s Strategic Plan was originally developed for the 2013-2018 timeframe. In light of the college’s updated mission, the waning utility of the college’s old strategic plan, and a successful NWCCU
accreditation evaluation, institutional goals and objectives were rewritten. A representative committee developed new strategies and objectives to guide the work of the college. The new goals and objectives were proposed in the 2018-2022 strategic plan, submitted for Board review during the March 2018 meeting and adopted during the June 2018 meeting. The current Strategic Plan document was modified and streamlined to reflect our post-pandemic realities. As presented in this plan report, the goals have been operationalized through relevant performance measures. System-wide performance measures are comingled among institutional performance measures to undergird LC State’s commitment to “systemness”. Institutional performance will undergo annual Cabinet review. Changes will be made in alignment with objective performance review and subjective evaluation of the involved campus stakeholders.

Red Tape Reduction Act

Administrative Rules are promulgated through the State Board of Education and this information is contained in the State Board of Education’s K-20 Strategic Plan.

Table 1: The Idaho State Board of Education (SBOE) has four goals in its strategic plan, three of which are presented here in alignment with LC State’s strategic plan goals and objectives. The goal missing in the above table from the SBOE plan is composed of measures entirely relating to K-12 education.
North Idaho College is in the process of a strategic plan revision which may result in changes to some elements of this plan, including benchmark targets.

MISSION STATEMENT
North Idaho College meets the diverse educational needs of students, employers, and the northern Idaho communities it serves through a commitment to student success, educational excellence, community engagement, and lifelong learning.

VISION STATEMENT
As a comprehensive community college, North Idaho College strives to provide accessible, affordable, quality learning opportunities. North Idaho College endeavors to be an innovative, flexible leader recognized as a center of educational, cultural, economic, and civic activities by the communities it serves.

GOAL 1: STUDENT SUCCESS
A vibrant, lifelong learning environment that engages students as partners in achieving educational goals to enhance their quality of life.

Goal 1, Objective A: Provide innovative, progressive, and student-centered programs and services.

Benchmark: $0.90 per gross square foot (by 2029)

KEY EXTERNAL FACTORS
- North Idaho College is currently under an extended show-cause sanction imposed by the Northwest Commission on Colleges and Universities
- Changes in the economic environment, including the COVID-19 pandemic
- Changes in local, state, or federal funding levels
- Changes in local, state, or national educational priorities
- Changes in education market (competitive environment)

EVALUATION PROCESS
- Details of implementation
  - The Institutional Research Team, along with NIC’s Provost, leads the President’s Cabinet in an annual review and revision of the strategic plan. The strategic plan is organized to align with North Idaho College’s core values. Together, the core values and the strategic plan guide NIC to mission fulfillment.

- Status of goals and objectives
  - North Idaho College’s goals for the strategic plan are also the college’s core values. The objectives to meet the goals are reviewed with the data collected to determine if benchmarks have been met. The review process often leads to the following questions:
    - Is the data we are collecting providing information related to goal attainment?
    - Is additional data needed to better understand goal attainment?
    - Do the objectives need revision to reach goal attainment?
  - There were no substantial changes made to the goals and objectives in the past academic year.
Footnotes

1 Benchmark is set based on IPEDS data from comparator institutions combined with current institutional challenges the desired level of achievement. Numbers for those comparator institutions range between 59% and 63% (based on median of comparator group institutions, 2011-12 through 2014-15, latest available). Cohort includes first-time degree/certificate-seeking and new transfer degree/certificate-seeking students for the fiscal year. Includes students who received a degree/certificate, transferred, or are still enrolled after eight years. [CCM 257]

2 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. National Student Clearinghouse results were used to calculate these numbers. Numbers are as of 02/28/2024. Data refreshes nightly so prior year trends may have changed slightly. Students who graduate during a fall or winter term may not be fully represented. FY20-FY22 (2019 cohort-2021 cohort) updated March 2024 to reflect latest data available. [CCM 227]

3 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. National Student Clearinghouse results were used to calculate these numbers. Numbers are as of 02/28/2024. Data refreshes nightly so prior year trends may have changed slightly. Other Institutions excludes NIC. Students who graduate during a fall or winter term may not be fully represented. FY20-FY22 (2019 cohort-2021 cohort) updated March 2024 to reflect latest data available [CCM 228]

4 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Total awards by award level. Historical data has been revised to reflect current IPEDS definitions which reflect a change in methodology, effective October 2020. Data prior to FY21 may not reflect what was previously reported to IPEDS. [CCM 238]

5 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Counts are unduplicated by award level. Historical data has been revised to reflect current IPEDS definitions which reflect a change in methodology, effective October 2020. Data prior to FY21 may not reflect what was previously reported to IPEDS. [CCM 239]

6 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. This measure is currently under review due in part to methodology differences that exist between data collection processes. Positive placement includes employed and/or employed related to training. Percentages are calculated on respondents only. [CCM 177]

7 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. This measure represents the number of students (duplicated headcount) who completed non-remedial courses with a C or better (or P or S). Denominator is the duplicated count of students enrolled in non-remedial courses at the end of term. Does not include labs, incompletes, or audits. [CCM 108]

8 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. [CCM 155]

9 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Benchmark calculations exclude the outlier year. Anticipate FYE program to increase retention. This cohort represents a small percentage of NIC’s total credit student population. FY23 numbers (Fall 2022 cohort) are pre-IPEDS submission and should be considered preliminary at this point. FY21-FY22 (Fall 2020 cohort-Fall 2021 cohort) updated March 2024 to reflect latest data available. [CCM 025]

10 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Benchmark calculations exclude the outlier year. Anticipate FYE program to
increase retention. This cohort represents a small percentage of NIC’s total credit student population. FY23 (Fall 2022 cohort) numbers are pre-IPEDS submission and should be considered preliminary at this point. FY22 (Fall 2021 cohort) updated March 2024 to reflect latest data available. [CCM 026]

11 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Based on a cohort of students that excludes non-degree/certificate-seeking, Dual Credit, and 100% audits. Includes registered credits and credits awarded through placement tests, Summer/Fall/Spring. Refreshed nightly so numbers may change slightly, i.e., incomplete grade changes. [CCM 195]

12 Benchmark is set based on IPEDS data from comparator institutions combined with current institutional challenges and the desired level of achievement. [CCM 196]

13 Benchmark is set based on IPEDS data from comparator combined with current institutional challenges and the desired level of achievement. FY23 numbers (Fall 2021 cohort) are pre-IPEDS submission and should be considered preliminary at this point. [CCM 199]

14 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Benchmark factors in decrease in enrollment and increase in population. Service Area population numbers are based on latest United States Census Bureau estimates (2022). [CCM 037]

15 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. FY22 enrollment decline due to fewer Community Education courses now being offered. Benchmark factors in decrease in enrollment and increase in population. Service Area population numbers are based on latest United States Census Bureau estimates (2022). [CCM 038]

16 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. FY20-FY22 (18-19 cohort - 20-21 cohort, English) updated March 2024 to reflect latest data available. [CCM 203/204]

17 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Full year cohort, first-time degree/certificate-seeking, full- and part-time (IPEDS). Gateway courses include MATH 123, 130, 143, 147, 157, 160, 170, and 253. [CCM 198]

18 Benchmark is set based on the standardized mean of benchmark scores. Data points represent benchmark scores for the CCSSE Benchmark: Student-Faculty Interaction. Benchmarks are groups of conceptually related survey items that address key areas of student engagement. Benchmark scores are standardized to have a mean of 50 and a standard deviation of 25 across all respondents. Top Schools are those that scored in the top 10 percent of the cohort by benchmark. CCSSE is a survey administered to community college students across the nation. [CCM 162]

19 Benchmark is set based on the standardized mean of benchmark scores. Data points represent benchmark scores for the CCSSE Benchmark: Support for Learners. Benchmarks are groups of conceptually related survey items that address key areas of student engagement. Benchmark scores are standardized to have a mean of 50 and a standard deviation of 25 across all respondents. Top Schools are those that scored in the top 10 percent of the cohort by benchmark. CCSSE is a survey administered to community college students across the nation. [CCM 165]

20 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Each action for the goals is rated on a scale of 1 to 3: 3 = Action Met, 2 = Consistently Progressing, or 1 = Not Attempted. N/A = future timeline for the goal. The mean score of all actions is calculated and the percentage is used to evaluate this measure. The goals are evaluated annually. [CCM 114]

21 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Counts include all active employees. FY22 revised March 2024. [CCM 029]
Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Reflects the total of the Faculty PIP, Staff PIP, and Professional Development Fund and all expenses in the staff development line item for the general fund departments. Does not include tuition waivers for NIC courses taken by NIC employees. FY20 and FY21 substantially lower than prior years due to COVID-related travel restrictions. [CCM 115]

FY22 cohort of students is smaller due to a decrease in number of Community Education classes offered. Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. [CCM 054]

Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Percentages shown reflect the average pass rate of all programs. Programs may vary year to year. FY23 includes Medical Assistant, Medical Lab Technology, Physical Therapist Assistant, Practical Nursing, Radiography Technology, Registered Nursing, and Surgical Technology. In the evaluation of NIC’s strategic plan, there is an additional benchmark that is considered aspirational and is extra-ordinary compared with similar institutions (peer groups). This component acknowledges that NIC has achieved a level of excellence on a particular measure and has little room for improvement, but should be encouraged to sustain this high level over time. Performance in the top third of the relevant comparator group is the threshold for sustained excellence for most measures. However, for any measure involving the performance of students on professional and occupational licensure tests, sustained excellence is considered to have been met with a passage rate of 90 percent or above. FY21 updated March 2024. [CCM 091]

Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. [CCM 020]

Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. [CCM 019]

Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. [CCM 017]

Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Data reflects the number of Distance Learning student credit hours out of number of both distance and non-distance student credit hours, end-of-term. Includes courses and programs in which ALL instructional portions can be completed remotely. Non-instructional, in-person requirements (e.g., orientation and testing) does not exclude a course or program from being classified as exclusively distance learning. This includes credit distance learning courses that are web-based, computer mediated, asynchronously AND synchronously via zoom, etc. in which the learner and learning resources can be generally separated by time and/or space. Does not include hybrid or other courses that require a portion to be done in person. [CCM 258]

Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Latest NIC Service Region comparison = 88.7% White, 9.3% Other, and 2.0% Unknown. (Source: U.S. Census Bureau Quick Facts, July 2022). [CCM 105]

Benchmark is based on national comparators combined with the desired level of achievement. Represents the percentage of students who answered “quite a bit” or “very much” to one individual survey question. The Community College Survey of Student Engagement (CCSSE) is a survey administered to community college students across the nation. [CCM 106]
31 Proficiency outcomes were defined in the spring of 2021. GEM = General Education Requirements. GEM 5 = Humanistic & Artistic Ways of Knowing; GEM 6 = Social & Behavioral Ways of Knowing. Note: NIC started collecting proficiency outcome for all GEM courses in FY19. During the first year a limited number of courses were assessed. The college expects an increase in the number of courses assessed to increase as more faculty participate in the process. Consequently, the college is predicting a decrease in the percentage of students who meet the proficiency outcomes. Percentages represent the weighted average of GEM 5 and GEM 6. FY23 is currently under review and should be considered preliminary at this point. [CCM 174]

32 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. FY21 decline due in part to CARES federal funding received. [CCM 172]

33 Benchmark is set based on IPEDS data from comparator institutions combined with the desired level of achievement. Higher percentile scores represent lower costs. For example, data indicates that NIC is less expensive than 73% of the institutions in its peer comparison group. Benchmark/target is to reach 75%. [CCM 130]

34 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. Auxiliary Services Operating Units include: Bookstore, Dining Services, Residence Hall, Student Union Operations, Financial Services, and the Student Wellness & Recreation Center. These Operating Units provide services to the students and the North Idaho College campuses that are not covered by tuition dollars and/or state fees. Continuing enrollment decline resulted in lower student fee generation, the primary source of funding for Student Union Operations and the Student Wellness & Recreation Center. FY23 Revenues from Sales and Operational Expenses are markedly higher than FY22 due the accounting treatment caused by a change to a Management Fee agreement with North Idaho College’s food service provider, Sodexo America LLC. Debt-service for the Residence Hall was retired in FY22. Remaining debt-service attaches to the Student Wellness & Recreation Center, including principal and interest for FY23. Stewardship is displayed by leveraging resources to contribute to the economic viability of North Idaho College. [CCM 170]

35 Benchmark is set based on an analysis of historical trends combined with current institutional challenges and the desired level of achievement. [CCM 192]
MISSION STATEMENT

To support Idaho students, educators, and school leaders with the tools and resources needed to achieve academic excellence through strategic thought, leadership, and policy alignment.

VISION STATEMENT

All Idaho students have access to a high-quality education that prepares them for their future with skills and job readiness to become engaged, successful citizens.

GUIDING VALUES

Listen with intention.

Lean into collaboration.

Lead with integrity.
GOAL 1: MODERNIZE EDUCATION FUNDING

Objective A: Determine costs of providing K-12 education in Idaho and recommend equitable funding.

Performance Measures:
I. Evaluate and report rural education costs vs. urban costs and define each. Target 12/1/25.
II. Definitions. Target 7/22/25.
III. Identify differences in rural and urban LEA costs through five-year historical comparisons of LEAs. Target 12/1/25.
IV. Evaluate and report virtual vs. brick and mortar LEA expenditures. Target 12/1/25.
V. Develop budget with increased discretionary funding flexibility. Target 12/1/25.
VI. Explore changes to funding model that reflects contemporary needs. Budget accordingly. Target 12/31/25.
VII. Compare assets and liabilities of 4 day vs. 5 day school weeks. Target 11/1/25.

Objective B: Stabilize Federal funding dependence without decreasing support for underserved students.

Performance Measures:
I. Quantify school district dependence on federal funding for employees/programs. Target 11/1/25.
II. Suggest alternatives to increased federal funding dependence. Target 11/1/25.

Objective C: Reduce district dependency on school levies and bonds through increased responsibility of other stakeholders.

Performance Measures:
I. Report Values of bonds and levies passed and failed (past 20+ years). Target 12/31/25.
II. What are the reported uses of supplemental levies in Idaho? Regional Analysis? Target 12/31/25.
III. Analyze the effect of 2023 funding increases and recommend adjustments. Target 12/1/25.
IV. Explore additional state support that will reduce reliance on supplemental levies. Target 12/31/25.
V. Analyze and recommend options for updating state support for facilities (e.g., revolving loan). Target 1/1/26.
VI. Analyze and recommend options for state funded building construction. Target 1/1/26.

Objective D: Examine the value/roots/motivation/benefits of per pupil funding.
I. Reevaluate unit calculation. Target 12/31/25.
II. Reevaluate seat time calculation. Target 12/31/25.
III. Review Title 33 for relevance. Target 12/31/25.

Objective E: Align funding with Idaho Department of Education Goals.
I. Review existing line items and their alignment with Department goals. Target 9/1/25.
II. Align Department administrative structure with Department goals. Target 12/31/25.

GOAL 2: STUDENT ACHIEVEMENT GOALS

Objective A: Improve Idaho student achievement growth.
Performance Measures:
II. Offer 4 early literacy, face-to-face professional development opportunities, with an emphasis on Dyslexia. Target 8/30/26.
III. Staff will personally visit 3/4, about 135, of the LEAs and charter schools in SY 2023/24. Target 7/30/26.
IV. SDE will assist in at least 10 school districts in the critique and selection of research-based curricula, proven effective with Idaho students. Target 7/30/26.
V. Visually clear (easy to read) student cohort data in reading and math. Target 7/1/26.
VI. Establish statewide reading goals for “below basic” readers on IRI. Target 12/14/25.

Objective B: Improve the mental and behavioral health of Idaho students
Performance Measures:
I. Work with education and community partners to identify existing resources.
II. Identify, highlight, and replicate existing/ successful Idaho-based programs. Target 3/31/26.
III. Identify gaps in mental health services for Idaho students. Target 12/30/26.
IV. Support advocacy for parents meeting with schools and assist with conflict resolution. Target 7/1/27.

V. Support professional development for special education teachers and directors. Target 7/1/27.

VI. Help general education teachers clearly understand the differences between mental health issues and special education needs. Target 7/1/27.

**Objective C: Train education stakeholders in developing and implementing meaningful assessment tools**

**Performance Measures:**

I. Solicit stakeholder input around the state-required IRI assessment. Target 2/1/26.

II. Develop an RFP for the Idaho Reading Indicator. Target 2/28/26.

III. Solicit stakeholder input around the ESSA-required state assessment (ISAT). Target 2/1/27.

IV. Develop an RFP for the Idaho Standards of Achievement Test (ISAT). Target 6/30/27.

V. Solicit stakeholder input around the Idaho dyslexia screening tool. Target 2/1/27.

VI. Develop an RFP for the Idaho dyslexia screening tool. Target 6/30/27.

VII. Solicit stakeholder input around the federally-required SDE report card. Target 2/1/26.

**Objective D: Identify essential standards for math and science**

**Performance Measures:**

III. Establish workgroup to identify essential standards for ELA. Target 8/30/26.

IV. Create SDE document identifying essential standards for ELA. Target 4/30/27.

V. Establish workgroup to identify essential standards for science. Target 8/30/27.

VII. Review and discuss ESSA-required summative assessment option with USDOE. Target 2/15/26.
GOAL 3: ATTRACT AND RETAIN LEADERS

Objective A: recruit new teachers and administrators to Idaho K-12 schools.

Performance Measures:
II. Provide incentives for teacher candidates in approved teacher prep programs. Target 12/1/25.
III. Surrounding states starting salaries. Target 12/31/25.

Objective B: Retain Idaho’s highest performing teachers

Performance Measures:
I. Help Idaho’s teachers feel appreciated and recognized. Create a culture of respect and value. Target 1/1/27.
II. Support school districts in providing high quality mentorship for educators. Specifically for educators in their first three years. Target 6/30/26.
III. Accumulate ideas for specifically defining mentoring in Idaho education. Target 2/15/26
IV. Ensure that every district can access quality mentoring for their staff. Target 3/15/26.
V. Support required training for school board members. Target 4/1/26.

Objective C: Retain Idaho’s highest performing administrators

Performance Measures:
I. Orientation training for new superintendents. Target 1/1/26.
II. Training for all superintendents (Idaho superintendent’s network). Target 1/1/26.
III. SDE will assist education partners in school board training related to hiring and evaluating superintendents. Target 6/30/27.

Objective D: Hire and retain exceptional teammates at the Idaho Department of Education

Performance Measures:
II. Determine baseline retention rate for exceptional teammates. Target 8/1/26.
III. Monitor retention rate. Target 7/1/28.
GOAL 4: PREPARE STUDENTS FOR LIFE

Objective A: Prepare students for all options following high school graduation

Performance Measures:
I. Award grant monies from Idaho Career Ready Students. Target 12/31/25.
II. Track Launch enrollment. Target 7/1/26.
III. Idaho Career Ready Students granting council membership. Target 7/1/26.

Objective B: Improve Financial Literacy of Idaho Students

Performance Measures:
I. Work towards a full credit for the required class. Target 6/1/27.
II. Leverage free curriculums.

Objective C: Review and Update Graduation Requirements

Performance Measures:
I. Establish a committee to provide recommendation to SBOE. Target 6/30/26.

KEY EXTERNAL FACTORS

Movement toward meeting these goals is contingent on many factors outside the control of the Idaho Department of Education. Key to this is that K-12 funding is primarily provided by the Idaho Legislature. The Idaho Department of Education does not select this body.

Another factor outside the sphere of influence of the Department is the changing demographics of the state. A large number of immigrants, and retired, out of state residents have come to Idaho. They affect the political tenor of Idaho’s politics.

A final external fact influencing the achievement of goals is the economy of Idaho. It influences money available, workforce needs, and more.
University of Idaho
Strategic Plan and Process

FY25 – FY29

Base 10-year plan established for 2016 – 2025; approved by the SBOE June 2016
Reviewed and submitted March 2024 for FY25 – FY29
MISSION STATEMENT

The University of Idaho will shape the future through innovative thinking, community engagement and transformative education.

The University of Idaho is the state’s land-grant research university. From this distinctive origin and identity, we will enhance the scientific, economic, social, legal, and cultural assets of our state and develop solutions for complex problems facing our society. We will continue to deliver focused excellence in teaching, research, outreach, and engagement in a collaborative environment at our residential main campus in Moscow, regional centers, extension offices and research facilities across Idaho. Consistent with the land-grant ideal, we will ensure that our outreach activities serve the state and strengthen our teaching, scholarly and creative capacities statewide.

Our educational offerings will transform the lives of our students through engaged learning and self-reflection. Our teaching and learning will include undergraduate, graduate, professional and continuing education offered through face-to-face instruction, technology-enabled delivery, and hands-on experience. Our educational programs will strive for excellence and will be enriched by the knowledge, collaboration, diversity and creativity of our faculty, students, and staff.

VISION STATEMENT

The University of Idaho will expand the institution’s intellectual and economic impact and make higher education relevant and accessible to qualified students of all backgrounds.

GOAL 1: Innovate

Scholarly and creative work with impact

Scholarly and creative products of the highest quality and scope, resulting in significant positive impact for the region and the world.¹

Objective A: Build a culture of collaboration that increases scholarly and creative productivity through interdisciplinary, regional, national and global partnerships.

Performance Measures:

1. Research Expenditures ($ thousand)²

</tbody>
</table>

Key External Factors

*Factors beyond our control that affect achievement of goals*
• The COVID pandemic, and its impact on enrollment, retention, and the go-on rate.
• The general economy, tax funding and allocations to higher education.
• The overall number of students graduating from high school in Idaho and the region.
• Federal guidelines for eligibility for financial aid.
• Increased administrative burden increasing the cost of delivery of education, outreach and research activities.

Evaluation Process

A brief description of the evaluations or processes to be used in establishing or revising general goals and objectives in the future.

The metrics will be reviewed annually to evaluate their continued appropriateness in assessing the various goals and processes. As the feedback from the annual review process is reviewed, the effectiveness of the processes will be refined. These feedback cycles are in place for Strategic Plan Metrics, Program Prioritization Metrics, and External Program Review Process. A continued examination of various elements of community need is conducted as well.

1 Quality and scope will be measured via comparison to Carnegie R1 institutions with the intent of the University of Idaho attaining R1 status by 2025. See methodology as described on the Carnegie Foundation website (http://carnegieclassifications.iu.edu/).
2 This was established as a means to achieve our end goal for enrollment and R1 status by 2025.
3 Measured via survey of newly enrolled students, For students who answered “Yes or No”, “Somewhat No” or “Definitely no” to “In your high school junior year, were you already planning to attend college (UI or other)?” the percent that responded “Yes or No”, “Somewhat Yes” or “Definitely Yes” to “Have the University of Idaho’s information and recruitment efforts over the last year impacted your decision to go to college?”
4 Internally set standard to assure program quality.
5 Given data availability and importance for national rankings, percent of alumni giving is used for this measure.
6 The Integrated Postsecondary Education Data System (IPEDS) method for counting degrees and those used to aggregate the numbers reported on the Performance Measurement Report (PMR) for the State Board of Education (SBOE) use different methods of aggregation. As such the sum of the degrees by level will not match the total.
7 Based on a review of the Idaho demographic and a desire to have the diversity match or exceed that of the general state population.
8 Based on our desire is to reach the “Good” range (65%-74%), as established by the survey publisher.
9 Based on HR’s examination of turnover rates of institutions nationally.
### Institution/Agency Goals and Objectives

<table>
<thead>
<tr>
<th>Goal 1: Innovate</th>

| Objective C: Improve efficiency, transparency and communication. | ✓ |
Metric and Data Definitions

Guiding principle for metric selection and use.

The core guiding principle used in selecting, defining and tracking the metrics used in the strategic plan is to focus on measures key to university success while remaining as consistent with the metrics used when reporting to state, federal, institutional accreditation other key external entities. The desire is to report data efficiently and consistently across the various groups by careful consideration of the alignment of metrics for all these groups where possible. The order of priority for selecting the metrics used in the strategic plan is a) to use data based in the state reporting systems where possible, and b) then move to data based in federal and/or key national reporting bodies. Only then is the construction of unique institution metrics undertaken.

Metrics for Goal 1 (Innovate):

1.) **Terminal Degrees** in given field is the number of Ph.D., P.S.M., M.F.A., M.L.A., M.Arch., M.N.R., J.D., D.A.T., and Ed.D. degrees awarded annually pulled for the IR Degrees Awarded Mult table used for reporting to state and federal constituents. This data is updated regularly and will be reported annually.

2.) **Postdoctoral Researchers, and Non-faculty Research Staff with Doctorates** as reported annually in the Graduate Students and Postdoctorates in Science and Engineering Survey (http://www.nsf.gov/statistics/srvygradpostdoc/#qs).

3.) **Research Expenditures** as reported annually in the Higher Education Research and Development Survey (http://www.nsf.gov/statistics/srvyherd/).

4.) **Invention Disclosures** as reported annually in the Association of University Technology Managers Licensing Activity Survey (http://www.autm.net/resources-surveys/research-reports-databases/licensing-surveys/).

5.) **Number of undergraduate and graduate students paid from sponsored projects**: This metric is a newly established State Board of Education (SBOE) metric. It is calculated by the Office of Research and reported annually.

6.) **Percent of students engaged in undergraduate research**: This is a metric from the Performance Measurement Report (PMR) for the SBOE. These PMR data are pulled from the Graduating Senior Survey annually.

Metrics for Goal 2 (Engage):

1.) **Impact (UI Enrollment that increases the Go-On rate)**: The metric will rely on one or two items added to the Higher Education Research Institute’s (HERI) Cooperative Institutional Research Program (CIRP) First Year Student Survey. We will seek to estimate the number of new students
who were not anticipating attending college a year earlier. As the items are refined, baseline and reporting of the results will be updated.

2.) **Extension Contacts**: Outreach to offices in relevant Colleges (College of Agricultural and Life Sciences, College of Natural Resources, College of Engineering, etc.) will provide data from the yearly report to the federal government on contacts. This reporting represents direct teaching contacts made throughout the year by recording attendance at all extension classes, workshops, producer schools, seminars and short courses.

3.) **Collaboration with Communities**: HERI Faculty Survey completed by undergraduate faculty where respondents indicated that over the past two years they had, “collaborated with the local community in research/teaching.” This survey is administered every three to five years.

4.) **National Survey of Student Engagement (NSSE)** Mean Service Learning, Field Placement or Study Abroad: This is the average percentage of those who engaged in service learning (item 12 2015 NSSE), field experience (item 11a NSSE) and study abroad (item 11d) from the NSSE.

5.) **Alumni Participation Rate**: This is provided annually by University Advancement and represents the percentage of alumni that are giving to the University of Idaho (UI). It is calculated based on the data reported for the Voluntary Support of Education (VSE) report. [https://www.case.org/resources/voluntary-support-education-survey](https://www.case.org/resources/voluntary-support-education-survey). It is updated annually.

6.) **Economic Impact**: This is taken from the EMSI (now Lightcast) UI report as the summary of economic impact. This report is updated periodically, and the data will be updated as it becomes available.

7.) **Dual Credit**: These data are pulled from the PMR which is developed for the SBOE annually.

**Metrics for Goal 3 (Transform):**

1.) **Enrollment**: This metric consists of headcounts from the data set used in reporting headcounts to the SBOE, Integrated Postsecondary Education Data System (IPEDS) and the Common Data Set as of census date. The data is updated annually.

2.) **Equity Metric**: This metric is derived from the census date data used for reporting retention and graduation rate which is updated annually. The analysis is limited to first-time full-time students. The mean first term Grade Point Average and semester hours completed for first-time full-time students is calculated for all students combined and separately for each IPEDS race/ethnicity category. The mean for the eight groups is compared to the overall mean. The eight groups identified here are American Indian or Alaska Native, Asian, Black or African American, Hispanic/Latino, International, Native Hawaiian or Other Pacific Islander, Two or More Races and White. If the mean for a group is below the overall mean by 1/3 or more of a standard deviation it is considered below expectations/equity. The percentage of these eight groups meeting the equity cut off is reported. For example, if six of the eight groups meet equity, it is reported as 75%. As there are groups with low numbers, the best method for selecting the cut off was based on the principle of effect size (i.e., [https://researchrundowns.wordpress.com/quantitative-methods/effect-size/](https://researchrundowns.wordpress.com/quantitative-methods/effect-size/)).

3.) **Retention**: This is reported as first-time full-time student retention at year 1 using the data reported to the SBOE, IPEDs and the Common Data Set. This is updated annually. The final goal was selected based on the mean of the 2015-16 year for the aspiration peer group for first-year
retention as reported in the Common Data Set. This group includes Virginia Tech, Michigan State University and Iowa State University.

4.) **Graduates (all degrees):** This is reported from the annual data used to report for IPEDS and the Common Data Set for the most recent year and includes certificates.

5.) **Degrees by level:** Items (a) to (c) under Graduates are pulled from the PMR established by the SBOE. These numbers differ from IPEDs as they are aggregated differently, so the numbers do not sum to the IPEDs total.

6.) **NSSE High Impact Practices:** This metric is for overall participation of seniors in two or more High Impact Practices (HIPs). The national norms for 2015 from NSSE are saved in the NSSE folders on the IR shared drive. The norms for 2015 HIPs seniors places UI’s percentage at 67%, well above R1/DRU (64%) and RH (60%) as benchmarks. The highest group (Bach. Colleges- Arts & Sciences) was 85%. The goal is to reach at least this level by 2025.

7.) **Remediation:** This metric comes from the PMR of the SBOE. It is updated annually.

**Metrics for Goal 4 (Cultivate):**

1.) **Chronicle Survey Score (Survey Average):** This metric was baselined in spring 2016 and utilizes the “Survey Average” score. The desire is to reach the “Good” range (65%-74%), which is the 4th group of 5, or higher. The survey can be found here: [https://greatcollegesprogram.com/participation-reports](https://greatcollegesprogram.com/participation-reports).

2.) **Multicultural Student Enrollment:** The headcounts used for this metric will be derived from the data set used to report to the SBOE at fall census date. This is based on the categories used by IPEDS and the Common Data Set. The census date data is updated annually.

3.) **International Student Enrollment:** The headcounts used for this metric are derived from the data set used to report to the SBOE at fall census date. This is based on the categories used by IPEDS and the Common Data Set. The census date data is updated annually.

4.) **Full-time Staff Turnover Rate** is obtained from UI Human Resources on an annual basis.

5.) **Percentage of Multicultural Faculty and Staff** is the percentage of full-time faculty and staff that are not Caucasian/Unknown from the IPEDS report. Full-time faculty is as reported in IPEDS Human Resources Part A1 for full-time tenured and tenure track. Full-time staff is as reported in IPEDS B1 using occupational category totals for full-time non-instructional staff.

6.) **Cost per credit hour:** This metric is from the PMR for the SBOE and is update annually.

7.) **Efficiency:** This metric is from the PMR for the SBOE and is updated annually.
Content and Format

The Strategic Plan (Plan) is divided into three sections. The first two sections describe the programs administered under the Idaho Division of Vocational Rehabilitation (IDVR). Each program (Vocational Rehabilitation and the Council for the Deaf and Hard of Hearing), independently outline specific goals, objectives, performance measures, benchmarks and/or baselines for achieving their stated goals. The final section addresses external factors impacting the Division, and SBOE’s strategic plan evaluation process.

This Plan covers State Fiscal Years (SFY) 2025 through 2029.

This is a new strategic plan for the Idaho Division of Vocational Rehabilitation. IDVR’s federal funding agency, the Rehabilitation Services Administration, requires a major state plan revision every two years. Additionally, they require a triennial Comprehensive Statewide Needs Assessment (CSNA), both of which have been recently completed for the Division, necessitating a substantial revision of this strategic plan including goals, objectives, tasks, and measures. Changes to these goals, objectives, tasks, and performance measures are supported by the CSNA and IDVR’s State Rehabilitation Council, as required by RSA.

The Division retains its mission and vision. The mission statement reflects the focus on the dual customer, individuals with disabilities and employers. Additionally, the agency has engaged in a major reorganization effort designed to improve performance across various major functions of the agency including new goals around Pre-Employment Transition Services (Pre-ETS) and business services. Some performance measures from the previous plan have been retained but may appear under newly established goals. Newly established performance measures may lack historical data.

Alignment with Idaho State Board of Education 2024 Strategic Plan

The Strategic Plan for Idaho Division of Vocational Rehabilitation is highly complementary with many goals and objectives contained in the SBOE plan (particularly for students aged 14 and up). The Division works closely at the intersection of students and youth transitioning into higher education or employment. Specifically, for SBOE goals 2 and 3, education access and educational attainment, IDVR can support up to 100 percent of costs for two-year, four-year, and graduate educational opportunities as well as apprenticeship opportunities for eligible Idahoans with disabilities transitioning from school into workforce age. The Division includes measures for credential attainment and measurable skill gains within its primary performance measure under Goal 1 Objective 1 Measure 1. Furthermore, Pre-Employment Transition Services (Pre-ETS), offered by the Division, help facilitate the transition of students from school to work through offering work-based learning experiences, counseling on post-secondary enrollment opportunities, work readiness training, self-advocacy, and job exploration counseling services the Division is federally required to provide to Idaho students with disabilities (along with similar services to youth).
Vocational Rehabilitation

Vision

An Idaho where all individuals with disabilities have the opportunity to participate in the workforce and employers value their contributions.

Mission

To prepare individuals with disabilities for employment and career opportunities while meeting the needs of employers.
Vocational Rehabilitation

**Goal 1:** Maximize the career potential of Idahoans with disabilities engaged with the Division.

**Objective 1:** Improve the quality of VR outcomes for IDVR customers.
1. Task: Improve access to and utilization of relevant local area LMI and Career Pathways to inform customer career choice and promote successful outcomes.
2. Task: Ensure customers have better job-ready/hire-ready skills through staff training and accessing IDOL workshops, tools, and resources.
3. Task: Increase access to relevant educational opportunities (vocational/technical/two-year/four-year/apprenticeships and other pathways to quality employment).

**Performance Measure 1.1.1:** Meet or exceed negotiated targets on the following five Primary Performance Indicators (PPIs).

_Relation to Goal:_ These Federally required indicators are intended to gauge program performance and increases across these PPIs can be used to assess Goal 1 Objective 1 performance.

**Benchmarks:** All PPI benchmarks are negotiated with RSA for a two-year period in alignment with the Combined State Plan cycle. Benchmarks for SYs 23 & 24 were negotiated in April 2022 and are reflected in this plan. Benchmarks for SY 25 & 26 will be negotiated in May 2024. Benchmarks for SY 2025 and SY 2029 are projected.

**Note:** Data for SY 2023 for PPI’s 1 & 3 above reflects RSA’s cohort period 7/1/2021-6/30/2022 & data for PPI’s 2 and 4 above reflects RSA’s cohort period 1/1/2021–12/31/2021.
Performance Measure 1.1.2: Overall customer satisfaction rate.
Relation to Goal: Used as an indicator of overall quality directly informing progress on Goal 1, Objective 1.

Benchmark: Greater than or equal to 90% for SY 25. This continues to be a stretch goal for the Division.

Objective 2: Strategically expand outreach, especially to underserved and growing populations.
1. Task: Increase customized outreach through community organizations, WIOA partners, and professionals that serve underserved, growing, and prioritized populations identified by the SRC and IDVR management (i.e., out-of-school youth, mental health, justice-involved, Hispanic)

Performance Measure 1.1.2: Number of applications for VR services.
Relation to Goal: Strategic outreach should result in an increase in overall applications to the VR program providing a measure for Goal 1 Objective 2.

Objective 3: Improve Community Rehabilitation Program (CRP) Service provision quality and quantity (including Supported Employment) for Idahoans with the Most Significant Disabilities.
1. Task: Complete rate methodology/recalibration. The new rates proposed are designed to be rates that support quality Community Rehabilitation Program Services. Task will be achieved once rates are issued.
2. Task: Implement newly revised CRP Monitoring Protocol designed to promote two-way data-driven continuous improvement conversations/increase feedback, relevance, and understanding between IDVR and Idaho’s CRPs.

Performance Measure 1.3.1: Number of cases with CRP provided services (non-assessment) in the SY.
Relation to Goal: The tasks under Goal 1 Objective 3 are focused on increasing performance in employment stability, and customer satisfaction for core CRP services for Idahoans with Most Significant Disabilities. The following two measures are used to assess performance on Goal 1 Objective 3:
**Objective 4: Hire and retain qualified employees to deliver quality vocational rehabilitation services.**

1. Task: Continued efforts to expand FTE, maximize compensation, and other innovative approaches to increase employee satisfaction and retention.

**Performance Measure 1.4.1: Percentage of counselors who meet Comprehensive System of Personnel Development (CSPD) compliance.**

*Relation to Goal: The Division maintains a CSPD plan with a focus on recruitment and retention of qualified counselors. The CSPD rate represents a percent of counselors who currently meet CSPD standards. Counselors meeting CSPD standards are more effective at serving Idahoans with disabilities. An increase in this measure leads to gains on Goal 1 Objective 4.*

---

**Goal 2: Expand utilization and improve quality of Pre-Employment Transition Services (Pre-ETS) and similar services for youth.**

**Objective 1: Increase utilization of Pre-ETS services and similar services to youth to priority populations identified by the SRC and IDVR management.**

1. Task 1: Increase outreach with schools, community organizations, and professionals that serve student, youth, and families.
2. Task 2: Increase outreach through WIOA umbrella partners that serve students and youth.
Performance Measure 2.1.1: Number of students receiving Pre-employment Transition Services (Pre-ETS).

Relation to Goal: The Division will engage in strategic outreach to populations identified by the SRC and IDVR management to increase utilization of Pre-ETS and similar services for youth. The following two measures are used to assess performance on Goal 2 Objective 1.

Goal 3: Improve outreach and engagement through individualized services to Idaho businesses.

Objective 1: Work with the business community to improve understanding and utilization of IDVR business services.
1. Task: Identify business groups (i.e., Chamber, Workforce Development groups, Society for Human Resource Management (SHRM)) that could benefit from networking with IDVR.
2. Task: Identify opportunities to provide education and training on the scope and availability of IDVR business services to provide customized business solutions.
3. Task: Expand business spotlights to each IDVR Center.
4. Task: Continue to improve IDVR website business page for useability and improved business content.

Performance Measure 3.1.1: Utilization of IDVR Business Services

Relation to Goal: Direct measure of business services provided; an increase will meet Goal 3 Objective 1.

Objective 2: Improved utilization of business engagement partnerships with the local workforce system.

1. Task: Continue efforts to align IDVR activities with the workforce development system, including aligned business engagement strategy at the state and local level.

Performance Measure 3.2.1: Retention rate with the same employer the 4th quarter after exit.

Relation to Goal: Evolution and continued improvement of teams should result in increased engagement with business services. Established relationships with business and VR should dispel myths and alleviate concerns of businesses promoting the hire and retention of individuals with disabilities.

**Benchmark:** Greater than or equal to SY 24 for SY 25

**Note:** Data for SY 2023 reflects RSA’s cohort period 1/1/2021 – 12/31/2021. This measure continues to be a ‘pilot’ measure. The current benchmark is proxy until formal negotiation occurs.

*The rates for this measure were previously underreported, as the measure asks only for participants who were employed in both the 2nd and 4th quarters after exit in the denominator. This impacted previous Strategic Plan reporting for SYs 2020-2022. This report includes corrected performance data.*
Council for the Deaf and Hard of Hearing (CDHH)

Role of CDHH

CDHH is an independent agency. This is a flow-through council for budgetary and administrative support purposes only with no direct programmatic implication for IDVR. The following is the Council for the Deaf and Hard of Hearing’s Strategic Plan.

Mission

Dedicated to making Idaho a place where persons, of all ages, who are deaf or hard of hearing have an equal opportunity to participate fully as active, productive and independent citizens.

Vision

To ensure that individuals who are deaf, hard of hearing, or hearing impaired have a centralized location to obtain resources and information about services available.

Goal #1 – Work to increase access to employment, educational and social-interaction opportunities for persons who are deaf or hard of hearing.

1. **Objective**: Continue to provide information and resources.

**Performance Measure 1.1**: Track when information and resources are given to consumers.

Goal #5 – Determine the extent and availability of services to the deaf and hard of hearing, determine the need for further services and make recommendations to government officials to ensure that the needs of deaf and hard of hearing citizens are best served.

1. **Objective**: The Council will determine the availability of services available.

**Performance Measure 5.1**: The Council will administer assessments and facilitate meetings to determine the needs.

External Factors Impacting IDVR

The field of Vocational Rehabilitation is dynamic due to the nature and demographics of the customers served and the variety of disabilities addressed. Challenges facing the Division include:

Recruitment and Retention of Qualified Personnel

IDVR is dedicated to providing the most qualified personnel to address the needs of the customers served by the organization. Challenges in staff recruitment and retention continue to be problematic and persistent over the past several years. Recruitment challenges continue due to lower wages as compared to the private sector, other Idaho state agencies, and neighboring states higher wages. The Division continues to evaluate and implement new strategies in an effort to improve the recruitment and retention rates of qualified personnel (e.g., providing tuition assistance, opportunities for advancement, etc.). IDVR continues to develop relationships with universities specifically offering a Master’s Degree in Rehabilitation Counseling, as well as engaging with related Bachelor Degree programs to help feed the talent pipeline. The agency is also experiencing a wave of retirements which represents a substantial risk to the ongoing institutional memory of the organization. The Division does have succession planning contingencies in place where possible. The Division is also engaged in an ongoing frontline efficiencies initiative designed to reduce the overall administrative burden on team members with the intention of reducing excessive pressures and improving overall job satisfaction.

Quality of Community Rehabilitation Provider (CRP) Services

IDVR’s Comprehensive Statewide Needs Assessment indicated that CRPs continue to experience some of the same recruitment and retention challenges that IDVR is facing. The Division is currently engaged in a rate reevaluation study to recommend contemporary rates which will support quality employment outcomes that are sustainable for both IDVR and CRPs. Currently the low rate of unemployment in Idaho makes competitive hiring challenging for both the Division and vendors. An innovation and expansion activity is being considered in order to promote adequate resources and more qualified CRP staff to deliver and improve customer satisfaction with these services.

State and Federal Economic Climate

While Idaho has seen continuous and sustained improvement in its economic growth over the past several years there are a variety of influences which can affect progress. Individuals with disabilities continue to experience much higher unemployment rates, even in strong economic times (while the disability employment gap has seen slight improvement in recent years, more work remains to be done). IDVR recognizes this and strives to develop relationships within both the private and public sectors to increase employment opportunities and livable wages for its customers.
IDVR is impacted by decisions made at the federal level. The VR program continues to experience pressures added by the requirements of the Workforce Innovation and Opportunity Act (WIOA). The expanded customer base (potentially eligible students and serving Idaho businesses), and Idaho’s population growth, along with additional data and reporting requirements has forced the agency to reevaluate the way work is accomplished and by who. The Division continues a major initiative to institute efficiencies including leveraging technology and unencumbering work processes to partially alleviate excessive pressures.

Serving students and youth with disabilities continues to be an essential goal and priority for the Division. WIOA mandates VR agencies reserve 15 percent of their budgets for the provision of Pre-employment Transition Services (Pre-ETS). This change has not only shifted the populations we serve, but also how we innovate to best serve them.

EVALUATION PROCESS

The State Board of Education Planning, Policy, and Governmental Affairs Committee reviews the Idaho Division of Vocational Rehabilitation strategic plan on an annual basis. Changes may be brought forward to the Board for consideration in future meetings. This review and re-approval take into consideration performance measure progress reported to the Board in the October meeting.
Footnotes:

1Benchmarks are set based on federally negotiated targets for a two-year period (SY 2023 & 2024) for all five Primary Performance Indicators.
2Benchmarks are set based on an internal measure of performance and was established by the Division’s SRC to gauge customer satisfaction with program services and identify areas for improvement. The benchmark of 90% has been traditionally utilized as a target for quality performance.
3Benchmarks are set based on service volume and recent trends in applications for services.
4Benchmarks are set based on Community Rehabilitation Program service volume for IDVR customers engaged in an Individualized Plan for Employment with the Division.
5Benchmarks are set based on an internal measure of performance and informed by the Division’s SRC. The emphasis is on quality services provided by Community Rehabilitation Programs.
6Benchmarks are set based on an internal program measure and represents a commitment to the development of quality vocational rehabilitation counselors, meeting this standard ensures that individuals with disabilities in Idaho receive services through certified professionals and promotes more efficient, comprehensive, and quality services. The baseline is a percentage established by IDVR and is a stretch goal the agency aspires to achieve.
7Benchmarks are set based on an internal measure of performance (student applications) and informed by the Division’s SRC. Services for students are a major focus under WIOA.
8Benchmarks are set based on an internal measure of performance (youth applications) and informed by the Division’s SRC. Services for youth are a major focus.
9Benchmarks are set based on an internal measure of performance (business services volume) and informed by the Division’s SRC. Services for businesses are a major focus under WIOA.
10Benchmarks will be established based on federally negotiated targets following formalization by RSA. This performance measure is useful in determining whether VR is serving employers effectively by improving the skills of customers and decreasing employee turnover.
11Benchmarks are set based on an internal program measure to expand information to Idaho’s deaf and hard of hearing population, to include brochures and information via electronic and social media. The Council is the only clearinghouse of information in Idaho about deaf and hard of hearing issues. This benchmark was established to adhere to Idaho statute 67, chapter 73.
12Benchmarks are set based on internal program measure to provide information about the needs of persons who are deaf or hard of hearing. The benchmark was created because the Council is the only state agency to provide this type of information. CDHH has hired a part time Communications and Outreach Coordination to increase awareness and make presentations throughout the state. This benchmark was established to adhere to Idaho statute 67, chapter 73.
13Benchmarks are set based on internal program measure to provide information about deaf and hard of hearing issues. CDHH partnered with JFAC to procure funding for a full-time interpreter and partnered with the Sexual Abuse/Domestic Violence Coalition. This benchmark was established to adhere to Idaho statute 67, chapter 73.
14The Council has historically been the organization where individuals and groups come for information concerning deaf and hard of hearing issues. The benchmark was created to continue tracking the information. This benchmark was established to adhere to Idaho statute 67, chapter 73.
15Benchmarks are set based on internal program measure to determine the need for public services for deaf and hard of hearing community and was established because there was a Task Force that met to determine the need of mental health services that need to be provided to deaf and hard of hearing individuals. This benchmark was established to adhere to Idaho statute 67, chapter 73.
16Benchmarks are set to provide information where interpreters can get information about current issues and has established a printed list of Sign Language Interpreters and also on the Council’s website. This benchmark was established per the request of the Idaho Registry of Interpreters of the Deaf to support the legislation. This benchmark was established to adhere to Idaho statute 67, chapter 73.
17Benchmarks are set based to provide information, in collaboration with the Northwest ADA Center, about the Americans with Disability Act (ADA). The benchmark was established to continue that partnership and to adhere to Idaho statute 67, chapter 73.
18Benchmarks are set based on internal program measure to provide information about deaf and hard of hearing issues, this benchmark was established to adhere to Idaho statute 67, chapter 73.
