a University Default pursuant to Section 16.2(a)(ii) or Section 16.2(a)(iii) by (i) agreeing within such 60-Day period to pay any Losses sustained as a result of such University Default or (ii) providing the Concessionaire with a written work plan within such 60-Day period outlining the actions by which the University will ensure future compliance with either (x) the obligation, covenant, agreement, term or condition in this Agreement that the University failed to perform or observe or (y) the requirements or directives of the final award issued in accordance with Article 18 that the University failed to perform or observe, which work plan is approved by the Concessionaire, but any failure of the University to comply in any material respect with such approved work plan following 30 Days’ notice of such failure from the Concessionaire to the University shall be deemed to be a University Default described in Section 16.2(a)(ii) and the entitlement of the University to cure such University Default by the delivery of an approved work plan shall not apply thereto; and upon such termination, the University shall be obligated to pay to the Concessionaire the Utility System Concession Value plus, without duplication, the unpaid Concession and KPI Compensation Balance (for the avoidance of doubt, including any Unrecovered Balances) and the out-of-pocket and documented costs and expenses incurred by the Concessionaire as a result of such termination together with any Taxes payable by the Concessionaire on the foregoing that exceed the Taxes the Concessionaire would have paid on future receipts of the Utility Fee if the termination of this Agreement pursuant to this Section 16.2(b)(i) had not occurred (using the Tax rates in effect when such damages would be payable) and using the same assumptions for the calculation of the amount of such future receipts as are used in the calculation of Utility System Concession Value;

(ii) exercise any of its rights or remedies at law or in equity;

(iii) seek to recover its Losses and any amounts due and payable under this Agreement and, in connection therewith, exercise any recourse available to any Person who is owed damages or a debt; and

(iv) seek specific performance, injunction or other equitable remedies, it being acknowledged that damages are an inadequate remedy for a University Default.

Section 16.3. Consequences of Termination or Reversion. Upon the termination or expiration of this Agreement, notwithstanding any claims the Parties may have against each other and subject to Section 16.2(b)(iii), the following provisions shall apply:

(a) the Concessionaire shall, without action whatsoever being necessary on the part of the University (other than any payment obligations of the University with respect to such termination (including, for the avoidance of doubt, any payment obligations pursuant to Sections 14.2(a), 15.3(f) or 16.1(b)(i), if any, and the payment obligation set forth in this Section 16.3(a))), surrender, transfer and
deliver to the University the Utility System (including all improvements to the Utility System), the Utility System Assets (to the extent they have not been disposed of in the ordinary course of business) and all tangible and intangible personal property of the Concessionaire (including inventories) that is included in the Utility System or used in connection with the Utility System Operations, in good order, condition and repair (reasonable wear and tear excepted), determined reasonably in accordance with the then applicable Performance Standards, free and clear of all Encumbrances other than (w) Permitted Concessionaire Encumbrances set forth in clauses (iv) and (vii) of the definition of that term, (x) Permitted University Encumbrances, (y) those created by or suffered to exist or consented to by the University or any Person claiming through it, and (z) with respect to any property added to the Utility System after the Time of Closing, title defects affecting such property in existence on the date such property is added to the Utility System, all in exchange for $1 paid by the University on the Reversion Date;

(b) the Concessionaire hereby waives any notice now or hereafter required by Law with respect to transfer of the Utility System on the Reversion Date;

(c) the University shall, as of the Reversion Date, assume full responsibility for the Utility System Operations, and as of such date, the Concessionaire shall have no liability or responsibility for Utility System Operations occurring after such date;

(d) the Concessionaire shall be liable for all costs, expenses and other amounts for which it is liable or responsible hereunder incurred up to but not including the Reversion Date, and the University shall be liable for all costs, expenses and amounts incurred in connection with the Utility System Operations on and after the Reversion Date;

(e) the University shall have the option, subject to the rights of any Leasehold Mortgagee, or its designee or nominee, to enter into a New Agreement with a third party, by providing notice to the Concessionaire requiring that the Concessionaire assign, without warranty or recourse to the Concessionaire, to the fullest extent permitted by Authorizations and applicable Law, all of its right, title and interest in, to and under (in each of the following cases, to the extent assignable) all or any of the Operating Agreements then in effect and all Authorizations to the University or its nominee for the remainder of their respective terms; provided, however, that if the University exercises such option, the right, title and interest of the Concessionaire in, to and under such Operating Agreements and Authorizations shall be assigned to the University or its nominee as of the Reversion Date and the Concessionaire shall surrender the Utility System to the University and shall cause all Persons claiming under or through the Concessionaire to do likewise, and the University shall assume in writing, pursuant to an assumption agreement satisfactory to the Concessionaire, the Concessionaire’s obligations under the Operating Agreements that arise in respect of, or relate to, any period of time falling on and after the Reversion Date; provided further, that if the University does not exercise such option, the
Concessionaire shall take such steps as are necessary to terminate the Operating Agreements to the extent permitted thereunder and in accordance with the terms thereof;

(f) the Concessionaire, at its sole cost and expense, shall promptly deliver to the University copies of all records and other documents relating to the Utility Fee that are in the possession of the Concessionaire or its Representatives and all other then-existing records and information relating to the Utility System as the University, acting reasonably, may request;

(g) the Concessionaire shall execute and deliver to the University transfer of title documents and other instruments reasonably required by the University to evidence such termination;

(h) the Concessionaire shall assist the University in such manner as the University may require to ensure the orderly transition of control, operation, management, maintenance and rehabilitation of the Utility System, and shall, if appropriate and if requested by the University, take all steps as may be necessary to enforce the provisions of the Operating Agreements pertaining to the surrender of the Utility System;

(i) the University and the Concessionaire shall make appropriate adjustments, including adjustments relating to any Operating Agreements assigned to the University, Utility Fee and other similar charges collected on and after the Reversion Date that are incurred prior to the Reversion Date, and utilities, and any adjustments and payment therefor shall be made by the appropriate Party on the Reversion Date, but shall be subject to readjustment if necessary because of error in matters such as information, calculation, payments and omissions that are identified within the period of 180 Days following the Reversion Date; provided, however, that the University and the Concessionaire acknowledge that certain adjustments or readjustments may have to be made when a third party provides to the University or the Concessionaire a final adjustment amount in respect of a matter, and for such matters the adjustment and readjustment date shall each be correspondingly extended;

(j) if this Agreement is terminated as a result of an Adverse Action, the payment by the University to the Concessionaire of the amounts required under Article 14 or Article 18 shall constitute full and final settlement of any and all Claims the Concessionaire may have against the University for and in respect of the termination of this Agreement and upon such payment, the Concessionaire shall execute and deliver all such releases and discharges as the University may reasonably require to give effect to the foregoing; and

(k) all plans, drawings, specifications and models prepared in connection with construction at the Utility System and in the Concessionaire’s possession and all “as-built” drawings shall become the sole and absolute property of the University, and the Concessionaire shall promptly deliver to the University all
such plans, drawings, specifications and models and all such as-built drawings (but may keep copies of those plans, drawings, specifications and models that were developed by the Concessionaire or its Representatives).

This Section 16.3 shall survive the expiration or any earlier termination of this Agreement.

Section 16.4. Termination Other than Pursuant to Agreement. If this Agreement is terminated by the University other than pursuant to Section 16.1, or is canceled, rescinded or voided during the Term for any reason over the objection and without action by the Concessionaire, the University shall (without limiting any payment obligations set forth in Section 15.3(f)) pay to the Concessionaire (A) the Utility System Concession Value as of the date of such termination, cancellation, rescinding or voiding, plus, without duplication, (B) the unpaid Concession and KPI Compensation Balance (for the avoidance of doubt, including any Unrecovered Balances), and (C) the out-of-pocket and documented costs and expenses incurred by the Concessionaire or the Operator as a direct result of such termination, cancellation, rescinding or voiding, and (D) any Taxes payable by the Concessionaire on the foregoing (A) through (C) that exceed the Taxes the Concessionaire would have paid on future receipts of the Utility Fee if the termination of this Agreement pursuant to this Section 16.4 had not occurred (using the Tax rates in effect when such damages would be payable) and using the same assumptions for the calculation of the amount of such future receipts as are used in the calculation of Utility System Concession Value. The University hereby acknowledges and agrees that it may only terminate this Agreement in accordance with the express terms hereof and shall not, in any event, have the right to terminate this Agreement for convenience. The Concessionaire hereby acknowledges and agrees that it may only terminate this Agreement in accordance with the express terms hereof and shall not, in any event, have the right to terminate this Agreement for convenience or to challenge the validity or enforceability of this Agreement.

ARTICLE 17
RESTRICTIONS ON TRANSFERS

Section 17.1. Transfers by the Concessionaire.

(a) Subject in all respects to the collateral assignment of the Concessionaire Interest to the Leasehold Mortgagee, and exercise by the Leasehold Mortgagee of its rights pursuant to such assignment, including by foreclosure, as set forth in Article 19, the Concessionaire shall not Transfer, or otherwise permit the Transfer, of any part of the Concessionaire Interest to or in favor of a Transferee (other than a Transferee that is an Affiliate or a Leasehold Mortgagee under or nominee/designee of a Leasehold Mortgagee under Article 19) that would result in the Concessionaire directly owning 50% or less of the Concessionaire Interest granted to the Concessionaire as of the date hereof Signing Date unless (i) the University has Approved (based upon a determination in accordance with Section 17.1(b)) such proposed Transferee and (ii) the proposed Transferee (other than a Transferee that is an Affiliate or a Leasehold Mortgagee under Article 19) enters into an agreement with the University in form and substance satisfactory to the University, acting reasonably, wherein the Transferee acquires
the rights and assumes the obligations of the Concessionaire and agrees to perform and observe all of the obligations and covenants of the Concessionaire under this Agreement. Any Transfer made in violation of the foregoing provision shall be null and void ab initio and of no force and effect.

(b) Approval of a proposed Transfer may be withheld if the University reasonably determines that (i) such proposed Transfer is prohibited by applicable Law, (ii) such proposed Transferee’s entering into this Agreement with the University is prohibited by Law, (iii) such proposed Transfer would result in a violation of Law, (iv) such proposed Transfer would result in a Tax liability to the University (unless the University shall have received indemnification, as determined in the University’s discretion, with respect thereto), or (v) such proposed Transferee is not capable of performing the obligations and covenants of the Concessionaire under this Agreement. Such determination shall be based upon and take into account the following factors, in each case assessed as of the date of such determination but after giving effect to the proposed Transfer together with any related transactions (including the proposed transfer of employees and other resources to such Transferee in connection with such proposed Transfer and related transactions): (a) the financial strength and integrity of the proposed Transferee, its direct or indirect beneficial owners, any proposed managers or operating partners and each of their respective Affiliates; (b) the experience of the proposed Transferee or the Operator engaged by the proposed Transferee in operating a Comparable Utility System and performing other relevant projects; (c) the background and reputation of the proposed Transferee, its direct or indirect beneficial owners, any proposed managers or operating partners, each of their respective officers, directors and employees and each of their respective Affiliates (including the absence of criminal, civil or regulatory claims or actions against any such Person and the quality of any such Person’s past or present performance on other projects); and (d) the Operator engaged by the proposed Transferee, including the ability of the Operator to meet the Performance Standards. If the Concessionaire disputes the University’s determination under this Section 17.1(b), such dispute shall be resolved in accordance with Article 18.

(c) If requested by the Concessionaire, the University shall, on a confidential basis (unless disclosure is required by applicable Law) and at the Concessionaire’s sole cost and expense, evaluate one or more proposed Transferees as provided in Section 17.1(b) and notify the Concessionaire within 30 Business Days of its Approval or withholding of Approval with respect to such proposed Transferee(s).

(d) No Transfer of all or any of the Concessionaire Interest (except for a Transfer to a Leasehold Mortgagee or its nominee upon its exercise of remedies under the Leasehold Mortgage and any subsequent transfer to the transferee of the Leasehold Mortgagee that has been Approved under Section 17.1(b)) shall be made or have any force or effect if, at the time of such Transfer there has occurred a Concessionaire Default that has not been remedied or an event that
with the lapse of time, the giving of notice or otherwise would constitute a Concessionaire Default.

(e) A Change in Control of the Concessionaire (other than a Change in Control occasioned by the exercise by any Leasehold Mortgagee of its remedies under any pledge of shares, limited liability company interest or partnership interest) shall be deemed to be a Transfer of the Concessionaire Interest for purposes of the foregoing provisions (thus requiring the University’s Approval) and shall be evaluated by the University as provided in Section 17.1(b) and Section 17.1(c).

(f) Nothing contained in the foregoing shall be deemed to prohibit or limit the Concessionaire from changing its name, organizational form or status (including a change from a limited liability company to a corporation or limited partnership), provided that such change in name, organizational form or status does not result in a Change in Control of the Concessionaire.

(g) Neither (i) a change of ownership that is attributable to a lease, sublease, concession, management agreement, operating agreement or other similar arrangement that is subject and subordinate in all respects to the rights of the University under this Agreement so long as (A) no “Change in Control” occurs with respect to the Concessionaire and (B) the Concessionaire remains obligated under this Agreement, nor (ii) the creation of a trust or any other transaction or arrangement that is solely a transfer of all or part of the Concessionaire’s economic interest under this Agreement to another entity shall be deemed to be a Transfer of the Concessionaire Interest for purposes of Section 17.1(a).

Section 17.2. Assignment by the University. The University shall have the right to Transfer any or all of its interest in the Utility System and this Agreement, provided that it shall be jointly and severally liable with the Transferee for the performance and observance of the obligations and covenants of the University under this Agreement, and any agreement entered into by the University under this Agreement (including agreeing directly with any Leasehold Mortgagee to be bound by the agreement entered into in accordance with Section 19.3) and that any such Transfer by the University shall not materially limit or reduce any of the Concessionaire’s other rights, benefits, remedies or privileges under this Agreement nor shall it materially impair the University’s ability to meet its obligations under this Agreement and, provided further, any such Transfer shall be subject to the rights and Encumbrances of the Concessionaire and of the Leasehold Mortgagee under any Leasehold Mortgage.

ARTICLE 18
DISPUTE RESOLUTION

Section 18.1. Scope. Any dispute arising out of, relating to, or in connection with this Agreement shall be resolved as set forth in this Article 18.

Section 18.2. Informal Dispute Resolution Procedures. The Parties shall attempt in good faith to resolve such dispute within 15 Business Days following receipt by one Party of notice of such dispute from the other Party. If the Parties are unable to resolve the dispute within
such period of 15 Business Days, and upon notice by either Party to the other, the dispute shall be referred to the Designated Senior Person of each Party. The Designated Senior Persons shall negotiate in good faith to resolve the dispute, conferring as often as they deem reasonably necessary. Statements made by Representatives of the Parties during the dispute resolution procedures set forth in this Section 18.2 and in Section 18.3 and documents specifically prepared for such dispute resolution procedures shall be considered part of settlement negotiations and shall not be admissible as evidence in any litigation proceeding between the Parties without the mutual consent of the Parties.

Section 18.3. Dispute Resolution

Section 18.3(a). Mediation. Mediation of a dispute under this Agreement may not be commenced until the earlier of: (i) such time as both of the Designated Senior Persons, after following the procedures set forth in Section 18.2, conclude in good faith that amicable resolution through continued negotiation of the matter does not appear likely; or (ii) 15 Business Days after the notice referring the dispute to the Designated Senior Persons, pursuant to Section 18.2. If, after such time period, the dispute remains unresolved, the Parties shall attempt to resolve the dispute through mediation administered by the AAA under its Commercial Mediation Procedures before resorting to litigation, as provided by Section 18.4. The Parties agree that any period of limitation applicable to the assertion of a claim shall be deemed tolled during the conduct of informal dispute resolution under Section 18.2 and mediation under this Section 18.3(a), and that any claim of any Party shall be deemed not to have accrued until the mediation is terminated.

(b) Expedited Arbitration. Notwithstanding anything in Section 18.3(a) above, if the informal dispute resolution procedures set forth in Section 18.2 above fail to resolve a dispute relating to (i) the Concessionaire’s determination of commercial unavailability made in accordance with Section 13.3(o) and Section 13.3(u), or (ii) the Concessionaire’s assessment of the type of casualty made in accordance with Section 13.4(a)(ii) as between the University and the Concessionaire, provided that, for the avoidance of doubt, State Risk’s determination as to whether a casualty is a State Risk Retained Casualty shall not be subject to challenge by either Party; within thirty (30) days of the commencement of such negotiation, or if prior to the expiration of such thirty (30)-day period the parties determine that continuation of the negotiation process is not warranted, the dispute shall be submitted to binding arbitration pursuant to the Rules of Arbitration of the AAA. The arbitration shall be heard and determined by a panel of three (3) arbitrators, one of whom shall be selected by each Party, and the third of whom shall be appointed by the mutual agreement of the two (2) arbitrators selected by the parties. Should the arbitrators be unable to agree upon the third arbitrator, then the third arbitrator shall be appointed by the AAA. The arbitration shall be held in Moscow, Idaho. The award rendered by arbitration shall be final, binding and non-appealable judgment and the award may be entered in the state courts in the State of Idaho in Latah County. Special, consequential or punitive damages shall not be awarded by the arbitrator. The
Concessionaire shall initially pay the fees of the arbitrators. Any party found by the arbitrators to have substantially prevailed on the merits of the claims shall pay the costs of the arbitrators incurred in connection with the expedited arbitration process.

Section 18.4. Litigation. Unless the Parties otherwise agree, if mediation as set forth in Section 18.3(a) does not resolve the dispute within 30 Business Days following a reference to mediation or such longer period as the Parties may mutually agree, then the Parties shall present the dispute to such court of competent jurisdiction as set forth in Section 20.7.

Section 18.5. Provisional Remedies. No Party shall be precluded from initiating a proceeding in a court of competent jurisdiction for the purpose of obtaining any emergency or provisional remedy to protect its rights that may be necessary and that is not otherwise available under this Agreement or to enforce or execute upon a judgment entered in accordance with this Agreement, including temporary, preliminary and permanent injunctive relief and restraining orders, writs of mandamus, and the appointment of a receiver or receiver and manager in connection with the collection and retention of the Utility Fee.

Section 18.6. Tolling. If a Party receiving a notice of default under this Agreement contests, disputes or challenges the propriety of such notice by making application to the dispute resolution procedure in this Article 18, any cure period that applies to such default shall be tolled for the time period between such application and the issuance of a final award or determination.

ARTICLE 19
LENDERS

Section 19.1. Leasehold Mortgages. The Concessionaire shall have the right, at its sole cost and expense, to grant one or more Leasehold Mortgages, secured by the Concessionaire Interest or the Utility Fee if at the time any such Leasehold Mortgage is executed and delivered to the Leasehold Mortgagee, no Concessionaire Default exists and upon and subject to the following terms and conditions:

(a) a Leasehold Mortgage may not cover any property of, or secure any debt issued or guaranteed by, any Person other than the Concessionaire or the Concessionaire’s Parent, but may cover shares or equity interests in the capital of the Concessionaire and any cash reserves or deposits held in the name of the Concessionaire;

(b) no Person other than an Institutional Lender shall be entitled to the benefits and protections accorded to a Leasehold Mortgagee in this Agreement; provided, however, that lessors and lenders to the Concessionaire (and lenders to a Leasehold Mortgagee that is a Lessor) may be Persons other than Institutional Lenders so long as any Leasehold Mortgage securing the loans made by such Persons is held by an Institutional Lender acting as collateral agent or trustee;

(b) no Leasehold Mortgage or other instrument purporting to mortgage, pledge, encumber, or create a lien, charge or security interest on or against any or all of the Concessionaire Interest shall extend to or affect the fee simple interest in the
Utility System, the University’s interest hereunder or the University’s reversionary interests and estates in and to the Utility System or any part thereof; in addition, any termination of this Agreement, following the expiration of the Leasehold Mortgagee’s cure period in Section 19.3, if any, without a cure, by the University shall simultaneously terminate the Leasehold Mortgage; provided, however, such termination of the Leasehold Mortgage and the Concessionaire’s leasehold interest in the Utility System, shall not affect, modify or terminate the Concessionaire’s obligations to the Leasehold Mortgagee with respect to the Leasehold Mortgage Debt;

(c) the University shall have no liability whatsoever for payment of the principal sum secured by any Leasehold Mortgage, or any interest accrued thereon or any other sum secured thereby or accruing thereunder, and, except for violation by the University of express obligations set forth herein with respect to the Leasehold Mortgagee or in any other agreement with the Leasehold Mortgagee, the Leasehold Mortgagee shall not be entitled to seek any damages or other amounts against the University for any or all of the same;

(d) the University shall have no obligation to any Leasehold Mortgagee in the enforcement of the rights and remedies of the University under this Agreement or by Law, except as expressly set forth in this Agreement or in any agreement with the Leasehold Mortgagee and unless such Leasehold Mortgagee has provided the University with notice of its Leasehold Mortgage in accordance with the Leasehold Mortgagee Notice Requirements;

(e) each Leasehold Mortgage shall provide that if the Concessionaire is in default under the Leasehold Mortgage and the Leasehold Mortgagee gives notice of such default to the Concessionaire, then the Leasehold Mortgagee shall give written notice of such default to the University;

(f) subject to the terms of this Agreement and the terms of any direct consent agreement executed by and between the University and Leasehold Mortgagee, all rights acquired by a Leasehold Mortgagee under any Leasehold Mortgage shall be subject and subordinate to all of the provisions of this Agreement and to all of the rights of the University hereunder and the Leasehold Mortgagee shall agree to be bound by the terms of this Agreement to the extent applicable to the Leasehold Mortgagee;

(g) notwithstanding any enforcement of the security of any Leasehold Mortgage, the Concessionaire shall remain liable to the University for the payment of all sums owing to the University under this Agreement and the performance and observance of all of the Concessionaire’s covenants and obligations under this Agreement;

(h) a Leasehold Mortgagee shall not, by virtue of its Leasehold Mortgage, acquire any greater rights or interest in the Utility System than the Concessionaire has at any applicable time under this Agreement, other than such rights granted
expressly to such Leasehold Mortgagee pursuant to this Article 19, and each Leasehold Mortgagee, the University and the Concessionaire shall enter into a consent agreement in a form acceptable to all parties; provided that such consent agreement shall be in a customary form and shall include the rights and protections provided to the Leasehold Mortgagees in this Agreement;

(i) a Leasehold Mortgagee shall, within ten (10) Days after receipt of written request from the University, execute an amendment to its recorded Leasehold Mortgage to conform the legal description of the real property encumbered by such Leasehold Mortgage to conform to the legal description in the Memorandum of Lease to the extent properly modified pursuant to Section 2.8; and

(j) a Leasehold Mortgagee shall, within ten (10) Days after receipt of written request from the University, execute documentation reasonably acceptable to the University releasing any land or other real property owned by the University from the lien of any Leasehold Mortgage such that such land or real property may be conveyed to a third party without being subject to this Agreement or the Leasehold Mortgage, provided such request is accompanied by an affidavit from the University that such land or other real property does not contain any Utility Facilities or Utility System Assets.

While any Leasehold Mortgage is outstanding, the University shall not agree to any amendment or modification of this Agreement that could reasonably be expected to have a material adverse effect on the rights or interests of the Leasehold Mortgagee or agree to a voluntary surrender or termination of this Agreement by the Concessionaire without the consent of the Leasehold Mortgagee.

Section 19.2. Notices and Payments to Leasehold Mortgagees. Whenever a Leasehold Mortgage exists as to which the University has been provided notice by the holder thereof in accordance with the Leasehold Mortgagee Notice Requirements, the University shall, simultaneously with providing the Concessionaire any required notice under this Agreement, provide a copy of such notice to such Leasehold Mortgagee, and no such notice to the Concessionaire shall be effective against the Leasehold Mortgagee until a copy thereof is duly provided to such Leasehold Mortgagee at its address specified in its notice given to the University in accordance with the Leasehold Mortgagee Notice Requirements (or any subsequent change of address notice given to the University pursuant to the requirements of Section 20.1). With respect to a Leasehold Mortgage regarding which the University has been provided notice in accordance with the Leasehold Mortgagee Notice Requirements, unless the Leasehold Mortgagee has otherwise advised the University in writing, all payments to the Concessionaire to be made by the University under this Agreement shall be made to the institution acting as the collateral agent or depository under the financing secured by such Leasehold Mortgage to the extent the University has been provided the name and mailing address of such institution.

Section 19.3. Leasehold Mortgagee’s Right to Cure. The Leasehold Mortgagee shall have a period of 90 Days with respect to any Concessionaire Default beyond any cure period
expressly provided to the Concessionaire herein, in which to cure or cause to be cured any such Concessionaire Default; provided, however, that such 90-Day period shall be extended if the Concessionaire Default may be cured but cannot reasonably be cured within such period of 90 Days, and the Leasehold Mortgagee begins to cure such default within such 90-Day period (or if possession is necessary in order to effect such cure, the Leasehold Mortgagee files the appropriate legal action to commence foreclosure on the liens of the Leasehold Mortgage (or takes other appropriate action to effect a transfer of title to the property subject to such liens) and take possession of the Utility System within such period) and thereafter proceeds with all due diligence to cure such Concessionaire Default (including by proceeding with all due diligence to effect such foreclosure and during such foreclosure action (to the extent practicable) and thereafter to effect such a cure) within a reasonable period of time acceptable to the University, acting reasonably; provided further that if a Leasehold Mortgagee’s right to cure a Concessionaire Default has not expired, and the Leasehold Mortgagee is acting to cure such Concessionaire Default in accordance with this Section 19.3, then the University shall not exercise its right to terminate this Agreement by reason of such Concessionaire Default. In furtherance of the foregoing, the University shall permit the Leasehold Mortgagee and its Representatives the same access to the Utility System as is permitted to the Concessionaire hereunder. The University shall accept any such performance by a Leasehold Mortgagee as though the same had been done or performed by the Concessionaire. Any payment to be made or action to be taken by a Leasehold Mortgagee hereunder as a prerequisite to keeping this Agreement in effect shall be deemed properly to have been made or taken by the Leasehold Mortgagee if such payment is made or action is taken by a nominee, agent or assignee of the rights of such Leasehold Mortgagee. Any exercise of the Leasehold Mortgagee’s rights to cure hereunder shall not result in the assumption by such Leasehold Mortgagee of the Concessionaire’s obligations hereunder.

Section 19.4. Rights of the Leasehold Mortgagee.

(a) Subject to the provisions of this Agreement, a Leasehold Mortgagee may (i) enforce its Leasehold Mortgage in any lawful way, (ii) acquire the Concessionaire Interest in any lawful way, or (iii) take possession of in any lawful way and manage the Utility System in accordance with the terms of this Agreement. Upon foreclosure of (or without foreclosure upon exercise of any contractual or statutory power of sale under such Leasehold Mortgage or a deed in lieu) and subject to the provisions of Article 17 (applied to the Leasehold Mortgagee as if it were the Concessionaire, except that Section 17.1(c) will not apply), a Leasehold Mortgagee may Transfer the Concessionaire Interest; provided, however, that no Transfer by a Leasehold Mortgagee shall be effective unless the Transfer is made in accordance with Section 17.1. Any Person to whom the Leasehold Mortgagee Transfers the Concessionaire Interest (including such Leasehold Mortgagee) shall take the Concessionaire Interest subject to all of the Concessionaire’s obligations under this Agreement.

(b) Except as provided in Section 19.3, unless and until a Leasehold Mortgagee (i) forecloses or has otherwise taken ownership of the Concessionaire Interest or (ii) has taken possession or control of the Concessionaire Interest, whether directly or by an agent as a mortgagee in possession or a receiver or receiver and
manager has taken possession or control of the Concessionaire Interest by reference to the Leasehold Mortgage, the Leasehold Mortgagee shall not be liable for any of the Concessionaire’s obligations under this Agreement or be entitled to any of the Concessionaire’s rights and benefits contained in this Agreement, except by way of security; provided, however, that the Leasehold Mortgagee shall be entitled to cure any Concessionaire Default that requires payment of money by paying such money on the Concessionaire’s behalf, prior to the Leasehold Mortgagee taking possession, control or ownership of the Concessionaire Interest. If the Leasehold Mortgagee itself or by an agent or a receiver or a receiver and manager is the owner, or is in control or possession of, the Concessionaire Interest, it shall be bound by all liabilities and obligations of the Concessionaire under this Agreement (including the obligation to engage an Operator). Once the Leasehold Mortgagee goes out of possession or control of the Concessionaire Interest or Transfers the Concessionaire Interest to another Person in accordance with the provisions of this Agreement, the Leasehold Mortgagee shall cease to be liable for any of the Concessionaire’s obligations under this Agreement accruing thereafter and shall cease to be entitled to any of the Concessionaire’s rights and benefits contained in this Agreement, except, if the Leasehold Mortgage remains outstanding, by way of security.

Section 19.5. Termination of this Agreement; New Agreement.

(a) Without prejudice to the rights of a Leasehold Mortgagee under Section 19.3, if this Agreement is terminated prior to the expiration of the Term due to a Concessionaire Default (in which case the University shall notify the Leasehold Mortgagee of such termination) or if this Agreement is rejected or disaffirmed pursuant to any bankruptcy Law or proceeding or other similar Law or proceedings affecting creditors’ rights generally with respect to a bankruptcy proceeding relating to the Concessionaire or otherwise, the University agrees to enter into a new concession and lease agreement of the Utility System with the Leasehold Mortgagee (or its designee or nominee, provided that such designee or nominee either is controlled by the Leasehold Mortgagee (or by the holders of the Leasehold Mortgage Debt)) or is Approved by the University as Transferee under Section 17.1) for the remainder of the original stated Term upon all of the covenants, agreements, terms, provisions and limitations of this Agreement, without any charge, penalty, assessment or consideration not specifically provided for in this Section 19.5 (the “New Agreement”), effective as of the date of such termination, but only on and subject to the satisfaction of all of the following requirements and conditions: (i) such Leasehold Mortgagee commits in writing to the University, in a notice delivered to the University, within 30 Days after the University delivers the termination notice to Leasehold Mortgagee (or, if later, upon the termination of any cure period granted to the Leasehold Mortgagee pursuant to Section 19.3) or within 30 Days after the effective date of such rejection or disaffirmance, as the case may be, that the Leasehold Mortgagee (or its designee or nominee) will enter into the New Agreement, which notice is accompanied by a copy of such New Agreement, duly executed and acknowledged by the Leasehold Mortgagee (or its designee or nominee);
(ii) the Leasehold Mortgagee (or its designee or nominee) pays or causes to be paid to the University, at the time of the execution and delivery of the New Agreement, all amounts which, at the time of the execution and delivery thereof, would have been past-due or due and payable in accordance with the provisions of this Agreement but for such termination; (iii) provided the University furnishes a statement or invoice for such costs the Leasehold Mortgagee pays or causes to be paid to the University all reasonable costs and expenses (including legal, advisory and other fees), Taxes, fees, charges and disbursements paid or incurred by the University in connection with such Concessionaire Defaults and termination, the recovery of possession from the Concessionaire, and in connection with the preparation, execution and delivery of the New Agreement and related agreements and documents specified in such statement or invoice; and (iv) such Leasehold Mortgagee (or its designee or nominee), at the time of such written request, cures all Concessionaire Defaults under this Agreement (curable by the payment of money) existing immediately prior to the termination of this Agreement, or, if such Concessionaire Defaults cannot be cured by the payment of money, such Leasehold Mortgagee (or its designee or nominee) commits to the University in the New Agreement to proceed both promptly and diligently, upon the execution of the New Agreement, to cure all such other Concessionaire Defaults to the extent such Concessionaire Defaults are capable of cure by a Person other than the original Concessionaire and, if possession is necessary in order to cure such other Concessionaire Defaults, to proceed both promptly and diligently to obtain the possession required to cure any such other Concessionaire Defaults (and such cure shall be a covenant in the New Agreement).

(b) Nothing contained in this Section 19.5 shall be deemed to limit or affect the University’s interests in and to such Utility System upon the expiration of the Term of the New Agreement. The provisions of this Section 19.5 shall survive the termination of this Agreement and shall continue in full force and effect thereafter to the same extent as if this Section 19.5 were a separate and independent contract made by the University, the Concessionaire and the Leasehold Mortgagee and, if the Leasehold Mortgagee satisfies the conditions to execute a New Agreement, from the effective date of such termination of this Agreement to the date of execution and delivery of the New Agreement, the Leasehold Mortgagee may use and enjoy the leasehold estate created by this Agreement without hindrance by the University, but only on and subject to the terms and provisions of this Agreement.

(c) If the circumstances described in Section 19.5(a) occur, and the University determines, based on the written legal advice of counsel, that termination of this Agreement and the entry into a New Agreement by and among the University and the Leasehold Mortgagee could violate applicable provisions of the Laws of the State of Idaho governing procurement by the University then, in lieu of entering in a New Agreement and in satisfaction of its obligations under this
Section 19.5, the University agrees to enter into an Assignment and Assumption Agreement pursuant to Section 19.8.

**Section 19.6. Recognition of Leasehold Mortgagee.** If there is more than one Leasehold Mortgagee, only that Leasehold Mortgagee (who, for the avoidance of doubt, may act on behalf of one or more lender groups as contemplated by Section 19.1), to the exclusion of all other Leasehold Mortgagees, whose notice was earliest received by the University pursuant to the Leasehold Mortgagee Notice Requirements, shall have the right to exercise the rights as a Leasehold Mortgagee under this Article 19 vis-à-vis the University, unless such Leasehold Mortgagee has designated in writing another Leasehold Mortgagee to exercise such rights in which case the other Leasehold Mortgagee may exercise such rights, provided that such requirement shall not limit such additional Leasehold Mortgagees’ rights hereunder. Such Leasehold Mortgagee may act as agent for a group or syndicate of one or more Institutional Lenders and such Leasehold Mortgagee and Institutional Lenders may freely assign or sell interests and/or participations in the loans to any other Institutional Lender.

**Section 19.7. University’s Right to Purchase Leasehold Mortgages.**

(a) If any default by the Concessionaire has occurred under a Leasehold Mortgage and has not been cured within applicable cure periods, or any act, condition or event has occurred which would permit a Leasehold Mortgagee to declare all or part of the indebtedness secured by a Leasehold Mortgage to be immediately due and payable (or, in the case of a Leasehold Mortgage that is a lease, to terminate the lease), then the University shall have 30 Days after the date on which such Leasehold Mortgagee shall serve notice upon the University in writing (“Leasehold Mortgagee’s Notice”) that such Leasehold Mortgagee intends to commence proceedings to foreclose the Leasehold Mortgage or, in the case of a Leasehold Mortgagee that is a Lessor to terminate the lease (stating the calculation of the purchase price pursuant to Section 19.7(c)), during which 30-Day period the University shall have the right and option (the “University’s Option”) to purchase from all Leasehold Mortgagees their Leasehold Mortgages, upon the terms and subject to the conditions contained in this Section 19.7.

(b) The University’s Option shall be exercised by notice served upon the Concessionaire and all Leasehold Mortgagees within such 30-Day period. If the University’s Option is duly and timely exercised, the University shall purchase and all Leasehold Mortgagees shall assign their Leasehold Mortgages to the University (or its designee) on the date which is 60 Days after the date on which a Leasehold Mortgagee’s Notice is served upon the University. The closing shall take place at a mutually convenient time and place.

(c) The purchase price payable by the University shall be equal to the aggregate amounts secured by such Leasehold Mortgages (including principal, interest, fees, premiums, Breakage Costs and other costs, expenses (including attorneys’ fees) and any other amounts secured thereby) as of the closing date of the purchase. The purchase price shall be paid in full in cash at closing by wire
transfer or other immediately available funds. The purchase price shall be paid by the University to each respective Leasehold Mortgagee, to be applied by the Leasehold Mortgagee to the amounts secured by the Leasehold Mortgage owed to such Leasehold Mortgagee, subject to the priorities of lien of such Leasehold Mortgages.

(d) At the closing and upon payment in full of the purchase price each Leasehold Mortgagee shall assign its Leasehold Mortgage to the University, together with any security interest held by it in the Concessionaire Interest, without recourse, representations, covenants or warranties of any kind, provided that such Leasehold Mortgages and security interests shall be deemed modified to secure the amount of the aggregate purchase price paid by the University to all Leasehold Mortgagees (rather than the indebtedness theretofore secured thereby) payable on demand, with interest and upon the other items referred to in this Section 19.7(d). Each such assignment shall be in form for recordation or filing, as the case may be. The University shall be responsible for paying any Taxes payable to any Governmental Authority upon such assignment. Such assignment shall be made subject to such state of title of the Utility System as shall exist at the date of exercise of the University’s Option.

(e) Any Leasehold Mortgage shall contain an agreement of the Leasehold Mortgagee to be bound by the provisions of this Section 19.7, and the University shall have the right to receive all notices of default under any Leasehold Mortgage.

Section 19.8. Assignment and Assumption Agreement.

(a) The provisions of this Section 19.8 shall be in effect whenever either (i) the University has made the determination contemplated by Section 19.5(c) or (ii) the University, with the written consent of the Leasehold Mortgagee, has determined to proceed under this Section 19.8 in lieu of under Section 19.5.

(b) Without prejudice to the rights of a Leasehold Mortgagee under Section 19.3, if either (i) the University has given a notice of termination of this Agreement due to Concessionaire Default pursuant to Section 16.1(b), or (ii) this Agreement is rejected or disaffirmed pursuant to any bankruptcy Law or proceeding or other similar Law or proceedings affecting creditors’ rights generally with respect to a bankruptcy proceeding relating to the Concessionaire or otherwise, the University agrees to cooperate with a Leasehold Mortgagee in order to effectuate such Leasehold Mortgagee’s rights under the Leasehold Mortgage to step-in, assume or assign this Agreement, in accordance with the procedures, terms and conditions of this Section 19.8 without any charge, penalty, assessment or consideration not specifically provided for in this Section 19.8.

(c) Upon notification and satisfaction of all of the conditions and requirements in Section 19.8(d), the University agrees that this Agreement shall not be deemed terminated, but may be assumed by a Leasehold Mortgagee or by a designee or
nominee of such Leasehold Mortgagee who is either controlled by the Leasehold Mortgagee (or by the holders of the Leasehold Mortgage Debt) or is Approved by the University as a Transferee under Section 17.1, for the remainder of the original stated Term of this Agreement, and as evidence of such assignment and assumption the University agrees to execute an amended and restated concession and lease agreement for the Utility System upon all of the covenants, agreements, terms, provisions and limitations of this Agreement (the “Assignment and Assumption Agreement”).

(d) This Agreement may be so assigned and assumed pursuant to an Assignment and Assumption Agreement upon and subject to satisfaction of all of the following requirements and conditions:

(i) Such Leasehold Mortgagee must commit in writing to the University, in a notice delivered to the University within the later of 30 Days after the University delivers the termination notice to Leasehold Mortgagee or upon the termination of any cure period granted to such Leasehold Mortgagee pursuant to Section 19.3, or within 30 Days after the effective date of any rejection or disaffirmance of this Agreement in a bankruptcy proceeding, as the case may be, that such Leasehold Mortgagee (or its designee or nominee) will assume this Agreement and enter into the Assignment and Assumption Agreement, which notice is accompanied by a copy of such Assignment and Assumption Agreement duly executed and acknowledged by such Leasehold Mortgagee (or its designee or nominee).

(ii) Such Leasehold Mortgagee (or its designee or nominee) shall pay or cause to be paid to the University, at the time that the Assignment and Assumption Agreement is fully executed, all amounts which, at the time of the execution and delivery thereof, would have been past-due or due and payable in accordance with the provisions of this Agreement.

(iii) Such Leasehold Mortgagee (or its designee or nominee) shall pay or cause to be paid to the University all reasonable costs and expenses (including legal fees), Taxes, fees, charges and disbursements paid or incurred by the University in connection with such defaults and notice of termination, the recovery of possession from the Concessionaire, and in connection with the preparation, execution and delivery of the Assignment and Assumption Agreement and related agreements and documents. The University shall provide an invoice to such Leasehold Mortgagee of such costs, and the Leasehold Mortgagee or its designee or nominee shall pay such invoiced costs within 5 Days of the receipt of such invoice.

(iv) Such Leasehold Mortgagee (or its designee or nominee), at the time of the notice provided under Section 19.8(d)(i), shall cure all Concessionaire Defaults under this Agreement (including all such Concessionaire Defaults curable by the payment of money) existing
immediately prior to the notice of termination issued pursuant to Section 16.1(b), or, if such Concessionaire Defaults cannot be cured by the payment of money, such Leasehold Mortgagee (or its designee or nominee) shall commit to the University in the Assignment and Assumption Agreement to proceed both promptly and diligently, upon the execution of the Assignment and Assumption Agreement, to cure all such other defaults to the extent such defaults are capable of cure by a Person other than the original Concessionaire and, if possession is necessary in order to cure such other Concessionaire Defaults, to proceed both promptly and diligently to obtain the possession required to cure any such other defaults (and such obligation to cure shall be a covenant in the Assignment and Assumption Agreement).

(e) If a Leasehold Mortgagee gives the University a notice as provided in Section 19.8(d)(i), the University and Leasehold Mortgagee agree to cooperate with respect to taking any appropriate actions required to regain and transfer possession of the Utility System and the Utility System Assets, including:

(i) seeking surrender of possession in any bankruptcy proceedings; and
(ii) seeking relief from any automatic stay in bankruptcy provisions and pursuit of state law remedies to obtain possession and to foreclose on the Leasehold Mortgage interest and assume the Concessionaire’s position as provided in Section 19.4 of this Agreement; provided that any costs incurred by the University under this provision shall be reimbursed by the Leasehold Mortgagee (or its designee or nominee) as provided in Section 19.8(d)(iii).

Section 19.9. Right to Dispute Resolution. In each case specified in this Agreement in which resort to dispute resolution is authorized, a Leasehold Mortgagee shall have the right and privilege if an event of default under the Leasehold Mortgage then exists and notice has been given to the University as contemplated by Section 19.1(f), in the Concessionaire’s name, place and stead, to obtain and participate in such dispute resolution upon notice to the University in accordance with Article 18; provided that the Leasehold Mortgagee agrees to be bound by the outcome of the dispute resolution process.

ARTICLE 20
MISCELLANEOUS

Section 20.1. Notice. All notices by the Concessionaire or the University, approvals or consents by the Concessionaire, and Approvals by the University (each, a “Notice”) required or permitted by this Agreement shall be in writing, shall state specifically that they are being given pursuant to this Agreement and shall be delivered by email, nationally recognized overnight courier service, or certified or registered mail (return receipt requested and postage prepaid) for the attention of the persons and to the addresses or email addresses shown below (or such other persons, address or email addresses as either Party may from time to time designate by a Notice to the other):
(a) in the case of the University:

(i) for delivery by mail:

University of Idaho
Office of Finance & Administration
875 Perimeter Drive MS-3168
Moscow, Idaho 83844-3168
Attention: Vice President for Finance & Administration

With a copy to:

University of Idaho
Office of the General Counsel
875 Perimeter Drive MS-3158
Moscow, Idaho 83844-3158

(ii) for delivery by email:

Vice President for Finance & Administration
Email: vpfinance@uidaho.edu

With a copy to:

Office of the General Counsel
Email: counsel@uidaho.edu

(b) in the case of the Concessionaire:

(i) for delivery by mail:

Sacyr Infrastructure USA LLC
3191 Coral Way, Suite 510
Miami, Florida 33145
Attention: Raúl Perez Lopez

With a copy to:

Plenary Americas LP
Suite 2000, 400 Burrard Street
Commerce Place
Vancouver BC V6C 3A6
Attention: Matthew Coady
With a copy to:

Hunton Andrews Kurth LLP
2200 Pennsylvania Avenue NW
Washington, D.C. 20037
Attention: David B. Horner, Esq.

(ii) for delivery by email:

Raúl Perez Lopez
Email: rperezl@sacyr.com

With a copy to:

Matthew Coady
Email: Matt.Coady@plenarygroup.com

With a copy to:

David B. Horner, Esq.
Email: DHorner@Hunton.com

A Notice shall be deemed to have been sent and received (i) on the Day it is delivered, or if such Day is not a Business Day or if the Notice is received after ordinary office hours (time of place of receipt), the Notice shall be deemed to have been sent and received on the next Business Day, or (ii) on the 4th Business Day after mailing if sent by U.S. registered or certified mail. Each Party shall use commercially reasonable efforts to deliver an electronic copy of each Notice provided by mail in accordance with the foregoing via email to the persons and email addresses designated pursuant to the foregoing to receive Notices provided by email.

All communications other than Notices that are required or permitted by this Agreement shall be in writing, shall state specifically that they are being given pursuant to this Agreement and shall be delivered by email to the persons and email addresses shown below (or such other persons or email addresses as either Party may from time to time designate by a Notice to the other):

(x) in the case of the University:

Brian Foisy
Email: brianfoisy@uidaho.edu

(y) in the case of the Concessionaire:

Raúl Perez Lopez

With a copy to:
Section 20.2. Entire Agreement. This Agreement constitutes the entire agreement between the Parties pertaining to the subject matter hereof and supersedes all prior agreements, negotiations, discussions and understandings, written or oral, between the Parties. There are no representations, warranties, conditions or other agreements, whether direct or collateral, or express or implied, that form part of or affect this Agreement, or that induced any Party to enter into this Agreement or on which reliance is placed by any Party, except as specifically set forth in this Agreement. The Parties acknowledge and agree that (i) each has substantial business experience and is fully acquainted with the provisions of this Agreement, (ii) the provisions and language of this Agreement have been fully negotiated, and (iii) no provision of this Agreement shall be construed in favor of any Party or against any Party by reason of such provision of this Agreement having been drafted on behalf of one Party rather than the other.

Section 20.3. Amendment. This Agreement may be amended, changed or supplemented only by a written agreement signed by the Parties.

Section 20.4. Waiver of Rights. Any waiver of, or consent to depart from, the requirements of any provision of this Agreement shall be effective only if it is in writing and signed by the Party giving it, and only in the specific instance and for the specific purpose for which it has been given. No failure on the part of any Party to exercise, and no delay in exercising, any right under this Agreement shall operate as a waiver of such right. No single or partial exercise of any such right shall preclude any other or further exercise of such right or the exercise of any other right.

Section 20.5. Severability. Each provision of this Agreement shall be valid and enforceable to the fullest extent permitted by applicable Law. The invalidity of any one or more phrases, sentences, clauses or sections contained in this Agreement shall not affect the remaining portions of this Agreement or any part thereof. If any provision of this Agreement or the application thereof to any Person or circumstance is held or deemed to be or determined to be invalid, inoperative or unenforceable in any particular case in any particular jurisdiction or jurisdictions because it conflicts with any other provision or provisions hereof or of any applicable Law, or public policy, or for any other reason, (i) such circumstance shall not have the effect of rendering the provision in question inoperative or unenforceable in any other case or circumstance, or rendering any other provision or provisions herein contained invalid, inoperative or unenforceable to any extent whatever, and (ii) the Parties shall negotiate in good faith to amend this Agreement to implement the provisions set forth herein. If the Parties cannot agree on an appropriate amendment, either Party may refer the matter for determination pursuant to the dispute resolution procedure in Article 18. If, by means of the dispute resolution procedure, the Parties are unable, as a result of applicable Law, to resolve the matter in a manner that effectively entitles the University to have the same rights after the aforesaid determination of invalidity or unenforceability as before, the University shall have the right to enact, and cause to come into force, any Law to provide for the same or substantially the same rights as were determined to be invalid or unenforceable.
Section 20.6. Governing Law; Waiver of Jury Trial. This Agreement shall be governed by, and interpreted and enforced in accordance with, the Laws in force in the State of Idaho (excluding any conflict of laws rule or principle which might refer such interpretation to the Laws of another jurisdiction). EACH OF THE PARTIES HEREBY IRREVOCABLY WAIVES ANY AND ALL RIGHT TO TRIAL BY JURY IN ANY LEGAL PROCEEDING ARISING OUT OF OR RELATED TO THIS AGREEMENT OR THE TRANSACTIONS CONTEMPLATED HEREBY.

Section 20.7. Submission to Jurisdiction. Subject to Article 18, any action or proceeding against any Party relating in any way to this Agreement may be brought and enforced in the state courts in the State of Idaho in Latah County, and each of the Concessionaire and the University hereby irrevocably submits to the jurisdiction of such courts with regard to any such action or proceeding, and irrevocably waives, to the fullest extent permitted by applicable Law, any objection it may have now or hereafter have to the laying of venue of any such action or proceeding in such courts and any claim that any such action or proceeding brought in any such court has been brought in an inconvenient forum. Service of process on the University may be made, either by registered or certified mail addressed as provided for in Section 20.1. Service of process on the Concessionaire may be made either by registered or certified mail addressed as provided for in Section 20.1 or by delivery to the Concessionaire’s registered agent for service of process in the State of Idaho. If the Concessionaire is presented with a request for Documents by any administrative agency or with a subpoena duces tecum regarding any Documents which may be in its possession by reason of this Agreement, the Concessionaire, unless prohibited by Law, shall give prompt notice to the University. The University may contest such process by any means available to it before such Documents are submitted to a court or other third party; provided, however, that the Concessionaire shall not be obligated to withhold such delivery beyond that time as may be ordered by the court or administrative agency or required by Law, unless the subpoena or request is quashed or the time to produce is otherwise extended.

Section 20.8. Further Acts. The Parties shall do or cause to be done all such further acts and things as may be reasonably necessary or desirable to give full effect to this Agreement. Without limiting the foregoing, each Party will, at any time and from time to time, execute and deliver or cause to be executed and delivered such further instruments and assurances and take such further actions as may be reasonably requested by the other Party in order to cure any defect in the execution and/or delivery of this Agreement.

Section 20.9. Costs. Except as otherwise provided in this Agreement, each Party shall be responsible for its own costs and expenses incurred in connection with performing and observing its obligations and covenants under this Agreement.

Section 20.10. Interest. Any amount payable under this Agreement and not paid when due shall bear interest at a variable nominal rate per annum equal on each Day to the Bank Rate then in effect, from the date such payment is due until payment and both before and after judgment.
Section 20.11. Inurement and Binding Effect. This Agreement shall inure to the benefit of the Parties and their respective permitted successors and assigns and is binding upon the Parties and their respective successors and assigns.

Section 20.12. No Partnership or Third Party Beneficiaries. Except as expressly provided herein to the contrary, nothing contained in this Agreement shall constitute or be deemed to create a partnership, joint venture or principal and agent relationship between the University and the Concessionaire, nor shall any term or provision hereof be construed in any way to grant, convey or create any rights or interests to any Person not a party to this Agreement, other than, in the case of Section 3.11, Section 10.2, Section 12.3, Section 13.4, Section 14.2, Section 16.3, Section 17.1, Section 17.2 and Article 19, any Leasehold Mortgagee.

Section 20.13. Cumulative Remedies. The rights, remedies, powers and privileges herein provided are cumulative and not exclusive of any rights, remedies, powers and privileges provided by Law, except for the remedies available to the University for a breach of the Performance Standards or a KPI Event, which shall be limited to those expressly set forth herein. Notwithstanding the foregoing, where this Agreement provides for liquidated damages, such liquidated damages shall be the sole exclusive remedy of the University or the Concessionaire, as applicable, and the University and the Concessionaire hereby irrevocably waive any right to assert a claim against the other party based on a legal theory that a remedy provided herein for such breach or act triggering the liquidated damages fails of its essential purpose.

Section 20.14. Counterparts; Electronic Execution. This Agreement may be executed in any number of counterparts which, taken together, shall constitute one and the same agreement. This Agreement shall be effective when it has been executed by each Party and delivered to both Parties. To evidence the fact that it has executed this Agreement, a Party may send a copy of its executed counterpart to the other Party by email or other means of electronic transmission. Such Party shall be deemed to have executed and delivered this Agreement on the date it sent such email or other means of electronic transmission. In such event, such Party shall forthwith deliver to the other Party an original counterpart of this Agreement executed by such Party.

Section 20.15. Time of the Essence. Time is of the essence for this Agreement.

(Intentionally Left Blank)
IN WITNESS WHEREOF, the University and the Concessionaire have caused this Agreement to be signed by their respective officers thereunto duly authorized as of the date first written above.

Part I - GENERAL

Introduction and Purpose of Performance Standards

These Performance Standards and any Appendices thereto, are provided pursuant to Article 6 of the First Amended and Restated Long-Term Lease and Concession Agreement for the University of Idaho Utility System (as modified, amended or restated, the “Concession Agreement”) to which they are attached. The Performance Standards and Appendices are incorporated and made part of the obligations under the Concession Agreement.

The Utility System is comprised of 8 individual Utilities, specifically the: (i) the portion of the Utility System that generates, distributes and returns chilled water (the “Chilled Water System”); (ii) the portion of the Utility System that generates, distributes and returns steam, hot water, and condensate, which as of the date hereof is subject to Air Quality Tier I Operating Permit T-1-2017.0048 (the “Steam and Condensate System”); (iii) the portion of the Utility System that produces (to the extent applicable) and distributes electricity (the “Electric System”); (iv) the portion of the Utility System that distributes domestic water (the “Domestic Water System”); (v) the portion of the Utility System that produces and distributes compressed air (the “Compressed Air System”); (vi) the portion of the Utility System that removes storm water (the “Storm Water System”); (vii) the portion of the Utility System that collects sanitary sewage (the “Sanitary Sewer System”) and (viii) the portion of the Utility System that processes and delivers reclaimed, non-potable water to the campus as irrigation water, which as of the date hereof operates under the Idaho Department of Environmental Water Quality: Permit No.: WRUM-028-3 Formerly LA-000028-03 (the “Reclaimed Water System”). The purpose of the Performance Standards is to: (A) provide the minimum general requirements for the operations and maintenance of the University’s Utility System and provide standards governing Utility System Operations as required by the Concession Agreement, but are not inclusive of all of the Concessionaire’s responsibilities; (B) aid in the development of an Operations Plan (as defined herein) to be developed annually by the Concessionaire for the Utility System; (C) incentivize the Concessionaire to minimize the time during which the Utility System experiences outages; and (D) ensure that the Utility System is operated and maintained in accordance with Prudent Industry Practices.

Terms used and not otherwise defined in these Performance Standards shall have the meanings ascribed to them in the Concession Agreement (and any other schedules attached thereto). Any approvals or consent required under these Performance Standards shall be governed by the procedure outlined in Section 1.15 of the Concession Agreement. Unless otherwise stated herein or in the Concession Agreement, any modification or change to the requirements set forth in these Performance Standards or Appendices thereto, shall be governed by Section 6.3 of the Concession Agreement. Any references to a governmental entity, industry standard organization or University department shall include any successor to such entity, organization or department. Any references to “degrees” shall, unless otherwise specified herein, mean “degrees Fahrenheit.” To the extent that any term or provision specified herein conflicts with any term or provision of the Concession Agreement, the Concession Agreement shall govern.
The Concessionaire shall perform all duties and tasks and all other responsibilities required by these Performance Standards in conformance with Prudent Industry Practices, and the Concessionaire shall keep the Utility System in good condition and repair throughout the Term of the Concession Agreement. If the Concessionaire fails to meet these Performance Standards, it shall be subject to the procedures in the Concession Agreement for addressing such failures.

If deficiencies or situations affecting minimum standards for performance develop during the Term that are not specifically noted herein, it is the Concessionaire’s responsibility to correct the deficiencies and manage such situations such that the Utility System will be maintained in the condition required by these Performance Standards.
Part II - PERFORMANCE STANDARDS – GENERAL OPERATIONS

1) General

a) The Concessionaire shall propose a plan with respect to the Utility System in accordance with these Performance Standards and the Concession Agreement (the “Operations Plan”). The Operations Plan shall include and satisfy at a minimum, all requirements and all components of the Performance Standards and Prudent Industry Practices and shall include, in addition to the specific requirements set forth herein, the following: (1) the plan for the operation, repair, maintenance and replacement of the Utility Facilities and Utility System Assets; (2) any proposed or expected changes to the environmental permitting requirements or classifications of any portion of the Utility System for the upcoming 5 years, of which the Concessionaire has knowledge, (3) any proposed or expected requirements related to regulatory changes affecting the Utility System, of which the Concessionaire has knowledge; (4) the 1 year short term list of goals and expectations for the Utility System operations and 5 year list of strategic goals therefor as described in Part II, Section 1(d) hereof; (5) a detailed staffing plan, as described in Part II, Section 9(b) hereof; (6) the Building Emergency Action Plan; (7) the Continuity Management Plan; (8) a maintenance management program, as described in Part II, Section 1(e) hereof; (9) operations and maintenance manuals for all Utility Facilities; and (10) the Operator’s standard hourly and fixed rates for performing services for the University and its Representatives that are not part of Utility System Operations, which shall be reasonable and consistent with the University’s past practice, taking into account changes in the cost of supplies, materials and labor (the “Concessionaire Charge Rates”). The Concessionaire shall submit such Operations Plan to the University for its review within 180 days after Closing and as further required herein. The University will review the Operations Plan and where appropriate, will provide comments for Concessionaire’s consideration. The Concessionaire shall perform all components of the Operations Plan. The Operations Plan shall cover each Fiscal Year. The Operations Plan must include an appropriate 5-year cyclical maintenance and repair program/plan to provide a safe and satisfactory level of service and to maximize Utility System service life in accordance with these Performance Standards. To the extent that any term or provision of the Operations Plan conflicts with any term or provision of these Performance Standards, the Performance Standards shall govern.

b) All operations, repairs, replacement and maintenance activities shall be carried out in a good and workmanlike manner so as to ensure continuous safety for users of the Utility System and to sustain the value of the Utility System as an asset. Condition assessments and inspections shall follow Prudent Industry Practices and recognized national standards as set forth herein. If the University elects, at its sole cost and expense, to perform, or cause to be performed by a qualified engineering firm, any such assessment or inspection, then the Concessionaire covenants to address any failures to operate, repair or maintain the Utility System in accordance with these Performance Standards and the Concession Agreement,
noted therein as promptly as reasonably practicable, and the Concessionaire shall reasonably cooperate with the University and any qualified engineering firm engaged by the University.

c) Other than as set forth in Part II, Section 1(a) hereof with respect to the first Operations Plan, the Concessionaire must update and submit its Operations Plan for the upcoming Fiscal Year to the University no later than 120 days prior to the beginning of each Fiscal Year. The University will review and if necessary, comment on the Operations Plan. The Concessionaire shall submit an updated Operations Plan for the start of each Fiscal Year, which may be based on the prior Fiscal Year’s Operations Plan. If the Concessionaire fails in its obligation to submit an Operations Plan by the commencement of such Fiscal Year, the Operations Plan for the preceding Fiscal Year shall remain in place until an updated Operations Plan is submitted, provided that such updated Operations Plan shall remain subject to the University’s right to review and comment as set forth above. Notwithstanding the above, any proposals subject to University Approval as part of the Concessionaire’s Five Year Plan, must comply with Articles 4 and 7 of the Concession Agreement.

d) The Operations Plan shall specify how the Concessionaire has considered, trained, addressed, and planned for all operational, repair, maintenance and replacement activities in connection with the Utility System and has established protocols, procedures, responsibilities, and minimum requirements to operate, repair, maintain and replace the Utility System in accordance with these Performance Standards and the Concession Agreement and Prudent Industry Practices. If the University provides comments on the Operations Plan that are necessary for such Operations Plan to comply with the Concession Agreement and these Performance Standards, then the Concessionaire shall implement such comments or provide some reasonable alternative that addresses the failure to comply with the Concession Agreement or the Performance Standards. The Concessionaire shall provide a list of goals for the Fiscal Year as part of the Operations Plan to indicate focus areas aligned with the above. The Operations Plan shall also include the Concessionaire’s standard operating procedures for each Utility Facility in connection with its operation of the Utility System.

e) As part of the Operations Plan, the Concessionaire shall include a maintenance management program for the Utility System. The maintenance management program shall, at a minimum, meet Prudent Industry Practices and shall include procedures and records for asset management that include critical equipment capacity identification/documentation, inspection and testing plans, PM and PdM (each as defined herein), maintenance workflow including work prioritization based on equipment criticality, planned outages, continuous improvement teams, and records management. Generally, the asset management program will be implemented in the FAMIS system for the Utility System or utilize a maintenance management system of its own choosing if the cost of such system is Approved by the University as part of the Five-Year Plan. The Concessionaire shall indicate any major changes to the maintenance workflow in the prior Fiscal Year.
as well as planned improvements and/or changes aligned with provided goals in the Operations Plan.

f) The Concessionaire shall maintain records related to its maintenance and operation of the Utility System in accordance with Section 3.12 of the Concession Agreement. The records regarding maintenance of the Utility System required to be retained by the Concessionaire shall include the following:

i. Status of Utility System Assets with disposition of breakdowns, deteriorating conditions, failure to start, significant decrease in capacity or performance (> 5%);

ii. Total maintenance spend for the Fiscal Year for the repair costs and labor hours for each individual Utility and the individual work orders associated therewith;

iii. Usage of each Supply by commodity and Supply spend corresponding to each commodity, reported monthly compared to the expected usage and spend for the current Fiscal Year in the current Five-Year Plan and including a reasonably detailed explanation for any variation therefrom;

iv. Any changes to the Utility System or Utility System Operations required or made due to environmental and regulatory changes required by Law or applicable Governmental Agency;

v. One, three and six-year projection of life expectancies of equipment that would be considered Capital Improvements based upon maintenance performed and manufacturer’s recommendations;

vi. State of Idaho Certificate(s) and risk management for boilers;

vii. Annual building inspections required by the Division of Building Safety and State of Idaho Division of Administration;

viii. Annual inspections required by the University Environmental Health and Safety Department or its successor department (“EHS”) and documentation evidencing compliance with all applicable health and safety regulations; and

ix. The Preventive Maintenance (as defined herein) data specified in Section II 1(k) of these Performance Standards.

g) The Concessionaire shall include in its Operations Plan a proposed plan for its expenditures to extend the useful life of any and all components of the Utility System, including planned replacements or any additions thereto. The proposed plan shall include any major system or specific equipment improvements planned
for the next Fiscal Year, as well as indicate changes to existing environmental permitting requirements that may be needed to implement the improvements.

h) Currently, maintenance activities are managed through FAMIS (by Asset Works). The Concessionaire shall either continue to use the FAMIS system for the Utility System and for any requests made pursuant to Section Part II, Section 1(k) of these Performance Standards hereof by the University or utilize a maintenance management system of its own choosing if the cost of such system is Approved by the University as part of the Five-Year Plan (a “CMMS”). To the extent requested by the University, the Concessionaire will provide a list of system components for prioritized funding through the Idaho State Permanent Building Fund.

i) Maintenance Workflow.

i. The Concessionaire shall use the existing, or propose a new (depending on availability of University and Concessionaire resources), maintenance workflow process to identify, prioritize, approve, execute, and document completion for all work. The maintenance workflow process shall align with the process for the Five-Year Plan.

ii. The Concessionaire shall maintain an asset list with documented criticality in the CMMS.

iii. The Concessionaire shall train all personnel on utilization of the maintenance workflow described herein including work order generation, backlog reviews, work prioritization, outage management, schedule development, and work completion. The following defines the type of work orders:

1. “Corrective Maintenance” is defined as the specific maintenance actions performed on Utility System Assets or Utility Facilities (or a portion thereof), in the event that a Utility System Asset’s or a Utility Facility’s current condition is below the required standards as identified by a Preventive Maintenance, Predictive Maintenance (as defined herein), or technician observation. The Concessionaire shall provide the Corrective Maintenance necessary to maintain the Utility System in good condition and repair and otherwise in accordance with Prudent Industry Practices.

2. “Emergency Maintenance” is defined as the maintenance necessary to restore operation to equipment, systems, or components in the Utility System that have failed to operate as required.

iv. The Concessionaire shall perform all Emergency Maintenance as promptly as possible within time limits agreed to by the Parties and if
applicable, adhere to the Unplanned Outage (as defined herein) requirements set forth herein.

v. The Concessionaire shall develop or maintain Preventive Maintenance and Predictive Maintenance plans based on equipment criticality, in accordance with Prudent Industry Practices, including applicable operations and maintenance best practices industry manuals and shall include those plans in the Operations Plan.

1. “Preventive Maintenance” or “PM” is defined as maintenance and/or inspections on a Utility System Asset or a Utility Facility or a portion thereof based on a pre-determined schedule or run time to reduce the probability of failure. A Corrective Maintenance work order shall be written to address any findings from a Preventive Maintenance task.

2. “Predictive Maintenance” or “PdM” is defined as the tests performed on a Utility System Asset or a Utility Facility or a portion thereof to determine current condition and remaining life to reduce the probability of failure. A Corrective Maintenance work order shall be written to address any findings from a Predictive Maintenance task.

vi. The Concessionaire shall perform PM and PdM in accordance with the plans included in the Operations Plan. The Concessionaire shall keep records and track PM and PdM completion against planned schedules. The Concessionaire shall develop a process for the Concessionaire to internally approve any delay of any PM and PdM plans for a Fiscal Year as soon as reasonably practicable after execution of the Concession Agreement and shall include a plan to address operational risks. The process for approving any such delay, the approval of any such delay and the results of each such test shall be recorded in accordance with the Record Retention Policy. The Concessionaire shall promptly provide the University with Notice of any critical equipment PM and PdM plans that are incomplete in accordance with the terms of such plans.

j) In order to properly assist the University in the comprehensive planning for, efficient management of, effective repair of, and controlled access to, the public ways on the University Campus and to lessen the public inconvenience of uncoordinated work in the Public Way while promoting the general public health, safety, and welfare, the Concessionaire shall adhere to any University or municipality policies, including the Safety, Health and Environmental Policies attached as Appendix U (collectively, the “EHS Policies”), provided that, with respect to other University policies, the University has provided the Concessionaire with written notice thereof.
k) Upon request of the University, the Concessionaire shall perform such services for which the Concessionaire has a Concessionaire Charge Rate as requested by the University that are outside of the Utility Services and the Utility System Operations, in which case the University shall pay to the Concessionaire the cost therefor by payment of the applicable Concessionaire Charge Rate within 30 Days after receipt of an invoice therefor.

l) The Concessionaire shall cause the Utility System to consume Supplies in a manner consistent with the Approved Five-Year Plan, and the University may direct the Concessionaire to consume Supplies in a particular manner upon Notice to the Concessionaire provided that if such direction (i) is materially inconsistent with the Approved Five-Year Plan, (ii) materially and adversely affects Utility System Operations (including the Concessionaire’s ability to comply with Prudent Industry Practices or its other obligations under the Concession Agreement) or (iii) causes the Concessionaire to incur materially more Capped O&M Costs, which could not be reasonably avoided, then such direction shall be considered a University Directive if the Concessionaire provides the University with notice as soon as reasonably practicable after receipt of the University’s direction.

2) Exterior Appearance of Utility Facilities

a) The Concessionaire shall maintain the exterior appearance of Utility Facilities in accordance with the University’s design standards applicable to the University of Idaho, provided in Appendix F, as may be updated from time to time (the “Design Standards”). Changes to the exterior appearances of Utility Facilities, including but not limited to the color and lighting of such Utility Facilities and any signage thereon, shall require prior Approval of the University.

3) Utility Marking, GIS Mapping and Asset Management

a) The Concessionaire shall provide utility marking of the Utility System in accordance with applicable Law and Prudent Industry Practices. The utility marking process shall include:

i. Support design activities during project planning and development;

ii. Provide pre-excavation marking for all construction and maintenance projects with 48-hours of notification;

iii. Provide line locating and elevation during installation of new equipment; and

b) The Concessionaire shall provide mapping updates to reflect modifications to the existing Geographic Information System (“GIS”) for the Utility System including
mapping of all Utility System Assets that are abandoned and not removed during the Term. Such information and updates shall be provided in a format and include details as requested by the University.

i. The Concessionaire shall reasonably cooperate with the University in connection with the GIS, which contains information regarding both Utility Facilities as well as other facilities which are not part of the Utility System, in connection with any changes, updates or modifications to the Utility System.

c) The Concessionaire shall be responsible for providing updates for the GIS to the University in a timely manner to accurately depict the state of the existing Utility System. Within 10 Business Days after any change to the state of the existing Utility System, the Concessionaire shall provide to the University the information necessary for the University to update the GIS for the Utility System due to any material change including addition, modification, repair, or abandonment of any portion of the Utility System. For purposes of providing updates for changes to the Utility System due to construction activities, a “change” shall be deemed to occur when the improvement being constructed is deemed “substantially complete” and or becomes actively employed in delivering Utility Services.

d) The Concessionaire shall provide regular mapping update information to the University’s team for the Utility System GIS (as designated by the University to the Concessionaire), to include surface feature updates and repairs and non-material changes, every 6 months.

4) Health and Safety

a) The Concessionaire shall develop and adhere to safety and security standards in performing Utility System Operations which standards, at a minimum, meet Prudent Industry Practices, applicable Law and EHS Policies. The Concessionaire shall develop and document policies and procedures to ensure the security and safety of the Utility System that, at a minimum, shall be consistent with Prudent Industry Practices and current emergency management policies or procedures provided in Appendix C (the “Facilities Emergency Management Plan”) (See also Part II, Section 5(a) hereof). Such policies and procedures shall be included or referenced in the Operations Plan.

i. In addition, the electrical safety program shall be in compliance with all applicable Laws, including standards established by the United States Occupational Safety and Health Administration (“OSHA”) as well as the National Fire Protection Association (“NFPA”) (NFPA 70E), including applicable training and qualifications programs.

b) The Concessionaire shall maintain the security of the Tunnels in compliance with the requirements listed in Appendix V and shall comply with the confined space access protocols included as part of Appendix V. In addition, the Concessionaire
shall coordinate with the University’s Department of Public Safety and local law enforcement, as appropriate. Where Tunnel access occurs through a University building, management of security must be coordinated with the University by calling the Facilities Maintenance Front Desk number which is currently (208) 885-6246 and this may be updated by notice from the University to the Concessionaire (the “University Front Desk Number”) and reasonably coordinating with the University following such phone call.

c) The Concessionaire shall secure the industrial control systems within the Utility System in accordance with Prudent Industry Practices and University policy then in effect.

d) The Concessionaire shall promptly notify the University’s Department of Public Safety and local law enforcement upon learning of suspected or alleged criminal activity concerning the Utility System.

e) The Concessionaire shall abide by all regulations of the University’s Department of Public Safety.

f) The University’s Department of Public Safety and EHS shall have access at all times (24 hours a day, 7 days a week) to all plants, buildings and any other Utility Facilities on the University Campus which are required to be maintained by the Concessionaire.

g) The Concessionaire shall be responsible for ensuring that safety security alarms, including fire alarms which are part of the Utility System, are directly tied to the life and safety systems of the University.

h) Except as otherwise provided in Concession Agreement, Concessionaire shall ensure that any and all cameras installed by Concessionaire in Utility Facilities shall provide a direct feed to the University’s security office, use the University’s network and meet the University’s specifications for video surveillance as described in Appendix A.

i) The University of Idaho facilities are under the jurisdiction of the State Fire Marshall. Therefore, all Utility Facilities on the University Campus shall be subject to inspection by the State Fire Marshall, Environmental Health and Safety personnel, University Fire Protection personnel and the Department of Public Safety.

j) The Concessionaire shall adhere to any and all applicable policies, practices and procedures set forth by the University, including the EHS Policies.

k) As part of the Concessionaire’s obligation to comply with all Laws, the Concessionaire shall comply with all OSHA requirements including but not limited to, documented safety training programs and injury reporting and logs.
l) The Concessionaire and the Operator are required to maintain commercial and appropriate drug testing in accordance with all applicable Laws, including the requirements of the US Department of Transportation.

5) Emergency Response and Unplanned Outages

a) The Concessionaire shall follow the current Facilities Emergency Management Plan in the event of an Emergency or other event described therein.

b) The Concessionaire shall provide personnel to support all procedures and activities required by the University during an Emergency and/or failure of the Utility System or any portion thereof which failure had not previously been approved by the University (each, an “Unplanned Outage”), as described in more detail for each Utility as set forth in Parts III through XI hereof, in order to provide the required Utility Services.

c) During an Unplanned Outage, the Concessionaire shall work cooperatively with the University until Utility Services are restored. During any Unplanned Outage, the Concessionaire shall follow all communication procedures for an Emergency and all applicable Emergency response plans provided by the University, including working with a representative contact designated by the Assistant Vice President for Facilities (the “Communications Contact”). The Concessionaire shall provide status updates as soon as possible after any Emergency or Unplanned Outage to the Facilities Maintenance Front Desk to any designated University contacts using the communication medium designated by the University.

d) The Concessionaire shall adhere to the procedures and requirements for an Unplanned Outage set forth in these Performance Standards for each individual component of the Utility System.

e) The Concessionaire shall designate a representative to participate in the University’s Critical Incident Management Team (the “CIMT”), which representative shall:

i. Attend meetings at the reasonable request of the University;

ii. Obtain training required by the University; and

iii. Assist in coordination with the University to respond during Emergencies.

f) The Concessionaire shall adhere to the following priority list for restoration of the Utility System following an Unplanned Outage, whereby the Concessionaire shall cause buildings that contain in whole or in part the following functions to be tended to in this order of priority: (1) central public works utilities; (2) health, life and safety; (3) process cooling and heating loads; (4) laboratory; (5) research; (6) agricultural buildings; (7) administrative; and (8) out buildings serving cold storage. The foregoing priority list may be updated by the
University at any time upon written notice to the Concessionaire. Any such update shall not be considered a modification to these Performance Standards subject to Section 6.3 of the Concession Agreement.

g) During any Unplanned Outage, the Concessionaire shall send prompt updates to the CIMT and the designated Communications Contact, if activated, in addition to the procedures and requirements for an Unplanned Outage set forth in these Performance Standards for each individual component of the Utility System.

h) At least 48 hours before (i) any visit by a head of state or political dignitary, (ii) any significant political event, (iii) any home football game, (iv) move-in week for fall semester on the University Campus, (v) finals week for fall semester and spring semester for the University Campus (the exact dates of which shall be available on the University’s website), (vi) graduation ceremonies or (vii) any other event which the University provides advance written notice of to the Concessionaire (each, a “Major Event”), the Concessionaire shall:

i. **Prepare** a response plan for an Unplanned Outage, in accordance with the University’s then-existing mechanical and Electric System access and response practices and the Facilities Emergency Management Plan and promptly implement such plan as necessary; and

ii. **Provide** a subject matter expert as a resource to the University’s Strategic Communications Department and the CIMT before and during such Major Event.

i) If the Concessionaire is not provided with advance notice of a Major Event sufficient to comply with the deadline set forth in **Part II, Section 5(h)**, above, the Concessionaire shall provide the listed information as soon as practicable following notification of any Major Event. If a Major Event recurs during a Fiscal Year, e.g., home football games, then the Concessionaire’s responsibility shall be to provide such response plans and the subject matter expert for those Major Events, as a group, and the Concessionaire shall not be responsible for submitting separate information for each such Major Event within that group, unless the University so requests.

j) In the event an Unplanned Outage impacts the University Campus, the Concessionaire shall, at the University’s request, provide a subject matter expert as a resource to the University’s Strategic Communications Department for the duration of the need arising from the Unplanned Outage.

k) Promptly following any Unplanned Outage, and in any event within 15 Business Days thereafter, the Concessionaire shall provide to the University a report on such Unplanned Outage, which shall include a reasonably detailed summary of the Unplanned Outage, including the apparent cause, and the corrective actions taken with respect thereto. As soon as reasonably practical thereafter, but in any event within 60 Days after the Unplanned Outage, the Concessionaire shall
provide the University with a root cause analysis of the Unplanned Outage and any recommended changes in operations or Capital Improvements that the Concessionaire recommends to prevent future, similar Unplanned Outages.

l) The Concessionaire shall notify the Facilities Maintenance Front Desk as soon as reasonably practicable by calling the University Front Desk Number in the event of an Unplanned Outage.

6) Procedures for Planned Outages

a) The Concessionaire shall develop and follow plans and procedures for communicating a planned outage of the Utility System (a “Planned Outage”) in a form and manner reasonably acceptable to the University. Failure to adhere to such requirements shall cause any outage of any part of the Utility System to be deemed an Unplanned Outage. In addition to the requirements set forth above, the Concessionaire shall provide notice of such Planned Outage at least 10 Business Days before the Planned Outage.

b) Prior to a Planned Outage, the Concessionaire shall consult with the University to determine when temporary utility sources (such as electrical generators, boilers or chillers) are necessary to maintain building operations, and the Concessionaire shall provide such temporary utility sources as agreed with the University.

c) The Concessionaire shall coordinate the restoration of Utility Services following a Planned Outage with the University.

7) Design Standards

a) The Concessionaire shall follow the Design Standards for all portions of the Utility System, unless (i) otherwise provided for herein, (ii) the Utility System does not, as of the Closing Date, comply with the Design Standards and then only with respect to such non-compliance or (iii) Approved by the University, provided that the University shall be reasonable in granting its Approval to a deviation from the Design Standards that is consistent with other deviations to the Design Standards then-existing with respect to the Utility System. The Concessionaire shall develop and document design standards for the Utility System or deviations from the existing Design Standards and shall submit them for Approval to the University within 1 Year after the Closing Date. The University shall review such proposal and respond, either approving or disapproving such submission within 60 Days after receipt thereof. If the University so disapproves, it shall provide a reasonably detailed explanation as to the reasons therefor, and the Concessionaire shall resubmit a revised submission addressing such reasons. Once such submission (or re-submission) is Approved by the University, it shall be included in the Design Standards and apply to the Utility System. Future changes to those Design Standards for the Utility System shall be Approved by the University before adoption.
b) The University retains the right to modify or update the Design Standards or (to the extent that such Design Standards relate to the Utility System) direct the Concessionaire to do so, which modification or update shall be deemed a modification of these Performance Standards under Section 6.3(a) of the Concession Agreement. The Concessionaire shall participate in and provide input on periodic updates to the Design Standards and shall provide proposed changes if requested by the University.

8) Material and Equipment Management

a) The Concessionaire shall procure all necessary equipment and materials to properly operate the Utility System. Such equipment and material shall be appropriate for its use and, at a minimum, meet Prudent Industry Practices.

b) The Concessionaire shall include in its Operations Plan its plan for materials management; which shall include:

i. A process for procuring materials for the operation of the Utility System;

ii. A process for maintaining adequate inventory levels to account for Planned Outages and Unplanned Outages;

iii. A plan for maintenance of Concessionaire’s storage facilities;

iv. A method for staging materials; and

v. Minimum levels of certain materials identified as critical by the Concessionaire, below which the Concessionaire shall reorder such materials.

c) In all events, the Concessionaire shall purchase materials and equipment for use in the Utility System that are:

i. Fit and serviceable for the intended purpose and free of defects;

ii. UL-listed, if applicable at the time of purchase; and

iii. Of the type and quality typically used in Comparable Utility Systems.

9) Personnel, Operations and Reporting

a) Whenever the Concessionaire is required to utilize a qualified engineer, such engineer shall be subject to the University’s prior Approval. The Concessionaire shall have the right to provide a list of qualified engineers to the University on an annual basis for the University’s approval in accordance with Idaho Code. The Concessionaire shall then be permitted to utilize any engineer on such list.
b) As part of its Operations Plan, the Concessionaire shall provide a high-level staffing plan, which shall include, at a minimum:

i. Organizational chart(s);

ii. Any changes to shift planning for normal operations;

iii. Emergency response staffing and communications contact who is designated to work with the University (the “Concessionaire Communications Contact”);

iv. New position descriptions;

v. Screenings / testing, which the Concessionaire shall provide to the University promptly after receipt thereof;

vi. High-level training and employee development plan;

vii. Employee credentials, licenses and other certifications;

viii. Diversity and inclusion;

ix. Rates of pay;

x. Overtime policies and practices for all employees; and

xi. One year and five-year plans for staffing level increases or decreases, including organizational charts indicating the areas of staff addition or reduction.

c) As part of its Operations Plan, the Concessionaire shall include a plan for providing personnel coverage during an Emergency, for both a short-term and long-term closure of the University. Such plan shall include a list of employees designated as serving in “essential,” “alternate,” or “standby” status during an Emergency, and identify the Concessionaire Communications Contact, for both short-term and long-term closures. The Concessionaire’s Emergency staffing and designations shall conform with then-current University policies for Emergency preparedness and for short-term and long-term closures.

d) Within 10 days after By the end of each month, the Concessionaire shall provide the Utility System operating efficiency metrics as outlined in Appendix G. The Concessionaire shall cause the Utility System to be within 10% of the operating efficiency metrics outlined in Appendix G. If, in any month, the operating efficiency metrics are not within 10% of Appendix G, the Concessionaire shall promptly provide the University notice and shall cooperate in good faith with the University on the means to cause the operating efficiency metrics to be within 10% of Appendix G as soon as reasonably practicable.

First Amended and Restated Schedule 2, Part II Page 15
e) Unless information is required earlier for meeting required compliance reporting and the University has provided the Concessionaire with prior notice thereof, within 60 Days after the end of a Fiscal Year, the Concessionaire shall provide information to the University regarding the operations of the Utility System, including:

i. Supply mix and average cost of each Supply over the past Fiscal Year;

ii. The results of the chemical, water treatment, and pre-treatment plans;

iii. Environmental and regulatory compliance;

iv. The implementation of safety programs;

v. The effectiveness of utility data systems and IT network security;

vi. Plant operating procedures;

vii. Peak Utility System loads and percentage of installed capacity; and

viii. Utility System operating efficiency metrics as outlined in Appendix G.

f) The Concessionaire shall support project design reviews with the University Architectural and Engineering Services for University Campus projects requiring utility services support and new utility connection planning, design and construction inspections.

g) The Concessionaire shall plan and execute hot work and energized electrical equipment testing with respect to the Electric System per applicable safety standards including NFPA 70E.

h) The Concessionaire shall develop and conduct electrical power system studies including load demand, short circuit, electrical coordination, and OSHA arc flash-utilizing SKM software (or equivalent) and in compliance with all applicable Institute of Electrical and Electronics Engineers (“IEEE”) standards, such studies shall be conducted on a 5-year cycle with an annual review of deferred maintenance projects. The Concessionaire will maintain University Campus SKM (or equivalent) arc flash modeling, incorporating facility and building studies as they are conducted and made available by the University. The Concessionaire will provide utility point of interconnection fault current data to the University promptly after receipt of written notice from the University.

i) The Concessionaire shall maintain Pipe-Flo and load models at or above the level existing as of the Closing Date or develop mutually acceptable alternative models for the steam portion of the Steam and Condensate System that is designed for pressures of at least 120 psi and the Chilled Water System.
j) The Concessionaire shall comply with the Utility Service Connection and Inspection Standards provided in the Design Standards.

10) **Environmental Compliance**

a) In operating the Utility System, the Concessionaire shall comply with applicable Environmental Laws, all Authorizations related thereto (including all Campus-Wide Permits), EHS Policies, and any and all environmental or sustainability standards, policies or procedures adopted by the University and communicated to the Concessionaire.

b) The Concessionaire shall instruct its employees and employees of the Operator to conduct all operation, repair, maintenance and replacement work in a manner so as to minimize exposure to Hazardous Substances. The Concessionaire shall notify the University of any planned activity that may disturb building materials containing Hazardous Substances and may require special handling pursuant to applicable Environmental Laws. If advance notice is not practicable, the Concessionaire shall notify the Facilities Maintenance Front Desk as soon as reasonably practicable by calling the University Front Desk Number after encountering building materials containing Hazardous Substances on or in the vicinity of the Utility System, and shall immediately cease any activity which would disturb or further disturb hazardous building materials until after Concessionaire has notified and consulted with the University regarding proper handling of such material. If the Concessionaire, in the course of its operation, repair, maintenance or replacement activities, creates a hazardous condition by disturbing or otherwise altering building materials containing Hazardous Substances, the Concessionaire shall manage such Hazardous Substances in accordance with all applicable Environmental Laws and in compliance with all University policies and programs including the EHS Policies and the Asbestos Management Program set forth in Appendix D.

c) If the Concessionaire encounters or disturbs any Hazardous Substances in the course of its operations for which the University has retained liability pursuant to Section 3.2(d) of the Concession Agreement, the Concessionaire shall notify the University in writing and shall also contact the Facilities Maintenance Front Desk and shall work with the University to facilitate any University action deemed necessary to comply with applicable Environmental Laws. In any case, Concessionaire shall take measures to avoid causing, exacerbating, or contributing to any hazardous condition or any Release of a Hazardous Material encountered in the course of its operations. Further, whenever the Concessionaire becomes aware of any Release of any quantity of a Hazardous Substance, the Concessionaire must comply with the notice requirements set forth in Section 8.1(b) of the Concession Agreement.

d) The Concessionaire shall be responsible for managing and remediating Hazardous Substances Released or encountered in the course of operations of the Utility System, including those in the Storm Water System, in accordance with all
applicable Environmental Laws but only to the extent specified in Section 8.1(b) of the Concession Agreement (and, for the avoidance of doubt, to the extent that such liabilities and obligations are not otherwise considered to be excluded from liabilities and obligations of the Concessionaire pursuant to Section 3.2(d) of the Concession Agreement). The Concessionaire shall notify and coordinate with EHS before taking any non-emergency action to address a Release of a Hazardous Substance and shall include the University in any correspondence with regulatory officials regarding the management and remediation of the Hazardous Substances. If the University becomes aware of any Release or presence of Hazardous Substances in the Storm Water System, it shall promptly notify the Concessionaire, and the Concessionaire shall remediate such Hazardous Materials in accordance herewith.

e) In addition to the obligations set forth in Section 11.13 of the Concession Agreement pertaining to the Campus-Wide Permits, the Concessionaire shall be responsible for coordinating with EHS for the completion of and filing all environmental reports and for environmental recordkeeping and monitoring pertaining to the operation of the Utility System as required by the University or as may be required under applicable Environmental Laws. In connection therewith, the Concessionaire shall promptly provide a copy of any report or communication submitted to a Governmental Authority by the Concessionaire or the Operator with respect to the Utility System related to Hazardous Substances or Environmental Laws.

f) As part of its obligations under Section 3.12(a) of the Concession Agreement, the Concessionaire shall provide all necessary related operational and environmental data to the University for inclusion in campus-wide regulatory environmental reports and required records.

g) The Concessionaire shall coordinate with the University, including EHS, regarding the development and implementation of the following plans/programs as required by applicable Environmental Laws:

i. Spill Prevention Control, and Countermeasure Plan (“SPCC Plan”);

ii. **Stormwater** water management plan which complies with applicable National Pollutant Discharge Elimination System rules and University requirements, including the University’s Municipal Separate Storm Sewer System (MS4) permit;

iii. **Petroleum** storage and tank management program including inspections; and

iv. **Refrigerant** leak monitoring, reporting, and corrective action.

h) The Concessionaire must certify annual compliance to the University by certifying at least to the following on September 30 of each year:
i. Certified recovery or recycling machines are used prior to disposal of appliances, except for MVACs and MVAC-like appliances. Certifications of machines are maintained on-site and available for review.

ii. Certified recovery or recycling machines are used when maintaining, servicing, or repairing appliances, except for MVACs. Certifications of machines are maintained on-site for review.

iii. Certified technicians verify that the applicable level of evacuation has been reached prior to opening.

iv. Records are maintained on-site for review showing compliance with the less than 15 or 35 percent loss of refrigerant within a 12-month period for appliances containing more than 50 pounds of refrigerant.

v. Certification of training for technicians is maintained on-site for review.

vi. Technician certification is provided to the wholesaler when purchasing Class I or Class II refrigerants.

vii. Service records are kept for appliances containing more than 50 pounds of refrigerant and are maintained on-site for review.

viii. All records shall be maintained at the refrigeration shop and accessible for inspection by the University and Idaho Department of Environmental Quality or its successor agency ("Idaho DEQ").

i) Hazardous Substances

i. The Concessionaire shall not be allowed to use, dispose, treat or store any Hazardous Substances, other than those used in its ordinary course of operations, without written consent by the University.

ii. The Concessionaire shall manage all wastes resulting from its operations in accordance with EHS Policies and applicable Environmental Laws. All applications, certifications and notifications required for the generation, storage and disposal of Hazardous Substances shall be provided to the University at least 10 Business Days in advance of their submission, and the Concessionaire shall, in good faith, discuss with the University any proposed changes thereto.

j) Wastewater

i. Industrial discharge from operation of the Utility System shall meet the requirements of all Laws, including Environmental Laws and any directives provided by Governmental Authorities.
ii. Wastewater discharge permits and wastewater discharge operating requirements shall be coordinated with the University, and are the responsibility of the Concessionaire.

iii. Preapproval from the applicable Governmental Agency for any discharges from the Sanitary Sewer System to the applicable municipal sewer system shall be the responsibility of the Concessionaire.

k) The Concessionaire shall be responsible for evaluation, recycling and/or disposing of waste generated in the course of Utility System Operations, in compliance with applicable Environmental Laws and in alignment with University policies. The Concessionaire shall collaborate in good faith with EHS in determining the foregoing.

l) Environmental Emergency

i. In the event that the Concessionaire has become aware of a Release of Hazardous Substances into the environment due to Utility System Operations, the Concessionaire shall immediately notify the University and the appropriate Governmental Authority in accordance with applicable Laws and applicable University policy.

ii. The Concessionaire shall also take immediate steps to remediate any release of Hazardous Substances and to minimize further Release of Hazardous Substances into the environment. The Concessionaire shall have the opportunity to coordinate with UI Facilities Management for pick up and disposal of recycling and municipal solid waste generated at the Concessionaire’s expense and at the sole discretion of the University.

m) Construction in Flood Plain. Concessionaire shall be responsible for obtaining (on its own behalf or on behalf of the University, as applicable) any required Flood Plain Permits from the US Army Corps of Engineers and Idaho DEQ via the Joint Application process for the Utility System (including any Capital Improvements or Material Changes) and the Utility Facilities, and shall adhere to all requirements from permits issued by those authorities. The Concessionaire shall reasonably cooperate with the University for obtaining any required Flood Plain Permits from the US Army Corps of Engineers and Idaho DEQ via the Joint Application process for property outside of the Utility System and the Utility Facilities (or involving a combination of property within and outside the Utility System and the Utility Facilities).

n) Chemical Inventory. The Concessionaire shall be responsible for complying with the Resources Conservation and Recovery Act (RCRA) and the Emergency Planning and Community Right-to-Know Act (EPCRA) with respect to the Utility System Operations and the Utility System including all relevant chemical inventories and reporting requirements. Furthermore, the Concessionaire shall
comply with the University’s Hazard Communication Program attached hereto as part of the Safety Health and Environment Policy in Appendix U.

o) Permits to Construct. If the Concessionaire undertakes any work that requires a permit to construct application to the Idaho DEQ and/or the State Department of Health, it shall provide the University all required materials to be submitted with respect thereto, including any application fees (the cost of which are Capped O&M Costs), and the University shall have the right to review and Approve or disapprove such application within 10 Business Days. If Approved, the University shall submit such application.

p) If in connection with any Authorizations, including the Campus-Wide Permits, any fees or charges are incurred with respect to the Utility System or the Utility System Operations, the Concessionaire shall pay such amounts to the University within 10 Business Days after request, and the cost thereof may be considered a Capped O&M Cost. With respect to the Title V Permit, the Concessionaire shall pay the annual emission inventory fees as calculated by the EHS and Idaho DEQ officials. The Concessionaire shall provide the responsible official from the University with all information pertaining to the annual emissions inventory. Notwithstanding the foregoing, to the extent that any fee, charge, penalty or other amount is payable in connection with any Authorization due to a failure to comply with a specified limit or other condition of such Authorization, the Concessionaire shall only be liable to pay a portion of such amount to the extent that its actions contributed to such failure.

q) Underground Storage Tanks. Neither the Concessionaire nor the Operator will install any underground fuel storage tanks on the Utility System Land or anywhere on the University Campus without the University’s prior Approval.

r) Aboveground Storage Tanks. Neither the Concessionaire nor the Operator will install any aboveground storage tanks on the Utility System Land or anywhere on the University Campus without the approval of the university’s Department of Environmental Health and Safety.

11) Utility Office Functions

The Concessionaire shall establish an office of the Utility System (the “Utility Office”), which shall be staffed by the Utility System Operator personnel and shall have a head of the Utility Office which shall serve as the lead of the Utility Office. The Utility Office is the primary point of contact for the University regarding information on the Utility System and Utility System Operations, including Planned Outages, Unplanned Outages, general campus information and event-specific information related to the Utility Facilities and Utility Services.

12) Interagency Cooperation and Coordination

a) The Concessionaire is required to cooperate with any and all local, state and federal governmental, regulatory and law enforcement agencies. As part of such cooperation, the Concessionaire shall expect, and reasonably accommodate,
planned and unplanned inspections by Idaho Department of Building Safety, Idaho DEQ, Idaho State Fire Marshal and EHS.

b) The Concessionaire’s required cooperation may include, but not be limited to:

i. Providing access to the Utility Facilities;

ii. Closing Utility Facilities for public safety purposes;

iii. Disconnecting Utility Services or a portion thereof due to an Emergency or law enforcement situation;

iv. Providing access to information contained in any surveillance system;

v. Attending planning and operational meetings;

vi. Providing a representative in the CIMT in the event of a large-scale or critical situation that involves any aspect of the Utility Facilities or the Concessionaire’s responsibilities; or

vii. Any other action that is deemed necessary to ensure public safety.

13) University Department Office Cooperation

a) The Concessionaire will work collaboratively with departments, offices or other entities of the University for efficient, safe and effective Utility System Operations pursuant to the Concession Agreement and these Performance Standards or as may reasonably requested from time to time by the University.

b) The Concessionaire’s involvement with these departments as it relates to the Utility System may include, but not be limited to:

i. Participation in appropriate campus planning meetings including working with the University to coordinate responses to media or other inquiries;

ii. Coordination of information and logistical activities to ensure customer utility needs are met;

iii. Coordination between Concessionaire construction projects and other construction activities being conducted by the University;

iv. Participation on work teams to plan impacts under numerous scenarios related to planned and unplanned events;

v. Campus Emergency coordination;
vi. On and off-campus construction; and

vii. Working with University stakeholders to execute plans.

14) Public Relations and Media Interactions

a) The Concessionaire shall have procedures in place for working with the University and also for interacting with the University community, to the extent requested by the University. All communications about the Utility System directed to the University Campus constituents, or other University stakeholders must be coordinated with and Approved by the University. The Concessionaire shall work with the designated University Communications Contact.

b) The Concessionaire shall work with the University administration to engage the University community and media before, during and after any material event impacting or involving the Utility System or Utility Service, which plan shall be implemented following Approval by the University.

c) The Concessionaire may be contacted by members of the University community and media regarding information pertaining to the Utility System or Utility Service, and the Concessionaire shall, at the University’s option, either provide a referral to the appropriate entity (which may include a designated University representative) or a knowledgeable individual to respond directly to the University community and media. The University reserves the right to take any and all action necessary to ensure effective communication.

15) Vehicle Use and Operation

The Concessionaire will be permitted to utilize service vehicles to facilitate the operations of the Utility System. The Concessionaire shall cause all of the operators of those vehicles to be trained in accordance with the Commercial Drivers Training Program attached hereto as Appendix AA. In addition, because the Concessionaire’s service vehicles will also represent the image and character of the University, the following guidelines must be followed for the use of service vehicles:

a) The Concessionaire must ensure such service vehicles are in good operating condition and must maintain a sufficient inventory of service vehicles to meet the obligations of the Concessionaire at all times.

b) The Concessionaire shall be responsible for ensuring the safe operation of all service vehicles.

c) Insurance must be secured and maintained in accordance with the Concession Agreement.

d) All service vehicles utilized by the Concessionaire must be clean, safe and regularly maintained to ensure safe operation.
e) The vehicle body must be relatively free from damage. If damage occurs, it must be repaired within a reasonable period of time.

f) Annual safety inspections must be performed and documented.

g) All vehicles in use must have a cumulative fleet MPG average which meets applicable Federal fuel-efficiency standards, and must otherwise comply with all Laws and applicable University sustainability standards.

h) All service vehicles will be clearly identified and bear uniform markings on both sides of the vehicle. These include, but are not limited to:

   i. **Company** name; and

   ii. **Vehicle** (fleet) number located on the rear of each vehicle.

i) The Concessionaire shall develop and implement service vehicle user requirements and procedures including, but not limited to, the following:

   i. **Employees** must be properly trained on proper and safe use of service vehicles;

   ii. The Concessionaire must provide standards and procedures for screening service vehicle drivers and maintaining driver records;

   iii. Service vehicle operators shall not permit unauthorized passengers to utilize the service vehicles at any time; and

   iv. The Concessionaire shall report all service vehicle accidents on University property to the University within **one (1) Business Day** following any accident.

j) Service vehicles are subject to all University parking regulations and procedures.

k) Service vehicles shall be licensed and authorized to use public roads.

16) **Utility Service Inquiries**

a) The Concessionaire shall establish and implement a process for recording in the existing CMMS (whether FAMIS or its successor) any University questions and comments about Utility System Operations and Utility Services (“Service Inquiries”). Service Inquiries shall be recorded as they are received. The Concessionaire shall maintain a record of Service Inquiries which shall include:

   i. **Specific** Utility Service referred to in each Service Inquiry;

   ii. **Details** of the Service Inquiry;
iii. A description of actions taken by the Concessionaire in response to the Service Inquiry, including corresponding date of actions taken; and

iv. Details of how the Service Inquiry was resolved.

b) The database of Service Inquiries shall be provided to the University upon request.

c) The Concessionaire shall respond to all non-outage related Service Inquiries within one (1) Business Day of receipt thereof and shall resolve all Service Inquiries in a timely manner.

d) The Concessionaire must accept and respond to University Service Inquiries and outage reports on a 24-hour basis.

17) Emergency Safety Plans

a) As part of its Operations Plan, the Concessionaire shall include a Fire Safety Plan, Evacuation Plan and Building Emergency Action Plan (collectively, “Emergency Safety Plans”) for the emergency response for Utility Facilities in the event of an Emergency that permits staff to quickly and safely evacuate each Utility Facility or take other applicable emergency measures to protect life and property. The Emergency Safety Plans must be in the same format as all other University building emergency action plans and include, at a minimum, the following:

i. Evacuation procedures and roles;

ii. Evacuation routes;

iii. Shelter-in-place location(s);

iv. Emergency communications;

v. Training and drill schedules; and

vi. Emergency Utility Facility contact.

b) The Emergency Safety Plans will be created in conjunction with the CM Plan, as defined below. The Emergency Safety Plans shall be submitted to the University for the University’s comment, but the University approval is not required. These plans must be evaluated on an annual basis and updated as needed. The Concessionaire shall make personnel and other resources available to conduct fire drills, Emergency drills or Emergency planning required by the University as requested.
c) The personnel training program shall include training on all Emergency activities and procedures required by Law. Documentation of enrollment and satisfactory completion shall be supplied to the University and updated at least annually.

18) **Continuity Management Plan**

a) As part of the Operations Plan, the Concessionaire shall include a Continuity Management Plan (“CM Plan”) to establish procedures and protocols in relation to continuing or recovering services following an Emergency. This CM Plan must include, at a minimum, the following:

i. Plan overview, scope, and assumptions document;

ii. Response teams with named individuals assigned to each team;

iii. An initial call tree;

iv. Contact information for key team members, vendors, departments, agencies, and university stakeholders;

v. Initial response activities in the following categories: command/leadership, communications, HR/employee care, financials, IT, and assessment;

vi. A list of all Utility Services, prioritized in order of recovery, with recovery time objectives assigned to each;

vii. One named individual as the contact in charge of recovery and one as an alternate contact for each service;

viii. A description of how each service will be continued or recovered in each of the following three scenarios:

1. Unavailability of majority of staff;

2. Unavailability of key applications and/or equipment; and

3. Unavailability of the building/Utility Facility; and

ix. List of minimally-required resources for recovery.

b) This CM Plan will be created in conjunction with the Emergency Safety Plans. The Concessionaire must evaluate the CM Plan on at least an annual basis and update the CM Plan as needed.
19) **Information Technology, Communications and Connectivity**

a) The Concessionaire shall work with the [Division Office of Information Technology, Information Technology Services ("ITS" or "OIT")](#) to develop and implement appropriate interconnection protocols and security measures whenever the Concessionaire is connecting to any electronic network, communications system or other electronic media owned, operated or managed by the University or its agents. The Concessionaire shall provide annually, as part of the Operations Plan, a plan to keep network components updated with a replacement plan for any outdated equipment. If network equipment maintained by the Concessionaire ages to the point that it no longer will take updates in security, operating system, or process software provided by the developer of such equipment, then the equipment shall be replaced by the Concessionaire within six (6) months after such point where appropriate.

b) The Concessionaire understands that the University network is not certified for life-safety levels of availability that the University network will not be available during planned or unplanned maintenance events and that repairs on peripheral portions of the University network are handled on a commercially reasonable efforts basis.

c) Prior to connecting to or using the University’s electronic network, communications system or other electronic media, Concessionaire shall submit to the ITS OIT for review, and approval all of Concessionaire’s electronic network security protocols, application security protocols, data storage protocols, access management procedures, and any other information that ITS OIT determines necessary to protect the integrity and security of the University’s electronic systems and communications networks.

d) Any use of the University’s electronic network, networking equipment, network closets, fiber infrastructure, copper infrastructure or other information systems shall be done with the approval of ITS OIT and in compliance with current ITS OIT policies and standards, attached hereto as Appendix X and Appendix Y.

e) Concessionaire understands that the University cannot share network equipment (including but not limited to switches, routers and firewalls) nor infrastructure services (including but not limited to DHCP, DNS, IPAM, AAA services and network access control).

f) Concessionaire hereby designates the following individuals: [___________]¹ will provide name and contact information of designees to respond in a timely fashion to any and all security incidents, including copyright complaints, on connectivity provided through University-provided IP addresses.

¹ NTD: Concessionaire to provide.
(g) The University shall, except as set forth herein, retain responsibility for installing and maintaining the University’s fiber network; provided, the Concessionaire shall be responsible for (i) protecting and maintaining such fiber network in accordance with its obligations to maintain the Tunnels set forth in Part II, Section 4(b) hereof and (ii) the Concessionaire shall be responsible for maintaining the portion of the University’s fiber network that is exclusive and unique to the Utility System, to which the University hereby grants the Concessionaire a license to access, operate and maintain, and shall have the right to modify or add on to such portion of the University’s fiber network with the University’s Approval. The Concessionaire may lease fiber(s) or wired communications from the University, subject to agreement by the University, and shall have a non-exclusive right to use portions of the University’s fiber network that had been used in Utility System Operations on a non-exclusive basis with other operations of the University prior to the Closing Date. Any costs charged by the University for communications equipment may be included as O&M Costs or Capital Improvement costs pursuant to the terms of the Concession Agreement. The University shall provide such optical fiber and/or wired communications to the Concessionaire at the cost normally charged by ITS to internal University customers, if available, or at the then-current average market rate charged by local providers of materially similar services.

(h) Any networks installed and maintained by Concessionaire as part of the Utility System must be built according to industry best practices including NERC CIP or other then-current standards as Approved by the University.

(i) Subject to the terms of the Concession Agreement and except as caused by the University’s negligence or willful misconduct, Concessionaire assumes all risk and agrees to indemnify, defend and hold harmless the University from any and all actions, claims, costs, demands, or suits arising out of or resulting from the Concessionaire’s connection to or use of any electronic network, communications system or other electronic media owned, operated or managed by the University or its agents.

(j) Prior to deploying or using any wireless communications within the geographic boundaries of the University, Concessionaire shall submit to ITS for review, approval and acceptance, a detailed description of Concessionaire’s proposed wireless communications technology and any other information that ITS determines necessary. If required by ITS, the Concessionaire will implement all reasonable measures necessary (including abatement) to protect the integrity and security of current wireless communications networks and other equipment operating at the University.

(k) Conditions and requirements for The Concessionaire’s use for all of the University’s wired network (IP), dark fiber, cellular data, analog telephone, or 802.11 WiFi communications systems on the University Campus, including shall be by the University’s Approval only. The Concessionaire shall adhere to all
service-level agreements, security protocols and operating standards for such use are set forth in Appendix X.

k) The line of demarcation for the Utility Network (as defined in Appendix BB) and certain roles and responsibilities of the University and the Concessionaire related to the Utility Network and information technology are set forth in Appendix BB.

20) **Ongoing Utility System Projects – Cogeneration Plant**

Within 180 Days after completion of the cogeneration plant identified as part of the Ongoing Utility System Projects, the University shall have the right to update these Performance Standards to provide reasonable additional requirements for the operation and maintenance of such cogeneration plant and to make reasonable changes to any of the existing requirements to accommodate such cogeneration plant. The Concessionaire shall reasonably cooperate with the University in developing such additional requirements and changes. Upon delivery of such update, the Performance Standards shall be deemed modified, and the University shall not owe the Concessionaire any Concession Compensation in connection therewith. Prior to the update of the Performance Standards described herein, the Concessionaire shall operate the cogeneration plant in accordance with the Concession Agreement and Prudent Industry Practices.
Part III - PERFORMANCE STANDARDS – CHILLED WATER SYSTEM

1) Temperature Requirements

   a) The Concessionaire shall ensure that the supply temperature of all chilled water being supplied by the portion of the Chilled Water System within the Energy Plant, the South Campus Chiller Plant, and the McClure Hall Space on the University Campus must be between 42 and 46 degrees. The return temperature is targeted to be between 57 and 65 degrees.

   b) The monitoring points to determine compliance with such requirements are set forth on Appendix O.

2) Pressure Requirements

   a) The Concessionaire shall ensure that the water being distributed by the Chilled Water System maintains pressure as required to maintain building chilled water interface valves in a general range between 20% and 90% open for normal operations that allows for flow control (provided that for any building on the University Campus that operates directly from Chilled Water System pressure, building chilled water interface valves may be up to 100% open). Maintain a minimum differential pressure (defined as the difference between supply and return pressures) of 10 psi at the Albertson’s building, or such other point as agreed by the University and the Concessionaire in writing (the “Chilled Water Pressure Measurement Point”). The differential pressure figure may be adjusted if agreed by the University and the Concessionaire acting reasonably, if supported by an accurate Chilled Water System hydraulic model prepared in accordance with Part III, Section 6 below.

   b) The Concessionaire shall maintain a minimum differential pressure that is measured at the Albertson’s building must be maintained at a 14 psi differential (pressure difference between supply and return).

   b) The monitoring points to determine compliance with such requirements are set forth on Appendix O.

3) Line of Demarcation between Concessionaire and University

   a) Except as otherwise described herein, the line of demarcation for the Chilled Water System is depicted in Appendix L-3. Appendix L-3 serves as a representative diagram of the Chilled Water System. See also Appendix K-3 for a map of the Chilled Water System.

      i. All chilled water plants, to include North Campus Chiller Plant, South Campus Chiller Plant, and McClure Plant, and all distribution equipment up to the isolation valve for the applicable campus building - envelopes, interface control valves, interface meters and interface programmable logic controllers (“PLCs”), and meters shall be considered part of the
Chilled Water System; and, If an isolation valve is not present at a building, the line of demarcation will be immediately after the first building interface control valve.

ii. Any building/secondary pump, building piping, heat exchange equipment, valves, and controls downstream of the interface equipment isolation valve contained within the building envelopes (or if there is no such isolation valve, then at the point immediately before the first building interface control valve) shall not be considered part of the Chilled Water System.

4) Metering

a) The Concessionaire shall maintain, operate and replace Chilled Water meters in accordance with the requirements outlined herein.

   i. The Concessionaire shall ensure the meters are accurate and calibrated to the manufacturer’s recommendations.

b) As part of the Operations Plan, the Concessionaire shall include a plan to ensure metering accuracy and a metering accountability metric for such meters that are part of the Chilled Water System. For the avoidance of doubt, the Concessionaire shall adhere to all applicable requirements with respect to meters set forth in the Design Standards attached as Appendix F.

c) The Concessionaire shall acquire, monitor and maintain Utility consumption data within the Utility System using metering software of its choosing, subject to the Approval of such software in the Five-Year Plan by the University. In either case, the Concessionaire shall provide the University access to view and use for billing purposes the real-time meter data at any time.

d) The Concessionaire shall ensure electronic metering occurs at a minimum of 60-second or 5-minute intervals.

e) The Concessionaire shall maintain accurate software, monthly meter data, and provide that data to the necessary University servers for use by the University for campus billing.

f) The Concessionaire shall collaborate with construction teams for new buildings being added to the University Campus to ensure timely installation of all metering and interface equipment at the time of connection. Additionally, appropriate start-up procedures shall be followed and monitored by the Concessionaire to ensure no impact to the Chilled Water System.
5) Efficiency

a) The Concessionaire shall operate the Chilled Water System plants in a manner to ensure reliability as well as optimization of energy and conservation of natural resources. The Concessionaire shall use commercially reasonable efforts, consistent with Prudent Industry Practices, to continuously improve the operating efficiency and use of resources including water for the Chilled Water System.

6) Design Standards

a) The Concessionaire shall maintain and keep up to date an accurate Chilled Water System hydraulic model, which may be Pipe-Flo or other similar modeling software, in order to:

i. Inform new buildings being connected to the Chilled Water System of the design pressure drop requirements based on system hydraulic models; and

ii. Verify and maintain system flow velocities according to design standards.
b) The Concessionaire shall cause the Chilled Water System to adhere to chilled water pipe velocity limits as set forth in the Design Standards, once Approved by the University in accordance with Part II, Section 7(a) hereof.

c) The Concessionaire shall follow the Design Standards in Appendix F.

7) Unplanned Outage

a) An Unplanned Outage for the General Chilled Water Portion of the Utility System (as defined in Schedule 15 of the Concession Agreement) shall mean the occurrence of one of the following:

i. Chilled water supply temperature exceeds 50 degrees at any building interface supply point as measured at the chilled water supply of each chilled water plant, to include North Campus Chiller Plant, South Campus Chiller Plant, and McClure Plant, or supply pressure falls below 20 psi as measured at the Chilled Water Pressure Measurement Point for 30 continuous minutes or more or supply pressure at any building interface falls below 20 psi for 30 continuous minutes as measured by the chilled water interface temperature and pressure transmitters identified on Appendix O for Chilled Water System Unplanned Outages as monitoring points, provided that it shall not be an Unplanned Outage if the supply temperature or pressure is below those levels outside the required range (A) if the applicable University building’s automation system is not requesting chilled water at that time, (B) if the supply temperature or pressure is changed upon request of the University, or (C) when ambient temperatures exceed the cooling design-day conditions that the Chilled Water System is rated for.

ii. Chilled water supply is interrupted to a building due to a closed or inoperable distribution valve, leakage, pipe failure, or other system failure on the chilled water distribution system; except in the case where the valve has been closed upon the request of the University.

iii. The Concessionaire fails to provide sufficient notice for such outage to be a Planned Outage.

b) An Unplanned Outage for the Chilled Water Tank (Thermal Energy Storage) shall mean the occurrence of one of the following:

i. Failure to maintain a thermocline level of at least 30 at a temperature of 46 degrees or below.

ii. The Concessionaire fails to provide sufficient notice for such outage to be a Planned Outage.

b) The Concessionaire shall notify the University by calling the University Front Desk Number and the Manager of the Energy Plant which is currently (208) BUSINES AFFAIRS AND HUMAN RESOURCES APRIL 17-18, 2024 ATTACHMENT 2

First Amended and Restated Schedule 2, Part III Page 33
885-6271 and this may be updated by notice from the University to the Concessionaire (the “University Energy Plant Number”) if there is an excessive drop in chilled water loop makeup of more than 25 gallons per minute for 5 continuous minutes or an average of 2 gallons per minute level in the Thermal Energy Storage tank of 1.5 inches or more over a 24-hour period.

d) If an Unplanned Outage for the Chilled Water System occurs which causes a loss of service to a portion of the Utility System, the Concessionaire shall promptly and diligently, including 24-hour a day service, commence active work, regardless of potential delay by others, to correct the Chilled Water System Unplanned Outage and restore service; unless otherwise approved by the University in its sole discretion.

ed) If operational issues occur that result in a high loop temperature event (greater than 50 degrees for 30 minutes) for the Chilled Water System, the Concessionaire shall:

i. Notify the University by calling the University Front Desk Number;

ii. Begin necessary corrective action; and

iii. Provide updates as needed based on changes in the status of the Chilled Water System (and at least daily) and as more frequently as reasonably requested by the University to UI Facilities Management by calling the University Front Desk Number if an incident exceeds 15 minutes or more.

8) Redundancy

a) Where possible N+1 exists as of the date hereof or at such later date where N+1 comes to exist, the Concessionaire shall thereafter maintain an N+1 level of redundancy for the Chilled Water System. “N+1” is defined as the ability to meet seasonal peak load campus design-day cooling loads assuming the largest capacity Utility System Asset of the Chilled Water System is non-functional.

b) If the Chilled Water System has an N+1 level of redundancy, and at any point thereafter fails to maintain such N+1 redundancy, the Concessionaire shall promptly and diligently commence active work within 48 hours to correct the loss of system reliability within 48 hours.

c) The Concessionaire shall maintain existing standby generators for the Chilled Water System in accordance with manufacturers’ recommendations and Prudent Industry Practices with the rated capacity of at least the capacity in existence as of the Closing. The University has the right to increase such requirement in its reasonable discretion, which shall be deemed a modification of these Performance Standards under Section 6.3(a) of the Concession Agreement.
d) The Concessionaire shall perform standby generator testing for existing standby generators per manufacturers’ recommendations.

e) The Chilled Water Business Continuity Plan shall be tested annually in coordination with University Facilities Management staff. The date and time of each test shall be discussed with the University and agreed upon no less than 15 days in advance of such test.

9) Water Quality

a) The Concessionaire shall adhere to the existing chemical and water treatment plan that it establishes as part of the Operations Plan, which treatment plan shall cover the Chilled Water System and reasonably address and prioritize the protection of health, life and safety of University students, employees, faculty and guests. Such plan shall cover frequency and validation of measurement and testing as well as the following items at a minimum:

i. Scale and corrosion;

ii. Microbiological control;

iii. Copper corrosion;

iv. Maintaining closed loop water chemistry; and

v. Cooling tower and condenser water:

1. Scale and corrosion inhibitor; and

2. Bleach or other biocide;

For the South Campus Chiller Plant, monitor and maintain cooling tower cycles in the range of 2.5 to 4 cycles as necessary to keep heat transfer services clean while minimizing water usage. For the North Campus Chiller Plant, monitor and maintain cooling tower cycles in the range of 5 to 15 cycles, utilizing blended water, as necessary to keep heat transfer services clean while minimizing water usage. For the McClure Chiller Plant, monitor and maintain cooling tower cycles in the range of 2 or better cycles, as necessary to keep heat transfer services clean while minimizing water usage.

b) The Concessionaire shall require the chilled water systems in a new building that is to be connected to the Chilled Water System to be flushed and treated to central plant standards by the building owner or construction team before connecting to the Chilled Water System.
Part IV - PERFORMANCE STANDARDS –
STEAM AND CONDENSATE SYSTEM

1) Pressure Requirements
   a) The Concessionaire shall operate the steam portion of the Energy Plant to
      produce saturated steam for the University Campus distribution between \(30 \text{ psi} \) and \(60 \text{ psi}\).
   b) The Concessionaire shall ensure that each building served by the Steam and
      Condensate System maintain a minimum pressure of \(30 \text{ psi}\).
   c) The Concessionaire shall operate the boilers and main header no higher than \(200 \text{ psi}\).
   d) For operation of the Microturbine generators that are part of the Steam and
      Condensate System (the “Microturbine Generators”), the Concessionaire shall
      operate the boilers and pressure reducing valves to provide \(190 \text{ psi}\) inlet pressure
      and \(35 \text{ psi}\) outlet pressure as specified by the manufacturer.
   e) The monitoring points to determine compliance with such requirements are set
      forth on Appendix O.

2) Ongoing Utility System Projects - Cogeneration Plant (Microturbine Generators)
   a) The Concessionaire shall operate the Microturbine Generators that are part of the
      Steam and Condensate System at Maximum Electrical Power Output within the
      Pressure Requirements as specified in Part IV, Section 1 above and otherwise in
      accordance with Prudent Industry Practices, allowing for proper maintenance and
      service of equipment. “Maximum Electrical Power Output” is the design output
      capability of the turbine generators for sustained reliable operations.

23) Air Quality Permit with Idaho DEQ
   a) The Concessionaire must notify the EHS by calling the individual identified by
      the University Front Desk Number and Idaho DEQ as the “EHS Responsible
      Official,” as may be changed from time to time by notice to the Concessionaire
      (the “EHS Responsible Official”) and the Idaho DEQ via email at the e-mail
      addresses of which the University or Idaho DEQ gives the Concessionaire notice,
      with any excess emissions (opacity event) that lasts three minutes or more in one
      hour, within 24 hours from the beginning of the event. The Concessionaire shall
      complete the DEQ AQ-C9 initial notification form (or any successor form
      thereto) and attach it to the e-mail notification to the EHS Responsible Official
      and the Idaho DEQ. The Concessionaire shall provide the EHS Responsible
      Official with a summary of the actions taken to correct the excess emissions event
      and the continuous monitoring data for the excess emissions event within 48
      hours from the beginning of the event.
34) Line of Demarcation between Concessionaire and University

   a) Except as otherwise described herein, the line of demarcation for the Steam and Condensate System is depicted in Appendix L-4 and will be the point where the steam pipe enters the applicable building and connects to the building isolation valve. Appendix L-4 serves as a representative diagram of the Steam and Condensate System. See also Appendix K-4 for a map and further depiction of the Steam and Condensate System.

   i. All steam piping up to the building isolation valve will be considered part of the Steam and Condensate System.

   ii. All condensate piping from the condensate receiver pump outlet back to the Energy Plant shall be considered part of the Steam and Condensate System.

   b) The Concessionaire shall be responsible for using existing water and chemical treatment in the Utility Facilities or such alternative treatment methodology to the extent Approved by the University, acting reasonably.

45) Metering

   a) The Concessionaire shall maintain, operate and repair steam condensate meters in accordance with the requirements set forth herein.

   i. The Concessionaire shall ensure the meters are accurate and calibrated to the manufacturer’s recommendations (provided that, if any of the meters do not comply with the foregoing standards as of the Closing Date, the Concessionaire shall propose Capital Improvements to rectify such non-compliance within a reasonable period after the Closing Date, and the Concessionaire shall not be liable for such non-compliance until the University has Approved such Capital Improvements and the agreed time for completion of such Capital Improvements has elapsed).

   b) As part of the Preventive and Predictive Maintenance Plans the Concessionaire shall include a plan to ensure metering accuracy and a metering accountability metric for such meters that are part of the Steam and Condensate System.

   c) The Concessionaire shall ensure electronic metering occurs at a minimum of 60-second or 5-minute intervals.

   d) The Concessionaire shall maintain accurate software, monthly meter data, and provide that data to the necessary University servers for use by the University for campus billing.

   e) The Concessionaire shall ensure that all new building connections to the Steam and Condensate System are metered at the time of connection.
f) Plant production meters,

   i. Production meters for the Steam and Condensate System must be in service when equipment is operating, functioning properly and reporting to a data system readily accessible by the University. If a primary production meter fails, causing the Steam and Condensate System (or any portion thereof) to be unable to be operated under control, safely and effectively, the associated equipment shall be shut off until the failure is resolved, and the Concessionaire shall cause such meter to be replaced or repaired as soon as reasonably practicable.

   ii. Historical data starting after the Closing Date on plant production meters shall be maintained at a minimum of 5-minute intervals and readily accessible for the University’s review. Raw data shall be provided to the University in a format that cannot be edited by the Concessionaire. Data will be time stamped with the date, hour (in 24 hr.-hour format) and minute. Data shall be stored as required by the Record Retention Policy. Prior years’ data, to the extent available, shall be maintained for the University’s review.

   iii. Meters shall be calibrated and maintained in accordance with the manufacturer’s recommendations. The schedule for such calibration shall follow the Preventive and Predictive Maintenance Plans.

56) Efficiency

   a) The Concessionaire shall ensure that each boiler maintain a boiler fuel efficiency of 77% or greater operates within 5% of the annual performance level as defined in Appendix G.

   b) The Concessionaire shall ensure that the water recovery rate from the Hot Lime Softening System must be 99% or greater.

   eb) The Concessionaire shall measure and record every 8 hours on a daily basis the condensate return rate and condensate hardness rate for the Steam and Condensate System and maintain such records for at least 3 full Years. If the condensate return for the Steam and Condensate System drops more than 3% below the average annual return rate for the preceding 3 Years, then the Concessionaire shall propose a plan to the University to remedy such reduction, and, if Approved by the University, shall implement such plan to the extent within the Utility System.

   dc) The Concessionaire shall operate the Steam and Condensate System in a manner to ensure reliability as well as optimization of energy and conservation of natural resources. The Concessionaire shall use commercially reasonable efforts to continuously improve the operating efficiency and use of resources including water for the Steam and Condensate System.
Design Standards

a) If requested by the University, the Concessionaire shall propose as a Capital Improvement or Material Change an accurate Steam and Condensate System model using modeling software, in order to:

i. Inform new buildings being connected to the Steam and Condensate System of the design pressure drop requirements based on system models; and

ii. Verify and maintain system flow velocities.

If Approved by the University, the Concessionaire shall implement, operate and maintain such model such that it remains up to date and accurate.

b) The Concessionaire shall adhere to the following pipe velocity limits for the Steam and Condensate System:

i. New piping for the steam portion of the Steam and Condensate System to be installed at 120 feet per second (“fps”) respectively at peak flow; and

ii. Existing piping that exceeds 120 feet per second (“fps”) shall require University approval prior to replacement of the piping causing the velocity that exceeds 120 fps.

c) Steam distribution lines installed after the Closing Date shall be located in a walkable Tunnel or Utilidor.

d) The Concessionaire shall follow the Utility Service Connection and Inspection Standard set forth in the Design Standards.

Unplanned Outage

a) An Unplanned Outage for the General Steam Portion of the Utility System (as defined in Schedule 15 of the Concession Agreement) shall mean the occurrence of one of the following at the monitoring points identified on Appendix O for General Steam Portion of the Utility System Unplanned Outages:

i. Steam pressure at a building supply pressure transmitter the furthest point from the Energy Plant in the distribution network is less than 30 psi for 15 consecutive minutes or more;

ii. Steam supply is interrupted to a building due to loss of compressed air for the building pressure reducing valve, a closed or inoperable building isolation valve, leakage, pipe failure, or other system failure;
except in the case where the valve has been closed upon the request of the University; or

iii. **The Concessionaire** fails to provide sufficient notice for such outage to be a Planned Outage.

b) An Unplanned Outage for the Steam Plant (as defined in Schedule 15 of the Concession Agreement) shall mean the occurrence of one of the following at the monitoring points identified on Appendix O for Steam Plant Unplanned Outages.

i. The Steam Plant fails to provide at least 30 psi steam pressure to the General Steam Portion of the Utility System.

ii. The Concessionaire fails to provide sufficient notice for such outage to be a Planned Outage.

eb) If an Unplanned Outage of the Steam and Condensate System occurs, which causes a loss of service to a portion of the Utility System, the Concessionaire shall promptly and diligently, including 24-hour a day work, commence active work, regardless of potential delay by others, to correct the Unplanned Outage and restore service; unless otherwise approved by the University in its sole discretion.

c) An outage in the Steam and Condensate System caused solely by operation of the Microturbine Generators at Maximum Electrical Power Output shall not be deemed an Unplanned Outage.

d) If operational issues occur that result in a low steam pressure or event for the Steam and Condensate System, defined as an instance where the Steam and Condensate System is providing steam at less than 300 psi for 15 minutes at a building pressure transmitter or any building connected to the Steam and Condensate System—the furthest point from the Energy Plant in the distribution network, the Concessionaire shall:

i. **Notify** the University by calling the University Front Desk Number if any portion of the University Campus is affected.

ii. Immediately commence operation of the wood-fired and natural gas boilers to provide steam to the University Campus that meets the temperature and pressure requirements set forth herein, which wood-fired and natural gas boilers shall operate until such time as the Unplanned Outage is corrected;

iii. **Begin** necessary corrective action; and

iv. **Provide** updates every 60 minutes if outdoor temperatures are below 32 degrees, and every 24 hours otherwise, to UI Facilities Management by calling the University Front Desk Number if an incident
Redundancy

89) Redundancy

a) Where possible, N+1 exists as of the date hereof or at such later date where N+1 comes to exist, the Concessionaire shall thereafter maintain an N+1 level of redundancy for the Steam and Condensate System. “N+1” is defined as the ability to meet seasonal peak load (reasonably calculated by the Concessionaire using measured historic data) assuming the largest capacity Utility System Asset of the Steam and Condensate System is non-functional.

b) If the Steam and Condensate System has an N+1 level of redundancy, and at any point thereafter fails to maintain such N+1 redundancy, the Concessionaire shall promptly and diligently commence active work within 48 hours to correct the loss of system reliability within 48 hours.

c) The Concessionaire shall ensure that at least one out of two steam lines that provide steam to the University Campus is functional at all times.

d) Concessionaire shall use a chemical treatment plan for the Steam and Condensate System, as part of the Operations Plan, which must be at least as stringent as the chemical treatment plan existing as of the execution of the Concession Agreement. Such plan shall cover frequency and validation of measurement and shall adhere to ASME boiler water quality standards.

e) The Concessionaire shall maintain standby electrical backup generators for the Steam and Condensate System in accordance with manufacturers’ recommendations and Prudent Industry Practices with the rated capacity of at least the capacity in existence as of the Closing. The University has the right to increase such requirement in its reasonable discretion, which shall be deemed a modification of these Performance Standards under Section 6.3(a) of the Concession Agreement.

f) The Concessionaire shall perform standby generator testing per manufacturer’s recommendations.

g) The Concessionaire shall also include pretreatment standards as part of the Operations Plan, which shall include standards for:

i. Conductivity and hardness limits from water treatment plan; and

ii. Oxygen removal de-aerators.

h) The Concessionaire shall adhere to American Society of Mechanical Engineers boiler water quality standards.
9) **Fuel Operations and Storage**
   
a) The Concessionaire must maintain consistent fuel delivery operations from the solid fuel Supply inventory to the Energy Plant to satisfy the needs of the Energy Plant at all times.

b) The Concessionaire must maintain the Chip Storage/Drying Facility, to include the scale, covered storage, scale shack, conveyance system, shaker separator, and rolling stock. The rolling stock includes the Kenworth Tractor with Trailer, 950 CAT Front End Loader, Hough Front End Loader and a Ford F-500 truck, and if any of the foregoing require replacement, such replacement shall be considered Capital Improvements.

10) **Condensate water storage**
   
a) The Concessionaire shall maintain the condensate storage at a continuous 6,000-gallon minimum volume so long as the Steam and Condensate System is not then more than 3% below the average annual condensate return rate for the preceding 3 Years.
Part V - PERFORMANCE STANDARDS – ELECTRIC SYSTEM

1) Power Requirements

a) Concessionaire shall ensure that the Electric System maintains the following at the monitoring points identified on Appendix O for the Electric System:

i. At both the East Substation and the West Substation, the O transformer tap changers to deliver voltage consistent with the voltage then being delivered on the Closing Date with such changes as the University may require and +6%/- 5% of nominal per current version of American National Standards Institute (“ANSI”) C84.1, or equivalent; and

ii. 0.95 minimum power factor at the substation buses.

b) The Concessionaire shall design, procure, install, operate and maintain the Electric System such that it is configured for customer determined building load (as communicated by the University to the Concessionaire) and requirements for reliability and redundancy.

c) The Concessionaire shall operate and maintain the Electric System such that it meets the following power quality requirements using SEL revenue grade hardened utility metering including relay protection:

i. For harmonic distortion, comply with University Design Standards, inclusive of the Avista design and construction standards referenced therein, specifying maximum distortion allowable on the Electric System from connected loads, provided that the University shall cooperate with the Concessionaire to address distortion in excess of the maximum distortion allowable on the Electric System, to the extent such distortion is introduced by a connected load and provided further that if there is any ambiguity or conflict within the Design Standards with respect thereto, the controlling standard shall be IEEE 519; and

ii. For voltage sag or swell events, investigate any such event and minimize internal system disruption and take affirmative measures to reduce sensitivity of key utility components to reduce trips from minor sag and/or swell events. Minor sag and/or swell events include brownouts or power bumps, and/or power surges resulting in flickering lights or simple loss of power to low voltage remote notification systems, and or controls serving plants, systems and equipment requiring simple corrective actions to restore functionality.

d) Notwithstanding anything to the contrary contained herein, the Concessionaire shall operate the Utility System to participate in a Main Campus curtailment type program as directed by the University, and the Concessionaire shall not be in
breach of any of the requirements of these Performance Standards if it operates in accordance with such curtailment.

2) **Line of Demarcation; Concessionaire, University, and Avista Utility**

a) Except as depicted in Appendix L-1, or as set forth in Part V, Section 2(b) of this Part V below, the line of demarcation for the Electric System as between the University and the Concessionaire shall be at the point of presence for the service line, which is the building electrical service meter or, absent a switch. The building electrical service meter, if present, shall be included as part of the Electric System, regardless of its location before or after the building electrical service switch. See also Appendix K-1-A for a map of the Electric System on the Main Campus and Appendix K-1-B for a map of the Electric System, North Farm.

b) Except as depicted in Appendix L-1, the line of demarcation for the Electric System as between the Concessionaire and any third-party electricity providers (“External Electric Utilities”) shall be: (i) for the Main Campus, up to the external electrical substation transformers low-side cable terminations; and (ii) for the North Farm, up to and including the main transformer feeding disconnect switches on each building.

c) All cabling, switchgear, transformers, duct banks, manholes, and vaults and substation buildings and associated infrastructure between the External Electric Utilities and building lines of demarcation (as described herein) shall constitute the Electric System.

i. Avista Corporation, or its Affiliate, operates under an easement from the University and maintains its own equipment and the high side transmission lines feeding the two external electrical substations serving the University Campus and the North Farm.

ii. Sight perimeter walls chain link fence, access and drainage systems and the SPCC Plan shall be included as part of the Electric System.

d) The Concessionaire shall review and assume the current University role in complying with the access, operating, interlocking, and station service arrangements between the University and External Electric Utilities systems.

e) Where the physical line of demarcation within the Electric System is not set forth herein, or is not otherwise apparent, the line of demarcation shall be located on the low voltage side of the relevant building or structure transformer(s).

3) **Metering**

a) The Concessionaire shall maintain, operate and replace Electric meters in accordance with the requirements set forth herein.
i. The Concessionaire shall ensure the revenue grade meters are accurate and calibrated to the manufacturer’s recommendations (provided that, if any of the meters do not comply with the foregoing standards as of the Closing Date, the Concessionaire shall propose Capital Improvements to rectify such non-compliance within a reasonable period after the Closing Date, and the Concessionaire shall not be liable for such non-compliance until the University has Approved such Capital Improvements and the agreed time for completion of such Capital Improvements has elapsed).

ii. Concessionaire shall provide the University with all information from the meter readings, in a format prescribed by the University and in a manner that allows the University to maintain, without interruption, the University’s then-current internal system for usage recording and billing.

b) As part of the Preventive and Predictive Maintenance Plans developed in Section 1(i)(iv), the Concessionaire shall include a plan to ensure metering accuracy and a metering accountability metric for such meters that are part of the Electric System. For the avoidance of doubt, the Concessionaire shall adhere to all applicable requirements with respect to meters set forth in the Design Standards attached as Appendix F. Electric meters to be maintained per requirements of electric metering codes and guidelines.

c) The Concessionaire shall either continue to use the existing software programs that the University uses to acquire, monitor and maintain Utility consumption data within the Utility System or use metering software of its choosing, subject to the Approval of such change in the Five-Year Plan by the University. In either case, the Concessionaire shall provide the University reasonable access to view the real-time meter data for all meter sites.

d) The Concessionaire shall ensure electronic metering occurs at a minimum of 60-second intervals.

e) The Concessionaire shall maintain accurate software, monthly meter data, and provide that data to the necessary University servers for use by the University for campus billing, utility assessments.

f) The Concessionaire shall ensure that all new building connections to the Electric System are metered in accordance with the Design Standards. Temporary construction power shall be metered and read via manual reads. For new installations coming on-line, at the time permanent power is connected metering shall be in place for manual reads and shall be networked as soon as reasonably practicable meeting the specifications set forth herein.

g) Substation and campus feeder meters.

i. Main substation feed and customer meters that are part of the Electric System must be in service when equipment is operating, functioning properly and reporting to a data system accessible by the University. If a
meter or its network communications fails, it shall be repaired as expeditiously as possible.

ii. Main substation feed meters shall have event capture capability and store wave form level detail during periods of electrical disturbance.

h) The Concessionaire shall maintain Schweitzer Engineering Laboratories (SEL)-735 revenue meters (or an equivalent Approved by the University in its discretion) on all of the substation transformers in existence as of the Closing Date and can also compare meter readings to the Avista Feed Meters where applicable and SEL relays (or an equivalent, in each case, Approved by the University in its discretion). The Concessionaire shall then compare internal meters monthly to billed consumption from the serving utility promptly and shall report such result to the University.

4) Efficiency

a) The Concessionaire shall operate the Electric System in a manner to ensure reliability as well as optimization of energy and conservation of natural resources. The Concessionaire shall use commercially reasonable efforts to continuously improve the operating efficiency and use of resources for the Electric System.

5) Design Standards

a) The Concessionaire shall adhere to the University’s Design Standards and all legal requirements for the Electric System including but not limited to IEEE and NFPA.

b) The Concessionaire is prohibited from installing, constructing or using above grade transmission and distribution lines, except as Approved by the University on a case by case basis.

6) Unplanned Outage

a) An Unplanned Outage for the Electric System shall mean the occurrence of one of the following at the monitoring points identified on Appendix O for Electric System Unplanned Outages:

i. A failure at a distribution feeder breaker, or building transformer failure, primary fuse or primary switch opens, secondary service protector main or feeder breaker opens, or any other cause determined by the University (acting reasonably) to originate within the Utility System which interrupts service to a building connected to the Electric System (in each case, except where such event is caused by a fault within a building, or other campus infrastructure, beyond the line of demarcation for the Utility System); or
ii. The Concessionaire fails to provide sufficient notice for such outage to be a Planned Outage.

b) If an Unplanned Outage of the Electric System occurs which causes a loss of service, the Concessionaire shall promptly and diligently, including 24-hour a day work, commence active work to correct the Unplanned Outage and restore service, regardless of potential delay by others (unless proceeding despite such potential delay by others could reasonably result in further Unplanned Outages). Such updates shall be deemed a modification under Section 6.3(a) of the Concession Agreement.

c) If there is an Unplanned Outage of the Electric System, the Concessionaire shall:
   i. Notify the University by calling the University Front Desk Number if any portion of the University Campus is affected.
   ii. Begin necessary corrective action; and
   iii. Provide updates every 24 hours to UI Facilities Management by calling the University Front Desk Number if an incident exceeds 24 hours or more;

d) The Concessionaire shall communicate with the University when it becomes aware of an External Electric Utility line or service feed that is out of service and is impacting any University Facilities, or plans to perform such work that could impact reliability for the University.

7) **Redundancy**

a) Where possible, as of the date hereof or at such later date where N+1 comes to exist, the Concessionaire shall thereafter maintain an N+1 level of redundancy for the Electric System. “N+1” is defined as the ability to meet seasonal peak load assuming one of the primary electric feeds is non-functional.

b) If the Electric System is below an N+1 level of redundancy, and at any point thereafter fails to maintain such N+1 redundancy, the Concessionaire shall promptly and diligently commence active work to correct the loss of system reliability within 48 hours. Such 48-hour period shall not commence until the Concessionaire has obtained any necessary authorization for such work.

c) Each component of the Electric System shall have at least one independent backup.
   i. For each substation in the electrical feed from the applicable External Electric System Utility, maximum capacity, as set by the applicable...
External Electric Utility shall be met with the loss of a single transformer or bus.

ii. For distribution feeders in the Electric System:

iii. For building service substations in the Electric System, they shall be in a main-tie-main configuration for critical facilities such as, research facilities and larger stadiums and may be single-ended for non-critical facilities. This main-tie-main applies to East and West feed interconnectivity.

d) The Concessionaire shall operate, maintain and replace, as necessary, the gas engines, electric generator(s) that provide emergency back-up power to certain buildings, the Energy Plant and other parts of the Utility System on the University Campus, such that they shall provide at least the quality and quantity of backup service as exists on the Setting Date.

e) The Concessionaire shall participate in annual power-loss testing on the University Campus at such times and in such frequency as reasonably requested by the University.

f) The Concessionaire shall operate, maintain and replace, as necessary, the gas engines at North Farm that provide emergency back-up power to certain buildings on the University Campus in the same manner that it is required to operate, maintain and replace the rest of the Utility System, such that they shall provide at least the quality and quantity of backup service as exists on the Effective Date.

8) Distribution System Switching

a) The Concessionaire shall maintain a table of relay settings on feeders and substation transformers, transformer inventory for the Electric System in accordance with Prudent Industry Practices.

b) The Concessionaire shall provide switching for planned maintenance, curtailment or construction outages for the Electric System. Switching shall result in no unplanned interruption to the University.
c) Switch loading for the Electric System shall be done as required to comply with the following load limits:

i. **Bus** limits;

ii. **Transformer** load limits; and

iii. **Feeder** loading limits.

d) The Concessionaire shall provide low voltage switching and support for building outages.

e) As requested by the University for planning/design, for the duration of construction of new facilities on the University Campus, the Concessionaire shall provide construction power and support which shall include metering.
Part VI - PERFORMANCE STANDARDS – DOMESTIC WATER SYSTEM

1) Regulatory Requirements

a) The Concessionaire shall ensure that the Domestic Water System is compliant at all times with all current State of Idaho and Federal Regulatory requirements of the United States Safe Drinking Water Act (40 CFR 141) (the “Safe Drinking Water Act”), all applicable Idaho DEQ Idaho Rules For Public Water Systems, all rules promulgated by the American Water Work Association and the Idaho State Plumbing Code.

b) For any capital improvements or upgrades or additions to the Domestic Water System made after the Closing Date, the Concessionaire shall ensure that those capital improvements or upgrades or additions to the Domestic Water System meet all applicable Idaho DEQ Idaho Rules For Public Water Systems, all rules promulgated by the American Water Work Association and the Idaho State Plumbing Code 2017.

c) The Concessionaire shall ensure that the Domestic Water System is operated and maintained by at least two certified State of Idaho certified Drinking Water Distribution class 2 operators for the class of systems its rated at with compliance with Idaho APA under the supervision that is required by Idaho Administrative Rules (“IDAPA”) 58.01.08, et. seq., and the Safe Drinking Water Act.

d) The Concessionaire shall resume responsibility of the operating and maintaining University of Idaho Cross Control Program over the 330 assemblies that includes annual testing, repairing and replacing if needed by certified State of Idaho certified Backflow Assembly Tester in compliance with the Safe Drinking Water Act, all applicable Idaho DEQ Idaho Rules For Public Water Systems, all rules promulgated by the American Water Work Association and the Idaho State Plumbing Code 2017, each as amended from time to time.

e) The Concessionaire shall report demand and consumption of domestic water and a water profile to the Director of Utilities and Engineering Services and University or its designated assigns and representatives on a monthly basis no later than the 5th day end of the following calendar month and, further, the Concessionaire shall separately notify the University of any variances of more than 2% in the reportable data from the prior. The report will include variance in consumption from the previous years for the given month.

2) Pressure Requirements

a) The Concessionaire shall ensure that the water being distributed by the Domestic Water System maintains pressure of at least 50 psi as measured at the pressure at the base of campus highest elevation water towers as at the meters shown on Appendix O.
b) The Concessionaire shall ensure that the water psi being distributed by the Domestic Water System maintains pressure not above 80-150 psi at the point of connection to any water service as shown on Appendix O.

e) The Concessionaire shall ensure that the water psi being distributed by the Domestic Water System maintains pressure not above 125 psi as shown on Appendix O.

3) Line of Demarcation between Concessionaire and University

a) Except as otherwise described herein, the line of demarcation for the Domestic Water System, including building apparatus for firefighting water and fire hydrants is at the point of diversion from the mainline or meter whichever occurs first, which is depicted on Appendix L-2-B. A map showing the Domestic Water System is set forth on Appendix K-2.

b) All Backflow assemblies and domestic water meter/fire hydrants, premises backflow assemblies, and premises water meters, regardless of the meter location before or after the building or premises backflow assembly, are included within the Domestic Water System on the main service to the buildings, except where the applicable building is not served by the Domestic Water System, in which case no such equipment shall be considered part of the Domestic Water System. All building/secondary pumps, heat exchangers, equipment, fixtures, and associated building piping shall not be considered part of the Domestic Water System except for backflow assemblies and domestic water meters on main building service.

4) Metering

a) The Concessionaire shall maintain and operate Domestic Water System meters in accordance with the requirements set forth herein and in the Concession Agreement, provided that if any such meters do not meet the requirements set forth herein and in the Concession Agreement as of the Closing Date, the Concessionaire shall be excused from such compliance until such time as they, whether through completion of an Ongoing Utility System Project or a Capital Improvement made by the Concessionaire and Approved by the University.

i. The Concessionaire shall ensure the meters are accurate and calibrated to the manufacturer’s recommendations (provided that, if any of the meters do not comply with the foregoing standards as of the Closing Date, the Concessionaire shall propose Capital Improvements to rectify such non-compliance within a reasonable period after the Closing Date, and the Concessionaire shall not be liable for such non-compliance until the University has Approved such Capital Improvements and the agreed time for completion of such Capital Improvements has elapsed).

ii. Concessionaire shall provide the University with all information from the meter readings, in a format prescribed by the University and in a manner...
that allows the University to maintain, without interruption, the
University’s then-current internal system for usage recording and billing.
The Concessionaire-installed smart meters must be read at consistent
intervals as described in paragraph (d) of this Section 4.

b) As part of the Preventive Maintenance and Predictive Maintenance plans
developed in Section 1(i)(iv) of these Performance Standards, the Concessionaire
shall include a plan to ensure metering accuracy and a metering accountability
metric for such meters that are part of the Domestic Water System. For the
avoidance of doubt, the Concessionaire shall adhere to all applicable requirements
with respect to meters set forth in the Design Standards attached as Appendix F.

c) The Concessionaire shall continue to use the existing Siemens (SCADA),
Software licensed software programs that the University uses to acquire, monitor
and maintain Utility consumption production data within the Utility System or use
metering software of its choosing, subject to the Approval of such change in the
Five-Year Plan by the University. In either case, the Concessionaire shall provide
the University reasonable access to view the real-time meter data.

d) The Concessionaire shall ensure electronic metering occurs at a minimum of 60-
second 5 minute intervals for consumption meters and 1 day intervals for
production meters. Metering read via radio transmitter or other means shall occur
on the first of each month for billing purposes.

e) The Concessionaire shall maintain accurate software, monthly meter data, and
provide that data to the necessary University servers for use by the University for
campus billing.

f) The Concessionaire shall ensure that all new building connections to the
Domestic Water System are metered at the time of connection and that those
meters are networked to the Utility Network as soon as reasonably practicable in
order to meet the specifications set forth herein.

g) Plant production meters

i. Production meters for the Domestic Water System must be in service
when equipment is operating, functioning properly and reporting to a data
system readily accessible by the University. If a primary production meter
fails, causing the Domestic Water System (or any portion thereof) to be
unable to be operated under control, safely and effectively, the associated
equipment shall be shut off until the failure is resolved, and the
Concessionaire shall cause such meter to be replaced or repaired as soon
as reasonably practicable.

ii. Historical data starting after the Closing Date on plant production meters
shall be maintained at a minimum of 5-minute intervals and readily
accessible for the University’s review. Raw data shall be provided to the
University in a format that cannot be edited by Concessionaire. Data will
be time stamped with the date, hour (in 24 hr. format) and minute. To the extent available, Concessionaire shall maintain prior years’ data for the University’s review.

iii. Meters shall be calibrated and maintained in accordance with the manufacturer’s recommendations. The schedule for such calibration shall follow the Preventive Maintenance and Predictive Maintenance plans developed in Section 1(i)(iv) of these Performance Standards.

5) Efficiency

a) The Concessionaire shall operate the Domestic Water System plants in a manner to ensure reliability as well as optimization of energy and conservation of natural resources. The Concessionaire shall use commercially reasonable efforts to continuously improve the operating efficiency and use of resources, including reduction in water loss from the Domestic Water System.

b) The Concessionaire will maintain and operate a water loss control program that will mitigate loss over the entire Domestic Water System less than or equal to 2% aggregate loss over the entire Domestic Water System. The Concessionaire shall notify the University if there is excessive Domestic Water System water loss in the system defined as 2% or greater in aggregate at any point(s) in the Domestic Water System, which shall be conducted at the sole expense of the Concessionaire, and the Parties shall, acting reasonably and in good faith, agree upon the value for excessive loss. If the Parties fail to come to such agreement within 45 Days after completion of such evaluation, either Party may refer such dispute to Article 18 of the Concession Agreement.

6) Design Standards

a) If requested by the University, the Concessionaire shall propose as a Capital Improvement or Material Change an accurate Domestic Water System hydraulic model, using modeling software, in order to:

i. Inform new buildings being connected to the Domestic Water System of the design pressure drop requirements based on system hydraulic models; and

ii. Verify and maintain system flow velocities according to design standards.

If Approved by the University, the Concessionaire shall implement, operate and maintain such model such that it remains up to date and accurate.
b) The Concessionaire shall cause the Domestic Water System to adhere to the following pipe velocity limits:

i. New piping to be limited to 10 feet per second ("fps") at peak flow; and

ii. New piping velocity at peak flow shall comply with applicable ASTM International standards.

c) Domestic Water System distribution piping shall be direct buried unless no other practicable option exists other than to place Domestic Water System piping in a Tunnel, provided that the University must Approve that there is no practicable option to direct bury such piping.

d) All water service and water mains wall penetrations that are part of, or connected to, the Domestic Water System must be links seal and Ductile Iron pipe.

e) The Concessionaire shall follow the Utility Service Connection and Inspection Standard in the Design Standards and all new Domestic Water System mains must be approved of Idaho DEQ prior to installation.

In furtherance of its obligations under the Concession Agreement, the Concessionaire shall maintain and keep up to date with University of Idaho standards, (IDAPA 58.01.08) (Idaho rules for Public Water Systems) American Water Work Association (“AWWA”) and Idaho State Plumbing Code 2017.

7) Unplanned Outage

a) An Unplanned Outage for the Domestic Water System shall mean the occurrence of one of the following:

i. Domestic water supply to a building served by the Domestic Water System has no water pressure in any area of the building as reported and reasonably verified by the University due to a closed or inoperable isolation valve, leakage, pipe failure, or other system failure on the Domestic Water System for distribution; except in the case where the valve has been closed upon the request of the University;

ii. The Domestic Water System has less pressure than 20 psi to main and service lines in accordance with State of Idaho Administrative Rules;

iii. Failure to provide the approved water supply capable of supplying the required fire flow for fire protection water in accordance with applicable Law 2018 International Fire Code, Section 507, as may be amended in the future; or
iv. **The Concessionaire** fails to provide sufficient notice for such outage to be a Planned Outage.

b) The Concessionaire shall notify the University Front Desk Number if there is excessive Domestic Water System water loss in the Domestic Water System-defined as 2% or greater in aggregate at any point(s) in the Domestic Water System, with such excessive loss value to be as determined in accordance with Part VI, Section 5(b) above, and the Concessionaire shall cooperate in good faith with the University to implement such measures to reduce such excessive loss.

c) If an Unplanned Outage for the Domestic Water System occurs which causes a loss of service to a portion of the Utility System, the Concessionaire shall promptly and diligently, including 24-hour a day service, commence active work, regardless of potential delay by others, to correct the Domestic Water System Unplanned Outage and restore service; unless otherwise Approved by the University in its sole discretion.

d) If operational issues occur that result in a low water pressure event (lower than 20 psi on any water main for the Domestic Water System as measured at the monitoring point on Appendix O, the Concessionaire shall:

i. **Notify** the University by calling the University Front Desk Number;

ii. **Notify** Idaho DEQ of low water pressure rule in accordance with IDAPA 58.01.08, part 552.01.b.ii.(1), as may be amended from time to time;

iii. **Notify** Local Fire Department if no water service to building fire protection system is impacted;

iv. **Begin** necessary corrective action, including, if needed to control property damage, by closing water main valve if needed and re-routing flow thru water mains to campus; and if needed provide **bottle**ed water to patrons;

v. **Provide** updates every 24 hours to UI Facilities Management by calling the University Front Desk Number if an incident exceeds 24 hours or more.

8) **Redundancy**

a) Where **possible N+1 exists as of the date hereof** or at such later date where **N+1 comes to exist**, the Concessionaire shall **thereafter** maintain an N+1 level of redundancy for the Domestic Water System. “N+1” is defined as the ability to meet seasonal peak load assuming the largest capacity Utility System Asset of the Domestic Water System is non-functional.
b) If the Domestic Water System has an N+1 level of redundancy, and at any point thereafter fails to maintain such N+1 redundancy, the Concessionaire shall promptly and diligently commence active work within 48 hours to correct the loss of system reliability within 48 hours.

9) **Water Quality**

   a) The Concessionaire shall ensure compliance by the Domestic Water System with the Safe Drinking Water Act and the Domestic Water Plant operating permit requirements.

   b) The Concessionaire shall ensure compliance with the State standards, set forth in Part VI, Section 1(d) hereof, of any capital improvements or upgrades or additions to the Domestic Water System made after the Closing Date.

   c) The Concessionaire shall ensure compliance with State of Idaho DEQ and EPA sampling monitoring schedules and share records with the University.

   d) The Concessionaire shall require the domestic water systems in a new building that is to be connected to the Domestic Water System to be flushed and treated to central plant standards by the building owner or construction team before connecting to the Domestic Water System.

   e) The Concessionaire shall comply with the Infectious Disease Response Plan attached as Appendix I, as may be amended from time to time upon notice to the Concessionaire.

   f) The Concessionaire shall ensure compliance with AWWA and Idaho DEQ standards on operating, maintaining and servicing water reservoirs.
Part VII - PERFORMANCE STANDARDS – COMPRESSED AIR SYSTEM

1) Temperature Requirements

   a) The Concessionaire shall ensure that the compressed air being distributed by the Compressed Air System has the ability to maintain a dew point of 40 degrees or lower at each of the monitoring points in the Utility System for the Compressed Air System as identified on Appendix O when the associated Utility Facility is in service as measured at the output of the air dryers located in the Energy Plant.

2) Pressure Requirements

   a) The Concessionaire shall ensure that the compressed air being distributed by the Compressed Air System is maintained at a range from 80-90 psi at the main pressure control transmitter for the air system as identified on Appendix O.

3) Line of Demarcation between Concessionaire and University

   a) All air compressors, dryers, and associated equipment within the Energy Plant and distribution piping shall be part of the Compressed Air System. Except as depicted in Appendix L-5, the line of demarcation for the Compressed Air System is located at the foundation of the Energy Plant and is distributed throughout the district energy tunnel network to the building mechanical room in buildings, as depicted on Appendix L-5. As between the University and the Concessionaire shall be the first campus building or bicycle station isolation valve. See also Appendix K-5 for a map of the Compressed Air System.
   
   b) See also Appendix K-5 for a map of the Compressed Air System.

   bc) All building or bicycle station piping, valves, and associated equipment shall not be considered part of the Compressed Air System.

4) Metering Efficiency

   a) Production meters for the Compressed Air System must be in service when equipment is operating, functioning properly and reporting to a data system readily accessible by the University. If a primary production meter fails, causing the Compressed Air System (or any portion thereof) to be unable to be operated under control, safely and effectively, the associated equipment shall be shut off until the failure is resolved, and the Concessionaire shall cause such meter to be replaced or repaired as soon as reasonably practicable.

   b) Historical data on plant production meters shall be maintained and readily accessible for the University’s review. Raw data shall be provided to the University in a format that cannot be edited by the Concessionaire. Data will be time stamped with the date, hour (in 24 hr. format) and minute.
e) Meters shall be calibrated and maintained in accordance with the manufacturer’s recommendations (provided that, if any of the meters do not comply with the foregoing standards as of the Closing Date, the Concessionaire shall propose Capital Improvements to rectify such non-compliance within a reasonable period after the Closing Date, and the Concessionaire shall not be liable for such non-compliance until the University has Approved such Capital Improvements and the agreed time for completion of such Capital Improvements has elapsed). The schedule for such calibration shall follow the Preventive Maintenance and Predictive Maintenance plans.

5) Efficiency

a) The Concessionaire shall operate the Compressed Air System plants in a manner to ensure reliability as well as optimization of energy and conservation of natural resources. The Concessionaire shall use commercially reasonable efforts to continuously improve the operating efficiency and use of resources for the Compressed Air System.

6) Design Standards

a) The Concessionaire shall design and install all Compressed Air System piping in accordance with ASTM standards and University design standards. All piping will be type “K” copper.

b) The Concessionaire shall follow the Utility Service Connection and Inspection Standard in Design Standards.

7) Unplanned Outage

a) An Unplanned Outage for the Compressed Air System shall mean the occurrence of one of the following:

i. Compressed air supply is interrupted to a building due to a closed or inoperable isolation valve, leakage, pipe failure, or other system failure on the Compressed Air System; except in the case where the valve has been closed upon the request of University; or

ii. The Concessionaire fails to provide sufficient notice for such outage to be a Planned Outage.

b) The Concessionaire shall notify the University by calling the University Front Desk Number if the Compressed Air System is running more air compressors than normal to keep up with demand over a 24-hour period.

c) If an Unplanned Outage for the Compressed Air System occurs which causes a loss of service to a portion of the Utility System, the Concessionaire shall promptly and diligently, including 24-hour a day service, commence active work, regardless of potential delay by others, to correct the Compressed Air System
Unplanned Outage and restore service; unless otherwise approved by the University in its sole discretion.

d) If operational issues occur that result in an outage of the Compressed Air System, the Concessionaire shall:

i. Notify the University by calling the University Front Desk Number if any portion of the University Campus is affected;

ii. Begin necessary corrective action; and

iii. Provide updates every 24 hours to UI Facilities Management by calling the University Front Desk Number if an incident exceeds 24 hours or more.

87) Redundancy

a) Where possible N+1 exists as of the date hereof or at such later date where N+1 comes to exist, the Concessionaire shall thereafter maintain an N+1 level of redundancy for the Compressed Air System. “N+1” is defined as the ability to meet seasonal peak load assuming the largest capacity Utility System Asset of the Compressed air System is non-functional.

b) If the Compressed Air System is below an N+1 level of redundancy, and at any point thereafter fails to maintain such N+1 redundancy, the Concessionaire shall promptly and diligently commence active work within 48 hours to correct the loss of system reliability—within 48 hours.
[Part VIII – PERFORMANCE STANDARDS—UTILITY SCADA NETWORK-SYSTEM]

Intentionally Omitted

1) Availability Requirements

a) The Concessionaire shall ensure that the data infrastructure and network assets for the Utility System that transmit all data gathered by the network devices for the Utility System and transmits all other data and electronic information within the Utility System and all Utility Facilities to the data historians (the “Utility Network”) is maintained in accordance with Prudent Industry Practices and is maintained in a manner that it has available all data information reasonably necessary for safe plant and distribution system operation as well as commodity billing and that it stores all such data and information gathered by the Utility Network.

2) Line of Demarcation between Concessionaire and University

a) The Utility Network is separated from the University Campus network by a physical Fortinet firewall which will be operated and maintained by the Concessionaire. Data shall be made available outside the Utility Network via an University Approved SCADA and control system server. This server shall exist behind the physical firewall and shall maintain the capability to pass data to a University-owned PI Server, which resides on the University’s network, via PI-to-PI protocol, PI-Connector, or other University-Approved secure connection—Concessionaire shall have the option to maintain for its own use any other PI system elements, such as a PI AF Server and/or PI Vision capabilities behind the firewall. The University will have the right to determine which PI assets it will utilize on its side, as shown in Appendix P. For clarity, Appendix P illustrates the PI configuration that the Concessionaire will be required to adhere to on the Closing Date. All assets used to manage data on the Utility Network, including the firewall, a PI Server (or any approved successor server) shall be included in the Utility Network System as shown on Appendix P.

b) Additionally, the Utility Network System extends into University Buildings to collect metering data from Utility System Meters. The demarcation of the Utility Network System components within the buildings is also provided in Appendix P.

3) Utility Network Components

a) The Concessionaire shall monitor, maintain and operate the Utility Network system components in accordance with the requirements set forth herein:

b) The Concessionaire shall provide annually, as part of the Operations Plan, a plan to keep Utility Network components updated with a replacement plan for any outdated equipment. If network equipment ages to the point that it no longer will take updates in security, operating system, or process software provided by the
developer of such equipment, then the equipment shall be replaced within 6 months after such point.

c) The Concessionaire shall either continue to use the existing GE Global Care, Software Toolbox (OPC) and PI OsiSoft licensed software programs that the University uses to acquire, monitor and maintain Utility consumption data within the Utility System or use software of its choosing, subject to the Approval of such change in the Five Year Plan by the University. In either case, the Concessionaire shall provide the University reasonable access to view the real-time data.

d) The Concessionaire shall ensure control and data reliability appropriate for the criticality of the monitored devices.

e) All metering shall be revenue grade where applicable, and will be connected to the Utility Network using a network interface or University-Approved telemetry.

f) An Unplanned Outage of the Utility Network shall not be a KPI Event; however, the Concessionaire shall use commercially reasonable efforts to minimize the number and duration of Unplanned Outages of the Utility Network and will, as soon as reasonably practicable following such Unplanned Outage, restore the performance of the Utility Network.

4) Unplanned Outage

a) An Unplanned Outage for the Utility Network shall mean the occurrence of one of the following:

i. Loss of a key component of the Utility Network system that creates immediate operability issues;

ii. Loss of a key component of the Utility Network system that causes a loss of redundancy in key systems; or

iii. An unrecoverable loss of utility billing data for a period of more than 24 hours.

b) If an Unplanned Outage for the Utility Network System occurs which causes a loss of service to a portion of the Utility System, the Concessionaire shall promptly and diligently, including 24-hour-a-day service, commence active work, regardless of potential delay by others, to correct the Utility Network Unplanned Outage and restore service; unless otherwise Approved by the University in its sole discretion.
c) If operational issues occur that result in an outage for the Utility Network System, the Concessionaire shall:

i. Begin necessary corrective action within 2 hours for Emergency Situations (as defined below), and as soon as reasonably practicable for Urgent Situations (as defined below):

d) An “Emergency Situation” occurs with respect to the Utility Network if there is a (i) loss of network; (ii) loss of server; (iii) loss of PLC (CW interface); (iv) loss of network switch or router; (v) failure of substation relay; or (vi) a water plant issue endangering production.

e) An “Urgent Situation” occurs with respect to the Utility Network if there is: (i) redundancy lost in any network system; (ii) a Utility System meter offline; or (iii) a Complicity client offline.

5) Redundancy

a) Where possible, the Concessionaire shall maintain appropriate levels of redundancy for the Utility System Assets that make up the Utility Network System, so that secure and continuous operation can be maintained at all times. As part of such redundancy, the Concessionaire shall adhere to the following backup policy:

i. Full and incremental backups protect and preserve corporate network information and should be performed on a regular basis for system logs and technical documents that are not easily replaced, have a high replacement cost or are considered critical, consistent with the University’s Institutional Data Backup Policy, attached hereto as Appendix B. Backup systems should be housed in a secure and geographically separate location from the original and isolated from environmental hazards. Backup network components, cabling and connectors, power supplies, spare parts and relevant documentation should be stored in a secure area on-site as well as at other corporate locations. For the avoidance of doubt, backup media, data and other information may be stored on non-physical offsite data storage solutions.

ii. System databases

1. A copy of the most current network and system databases must be made at least twice per month or based on frequency of changes made.

2. The lead network administrator is responsible for this activity.

iii. Access to backup databases and other data are tested annually.
Part IX - PERFORMANCE STANDARDS – STORM WATER SYSTEM

1) Regulatory Requirements
   a) The Concessionaire shall ensure that the Storm Water System complies with all applicable Laws and the City of Moscow Storm Water Plan.
   b) For any capital improvements or upgrades or additions to the Storm Water System made after the Closing Date, the Concessionaire shall ensure that those Capital Improvements or Material Changes to the Storm Water System meet the current applicable standards Idaho DEQ, Idaho Rules For Storm Water Systems 58.01.02, State of Idaho Stormwater Best Management Practices, all rules promulgated by the American Water Work Association and applicable Law.

2) Pressure Requirements
   a) The Concessionaire shall ensure that the water being removed by the Storm Water System maintains pressure as required to maintain flow rates such that water does not back up and pool at Storm Water System entry points as identified on Appendix K-6.

3) Water Quality
   a) The Concessionaire shall ensure compliance by the Storm Water System with the Clean Water Act and operating under EPA region 10 permit requirements.
   b) The Concessionaire shall ensure compliance by the Storm Water System with the Clean Water Act and operating under State of Idaho MS4 permit requirements.
   c) The Concessionaire shall ensure storm water collection systems are properly maintained and tested for compliance including all retention ponds, storm water oil separator.

4) Line of Demarcation between Concessionaire and University
   a) The line of demarcation for the Storm Water System between the University and the Concessionaire shall be five feet from the building envelope.
   b) The Storm Water System shall include all piping, valves, manholes, access points and outfalls used to move storm water from the University Campus grounds, Storm Water System to the appropriate discharge point, whether into the City of Moscow storm system or Paradise Creek, as identified on Appendix L-6. Appendix L-6 serves as a representative diagram of the Storm Water System. See also Appendix K-6 for a map of the Storm Water System.
   b) Demarcation of all storm water systems discharging from any building is 5’ from the building envelope. The Concessionaire is responsible for the Storm Water
System starting at the point that is five feet from the structural barrier between the interior and exterior of each building on the University Campus.

5) Design Standards

a) The Concessionaire shall maintain and update on an annual basis an accurate Storm Water System asset condition report which will indicate any deficiencies in the capacity or design of the Storm Water System. This Storm Water System report will also be used to:

i. Inform new buildings being constructed adjacent to the Storm Water System; and

ii. Verify and maintain Storm Water System capacities according to Design Standards.

b) The Concessionaire shall cause the Storm Water System to adhere to the following storm water pipe velocity limits:

i. Storm Water System shall be capable of removing the New piping for storm water lines shall convey water from a 24-hour, 75-year rainstorm event without any failures or pooling.

6) Unplanned Outage

a) An Unplanned Outage for the Storm Water System shall mean the occurrence of one of the following:

i. Storm Water System fails to remove the storm water from any portion of the University Campus or retain on site the runoff volume produced from a 24-hour, 75-year storm event (or less) such that the water causes damage to any property or facility during a 75-year rain event (or less), provided that the foregoing shall not constitute an Unplanned Outage to the extent that such damage results from damage resulting from a deficiency in original design, or construction existing at the Closing Date (which is proven by the Concessionaire to the University’s reasonable satisfaction) to the extent that the Concessionaire has included the remediation of such deficiency in its initial Five-Year Plan and is diligently pursuing the remediation steps on the timetable set out in such initial Five-Year Plan).

ii. Storm water flow is interrupted and is not removed from the University Campus such that the water causes damage to any property or facility due to a closed or inoperable distribution valve, leakage, pipe failure, or other
system failure on the Storm Water System; except in the case where the valve has been closed upon the request of the University.

b) The Concessionaire shall notify the University by calling the University Front Desk Number if there is a reasonable possibility that the Storm Water System capacity is not sufficient to meet these Performance Standards.

c) If an Unplanned Outage for the Storm Water System occurs which causes a loss of service to a portion of the Utility System, the Concessionaire shall promptly and diligently, including 24-hour a day service, commence active work, regardless of potential delay by others, to correct the Storm Water System Unplanned Outage and restore service; unless otherwise approved by the University in its sole discretion.

d) If operational issues occur that result in a reduced Storm Water System capacity event, the Concessionaire shall:

   i. Notify the University by calling the University Front Desk Number if any portion of the University Campus is affected;

   ii. Begin necessary corrective action; and

   iii. Provide updates every 24 hours to UI Facilities Management by calling the University Front Desk Number if an incident exceeds 24 hours or more.
Part X - PERFORMANCE STANDARDS – SANITARY SEWER SYSTEM

1) Pressure Requirements
   a) The Concessionaire shall ensure that the water and other materials being distributed by the Sanitary Sewer System maintains pressure as required to maintain flow rates such that sanitary sewer water does not back up into any connected facilities.

2) Line of Demarcation between Concessionaire and University
   a) The line of demarcation for the Sanitary Sewer System between the University and the Concessionaire shall be five feet from the building envelope. Separators, retention tanks, and other equipment used to prevent contaminants such as greases, oils, chemicals, etc. from entering the Sanitary Sewer System shall not be considered part of the Sanitary Sewer System regardless of their location in relation to the line of demarcation.
   b) The Sanitary Sewer System shall include all piping, valves, manholes and access points used to move wastewater from the University Campus buildings to the appropriate discharge into City of Moscow sewer mains as identified on Appendix L-7. Appendix L-7 serves as a representative diagram of the Sanitary Sewer System. See also Appendix K-7 for a map of the Sanitary Sewer System.
   ab) Demarcation of all sanitary sewer systems discharging from any building is 5' from the building envelope. The Concessionaire is responsible for the Sanitary Sewer System starting at the point that is five feet from the structural barrier between the interior and exterior of each building on the University Campus.

3) Design Standards
   a) The Concessionaire shall cause the Sanitary Sewer System to adhere to the current Idaho State Plumbing Code 2017, American Water Work Association, and all applicable Laws.
   b) Sanitary Sewer System distribution piping shall be direct buried.

4) Unplanned Outage
   a) An Unplanned Outage for the Sanitary Sewer System shall mean the occurrence of one of the following:
   i. Sanitary Sewer System fails to remove the sanitary sewage from any portion of the University Campus such that the sanitary sewage causes damage to any property or facility;
   ii. Sanitary Sewer System flow is interrupted and fails to remove the sanitary sewage water from a facility such that the sanitary sewage causes...
damage to any property or facility or creates a situation such that the
facility may not be used normally due to a closed or inoperable
distribution valve, leakage, pipe failure, or other system failure on the
Sanitary Sewer System; except in the case where the valve has been
closed upon the request of the University; or

iii. A portion of the University's property served by the Sanitary Sewer
System is unable to be operated because the Concessionaire failed to
maintain the Storm Water System in accordance with Prudent Industry
Practices.

b) For the avoidance of doubt, it shall not be an Unplanned Outage of the Sanitary
Sewer System if an Unplanned Outage is caused by a user of the Sanitary Sewer
System (other than the Concessionaire, the Operator or their Representatives)
disrupting the Sanitary Sewer System by disposing of items in the Sanitary Sewer
System for which it was not intended to be used.

c) The Concessionaire shall notify the University by calling the University Front
Desk Number if there is a reasonable possibility that the Sanitary Sewer System
capacity is not sufficient to meet these Performance Standards.

d) If an Unplanned Outage for the Sanitary Sewer System occurs which causes a
loss of service to a portion of the Utility System, the Concessionaire shall
promptly and diligently, including 24-hour a day service, commence active work,
regardless of potential delay by others, to correct the Sanitary Sewer System
Unplanned Outage and restore service; unless otherwise approved by the
University in its sole discretion.

e) If operational issues occur that result in a reduced Sanitary Sewer System
capacity event, the Concessionaire shall:

i. Notify the University by calling the University Front Desk Number
if any portion of the University Campus is affected;

ii. Begin necessary corrective action; and

iii. Provide updates every 24 hours to UI Facilities Management by
calling the University Front Desk Number if an incident exceeds 24 hours
or more.
Part XI - PERFORMANCE STANDARDS – RECLAIMED WATER SYSTEM

1) Regulatory Requirements

a) The Concessionaire shall operate that Reclaimed Water System in compliance with all applicable Laws, the State of Idaho DEQ Permit M-028-03, all rules promulgated by the American Water Work Association and the Idaho State Plumbing Code.

b) For any Capital Improvements or Material Changes to the Reclaimed Water System made after the Closing Date, the Concessionaire shall ensure that those Capital Improvements or Material Changes to the Reclaimed Water System meet the current applicable State of Idaho DEQ Permit M-028-03 (Idaho DEQ) Idaho Rules For Public Water Systems (58.01.17), all rules promulgated by the American Water Work Association and the Idaho State Plumbing Code.

c) The Concessionaire shall ensure that the Reclaimed Water System is operated and maintained by at least two certified State of Idaho certified Wastewater Treatment operators and Wastewater Treatment Operator Land Application licenses for the class of systems its rated at with under the supervision required by IDAPA 58.01.16 and operated in compliance with applicable Laws and State of Idaho DEQ Permit M-028-03.

d) The Concessionaire is responsible for reporting demand and consumption shall report production of reclaimed water and a water profile to the Director of Utilities and Engineering Services and University or designated assigns and representatives on a monthly basis no later than the 5th day end of the following calendar month, which The report shall include information on efficiency, reuse production metrics consistent with the University’s practice prior to the Closing Date and, further, the Concessionaire shall separately notify the University of any variances of more than 2% in the reportable data from the prior to include variance in consumption from previous years for the given month.

2) Pressure Requirements

a) The Concessionaire shall ensure that the water being distributed by the Reclaimed Water System maintains pressure of at least 40 psi, at the backpressure valve of the golf course supply discharge points, as measured at the pressure at the campus highest elevation water towers as shown on Appendix O.

b) The Concessionaire shall ensure that the water being distributed by the Reclaimed Water System maintains pressure not above 8150 psi at the point of connection to any water service as shown on Appendix O.

c) The Concessionaire shall ensure that the water psi distributed by the Reclaimed Water System maintains pressure not above 125 psi as shown on Appendix O.
3) Line of Demarcation between Concessionaire and University

   a) Except as otherwise described herein, the line of demarcation between the Concessionaire and the University for the Reclaimed Water System, including all reclaimed water irrigation systems and irrigation clocks as identified on shall not be included in the Reclaimed Water System. Appendix L-8 and Appendix L-9. Each of Appendix L-8 and Appendix L-9 serves as a representative diagram of the Reclaimed Water System. See also Appendix K-8 for a map of the Reclaimed Water System.

   b) The line of demarcation for the Reclaimed Water System serving the University’s golf course shall be at the backpressure CLA-Val brand valve, after the isolation valve. The University’s golf course holding ponds shall not be part of the Reclaimed Water System.

   c) The line of demarcation between the Concessionaire and the City of Moscow shall be after the discharge monitoring valve at the Wastewater Treatment Plant. Appendix L-9 serves as a representative diagram of the demarcation.

4) Metering

   a) The Concessionaire shall maintain and operate Reclaimed Water System meters in accordance with the requirements set forth herein and in the Concession Agreement.

      i. The Concessionaire shall ensure the meters are accurate and calibrated to the manufacturer’s recommendations (provided that, if any of the meters do not comply with the foregoing standards as of the Closing Date, the Concessionaire shall propose Capital Improvements to rectify such non-compliance within a reasonable period after the Closing Date, and the Concessionaire shall not be liable for such non-compliance until the University has Approved such Capital Improvements and the agreed time for completion of such Capital Improvements has elapsed).

      ii. Concessionaire shall provide the University with all information from the meter readings, in a format prescribed by the University and in a manner that allows the University to maintain, without interruption, the University’s then-current internal system for usage recording and billing. The Concessionaire-installed smart meters must be read at consistent intervals as described in paragraph (d) of this Section 4.

   b) As part of the Preventive Maintenance and Predictive Maintenance plans developed in Section 1(i)(iv), the Concessionaire shall include a plan to ensure metering accuracy and a metering accountability metric for such meters that are part of the Reclaimed Water System. For the avoidance of doubt, the Concessionaire shall adhere to all applicable requirements with respect to meters set forth in University of Idaho Standards.
c) The Concessionaire shall continue to use the existing Siemens (SCADA), Software licensed software programs that the University uses to acquire, monitor and maintain Utility consumption data within the Utility System or use metering software of its choosing, subject to the Approval of such change in the Five-Year Plan by the University. In either case, the Concessionaire shall provide the University reasonable access to view the real-time meter data.

d) The Concessionaire shall ensure electronic metering occurs at a minimum of 60-second intervals for production meters. Metering read via radio transmitter or other means shall occur on the first of each month for billing purposes.

e) The Concessionaire shall maintain accurate software, monthly meter data, and provide that data to the necessary University servers for use by the University for campus billing.

f) The Concessionaire shall ensure that all new building connections to the Domestic/Reclaimed Water System are metered at the time of connection and that those meters are networked to the Utility Network as soon as reasonably practicable in order to meet the specifications set forth herein.

g) Plant production meters,

i. Production meters for the Reclaimed Water System must be in service when equipment is operating, functioning properly and reporting to a data system readily accessible by the University. If a primary production meter fails, causing the Reclaimed Water System (or any portion thereof) to be unable to be operated under control, safely and effectively, the associated equipment shall be shut off until the failure is resolved, and the Concessionaire shall cause such meter to be replaced or repaired as soon as reasonably practicable.

ii. Historical data on plant production meters starting after the Closing Date for plant production meters shall be maintained and readily accessible for the University’s review. Raw data shall be provided to the University in a format that cannot be edited by the Concessionaire. Data will be time stamped with the date, hour (in 24 hr. format) and minute. Data shall be stored in the Utility Network as required by the Record Retention Policy. Prior years’ data, to the extent available, shall be maintained for the University’s review.

iii. Meters shall be calibrated and maintained in accordance with the manufacturer’s recommendations. The schedule for such calibration shall follow the Preventive Maintenance and Predictive Maintenance plans developed in Section 1(i)(iv).
5) Efficiency

a) The Concessionaire shall operate the Reclaimed Water System plants in a manner to ensure reliability as well as optimization of energy and conservation of natural resources and, in any event, in accordance with the requirements set forth herein and in the Reclaimed Water Permit attached hereto as Appendix M. The Concessionaire shall use commercially reasonable efforts to continuously improve the operating efficiency and use of resources, including reduction in water loss from the Reclaimed Water System. The Concessionaire will maintain and operate a water audit and water loss control program serving to mitigate loss over the entire Reclaimed Water System in accordance with the provisions of the Reclaimed Water Permit attached hereto as Appendix M.

6) Design Standards

a) If requested by the University, the Concessionaire shall propose as a Capital Improvement or Material Change an accurate Reclaimed Water System hydraulic model, using modeling software, in order to:

i. Inform new buildings being connected to the Domestic Reclaimed Water System of the design pressure drop requirements based on system hydraulic models; and

ii. Verify and maintain system flow velocities according to design standards.

If Approved by the University, the Concessionaire shall implement, operate and maintain such model such that it remains up to date and accurate.

b) The Concessionaire shall cause design and construct the Reclaimed Water System to adhere to the following pipe velocity limits:

i. New piping to be limited to 10 feet per second ("fps") at peak flow; and

ii. New piping velocity at peak flow shall comply with applicable ASTM International standards.

c) Reclaimed Water System distribution piping shall be direct buried unless no other practicable option exists other than to place Reclaimed Water System piping in a Tunnel, provided that the University must Approve that there is no practicable option to direct bury such piping.

d) All water service and water mains wall penetrations must be links seal and Ductile Iron pipe.
e) The Concessionaire shall follow the Utility Service Connection and Inspection Standard in the Design Standards and all new reclaimed water mains must be approved of Idaho DEQ prior install.

f) The Concessionaire shall maintain and keep up to date with University of Idaho standards, (IDAPA 58.01.16) State of Idaho Wastewater Rules (IDAPA 58.01.17) Rules for Reclamation and Reuse of Municipal and Industrial AWWA (American Water Work Association) (Idaho State Plumbing Code 2017).

7) Unplanned Outage

a) An Unplanned Outage for the Reclaimed Water System shall mean the occurrence of one of the following:

i. Reclaimed water supply (regardless of the source of water) to an irrigation system served by the Reclaimed Water System has no water pressure in any area of the irrigation system as reported and reasonably verified by the University due to a closed or inoperable distribution valve, leakage, pipe failure, or other system failure on the Reclaimed Water System for distribution; except in the case where the valve has been closed upon the request of the University; or

ii. The Concessionaire fails to provide sufficient notice for such outage to be a Planned Outage.

b) The Concessionaire shall notify the University Front Desk Number if there is greater than 2% excessive Reclaimed Water System water loss in aggregate at any point(s) in the Reclaimed Water System. Within the first four (4) years after the Closing Date, the Concessionaire will perform a comprehensive evaluation of the Reclaimed Water System and recommend an aggregate loss percentage. The Parties shall, acting reasonably and in good faith, agree upon the value for an aggregate loss percentage. If the Parties fail to come to such agreement within forty-five (45) Days after completion of such evaluation, either Party may refer such dispute to Article 18 of the Concession Agreement. Once the aggregate loss is agreed, then the Concessionaire shall provide the University with notice any time the Reclaimed Water System exceeds the aggregate loss, and the Concessionaire shall cooperate in good faith with the University to implement such measures to reduce such excessive loss.

c) The Concessionaire shall respond to an emergency water leak with-in timely matter and assess the situation and take action if needed to control property damage by closing water main valve if needed and re-routing flow thru water mains to the University Campus.

d) If an Unplanned Outage for the Reclaimed Water System occurs which causes a loss of service to a portion of the Utility System, the Concessionaire shall promptly and diligently, including 24-hour a day service, commence active work, regardless of potential delay by others, to correct the Reclaimed Water
System Unplanned Outage and restore service; unless otherwise Approved by the University in its sole discretion.

e) If operational issues occur that result in a low water pressure event (lower than 20 psi on any water main for the Reclaimed Water System) the Concessionaire shall:

i. Notify the University by calling the University Front Desk Number if any portion of the University Campus is affected.

ii. Begin necessary corrective action; and if needed provide bottled water to users of the Reclaimed Water System;

iii. Provide updates every 24 hours to the University by calling the University Front Desk Number if an incident exceeds 24 hours or more.

8) Redundancy

a) Where possible N+1 exists as of the date hereof or at such later date where N+1 comes to exist, the Concessionaire shall thereafter maintain an N+1 level of redundancy for the Reclaimed Water System. “N+1” is defined as the ability to meet seasonal peak load assuming the largest capacity Utility System Asset in the distribution system of the Reclaimed Water System is non-functional.

b) If the Reclaimed Water System has an N+1 level of redundancy, and at any point thereafter fails to maintain such N+1 redundancy, the Concessionaire shall promptly and diligently commence active work within 48 hours to correct the loss of system reliability within 48 hours.

9) Water Quality

a) The Concessionaire shall ensure compliance by the Reclaimed Water System with State of Idaho Reuse operating Permit M-028-03 requirements.

b) The Concessionaire shall ensure compliance with State of Idaho DEQ sampling monitoring schedules. The Concessionaire shall inform the university’s Department of Environmental Health and Safety immediately of any water leaks.

c) The Concessionaire shall be required to maintain and operate the University of Idaho Reuse plant in compliance with DEQ regulations.

d) The Concessionaire shall comply with the Legionella Exposure Control Plan.

ed) The Concessionaire shall ensure compliance with AWWA and State of Idaho DEQ standards on operating, maintaining and servicing water reservoirs, Lagoons.

System Operating Efficiency Reporting

1. Boiler efficiencies
   a. Boiler A (Nebraska – wood): 76%
   b. Boiler B (Cleaver Brooks – gas): 85%
   c. Boiler C (Babcock and Wilcox – gas): 78%
   d. Boiler D (Combustion Engineering – gas): 85%

2. Thermal efficiency of District Energy Plant (at maximum wood boiler/turbine capacity)
   a. 69%

3. District Energy Plant steam in plant use, total use (K pounds) and % of boiler production
   a. <1% of boiler production

4. District Energy Plant hot lime softener blowdown rate (%)
   a. <1% of total throughput

5. Steam distribution losses (%)
   a. <2%

6. Condensate return (%)
   a. 98%

7. Chiller efficiency (kW/ton and steam pounds/ton)
   a. Carrier single-effect absorber: 14 lb/ton
   b. Armstrong/SmardT centrifugal: 0.49 kW/ton
   c. York centrifugal: 0.57 kW/ton

8. South Campus Chiller Plant electric consumption
   a. 21.25 kW at 0% chiller load / 1031.38 kW at 100% chiller load

9. Chilled Water loop average make-up
   a. Summer: 5,000 gal/month / Winter: 15,000 gal/month

10. Water Plant efficiency
    a. Well 3 pump efficiency: 69%
        i. 0.166 kW/GPM
    b. Well 4 pump efficiency: 61%
        i. 0.186 kW/GPM

11. Water system losses (Mgal)
    a. 4.9 Mgal Approximately 2% of the annual use

IT System Responsibility

1. DEFINITIONS

(A) “Utility Network” means the data infrastructure, network assets and information technology assets for the Utility System owned or leased by the Concessionaire that transmit or store all data gathered by the network devices for the Utility System and transmit all other data and electronic information within the Utility System and all Utility Facilities to data historians, including networking, cabling, devices, meters, virtual servers, firewalls, and software.

(B) “University Network” means the data infrastructure, network assets and other information technology assets owned or leased by the University that transmit or store data and other electronic information, including networking, cabling, fiber, firewalls, servers, classroom technology, and software.

2. LINE OF DEMARCATION

(A) The Parties acknowledge that, currently, Utility System Operations utilize the University’s wide area network (“WAN”) and local area network (“LAN”) to support communication between field devices, utility meters, and other virtual and physical sensors that are part of the Utility System. The line of demarcation between the University Network and the Utility Network can either be a physical device with an established point of connection or a separation of roles and responsibilities, in each case, as described in more detail herein and as shown on the representative diagram below as Figure 1: University Network and Utility Network Line of Demarcation. This Appendix BB shall also provide additional information on the roles and responsibilities of the University and the Concessionaire to support Utility System Operations as it relates to the Utility Network.

(B) Figure 1 below serves as a representative diagram of the line of demarcation between the University and the Concessionaire for the Utility Network infrastructure, which is comprised of both physical and virtual components.

(C) The University shall be responsible for all operations and maintenance of the University Network, except to the extent of damage caused by the Concessionaire or its Contractors, in which case, the Concessionaire shall promptly repair such damage, at its sole cost and expense. The Concessionaire shall be responsible for all operations and maintenance of the Utility Network, except to the extent of damage caused by the University or its Contractors, in which case, the University shall promptly repair such damage, at its sole cost and expense.
3. SERVICES PROVIDED BY THE UNIVERSITY TO THE CONCESSIONAIRE

The University shall provide to the Concessionaire the following services and access to the following equipment, as applicable, in each case in such location and in such manner as determined by the University in its reasonable discretion, provided that the University shall not materially change the location or manner of any of the listed items in a manner that adversely affects the Utility System Operations and provided further that the Concessionaire shall not use such services or equipment in a manner that causes damage thereto other than the ordinary wear and tear.

(A) OSI Layer 1 (physical)

(i) Copper cable connections between office wall plates and the University’s telecommunications closets, in all buildings where the Concessionaire maintains networked devices

(ii) Fiber connections between buildings where the Concessionaire has devices which need network connectivity, and to a University data center

(iii) Electrical power for all Utility Network systems

(iv) Any other physical component owned by the University that supports the Concessionaire’s Utility System Operations

(v) Servers which provide a virtual server environment for the Utility Network

(B) OSI Layer 2 (data links)
(i) Network switches for the Utility Network
(ii) Wireless access points and associated controllers for the Utility Network
(iii) Non-routed virtual local access networks (VLAN) for the Utility Network
(iv) Virtual server hosting includes virtual resources including processor, memory and storage for the Utility Network

(C) OSI Layer 3 (network)

(i) Assignment of the University’s public IP address space for the Utility Network
(ii) Internet connectivity with unrestricted bandwidth in connection with the Utility System Operations
(iii) Managed connectivity from the Utility Network to the University’s network resources (e.g., DHCP, DNS)
(iv) Access to virtual server console in connection with the Utility System Operations
(v) Remote access service to facilitate the Concessionaire’s access to select University services (as determined by the University) on the University Network

(D) OSI Layer 7 (application)

(i) Pass-through authentication for wireless authentication on the University Network
(ii) Automatic VLAN assignment for wireless clients on the University Campus, of which the Concessionaire may be one
(iii) Monitoring and alerting of all University-owned devices and services in the University Network
(iv) Provide the Concessionaire’s employees with credentials for the purpose of connecting to select University services (as determined by the University) on the University Network

4. SERVICES PROVIDED BY THE CONCESSIONAIRE

In connection with the Utility Services, the Concessionaire shall be responsible for providing the following services and equipment, as applicable as part of its operation of the Utility Network:

(A) OSI Layer 1 (physical)

(i) Any physical component owned or leased by the Concessionaire that supports the Concessionaire’s operations

(B) OSI Layer 2 (data links)

(i) Managed connectivity to the Utility Network resources (e.g., DHCP, DNS)
(C) OSI Layer 3 (network)
   (i) Firewall and/or SDWan devices for the Utility Network
   (ii) Remote access service to facilitate the University’s access to select Concessionaire services (as determined by the University) on the Utility Network

(D) OSI Layer 7 (application), in each case, with respect to the Utility Network
   (i) Monitoring and alerting
   (ii) Application access and management
   (iii) Server administration
   (iv) Server-based application administration
   (v) Authentication and authorization for the Concessionaire’s wireless network access
   (vi) CCTV system for general monitoring of Utility System Operations
   (vii) Provide the University’s employees with credentials for the purpose of connecting to select Concessionaire services (as determined by the Concessionaire) on the Utility Network

5. RESPONSIBILITIES OF THE UNIVERSITY

(A) Service requests regarding the University Network
   (i) The University will provide the Concessionaire the ability to utilize the University’s ticketing system to address service requests with respect to the University Network that affects the Utility Network from the Concessionaire
   (ii) The University will provide to the Concessionaire direct access to University IT staff for the Concessionaire to escalate IT service requests that materially impact the Utility Network

(B) Incidents
   (i) The University will provide the Concessionaire the ability to utilize the University’s ticketing system to address incident reports with respect to the University Network resulting from the Utility Network
   (ii) The University will provide to the Concessionaire direct access to University IT staff for the Concessionaire to escalate IT issues that materially impact the Utility Network

(C) Operations
(i) The University shall perform periodic backups of virtual servers used by the Concessionaire in such frequency as determined by the University in compliance with current University policies and standards

(ii) The University shall provide virtualized host environment security and services solely for Utility System Operations

(iii) The University shall provide maintenance of network equipment and their configurations that are part of the University Network that interact with the Utility Network

(iv) The University shall provide maintenance of firewall configurations for the firewall between the Utility Network and the University Network

(v) The University shall provide continuous monitoring and alerting on critical IT infrastructure that is part of the University Network that impacts the Utility Network

(vi) The University shall perform data closet network patching and documentation with respect to the University Network that interact with the Utility Network

(vii) The University shall provide to the Concessionaire escorted access to data closets on such terms and conditions as the University has provided notice in order for the Concessionaire to perform its obligations hereunder

(D) Communications and Coordination

(i) The University shall maintain a current contact list between the University and the Concessionaire to use for coordination during outages, service interruptions, upgrades or similar incidents, as they relate to the Utility Network or the University Network

(ii) The University shall proactively communicate with the Concessionaire about any planned outages of the University Network that will impact the Utility Network and the Utility System

(iii) The University shall provide to the Concessionaire with periodic status updates during and after unplanned outages of the University Network which impact the Utility Network and the Utility System

6. RESPONSIBILITIES OF THE CONCESSIONAIRE

(A) Service requests regarding the Utility Network

(i) The Concessionaire will use service requests within the University’s ticketing system, and the Concessionaire shall submit such service requests to the University using the University’s then-current processes for users of the University Network requesting service changes, provided that nothing herein shall obligate the University to approve or implement such changes. Such service requests may include requests to change the following with respect to the University Network: (1) types of services; (2) service levels
provided by the University Network; and (3) physical configuration or equipment of the University Network

(ii) The Concessionaire will utilize the University’s ticketing system to address service requests with respect to the Utility Network that affects the University Network from the University

(iii) The Concessionaire will provide to the University direct access for the University to escalate IT service requests which materially impact the University Network

(B) Incidents

(i) The Concessionaire will use the University’s ticketing system for reports of incidents impacting the Utility Network, and the Concessionaire shall submit incident reports for service outages, degradation of service, or other extraordinary events relating to the Utility Network to the University using the University’s then-current processes for users of the University Network reporting such incidents

(ii) The Concessionaire will utilize the University’s ticketing system to address incident reports with respect to the Utility Network resulting from the University Network

(iii) The Concessionaire will provide to the University direct access for the University to escalate IT incidents which materially impact the University Network

(C) Operations

(i) The Concessionaire shall be responsible for its backup requirements and locations for the Utility Network

(ii) The Concessionaire shall be responsible for data storage locations for the Utility Network

(iii) The Concessionaire shall perform periodic backups of system configurations, including at any time there is a new configuration or change with respect thereto

(iv) The Concessionaire shall be responsible for managing the Utility Network server administration, security, access control, remote access, etc.

(v) The Concessionaire shall provide direct support to the Concessionaire’s end users

(vi) The Concessionaire shall maintain network equipment and their configurations that are part of the Utility Network

(vii) The Concessionaire shall provide continuous monitoring and alerting on critical IT infrastructure that are part of the Utility Network

(D) Communications and Coordination
(i) The Concessionaire shall provide the University information regarding the current contact list for the Concessionaire regarding coordination during outages, service interruptions, upgrades, incidents, etc.

(ii) The Concessionaire will manage communications and response to incidents with the Utility Network
Calculation of Utility Fee

The Utility Fee for any given Fiscal Year shall be calculated as follows: (i) the Fixed Fee, plus (ii) Return on Equity Factor multiplied by 0.4 multiplied by the Variable Fee Component plus (iii) Cost of Debt Factor multiplied by 0.6 multiplied by the Variable Fee Component plus (iv) the Capital Recovery Amount plus (v) the Operating Fee. *Provided that the Variable Fee Component and Capital Recovery Amount shall be updated at the start of the Fiscal Year Second Half for each Fiscal Year to account for New Approved Capital Improvement Costs incurred in the Fiscal Year First Half and for any Unrecovered Balances becoming $0.*

For the purposes of all calculations hereunder, all dollar amounts will be rounded to the nearest dollar, and all decimals, such as the Cost of Debt Factor and Return on Equity Factor, shall be rounded to the ten-thousandths place.

Notwithstanding anything to the contrary contained herein, costs or expenses may only be included in one component of the Utility Fee for any given period, and the Concessionaire shall not be entitled to double-count such costs or expenses in any one period.

The Parties acknowledge that the purpose of the formula to calculate the Utility Fee is to approximate a reasonable and market rate to be paid by the University for the Utility Services commensurate of what would be paid for such services in the applicable market and is not intended to reflect Concessionaire’s actual cost of debt, return on equity, return of capital, tax liability or similar items.

Abandoned Capital Improvements

If any New Approved Capital Improvement Costs were included in the calculation of the Utility Fee in any Fiscal Year for a Capital Improvement that the University subsequently determines, in its reasonable discretion, that the Concessionaire has abandoned and does not ever intend to complete and bring into service for reasons other than a University Directive, a Delay Event, an Adverse Action or any other change in requirements by the University, those New Approved Capital Improvement Costs shall be removed from the Variable Fee Component and the Unrecovered Balance for each applicable Fiscal Year Half, and the Concessionaire shall promptly after receipt of notice of such determination recalculate the Utility Fee for such Fiscal Year resulting from the removal of such New Approved Capital Improvement Costs and pay to the University, within 30 Days of the determination by the Concessionaire, the difference between the Utility Fee actually paid by the University and the Utility Fee that the University would have paid if those New Approved Capital Improvement Costs had not been included.

Exhibit A

Attached hereto as Exhibit A is an illustrative mathematical explanation and example of the Utility Fee formula, which, in the event of a conflict between Exhibit A and such formula, the formula set forth above shall control.

Exhibit B
Attached hereto as Exhibit B is an illustrative mathematical explanation and example of the Capped O&M Index formula and the Uncapped O&M Costs, which, in the event of a conflict between Exhibit B and such formula, the formula set forth in the definition of “Capped O&M Index” and the definition of “Uncapped O&M Costs” shall control.

**Definitions**

“Capital Improvement Cost” shall mean the lesser of (i) the actual, out-of-pocket costs incurred by the Concessionaire (which costs and expenses shall include payments due and payable by the Concessionaire to the Operator or other Contractors pursuant to an Operating Agreement or similar agreement to the extent disclosed in the Concessionaire’s request for approval of such Capital Improvement pursuant to Article 4 of the Concession Agreement) in bringing a Capital Improvement into service, which may include insurance, and applicable sales or use tax, incremental financing costs and bonding costs, and (ii) the amount budgeted for such Capital Improvement in the University’s Approval therefor (which may include amounts payable to the Operator that are included in such Approval) which shall be increased by any reasonable, actual out-of-pocket costs incurred by the Concessionaire due to a Delay Event that were unavoidable for reasons outside the Concessionaire’s control, but excluding any amount budgeted for non-capital expenses with respect to such Capital Improvement, in each case taking into account any actual or anticipated tax credits or other benefits that will accrue to the Concessionaire (but only as and when such tax credit inures to the benefit of the Concessionaire and in the manner contemplated by the Approval of such Capital Improvement, if contemplated thereby), provided that, upon written request of the Concessionaire, the University shall have the right, in its sole discretion, to increase the Capital Improvement Cost by some or all of the amount that the actual out-of-pocket costs incurred for such Capital Improvement exceeds the amount Approved therefor.

“Capital Recovery Amount” shall mean the sum of the results of the following calculation, calculated separately for each New Approved Capital Improvement: (i) the New Approved Capital Improvement Costs incurred in the immediately prior Fiscal Year Half, divided by (ii) the Recovery Period for such New Approved Capital Improvement; which Capital Recovery Amount shall be included in each Fiscal Year’s Utility Fee thereafter until such time as the Unrecovered Balance for such New Approved Capital Improvement Costs equals $0 (which may occur at the start of a Fiscal Year Second Half); provided that, for the avoidance of doubt the Recovery Period for a New Approved Capital Improvement may extend beyond the Term.

“Capped O&M Ceiling” shall mean 102.0% of the Capped O&M Index for an applicable Fiscal Year.

“Capped O&M Index” shall mean for the applicable Fiscal Year (the “Subject Fiscal Year”) the three-year arithmetic average of Capped O&M Costs for the 3 previous Fiscal Years, regardless of whether the University or the Concessionaire was operating the Utility System (provided that for the Fiscal Years in which the University operated the Utility System, the Capped O&M Costs shall be the costs incurred or accrued by the University that are analogous to the categories of the Capped O&M Costs), provided that (A) when calculating such arithmetic average, the 3 previous Fiscal Years’ of Capped O&M Costs shall each be Adjusted for Inflation as follows: each of the previous Fiscal Years’ Capped O&M Costs shall be multiplied by (I) the CPI Index
in the Subject Fiscal Year divided by (II) the CPI Index in such previous Fiscal Year, provided that, in no event, shall the Capped O&M Costs be reduced as a result of being Adjusted for Inflation and (B) for purposes of calculating the Capped O&M Costs to be part of the three-year arithmetic average of Capped O&M Costs for the Capped O&M Index in a Subject Fiscal Year, the Capped O&M Costs for any Fiscal Year used in such calculation shall not exceed the Capped O&M Ceiling for that Fiscal Year, except that the University may, in its sole discretion, approve the inclusion of any Capped O&M Costs above the Capped O&M Ceiling in such calculation. Notwithstanding the foregoing, costs identified in the definition of “Capped O&M Costs” (i) related to (1) a New Approved Capital Improvement after it has been brought into service or (2) an Ongoing Utility System Project after it has been transferred to the Concessionaire and becomes part of the Utility System, (ii) related to operations and maintenance that are reasonably necessary to cause the Utility System or Utility System Operations to comply with the enactment of a new Law or the modification, amendment or change in enforcement or interpretation of a Law (including a change in the application or implementation thereof by any Governmental Authority) arising after the Setting Date or (iii) for any other adjustments to the Capped O&M Index made pursuant to the Agreement (including pursuant to Section 2.5(d), Section 2.5(k), Section 3.23, Section 5.1 and Section 6.3(a)) shall not be included in the calculation of the Capped O&M Index in each case, for the first 3 Fiscal Years (and any partial Fiscal Year) after the applicable occurrence (the “O&M Test Period”) as, for the avoidance of doubt, they will have been included as “Uncapped O&M Costs” pursuant to subclauses (p), (q) and (r) of the definition thereof for the applicable O&M Test Period. After the O&M Test Period elapses for each such occurrence, those costs that would otherwise be Capped O&M Costs but for the immediately prior sentence shall thereafter be included in the calculation of the Capped O&M Index and they shall be applied to increase the Capped O&M Index and the calculation of the historic Capped O&M Costs for each full Fiscal Year within the applicable O&M Test Period solely for the purpose of calculating the Capped O&M Index for the Fiscal Year immediately after such O&M Test Period and the subsequent two Fiscal Years. Notwithstanding the foregoing, the University and the Concessionaire hereby acknowledge and agree that, for purposes of calculating the Capped O&M Index, the Capped O&M Costs for the Fiscal Years ending June 30, 2018, June 30, 2019 and June 30, 2020 are deemed to be $2,635,157.74, $2,714,772.30 and $3,182,966.81, respectively, which, for the avoidance of doubt, shall be Adjusted for Inflation in accordance with this definition of “Capped O&M Index”. For the further avoidance of doubt, to determine the CPI Index for a Fiscal Year hereunder, the Parties shall calculate the arithmetic average of the monthly CPI Index for each month during such Fiscal Year and such average shall be the CPI Index for that Fiscal Year.

“Cost of Debt Factor” shall be .0230, which shall be adjusted at the end of each fifth Fiscal Year (starting on June 30, 2026), to be the “yield-to-worst”, expressed as a decimal, as such term is defined in the Barclays Baa U.S. Corporate Investment Grade Index using the “LCB1YW” ticker as of the date hereof (or if such index is no longer published, such other index as reasonably agreed by the Concessionaire and the University), which adjustment shall not be considered an amendment or modification of this Schedule 5 or the method of calculation of the Utility Fee and shall not require the approval of either the Concessionaire or the University. The Concessionaire shall have the right, with the University’s Approval which may be withheld in its sole discretion, to set the Cost of Debt Factor for a portion of the Variable Fee Component attributable to the Unrecovered Balance of a New Approved Capital Improvement based on the
actual cost of debt incurred by the Concessionaire with respect to such New Approved Capital Improvement.

“Fixed Fee” shall mean $7,600,000, increased by 1.5% to $7,714,000 on July 1, 2026 for the Fiscal Year ending on June 30, 2027 and by 1.5% at the start of each Fiscal Year thereafter. For the avoidance of doubt, the Fixed Fee is compensation for (i) the Concessionaire performing the Utility Services as set forth in the Agreement, (ii) the risks and liabilities undertaken by the Concessionaire in the Agreement for which the Concessionaire may not otherwise be compensated under the Agreement and (iii) the expertise and technical know-how that the Concessionaire is expected to bring to bear on the Utility System and the Utility System Operations.

“New Approved Capital Improvement” shall mean a Capital Improvement that was, or is being, constructed by the Concessionaire and is or will be brought into service as part of the Utility System.

“New Approved Capital Improvement Cost” shall mean the Capital Improvement Cost of a New Approved Capital Improvement.

“Operating Fee” shall mean the sum of (i) the Capped O&M Index, as may be adjusted in accordance with the definition thereof, (ii) the Annual Savings Incentive and (iii) the Uncapped O&M Costs.

“Relevant Region” shall mean Idaho, Montana, Nevada, Oregon, Utah, Washington and Wyoming.

“Return on Equity Factor” shall mean .0966, which shall be adjusted at the end of each 5th Fiscal Year (starting on June 30, 2026) to be the mean average of all return on equity percentages (as expressed as a decimal) for the investor-owned electric, gas or water public utilities in the Relevant Region approved within the previous 10 Fiscal Years, to the extent approved by a publicly-available, final, non-appealable order (or its equivalent) issued by the relevant public utilities commission or court of competent jurisdiction, which shall be determined (a) with respect to electric and gas public utilities, using the CapitalIQ Market Intelligence platform, or if such platform no longer exists, a replacement platform as determined by the University, acting reasonably, based on the following search terms: (i) peer set based on regulated electric, natural gas, and water utilities in the Relevant Region and (ii) regulatory rate case filings; mean of the approved cases within the last 10 years and (b) with respect to water public utilities, using the information published by the applicable commissions within the Relevant Region. For the avoidance of doubt, the foregoing adjustment shall not be considered an amendment or modification of this Schedule 5 or the method of calculation of the Utility Fee and shall not require the approval of either the Concessionaire or the University.

“Unrecovered Balance” shall mean for the New Approved Capital Improvement Costs incurred in any prior Fiscal Year Half, an amount equal to (i) those New Approved Capital Improvement Costs in such Fiscal Year Half less (ii) the aggregate Capital Recovery Amount that has been
paid in the calculation of the Utility Fee in prior Fiscal Years that are attributable to such New Approved Capital Improvement Costs.

“Variable Fee Component” shall mean the sum of all Unrecovered Balances, provided that, for the avoidance of doubt, the Variable Fee Component shall be recalculated for each Fiscal Year Half as a result of changes to the Unrecovered Balance for each Fiscal Year Half.
Exhibit A

CALCULATION OF UTILITY FEE

Formula
\[ UF = FF + (ROE \times 0.4 \times VFC) + (COD \times 0.6 \times VFC) + CRA + OF \]

COD = Cost of Debt Factor  
CRA = Capital Recovery Amount  
FF = Fixed Fee  
OF = Capped O&M Index + Annual Savings Incentive + Uncapped O&M Costs  
ROE = Return on Equity Factor  
UF = Utility Fee  
VFC = Variable Fee Component

Exemplar
As an exemplar only to illustrate a portion of the calculation of the Utility Fee, below shows the calculation for clauses (ii) and (iii) of the Utility Fee formula and the Capital Recovery Amount for Fiscal Years 2021, 2022 and 2023, assuming that (a) $1,000,000 is incurred as a New Approved Capital Improvement Cost in Fiscal Year 2020 for a New Approved Capital Improvement with an Recovery Period of 20 years with no further New Approved Capital Improvement Costs in 2021, 2022 and 2023, (b) the Return on Equity Factor is 0.10 and (c) the Cost of Debt Factor is 0.04. For the avoidance of doubt, none of these assumptions shall be binding on the University or the Concessionaire, and they are not intended to reflect any expectations of either Party or the actual calculation of the Utility Fee.

Fiscal Year 2020
Utility Fee clause (ii) = $0, calculated as follows: \(0.1 \times 0.4 \times 0\)  
Utility Fee clause (iii) = $0, calculated as follows: \(0.04 \times 0.6 \times 0\)  
Capital Recovery Amount = $0

Fiscal Year 2021
Utility Fee clause (ii) = $40,000, calculated as follows: \(0.1 \times 0.4 \times ($1,000,000 - $0)\)  
Utility Fee clause (iii) = $24,000, calculated as follows: \(0.04 \times 0.6 \times ($1,000,000 - $0)\)  
Capital Recovery Amount = $50,000, calculated as follows: $1,000,000 / 20

Fiscal Year 2022
Utility Fee clause (ii) = $38,000, calculated as follows: \(0.1 \times 0.4 \times ($1,000,000 - $50,000)\)  
Utility Fee clause (iii) = $22,800, calculated as follows: \(0.04 \times 0.6 \times ($1,000,000 - $50,000)\)  
Capital Recovery Amount = $50,000, calculated as follows: $1,000,000 / 20
As an exemplar only to illustrate the calculation of the Baseline Capped O&M Costs and thereby the Annual Savings Incentive sub-component of the Operating Fee component of the Utility Fee for Fiscal Year 2023, assuming that:

(a) Capped O&M Index is $10,000,000 for Fiscal Year 2021 (the first full Fiscal Year),

(b) CPI Index is 1.022 in Fiscal Year 2022 and 1.023 in Fiscal Year 2023, and

(c) forecasted annual operations and maintenance costs attributable to all Approved Capital Improvements and Material Changes is $50,000 in 2023, and

(d) actual Capped O&M Index is $9,550,000 for Fiscal Year 2023,

then:

Baseline Capped O&M Costs = $10,505,060 calculated as follows: $10,000,000 x 1.022 x 1.023 + $50,000

Total savings = $955,060 calculated as follows: $10,505,060 - $9,550,000

Annual Savings Incentive = $477,530, calculated as follows: $955,060 x 0.5
Exhibit B

CAPPED O&M INDEX CALCULATION

Formula

COMI = 3Y O&M Average

UOMC = OUOMC + NACI O&M + OUSP O&M + NL O&M + OA O&M

COMI = Capped O&M Index

3Y O&M Average = three-year arithmetic average of Capped O&M Costs for last 3 previous Fiscal Years as adjusted by clauses A & B of the COMI definition.

OUOMC = Uncapped O&M Costs other than NACI O&M, OUSP O&M, NL O&M or OA O&M

NACI O&M = annual operations and maintenance costs for New Approved Capital Improvements in the applicable O&M Test Period.

OUSP O&M = annual operations and maintenance costs for Ongoing Utility System Projects in the applicable O&M Test Period.

NL O&M = forecasted annual operations and maintenance costs for compliance with new Laws in the applicable O&M Test Period.

OA O&M = other adjustments to the COMI permitted by the Agreement in the applicable O&M Test Period.
**Exemplar**

As an exemplar only to illustrate the portion of the calculation of the Utility Fee related to the calculation of the Capped O&M Index and Uncapped O&M Costs for 2024, set forth below is the calculation of the Operating Fee using the hypothetical amounts set forth in the table below. For avoidance of doubt, none of these assumptions shall be binding on the University or the Concessionaire, and they are not intended to reflect any expectations of either Party as to the actual calculation of the Capped O&M Index or Uncapped O&M Costs.

<table>
<thead>
<tr>
<th>Year</th>
<th>CPI</th>
<th>COMI</th>
<th>COM Costs</th>
<th>NACL O&amp;M</th>
<th>OUSP O&amp;M</th>
<th>NL O&amp;M</th>
<th>OA O&amp;M</th>
<th>OUOMC</th>
</tr>
</thead>
<tbody>
<tr>
<td>2021</td>
<td>260</td>
<td>2.1 MM</td>
<td>2.11 MM</td>
<td>0</td>
<td>0</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>2022</td>
<td>280</td>
<td>2.15 MM</td>
<td>2.3 MM</td>
<td>.02 MM</td>
<td>.03 MM</td>
<td>.025 MM</td>
<td>.01 MM</td>
<td>0</td>
</tr>
<tr>
<td>2023</td>
<td>310</td>
<td>2.26 MM</td>
<td>2.12 MM</td>
<td>.02 MM</td>
<td>.03 MM</td>
<td>.025 MM</td>
<td>.01 MM</td>
<td>.01 MM</td>

<td>.01 MM</td>
<td>.01 MM</td>
<td></td>
</tr>
</tbody>
</table>

For Example, the 3Y O&M Average For Subject Fiscal Year of 2023 would be calculated as follows:

\[
\frac{(2024 \text{ CPI} / 2021 \text{ CPI, but no less than } 1) \times 2021 \text{ Capped O&M Costs, but the 2021 Capped O&M Costs can be no more than 102\% of 2021 COMI, plus (2024 CPI / 2022 CPI, but no less than 1) \times 2022 \text{ Capped O&M Costs, but the 2022 Capped O&M Costs can be no more than 102\% of 2022 COMI, plus (2024 CPI / 2023 CPI, but no less than 1) \times 2023 \text{ Capped O&M Costs, but the 2023 Capped O&M Costs can be no more than 102\% of 2023 COMI})}{3} \]

\[
\frac{(290 / 260 = 1.11 \times 2.11 = $2.342 \text{ MM}) + (290 / 280 = 1.036 \times 2.193 (\text{limited by 1.02 of COMI}) = $2.272) + (290 / 310 (\text{can’t be less than 1}) = 1 \times 2.12 = $2.12 \text{ MM})}{3} = $2.245 \text{ MM} \]

$2,245,000 \text{ COMI} + $20,000 \text{ NACI O&M} + $30,000 \text{ OUSP O&M} + $25,000 \text{ NL O&M} + 10,000 \text{ OA O&M} + $10,000 \text{ OUOMC} = $2,340,000

---

1 Such amounts would be included in the Capped O&M Index for Fiscal Years 2022, 2023 and 2024 (as adjusted by the CPI Index) solely for the purpose of calculating the Capped O&M Index for Fiscal Years 2025, 2026 and 2027, as applicable.

AMENDED AND RESTATED SCHEDULE 15

KEY PERFORMANCE INDICATORS

The Concessionaire shall calculate whether any KPI Compensation for each Key Performance Indicator has been generated during a Fiscal Year in accordance with this Schedule 15. For the avoidance of doubt, each KPI Calculation corresponds to one Key Performance Indicator.

1. Definitions

(a) Unless otherwise specified or the context otherwise requires, for the purposes of this Schedule 15, the following terms have the following meanings:

(i) “Availability KPIs” means those Key Performance Indicators which are measured by the following KPI Calculations: Electric Hours KPI Calculation, Electric Events KPI Calculation, Steam Plant Hours KPI Calculation, Steam Plant Events KPI Calculation, General Steam Hours KPI Calculation, General Steam Events KPI Calculation, Chilled Water Tank Hours KPI Calculation, Chilled Water Tank Events KPI Calculation, General Chilled Water Hours KPI Calculation, General Chilled Water Events KPI Calculation, Domestic Water Hours KPI Calculation, Domestic Water Event KPI Calculation, Sanitary Sewer Hours KPI Calculation, Sanitary Sewer Events KPI Calculation, Storm Water Hours KPI Calculation, Storm Water Events KPI Calculation, Reclaimed Water Hours KPI Calculation, Reclaimed Water Event KPI Calculation, Compressed Air Hours KPI Calculation, Compressed Air Event KPI Calculation.

(ii) “Compressed Air Portion of the Utility System” means that portion of the Utility System exclusively used in the production and distribution of compressed air to the University Campus to the line of demarcation for the Compressed Air System as described in the Performance Standards.

(iii) “Criticality Factor” means the factor for each University Building, as reasonably determined by the University as set forth on Appendix 24, which may, in no event, exceed 1.0.

(iv) “Domestic Water Portion of the Utility System” means that portion of the Utility System exclusively used in the production and distribution of potable water (and fire protection) to the University Campus to the line of demarcation for the Domestic Water System as described in the Performance Standards.

(v) “Electric Portion of the Utility System” means that portion of the Utility System exclusively used in the distribution of electricity to the University Campus to the line of demarcation for the Electric System as described in the Performance Standards.
(vi) “Equivalent Outage Hours” means, for each Unplanned Outage for each Portion of the Utility System, the product of the number of hours that such Unplanned Outage lasted (rounded up to the next full hour), multiplied by the Criticality Factor for the University Building affected by that Unplanned Outage for that Portion of the Utility System.

(vii) “General Chilled Water Portion of the Utility System” means that portion of the Utility System, other than the Chilled Water Tank (Thermal Energy Storage), exclusively used in the production and distribution of chilled water to the University Campus to the line of demarcation for the Chilled Water System as described in the Performance Standards.

(viii) “General Steam Portion of the Utility System” means that portion of the Utility System, other than the Steam Plant, exclusively used in the production and distribution of steam to the University Campus to the line of demarcation for the Steam and Condensate System as described in the Performance Standards.

(ix) “KPI Calculation Appendix” means each of the appendices attached to this Schedule 15.

(x) “KPI Calculations” means, collectively, all Availability KPIs and all Operational KPIs, and “KPI Calculation” shall mean any one of the foregoing.

(xi) “KPI Event” occurs when a KPI Calculation does not meet the Target for the applicable Key Performance Indicator in a Fiscal Year.

(xii) “KPI Event Year” means a Fiscal Year in which a KPI Event occurs.

(xiii) “KPI Measurement Window” means, commencing with the then-current Fiscal Year, the number of consecutive Fiscal Years preceding that Fiscal Year including the current Fiscal Year (but in no event more than the number of “Consecutive Event Years” shown on the applicable KPI Calculation Appendix) in which such KPI Event occurred.

(xiv) measured by the following KPI Calculations: Safety KPI, Environmental Compliance KPI and the Public Notice of Water Quality KPI.

(xv) of the Utility System, the Chilled Water Tank (Thermal Energy Storage), the Compressed Air Portion of the Utility System, the Domestic Water Portion of the Utility System, the Electric Portion of the Utility System, the Reclaimed Water Portion of the Utility System, the Sanitary Sewer Portion of the Utility System, the General Steam Portion of the Utility
System, the Steam Plant, or the Storm Water Portion of the Utility System, as applicable.

(xiv)(xvi) “Reclaimed Water Portion of the Utility System” means that portion of the Utility System exclusively used in the process and delivery of reclaimed, non-potable water to the University Campus to the line of demarcation for the Reclaimed Water System as described in the Performance Standards.

(xxvii) “Sanitary Sewer Portion of the Utility System” means that portion of the Utility System exclusively used for sanitary sewer purposes serving the University Campus up to the line of demarcation for the Sanitary Sewer System as described in the Performance Standards.

(xvi) “Steam Plant” means the portion of the Energy Plant that is used in the production and distribution of steam to the exterior of the walls of such district energy plant, which is then distributed to the University Campus through the General Steam Portion of the Utility System; provided that, for the avoidance of doubt the “Steam Plant” does not include the portions of such district energy plant that are used in the production or distribution of other Utilities beside steam.

(xvii)(xviii) “Storm Water Portion of the Utility System” means that portion of the Utility System exclusively used for storm water purposes serving the University Campus up to the line of demarcation for the Storm Water System as described in the Performance Standards.

(xxviii)(xix) “Target” for any Key Performance Indicator means the amount or percentage, as applicable, for that Key Performance Indicator as identified on the relevant KPI Calculation Appendix.

(xx) “Total Possible Connection Hours” shall be calculated as the total operating hours for a given utility system in the year. For all systems other than the Reclaimed Water System, this is: 24 hours/day x 365 days/year = 8,760 Total Possible Connection Hours (“TPCH”). For the Reclaimed Water System, there are 24 hours/day x 184 days/year = 4,416 TPCH.

(xx) “University Building” means each building or improvement connected to a Portion of the Utility System, which, as of the original Closing Date, is the list set forth on Appendix 24. A building or improvement shall be considered a University Building even if it is not listed on Appendix 24 or any update thereto.

(b) All capitalized words, not otherwise defined herein, shall have the meaning set forth in this Agreement (including all other schedules thereto), and if, pursuant to the terms and conditions of the Agreement, the definition of such capitalized
words is modified, such modification shall be deemed to apply in this Schedule 15.

(c) References to a “current Fiscal Year” herein shall mean the Fiscal Year for which the KPI Calculation is being determined.

2. Rules of General Applicability

(a) If, in any instance, the KPI Compensation is shown by the applicable KPI Calculation Appendix to be $1,000,000, it (and any cell in that KPI Calculation Appendix to the right or below such cell) shall be deemed to read, in all such instances, “the greater of (i) $1,000,000 and (ii) 10% of the Utility Fee for that particular Fiscal Year.”

(b) If, in any instance, the KPI Compensation is shown by the applicable KPI Calculation Appendix to be $500,000, it (and any cell in that KPI Calculation Appendix to the right or below such cell) shall be deemed to read, in all such instances, “the greater of (i) $500,000 and (ii) 5% of the Utility Fee for that particular Fiscal Year.”

(c) If there is an Unplanned Outage that affects both the Chilled Water Tank (Thermal Energy Storage) and the General Chilled Water Portion of the Utility System, such Unplanned Outage shall be considered an Unplanned Outage for both the Chilled Water Tank (Thermal Energy Storage) and the General Chilled Water Portion of the Utility System. If there is an Unplanned Outage that affects both the Steam Plant and the General Steam Portion of the Utility System, such Unplanned Outage shall be considered an Unplanned Outage for both the Steam Plant and the General Steam Portion of the Utility System.

(d) All amounts shown in the KPI Calculation Appendix shall be Adjusted for Inflation on the date that is the start of each Compensation Calculation Measuring Period other than the first such Compensation Calculation Measuring Period.

(e) The University shall have the right, upon notice to the Concessionaire, to revise Appendix 24 to amend the list of University Buildings and the Criticality Factor of any University Building in the event of an addition or removal of a University Building from the Utility System and/or a change in function, use or need for such University Building or for such other reason as determined by the University in good faith. If the University fails to provide notice revising Appendix 24 when a University Building is added to the Utility System, including any Portion of the Utility System, it shall automatically be deemed to have a Criticality Factor of 1.0 until such time as the University provides notice thereof.

(e) The Parties acknowledge and agree that this Schedule 15, the Criticality Factors, and the KPI Calculation Appendices appended hereto shall govern from and after the original Closing Date and that Schedule 15 to the Original Agreement shall no longer be of any force or effect for any time period.
3. **KPI Calculation for each Availability KPI**

(a) **KPI Calculation for Electricity – Unplanned Outage (Hours): KPI Calculation Appendix 1**

The Key Performance Indicator for the hours of Unplanned Outages for electricity is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year aggregating the Equivalent Outage Hours for the Electric Portion of the Utility System by the total possible connection hours of the Electric Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Electric Hours KPI Calculation”). provided that if one Unplanned Outage event affects multiple University Buildings for the Electric Portion of the Utility System, then the Electric Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for one University Building for that Unplanned Outage.

(b) **KPI Calculation for Electricity – Unplanned Outage (Events): KPI Calculation Appendix 2**

The Key Performance Indicator for the number of events of Unplanned Outages for electricity is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Electric Portion of the Utility System or any portion thereof (the “Electric Events KPI Calculation”).

(c) **KPI Calculation for Steam Plant (General) – Unplanned Outage (Hours): KPI Calculation Appendix 3**

The Key Performance Indicator for the hours of Unplanned Outages for the Steam Plant is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year for the Steam Plant by the total possible connection hours of the Steam Plant during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Steam Plant Hours KPI Calculation”).

(d) **KPI Calculation for Steam Plant – Unplanned Outage (Events): KPI Calculation Appendix 4**

The Key Performance Indicator for the number of events of Unplanned Outages for the Steam Plant is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Steam Plant or any portion thereof (the “Steam Plant Events KPI Calculation”).

(e) **KPI Calculation for Steam (General) – Unplanned Outage (Hours): KPI Calculation Appendix 5**
The Key Performance Indicator for the hours of Unplanned Outages for steam, other than in connection with the Steam Plant, is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year for the General aggregating the Equivalent Outage Hours for the Steam Portion of the Utility System by the total possible connection hours of the General Steam Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “General Steam Hours KPI Calculation”) provided that if one Unplanned Outage event affects multiple University Buildings for the Steam Portion of the Utility System, then the General Steam Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for one University Building for that Unplanned Outage.

**KPI Calculation for Steam (General) – Unplanned Outage (Events): KPI Calculation Appendix 6**

The Key Performance Indicator for the number of events of Unplanned Outages for steam, other than in connection with the Steam Plant, is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the General Steam Portion of the Utility System or any portion thereof (the “General Steam Events KPI Calculation”).

**KPI Calculation for Chilled Water Tank (Thermal Energy Storage) (General) – Unplanned Outage (Hours): KPI Calculation Appendix 7**

The Key Performance Indicator for the hours of Unplanned Outages for the Chilled Water Tank (Thermal Energy Storage) is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year for the Chilled Water Tank (Thermal Energy Storage) by the total possible connection hours of the Chilled Water Tank (Thermal Energy Storage) during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Chilled Water Tank Hours KPI Calculation”).

**KPI Calculation for Chilled Water Tank (Thermal Energy Storage) – Unplanned Outage (Events): KPI Calculation Appendix 8**

The Key Performance Indicator for the number of events of Unplanned Outages for the Chilled Water Tank (Thermal Energy Storage) is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Chilled Water Tank (Thermal Energy Storage) or any portion thereof (the “Chilled Water Tank Events KPI Calculation”).

**KPI Calculation for Chilled Water (General) – Unplanned Outage (Hours): KPI Calculation Appendix 9**
The Key Performance Indicator for the hours of Unplanned Outages for chilled water, other than in connection with the Chilled Water Tank (Thermal Energy Storage), is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year for the General Chilled Water Portion of the Utility System by the total possible connection hours of the General Chilled Water Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “General Chilled Water Hours KPI Calculation”). Provided that if one Unplanned Outage event affects multiple University Buildings for the Chilled Water Portion of the Utility System, then the General Chilled Water Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for that Unplanned Outage.

KPI Calculation for Chilled Water (General) – Unplanned Outage (Events): KPI Calculation Appendix 10

The Key Performance Indicator for the number of events of Unplanned Outages for chilled water, other than in connection with the Chilled Water Tank (Thermal Energy Storage), is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the General Chilled Water Portion of the Utility System or any portion thereof (the “General Chilled Water Events KPI Calculation”).

KPI Calculation for Domestic Water – Unplanned Outage (Hours): KPI Calculation Appendix 11

The Key Performance Indicator for the hours of Unplanned Outages for domestic water (including potable and fire protection) is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year aggregating the Equivalent Outage Hours for the Domestic Water Portion of the Utility System by the total possible connection hours of the Domestic Water Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Domestic Water Hours KPI Calculation”). Provided that if one Unplanned Outage event affects multiple University Buildings for the Domestic Water Portion of the Utility System, then the Domestic Water Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for that Unplanned Outage.

KPI Calculation for Domestic Water – Unplanned Outage (Events): KPI Calculation Appendix 12

The Key Performance Indicator for the number of events of Unplanned Outages for domestic water (including potable and fire protection) is determined on an
annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Domestic Water Portion of the Utility System or any portion thereof (the “Domestic Water Events KPI Calculation”).

KPI Calculation for Sanitary Sewer – Unplanned Outage (Hours): KPI Calculation Appendix 13

The Key Performance Indicator for the hours of Unplanned Outages for sanitary sewer is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year aggregating the Equivalent Outage Hours for the Sanitary Sewer Portion of the Utility System by the total possible connection hours of the Sanitary Sewer Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Sanitary Sewer Hours KPI Calculation”). provided that if one Unplanned Outage event affects multiple University Buildings for the Sanitary Sewer Portion of the Utility System, then the Sanitary Sewer Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for one University Building for that Unplanned Outage.

KPI Calculation for Sanitary Sewer – Unplanned Outage (Events): KPI Calculation Appendix 14

The Key Performance Indicator for the number of events of Unplanned Outages for sanitary sewer is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Sanitary Sewer Portion of the Utility System or any portion (the “Sanitary Sewer Events KPI Calculation”).

KPI Calculation for Storm Water – Unplanned Outage (Hours): KPI Calculation Appendix 15

The Key Performance Indicator for the hours of Unplanned Outages for storm water is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year aggregating the Equivalent Outage Hours for the Storm Water Portion of the Utility System by the total possible connection hours of the Storm Water Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Storm Water Hours KPI Calculation”). provided that if one Unplanned Outage event affects multiple University Buildings for the Storm Water Portion of the Utility System, then the Storm Water Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for one University Building for that Unplanned Outage.
The Key Performance Indicator for the number of events of Unplanned Outages for storm water is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Storm Water Portion of the Utility System or any portion thereof (the “Storm Water Events KPI Calculation”).

The Key Performance Indicator for the hours of Unplanned Outages for reclaimed, non-potable water is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year aggregating the Equivalent Outage Hours for the Reclaimed Water Portion of the Utility System by the total possible connection hours of the Reclaimed Water Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Reclaimed Water Hours KPI Calculation”), provided that if one Unplanned Outage event affects multiple University Buildings for the Reclaimed Water Portion of the Utility System, then the Reclaimed Water Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for one University Building for that Unplanned Outage.

The Key Performance Indicator for the number of events of Unplanned Outages for reclaimed, non-potable water is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Reclaimed Water Portion of the Utility System or any portion thereof (the “Reclaimed Water Events KPI Calculation”).

The Key Performance Indicator for the hours of Unplanned Outages for compressed air is determined on an annual basis in each Fiscal Year by dividing the number of hours that constitute an Unplanned Outage in that Fiscal Year aggregating the Equivalent Outage Hours for the Compressed Air Portion of the Utility System by the total possible connection hours of the Compressed Air Portion of the Utility System during that Fiscal Year, expressed as a percentage rounded to the nearest thousandth decimal point, and subtracting that result from 100% (the “Compressed Air Hours KPI Calculation”), provided that if one Unplanned Outage event affects multiple University Buildings for the Compressed Air Portion of the Utility System, then the Compressed Air Hours KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for one University Building for that Unplanned Outage.
KPI Calculation shall only include the Equivalent Outage Hours for one University Building, which will be the highest Equivalent Outage Hours for one University Building for that Unplanned Outage.

KPI Calculation for Compressed Air – Unplanned Outage (Events): KPI Calculation Appendix 20

The Key Performance Indicator for the number of events of Unplanned Outages for compressed air is determined on an annual basis in each Fiscal Year to equal the number of unique Unplanned Outages for the Compressed Air Portion of the Utility System or any portion (the “Compressed Air Events KPI Calculation”).

4. Determination of KPI Compensation for each Availability KPI

(a) The KPI Compensation for each Availability KPI for a Fiscal Year is determined as follows:

(i) If the applicable KPI Calculation meets the Target for that Availability KPI in that Fiscal Year, then the KPI Compensation for that Key Performance Indicator for that Fiscal Year is $0;

(ii) If (A) such Fiscal Year is a KPI Event Year for that Availability KPI and (B) the immediately preceding Fiscal Year was not a KPI Event Year for that Availability KPI, then the KPI Compensation shall be the amount shown on the applicable KPI Calculation Appendix for that KPI Calculation under the column labeled “0 Consecutive Event Years” and in the row where the column labeled “Annual Score” includes the KPI Calculation in the applicable KPI Calculation Appendix; and

(iii) If such Fiscal Year and the immediately preceding Fiscal Year are both KPI Event Years for that Availability KPI, then the KPI Compensation shall be determined by adding the applicable KPI Calculation for the Fiscal Years during the KPI Measurement Window and dividing that sum by the number of Fiscal Years in the KPI Measurement Window and rounding to the decimal point set forth in the applicable KPI Calculation, or if none is provided, to the nearest whole number, (the “KPI Calculation Average”), in which case the KPI Compensation shall be the amount shown on the applicable KPI Calculation Appendix for that KPI Calculation under the column where the number equals the number of Fiscal Years in the KPI Measurement Window and the row where the column labeled “Annual Score” includes the KPI Calculation Average in the applicable KPI Calculation Appendix, provided that if the KPI Compensation for such Fiscal Year would be higher if calculated pursuant to sub-section (ii) hereof, then the KPI Compensation shall be calculated in accordance with sub-section (ii) as if the immediately preceding Fiscal Year was not a KPI Event Year.
(b) The Concessionaire shall have the right, within sixty (60) Days following an Unplanned Outage for a Portion of the Utility System, to deliver notice to the University that it believes, in its reasonable discretion, that a single root cause caused an Unplanned Outage for multiple Portions of the Utility System, which notice shall include reasonable evidence supporting such conclusion. If the University, in its reasonable discretion, agrees that a single root cause caused an Unplanned Outage for multiple Portions of the Utility System, then it shall waive the Unplanned Outages for all Portions of the Utility System other than the Portion of the Utility System that the University, in its discretion, determines is the primary Portion of the Utility System affected by the root cause, solely for purposes of determining whether a KPI Event occurred in a particular Fiscal Year. For the avoidance of doubt, the Unplanned Outage for the primary Portion of the Utility System affected by the root cause shall be used to determine both the number of events of Unplanned Outages and the number of hours of Unplanned Outages for that Portion of the Utility System. For the avoidance of doubt, if more than one root cause for a Portion of the Utility System occurs concurrently and each root cause causes a separate Unplanned Outage, each root cause shall be treated as a separate Unplanned Outage event.

5. **KPI Calculation for each Operational KPI**

   (a) **KPI Calculation for Safety – Recordable Injury Rate: KPI Calculation Appendix 21**

   The Key Performance Indicator for the total OSHA recordable frequency is the number of fatalities, lost time injuries, substitute work, and other injuries (except a hearing threshold shift) requiring treatment by a medical professional and required to be recorded by OSHA in the performance of the Utility Services in the performance of the Utility Services (the “Safety KPI”).

   (b) **KPI Calculation for Environmental Compliance – Annual Rate of Notices of Violation: KPI Calculation Appendix 22**

   The Key Performance Indicator for environmental compliance will be the sum, in any given Fiscal Year, of the Notice of Violation notices received from the Idaho Department of Environmental Quality, the U.S. Environmental Protection Agency or a successor agency to either of the foregoing, or other Governmental Authority relating to compliance with Environmental Laws directly attributable to the Utility System, including its operation and maintenance, to the extent each such notice requires the payment of a fine or fee of $1,000 or more (the “Environmental Compliance KPI”).

   (c) **KPI Calculation for Issuance of Public Notice Related to Water Quality: KPI Calculation Appendix 23**

   The Key Performance Indicator for the issuance of public notices related to the quality of Domestic Water will be the sum of public notices sent by the Idaho
Department of Environmental Quality or any other Governmental Agency to the consumers of the Domestic Water Portion of the Utility System enforcing the Clean Water Act (33 U.S.C. §1321 et seq.) or any successor statute related to produced or distributed water quality (the “Public Notice of Water Quality KPI”).

6. **Determination of KPI Compensation for each Operational KPI**

(a) The KPI Compensation for each Operational KPI for a Fiscal Year is determined as follows:

(i) If the applicable KPI Calculation meets the Target for that Operational KPI in that Fiscal Year, then the KPI Compensation for that Key Performance Indicator for that Fiscal Year is $0;

(ii) If (A) such Fiscal Year is a KPI Event Year for that Operational KPI and (B) the immediately preceding Fiscal Year was not a KPI Event Year for that Operational KPI, then the KPI Compensation shall be the amount shown on the applicable KPI Calculation Appendix for that KPI Calculation under the column labeled “0 Consecutive Event Years” and in the row where the column labeled “Annual Score” includes the KPI Calculation in the applicable KPI Calculation Appendix; and

(iii) If such Fiscal Year and the immediately preceding Fiscal Year are both KPI Event Years for that Operational KPI, then the KPI Compensation shall be determined by determining the KPI Calculation Average, in which case the KPI Compensation shall be the amount shown on the applicable KPI Calculation Appendix for that KPI Calculation under the column where the number equals the number of Fiscal Years in the KPI Measurement Window and the row where the column labeled “Annual Score” includes the KPI Calculation Average in the applicable KPI Calculation Appendix, provided that if the KPI Compensation for such Fiscal Year would be higher if calculated pursuant to sub-section (ii) hereof, then the KPI Compensation shall be calculated in accordance with sub-section (ii) as if the immediately preceding Fiscal Year was not a KPI Event Year.

7. **Delivery of KPI Calculations and Right to Audit any Key Performance Indicator Calculation**

(a) Within thirty (30) Days after the expiration of the current Fiscal Year, the Concessionaire shall provide the University with written notice of its determination of all KPI Calculations and the KPI Compensation for the current Fiscal Year.

(b) The records that the Concessionaire maintains with respect to the calculation of the actual KPI Calculations shall be retained by the Concessionaire for a period of 4 Fiscal Years following the Fiscal Year to which such KPI Calculations relate in an electronic or other form reasonably acceptable to the University.
University shall have the right, through its Representatives, to examine, copy and audit such records at reasonable times, upon not less than five (5) Business Days’ prior notice, at such place within the City of Moscow as the Concessionaire shall reasonably designate from time to time for the keeping of such records. All costs of any such audit shall be borne by the University; provided, however, that if such audit establishes that any KPI Compensation for any particular KPI Calculation for the applicable Fiscal Year was lower than the final determination thereof, as set forth in the statement delivered by the Concessionaire to the University, by at least 1.0%, then the Concessionaire shall pay the cost of such audit. If, as a result of such audit, it is determined that the Concessionaire under calculated the KPI Compensation for any particular Fiscal Year, such difference shall be included as KPI Compensation in the KPI Evaluation Period during which such determination was made.

#### Notes:
- **KPI Compensation to the University** represents the payment to the university based on the percentage of availability and outage hours.
- The table shows different compensation amounts for various levels of availability and outage hours, with lower availability rates leading to higher compensation amounts.
- The compensation is calculated based on the percentage of availability and the number of consecutive event years.

THIRD AMENDMENT TO PRE-CLOSING AGREEMENT

THIS THIRD AMENDMENT TO PRE-CLOSING AGREEMENT (this “Third Amendment”) is made as of October 1, 2023 and effective as of June 30, 2023, by and between The Regents of the University of Idaho (the “University”) and Sacyr Plenary Utility Partners Idaho LLC, a Delaware limited liability company (the “Concessionaire” and, together with the University, the “Parties”).

A. The University and the Concessionaire have entered into that certain Long-Term Lease and Concession Agreement for the University of Idaho Utility System, dated as of November 2, 2020 (as may be amended, modified, or supplemented, the “Concession Agreement”).

B. The University and the Concessionaire have entered into that certain Pre-Closing Agreement dated December 22, 2020 (the “Original Agreement”), as amended by that certain First Amendment to Pre-Closing Agreement dated June 30, 2021 (the “First Amendment”), as further amended by that certain Second Amendment to Pre-Closing Agreement dated June 30, 2022 (the “Second Amendment” and, together with the Original Agreement and the First Amendment, the “Original Amended Agreement”), pursuant to which, among other things, the University agreed to receive, through the State of Idaho, Department of Administration, Division of Insurance the Substitute Policy (as defined in the Original Agreement) for the Applicable Insured Property (as defined in the Original Agreement) during the University Coverage Period (as defined in the Original Agreement) because the All Risk Property Insurance with respect to the Utility System required to be maintained by the Concessionaire in accordance with Section 13.1(h) of the Concession Agreement was not available to the Concessionaire on a commercially reasonable basis or on commercially reasonable terms.

C. The Parties now wish to amend the Original Amended Agreement to, among other things, authorize the University to request the State of Idaho, Department of Administration, Division of Insurance to purchase and hold a new Substitute Policy, as defined below, which would replace the Substituted Policy under the Original Amended Agreement.

NOW, THEREFORE, the University and the Concessionaire agree as follows:

1. Recitals

The foregoing recitals are incorporated into this Third Amendment as if set forth in full.

2. Definitions

(a) Unless expressly provided otherwise, or the context otherwise requires, (i) capitalized terms used but not defined herein shall have their respective meanings set forth in the Original Amended Agreement and (ii) references to Sections, Articles, and clauses herein shall be references to Sections, Articles and clauses of the Concession Agreement. The term “Agreement” as used in the Original Amended Agreement shall mean and refer to the Original Amended Agreement as amended by this Third Amendment.
(b) “Substitute Policy” shall mean, from and after July 1, 2023, and for purposes of the Original Amended Agreement and this Third Amendment, the All Risk Property Insurance for the Applicable Insured Property required by Section 13(h), acquired by and on such terms and conditions, coverages, limits, and exclusions with respect to Utility Assets as the State of Idaho, Department of Administration, Division of Insurance may determine in its sole discretion.

(c) “Applicable Insured Property” shall mean, from and after July 1, 2023, and for purposes of the Original Amended Agreement and this Third Amendment, the Utility System Assets that are covered by the Substitute Policy; provided that the Substitute Policy may not provide coverage for the entire Utility System and, for the avoidance of doubt, the maintenance, repair, replacement, restoration, and operation of any portion of the Utility System not insured by the Substitute Policy shall remain the responsibility of the Concessionaire, including the Restoration obligations set forth in Section 13.4. Upon the Concessionaire’s written request, the University shall provide the Concessionaire with a copy of the Substitute Policy.

3. Extension of University Coverage Period

(a) The Parties hereby agree that the University Coverage Period shall be extended to be from the Time of Closing until the earlier of (i) June 30, 2024 or (ii) such earlier date when the Required Coverages under Section 13.1(h) become available to the Concessionaire on a commercially reasonable basis or commercially reasonable terms. During the University Coverage Period, the University shall continue to maintain the Substitute Policy that it receives through the State of Idaho, Department of Administration, Division of Insurance in accordance with the Original Agreement (as modified hereby) to the extent of the coverage provided by the State of Idaho. From and after the date hereof, the Parties agree that the Substitute Policy shall include a deductible (after taking into account any self-insured retention for which the Concessionaire is not responsible) not to exceed $10,000.

(b) Consistent with the First Amendment and the Second Amendment, the University shall not name the Concessionaire, the Operator, Moscow ID Eco District I, LLC, as a Contractor to the Operator, or any Leasehold Mortgagee as additional insureds with respect to the Substitute Policy, and the Parties acknowledge that none of the foregoing had been listed as additional insureds with respect to the Substitute Policy prior to the date hereof. The University and the Concessionaire acknowledge and agree that the Operator, Sub-Operator and any Leasehold Mortgagee of whom the University has received notice shall be named as loss payees of the Substitute Policy for the University Coverage Period up to their respective interests in the Utility System.

(c) On or before the date which is thirty (30) days after the execution of this Third Amendment, the Concessionaire shall pay to the University $142,653, the estimated annual premium for the Substitute Policy (the “Estimated Premium”). The Parties acknowledge that, as of the time of execution of this Third Amendment, the actual amount of the premium for the Substitute Policy is unknown. Once the State of Idaho, Department of Administration, Division of Insurance notifies the University of the actual annual premium
payable for the Substitute Policy (the “Extension Policy Premium”), the difference between the Extension Policy Premium and the Estimated Premium, if positive, shall be payable by the Concessionaire to the University within thirty (30) days after the date of the University’s demand. If the difference between the Extension Policy Premium and the Estimated Premium is negative, the University shall refund the difference to the Concessionaire within thirty (30) days after the date of the Concessionaire’s demand. The amount of the Extension Policy Premium will be subject to adjustment only to the extent the University Coverage Period terminates before June 30, 2024, in which case the University shall refund a portion of the Extension Policy Premium equal to the Extension Policy Premium multiplied by a fraction, whose numerator is the number of days between the date of termination and the denominator is 365. The Concessionaire shall not include the cost of the Extension Policy Premium as an additional Capped O&M Cost but shall instead require the Sub-Operator to bear the cost without any increase in the fee payable by the Concessionaire to the Operator in accordance with Section 3.3(e).

(d) The University hereby waives the Concessionaire’s requirement to comply with Section 13.1(h) with respect to the Applicable Insured Property or Section 13.3 to the extent related to the Concessionaire Required Coverage for the Applicable Insured Property described in Section 13.1(h) during the extension of the University Coverage Period; provided however, that notwithstanding the foregoing, the Concessionaire shall maintain and evidence equipment breakdown coverage with respect to the entire Utility System, as applicable.

4. **Miscellaneous**

(a) **Conflict.** In the event the terms of the Original Amended Agreement conflict with the terms of this Third Amendment, the terms of this Third Amendment shall control and govern.

(b) **Original Amended Agreement in Full Force and Effect.** Except as expressly modified herein, the Original Amended Agreement remains in full force and effect. For the avoidance of doubt, the Concessionaire retains the obligations in the Concession Agreement, including but not limited to Sections 3.2, 3.22, 13.3(h), 13.4(a).

(c) **Severability.** Each provision of this Third Amendment shall be valid and enforceable to the fullest extent permitted by applicable Law. The invalidity of any one or more phrases, sentences, clauses or sections contained in this Third Amendment shall not affect the remaining portions of this Third Amendment or any part thereof. If any provision of this Third Amendment or the application thereof to any Person or circumstance is held or deemed to be or determined to be invalid, inoperative or unenforceable in any particular case in any particular jurisdiction or jurisdictions because it conflicts with any other provision or provisions hereof or of any applicable Law, or public policy, or for any other reason, (i) such circumstance shall not have the effect of rendering the provision in question inoperative or unenforceable in any other case or circumstance, or rendering any other provision or provisions herein contained invalid, inoperative or unenforceable to any extent whatsoever and (ii) the Parties shall negotiate in good faith to amend this Third Amendment to implement the provisions set forth herein.
(d) **Counterparts; Electronic Execution.** This Third Amendment may be executed in any number of counterparts which, taken together, shall constitute one and the same agreement. This Third Amendment shall be effective when it has been executed by each Party and delivered to both Parties. To evidence the fact that it has executed this Third Amendment, a Party may send a copy of its executed counterpart to the other Party by email or other means of electronic transmission. Such Party shall be deemed to have executed and delivered this Third Amendment on the date it sent such email or other means of electronic transmission. In such event, such Party shall forthwith deliver to the other Party an original counterpart of this Third Amendment executed by such Party.

[SIGNATURES ON THE FOLLOWING PAGE]
IN WITNESS WHEREOF, the Parties have caused their duly authorized officers to execute and deliver this Third Amendment as of the day and year first written above.

UNIVERSITY OF IDAHO

SUBJECT
Updated Six-Year Capital Plan (FY25-30)

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Sections V.K.2.a and b.

BACKGROUND/DISCUSSION
The University of Idaho is providing an updated Six-Year Capital Plan to reflect the addition of one project to the plan.

Huckabay Medical Education Building Expansion
The University of Idaho renovated the former Business Technology Incubator building on campus in 2019 and repurposed it to serve the needs of the Washington, Wyoming, Alaska, Montana, Idaho (WWAMI) Medical Education Program. Upon completion of the renovation effort the facility was renamed the D.A. Huckabay Medical Education Building. As the medical education curriculum and programs have grown in the five years since, and are anticipated to grow further, the facility requires expansion to add space for additional faculty offices, classroom, and support spaces. The site plan of the original structure accounted for an eventual expansion of the facility. The university has engaged in a pre-planning feasibility exercise with the architectural team responsible for the 2019 renovation. Based on the pre-planning work to date, the estimated cost of general construction for this proposed expansion is $2,492,000. Owner’s costs, estimated costs of architectural services, reasonable and rational construction and project contingencies bring the total estimate project costs to $3,496,900.

IMPACT
This project is key in the success of the University’s strategic plan regarding medical education opportunities to serve the State of Idaho. There is no material financial impact from approval of the updated Six-Year Capital Plan. The University will seek approval of the individual construction project described above in compliance with Board policy, at which time the financial impact of the project will be addressed in accordance with applicable policy.

ATTACHMENTS
Attachment 1 – Revised Six-Year Capital Plan

STAFF COMMENTS AND RECOMMENDATIONS
Under Board Policies and Procedures, Section V.K.2.b – If a Major Project is not included in a Plan and an institution or agency under the governance of the Board desires to obtain approval of the Major Project, before seeking approval, it shall
first bring an amended Plan to the Board for Approval at a regularly scheduled meeting of the Board.

Staff recommends approval.

BOARD ACTION
I move to approve the revision to the FY25–30 University of Idaho’s six-year capital plan as submitted in Attachment 1.

Note: FY2025 Six Year Plan, 1 Jul 23 REVISED 17 Apr 24

University of Idaho
UNIVERSITY OF IDAHO

SUBJECT
Request for design authorization; proposed Huckabay Medical Education Building Expansion, University of Idaho (UI), Moscow, Idaho.

REFERENCE:
February 2018  Idaho State Board of Education (Board) authorized the construction phase for WWAMI Medical Education Building renovation project.

December 2021  Board approved the naming of the WWAMI Medical Education Building as the “D.A. Huckabay M.D. Medical Education Building.”

April 2024  University of Idaho requests revision of the FY25-FY30 UI Six-Year Capital Improvement Plan.

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedure, Section V.K.1, and Sections V.K.3.

BACKGROUND/DISCUSSION
This is a request to authorize the design phase of a project to expand the Huckabay Medical Education Building located on the Moscow Campus of the University of Idaho.

The University of Idaho renovated the former Business Technology Incubator Building on campus in 2019 and repurposed it to serve the needs of the Washington, Wyoming, Alaska, Montana, Idaho (WWAMI) Medical Education Program. Upon completion of the renovation effort the facility was renamed the D.A. Huckabay Medical Education Building. As the medical education curriculum and programs have grown in the five years since, and are anticipated to grow further, the facility requires expansion to add space for additional faculty offices, classroom, and support spaces. The site plan of the original structure accounted for an eventual expansion of the facility. The university has engaged in a pre-planning feasibility exercise with the architectural team responsible for the 2019 renovation. The proposed addition is approximately 5,000 gsf. The site plan of the original structure accounted for an eventual expansion of the facility.

The project is consistent with the strategic goals and objectives of the University of Idaho and is key to the success of the University’s strategic planning regarding medical education opportunities to serve the State of Idaho.
In addition, the project is fully consistent with the principles, goals, and objectives of UI’s Long Range Campus Development Plan (LRCDP).

**IMPACT**

Based on the pre-planning and feasibility work to date, the estimated cost of general construction for this proposed expansion is $2,492,000. Owner’s costs, estimated costs of architectural services, reasonable and rational construction and project contingencies bring the total estimate project costs to $3,496,900.

The source of funds for this project effort is WWAMI program funds set aside for this project initiative.

This request is for authorization to proceed with the design phase for the proposed expansion of the Huckabay Medical Education Building. The University seeks authority to expend $805,540 during the design phase, based on estimated costs for A/E fees, other planning necessities such as site survey, geotechnical investigation, plan review fees, and design phase contingency allowances.

**ATTACHMENTS**

Attachment 1 – Capital Project Tracking Sheet  Page 4

**STAFF COMMENTS AND RECOMMENDATIONS**

The authorization of this request will allow the University of Idaho to progress with the planning and design phase of the intended expansion of the Huckabay Medical Education Building. The project will increase the capacity of the existing facility by approximately 5,000 gsf which will add space for additional faculty offices, classrooms, and support spaces to accommodate the growth in UI’s medical education curricula and programs over the past five (5) years.

UI’s request for the Board to authorize project planning and design costs of $805,540 is based upon estimated costs for architectural and engineering fees, site survey costs, geotechnical investigation, plan review fees, and design phase contingency allowances.

Under Board Policy V.K., if a project is estimated to exceed $2M, it is defined as a “major project.” Under Board Policy V.K.3.a. the institutions are required to obtain
Board approval for the planning and design process of a major project which is estimated to eventually cost in excess of $2M. (Present estimated total project costs are estimated to be approximately $3.5M)

Staff recommend approval.

BOARD ACTION
I move to approve the University of Idaho request to proceed with the design phase for the proposed expansion of the Huckabay Medical Education Building, for a total cost of $805,540 as described in the materials presented. Approval includes the authority for the Vice President for Finance and Administration to execute all necessary and requisite consulting and vendor contracts to implement the planning and design phase of this project.

SUBJECT
Board Policy III.G., Postsecondary Program Review and Approval – First Reading

REFERENCE
August 29, 2019  The Board was presented with a first reading of proposed amendments to Board Policy III.G. Policy, which was referred back to Instruction, Research, and Student Affairs (IRSA) for additional discussion.

October 17, 2019  The Board approved the first reading of proposed amendments, which adds baccalaureate degree programs to the list of programs reviewed by the Board and changes requirements for new academic program proposals that consist of new state appropriations.

December 2019  The Board approved the second reading of proposed amendments to Board Policy III.G.

June 10, 2020  The Board approved a one-year, partial waiver of the requirement for full proposals in Board Policy III.G.3.d and 4.d for modifications to academic programs, career technical programs and instructional and administrative units.

June 16, 2021  The Board approved an extension of the partial waiver of the requirement for full proposals in Board Policy III.G.3.d. and 4.d for modifications to academic programs, career technical programs and instructional and administrative units.

June 16, 2021  The Board approved the first reading of proposed amendments to Board Policy III.G, which reorganizes and streamlines proposal requirements and provides flexibility to the Executive Director to delegate authority to designees for the approval of academic and career technical program changes.

August 26, 2021  The Board approved the second reading of proposed amendments to Board Policy III.G.

December 15, 2021  The Board approved the first reading of proposed amendments to Board Policy III.G., correcting duplicative language and aligning approval roles.

February 17, 2022  The Board approved the second reading of proposed amendments to Board Policy III.G.

APPLICABLE STATUTE, RULE OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section III.G.
Idaho Code §§ 33-2107A, 33-2202, 33-2205

BACKGROUND/DISCUSSION
In August 2021, the Board approved a major revision to Board Policy III.G. Postsecondary Program Approval and Discontinuance. This revision restructured the policy to include three levels of review, based on the nature of requested programmatic changes: full proposal, short proposal, and letter of notification. In February 2022, the Board approved amendments to correct an unintended conflict in the policy related to actions requiring a short proposal.

Over the past 2.5 years of implementing the significantly revised policy, Board staff and institutions have noted several minor-to-moderate changes that would further streamline the program review and approval process. The proposed amendments include these changes.

It was also recognized by staff at the Board Office and the Idaho Division of Career Technical Education (Division) that review and approval authority of CTE programs in Policy III.G. is misaligned with Idaho Code. Specifically, Chapter 22, Title 33, Idaho Code, establishes the State Board for Career Technical Education, defines career technical education, and establishes Idaho’s career technical education system (secondary through postsecondary). The Chapter further establishes the Division as the agency responsible for administering the system on behalf of, and within state law and the policies of, the State Board for Career Technical Education. Specifically, Idaho Code § 33-2202 authorizes the Board, when serving in its role as the State Board for Career Technical Education, to execute the laws of the state relative to career technical education. Further, Idaho Code § 33-2205 identifies the administrator to the State Board for Career Technical Education as the administrator for the Division and authorizes the administrator to carry into effect the rules of the Board and coordinate all efforts in career technical education.

Additionally, language within Chapter 22 expands the administrator’s role in carrying out all federal and state provisions, including the rules adopted by the Board for its own governance (generally referred to as Board policies), related to career technical education. The current language in Board Policy III.G. authorizes the administrator or the Board’s executive director to approve career technical education programs. This language does not align with the statutory framework for the administration of career technical programs as that authorization is vested in the administrator for the Division. Idaho Code separates the duties of the Office of the State Board of Education established in Idaho Code § 33-102A and the powers and duties of the administrator for the State Board for Career Technical Education established in Idaho Code § 33-2205.

The proposed changes to Board Policy III.G. regarding the approval of career technical education programs align Board policy with Idaho Code. In addition to the alignment of the program approval process, additional technical changes have been made specific to career technical education programs such as removing the definition of career technical program component, as these programs do not include components.
The policy is now misaligned with recently updated practices related to the role of the Professional Standards Commission (PSC) in reviewing new educator preparation programs. The PSC no longer reviews such proposals, which will be reviewed, going forward, by the review process approved by the Board at the October 2023 regular Board meeting.

Finally, the current policy requires an external peer review for all doctoral programs before proposal submission to the board. Multiple institutions have indicated that some doctoral programs require specialized accreditation that includes a robust preliminary external peer review by the programmatic accreditor before any students may be enrolled. Proposed amendments would allow for the accreditor’s external review to supplant the required external peer review under certain conditions.

IMPACT
Amendments will clarify and streamline the program review and approval process and bring it into alignment with current practice. They will also clearly articulate the differential roles and responsibilities of the Board’s executive director and the Division administrator in program review and approval. Amendments will also increase efficiency and reduce duplicative costs for the development of some doctoral programs.

ATTACHMENTS
Attachment 1 – Board Policy III.G. Postsecondary Program Review and Approval – First Reading

BOARD STAFF COMMENTS AND RECOMMENDATIONS
The proposed amendments will improve the program review and approval process, for both Board staff and institutional staff. The amendments will also provide internal clarity regarding the review and approval of career technical programs and provide for more efficient program development processes.

Board staff recommends approval of these amendments.

BOARD ACTION
I move to approve the first reading of proposed amendments to Board Policy III.G, Postsecondary Program Review and Approval, as submitted in Attachment 1.

Moved by __________ Seconded by __________ Carried Yes _____ No _____
Idaho State Board of Education
GOVERNING POLICIES AND PROCEDURES
SECTION: III. POSTSECONDARY AFFAIRS
SUBSECTION: G. Postsecondary Program Review and Approval  
February 2022 June 2024

This subsection shall apply to the University of Idaho, Idaho State University, Boise State University, Lewis-Clark State College, North Idaho College, College of Eastern Idaho, College of Southern Idaho, and College of Western Idaho.

1. Classifications and Definitions

    a. Academic Program shall mean a postsecondary educational program offered by an institution of higher education that leads to an academic or professional degree, certificate, or other recognized educational credential as defined in Board Policy Section III.E.

    b. Academic Program Components shall include options, minors, emphases, tracks, concentrations, specializations, and cognates as defined by each institution. For the purposes of this policy, a certificate is not an academic program component.

    c. Administrative Unit shall mean offices, centers, bureaus, or institutes that are responsible for carrying out administrative functions, research, or public service as their primary purpose, and are not responsible for academic or career technical programs.

    d. Career Technical Program shall mean a sequence or aggregation of competencies that are derived from industry-endorsed outcome standards and directly related to preparation for employment in occupations requiring a career technical certificate or degree as defined in Board Policy Section III.E. These programs must include competency-based applied learning that contributes to an individual’s technical skills, academic knowledge, higher-order reasoning, and problem-solving skills.

    e. Career Technical Program Component shall mean instructional paths to fields of specialized employment, consisting of more than one specialized course.

    f.g. Financial Impact shall mean the total financial resource expenditures, regardless of funding source, needed to support personnel costs, operating expenditures, capital outlay, capital facilities construction or major renovation, and indirect costs that are incurred as a direct result of establishing, modifying, or discontinuing a new instructional program, instructional unit, or administrative unit. This includes the impact of moving resources from existing programs to proposed programs.

    g.f. Full Proposal shall mean a document submitted to the Board Office or Idaho Division of Career Technical Education (IDCTE) that contains details about substantive changes to academic or career technical education programming or administration that require review and approval by the full Board, or the Board’s Executive Director of the Board the IDCTE State Administrator (State
h. g. Instructional Unit shall mean departments, institutes, centers, divisions, schools, colleges, campuses, branch campuses, and research units (e.g. extension centers) that are responsible for academic programs or career technical programs.

i. h. Letter of Notification shall mean a letter from the institution to the Executive Director, IDCTE-State Administrator or designee, notifying the Board Office or IDCTE as appropriate of changes to academic or career technical education programming or administration that do not require advanced approval by the Board, or the Executive Director, State Administrator, or designee, as specified in this policy.

j. i. Major shall mean a principal field of academic specialization that usually accounts for 25 to 50 percent of the total degree requirements. The concentration of coursework in a subject major serves to distinguish one program from others leading to the same or a similar degree.

k. j. Short Proposal shall mean a document submitted to the Board Office or IDCTE that contains details about non-substantive changes to academic or career technical education programming or administration that require review and approval by the Executive Director, State Administrator, or designee, as specified in this policy. The Short Proposal template is developed and maintained by the Board Office in collaboration with IDCTE as appropriate.

2. Roles and Responsibilities

Program planning, review, and approval shall be a collaborative process which includes the Board, Board office staff, IDCTE staff, the institutions, faculty, external advisory groups, regional and specialized accreditation bodies, and other stakeholders pursuant to Board Policy III.Z.

a. Each institution shall establish and maintain policies and procedures for evaluating existing programs and developing new program proposals. This evaluation process should be an integral component of the institution’s academic and career technical education planning and budgeting processes.

b. The Council on Academic Affairs and Programs (CAAP) shall review new program proposals and discontinuation requests shall be reviewed by the Council on Academic Affairs and Programs (CAAP). CAAP shall make recommendations to the Instruction, Research, and Student Affairs (IRSA) committee on instructional programmatic matters and related policy issues.
c. The State Administrator of IDCTE shall approve academic microcredentials developed by the institutions, in consultation with Board Staff, in addition to career technical microcredentials. The Idaho Division of Career Technical Education shall review and make recommendations as appropriate to the IRSA Committee and/or the Board on instructional programmatic matters and policy issues related to their IDCTE’s roles and responsibilities. The State Administrator of the Idaho Division of Career Technical Education is authorized to approve academic microcredentials developed by the institutions in addition to career technical microcredentials.

The Professional Standards Commission shall review and make recommendations as appropriate to the Board on educator preparation programs for educator certification purposes. Educator preparation program approval for state certification purposes is governed by Administrative Code through a separate process. The processes for earning approval for certification should be conducted concurrently with the program approval process when practicable.

3. Procedures for Review and Approval of Changes to Academic Programming and Administration Proposal Submission and Approval

Proposed changes to academic programs and administration at the institutions shall be submitted to the Board for one of three levels of review: a Full Proposal, a Short Proposal, or a Letter of Notification. Institution staffs are strongly encouraged to consult with Board staff to determine the appropriate level of review before submitting proposed changes to the Board office.

a. Actions Requiring a Full Proposal

Subsequent to institutional review and consistent with institutional policies, but prior to implementation, actions related to academic programs or units identified in this subsection require approval by the Board or the Executive Director or designee as indicated, and shall be submitted by the institution as a Full Proposal. There are three different types of Full Proposal forms: a form for a discontinuation of a program, a form for new instructional/administrative units, and a form for all other actions requiring a Full Proposal.

i. The following actions require approval by the Board:

1) Establishment of a new branch campus or change in location geographically apart from the main campus, regardless of financial impact. A location of an institution that is geographically apart and independent of the main campus is permanent in nature; offers at least 50% of the courses of an educational program leading to a degree, certificate, or other educational credential; has its own faculty and
administrative organization; and has its own budgetary and hiring authority. Subsection 3.a.i.1 does not apply to community colleges.

2) Establishment of any new academic undergraduate or graduate program with a financial impact of $250,000 or more per fiscal year.

   a) All doctoral program proposals shall require an external peer review, regardless of financial impact. The external peer-review panel shall consist of at least two (2) members and will be selected by the Executive Director or designee and the requesting institution’s Chief Academic Officer. Board staff shall notify the institution in writing whether it may proceed with the external peer-review process. External reviewers shall not be affiliated with a public Idaho institution. The review shall consist of a paper and on-site peer review, followed by the issuance of a report and recommendations by the panel. Each institution shall provide the panel with a template developed by the Executive Director or designee. The peer reviewer report and recommendations shall be a significant factor in the Board’s evaluation of the program.

   i. For programs that require specialized accreditation, external review for the accreditation process may supplant standard external peer review as described in this paragraph, and may occur after approval of the program by the Board, if and only if receipt of initial accreditation is required before any student enrolls in the program. Institutions must receive from the Executive Director or designee approval to supplant external peer review with specialized accreditation review prior to submitting a doctoral program proposal. Institutions shall submit a copy of the specialized accreditation report to the Board Office within 30 days of completion of the review.

   b) New educator preparation programs must utilize the Board approved new education preparation program approval process and require concurrent submission of a Full Proposal to the Executive Director or designee— and the Professional Standards Commission (PSC), regardless of financial impact. The PSC new education preparation program approval process ensures programs meet the Idaho standards for educator certification. The Executive Director or designee ensures the program proposal is consistent with the program approval process and meets the standards approved by the Board and established by rule in Administrative Code pursuant to Section 33-1254 Idaho Code. The PSC makes recommendations to the Board for approval of programs as vehicles for meeting the state certification requirements.

3) Establishment by a community college of any new applied baccalaureate program, pursuant to Section 33-2107A, Idaho Code.
4) Establishment of any new program with academic program fees as defined in Board Policy Section V.R.

5) Adding program fees to existing programs requires full Board approval consistent with Board Policy Section V.R; however, such changes do not require submission of a Full Proposal.

ii. The following actions require approval by the Executive Director or designee:

1) Establishment of any new academic undergraduate or graduate program with a financial impact of less than $250,000 per fiscal year.
2) Discontinuation of an academic undergraduate or graduate program or instructional or administrative unit.
3) Establishment of any new instructional or administrative unit.
4) Establishment of any new or discontinuation of any existing academic undergraduate and graduate certificates consisting of more than 30 credits and with a financial impact of $250,000 or more per fiscal year.
5) Expansion of an existing program outside an institution’s Designated Service Region, with the exception of programs for which institutions have statewide program responsibilities as defined in Board Policy III.Z.
6) Conversion of a program option into a stand-alone program with a financial impact of $250,000 or more per fiscal year.
7) Consolidation of two or more undergraduate programs into one undergraduate program with a financial impact of $250,000 or more per fiscal year.
8) Consolidation of two or more graduate programs into one program.
9) Splitting of a graduate program into two or more programs.
10) Addition of an academic undergraduate, graduate, or specialized certificates or degrees to an existing programs with a financial impact of $250,000 or more per fiscal year.

Each Full Proposal shall be reviewed by the Council on Academic and Affairs and Programs (CAAP) within thirty (30) days of receipt submission to the Board Office. At the sole discretion of the Executive Director or designee, any Full Proposal may be referred to the full Board for review and approval. To ensure review by the full Board, the 30-day review must end at least fifteen (15) calendar days before the agenda material submission deadline for the targeted regular Board meeting. Requests requiring new state appropriations shall be submitted to the Board for review prior to or concurrently with submission of an institution’s annual budget request.

b. Actions Requiring a Short Proposal

Subsequent to institutional review and consistent with institutional policies, but prior to implementation, the following actions related to academic programs or
units require approval by the Executive Director or designee and shall be submitted by the institution as a Short Proposal:

i. Establishment of a new or discontinuation of any existing academic undergraduate or graduate certificate consisting of more than 30 credits with a financial impact of less than $250,000 per fiscal year.

ii. Addition of an academic undergraduate, graduate, or specialized certificate degree to an existing program with a financial impact of less than $250,000 per fiscal year.

iii. Splitting of an undergraduate program into two or more undergraduate programs.

iv. Consolidation of two or more undergraduate programs into one undergraduate program with a financial impact of less than $250,000 per fiscal year.

v. Conversion of one program option into a stand-alone program with a financial impact of less than $250,000 per fiscal year.

vi. Conversion or transition of a degree type (e.g., Bachelor of Arts to Bachelor of Science).

vii. Conversion or transition of a certificate type (e.g., Technical Certificate of Completion to Basic Technical Certificate).

viii. Deviation from certificate or degree program credit definitions as provided in Board Policy III.E.

ix. Changes to program names or degree titles related to Statewide Program Responsibilities as defined in Policy III.Z (requires full board approval).

x. Establishment of new programs consisting of multiple certificates with similar coursework.

xi. Establishment of a dual degree from existing programs with a financial impact of less than $250,000 per fiscal year.

xii. Modification to existing academic instructional or administrative units.

At the sole discretion of the Executive Director or designee, institutions may be required to submit a Full Proposal for any action identified in this subsection.

c. Actions Requiring a Letter of Notification

Subsequent to institutional review and consistent with institutional policies, and within at least 30 days after before implementation, institutions shall notify the Executive Director or designee of the following actions related to academic programs or units via a Letter of Notification:

i. Establishment of a new, modification to, or discontinuation of an academic program component.

ii. Establishment of a new or discontinuation of any existing academic undergraduate or graduate certificate consisting of fewer than thirty (30) credits.
iii. Expansion of an existing program expansion within an institution’s Service Region as defined in Board Policy III.Z.

iv. Expansion of an existing statewide program offered by an institution with Statewide Program Responsibilities as defined in Board Policy III.Z.

iv. A change from clock hours to credit hours for an academic program.

v. Addition of an online option to an existing academic program.

vi. Transition of an academic program with less than fifty percent (50%) of courses offered online exclusively to fifty percent (50%) or more of courses offered online exclusively.

vii. Transition of an academic program to an exclusively online format.

viii. Addition or removal of courses that represent a significant departure from existing academic program offerings or method of delivery.

ix. A change in name or title of any academic program or instructional or administrative unit.

x. A change of Classification of Instructional Program (CIP) code for any academic program.

xi. A credit change to the total number of credits required to earn a certificate or degree to an existing academic program.

At the sole discretion of the Executive Director or designee, institutions may be required to submit a Short Proposal or Full Proposal for any action identified in this subsection.

d. Other minor content changes to curriculum, descriptions of individual courses, or catalog listings do not require notification to or approval by the Board or the Executive Director or designee.

d-e. Requests to establish, modify, or discontinue a microcredential, as defined in Board Policy III.E, require approval by the State Administrator or shall be submitted by the institution in accordance with a templated developed by IDCTE.

4. Career Technical Program Proposal Submission and Approval

a. Actions Requiring a Full Proposal

Subsequent to institutional review and consistent with institutional policies, but prior to implementation, requests for changes to career technical programs or units identified in this subsection require approval by the State Administrator or the Executive Director or designee and shall be submitted by the institution as a Full Proposal.

i. Establishment of a new career technical education program or certificate. New career technical programs or certificates with a financial impact of $250,000 or more per fiscal year require approval by the full Board.

ii. Discontinuation of career technical programs and components.

iii. Establishment of new career technical administrative or instructional units.
iv. Expansion of a career technical program outside an institution’s Designated Service Region as defined in Board Policy III.Z.

v. Consolidation of two or more career technical programs into one career technical program with a financial impact of $250,000 or more per fiscal year.

vi. Conversion of one certificate or degree option within a career technical program option into a stand-alone career technical program with a financial impact of $250,000 or more per fiscal year.

vii. Addition of career technical certificates or degrees to existing career technical programs with a financial impact of $250,000 or more per fiscal year.

For new or modified career technical programs or certificates, a Program Profile Attachment B is required. Each Full Proposal shall be reviewed by the Council on Academic and Affairs and Programs (CAAP) within 30 days of receipt. Submission to IDCTE. At the sole discretion of the State Administrator or Executive Director or designee, any Full Proposal may be referred to the Board for review and approval. To ensure review by the full Board, the 30-day review must end at least fifteen (15) calendar days before the agenda material submission deadline for the targeted regular Board meeting.

b. Actions Requiring a Short Proposal

Subsequent to institutional review and consistent with institutional policies, but prior to implementation, requests for changes in career technical programs or units identified in this subsection require approval by the State Administrator or Executive Director or designee and shall be submitted by the institution as a Short Proposal.

i. Splitting of a career technical program into two or more career technical programs.

ii. Consolidation of two or more career technical programs into one career technical program with a financial impact of less than $250,000 per fiscal year.

iii. Conversion of one certificate or degree option within a career technical program option into a stand-alone career technical program with a financial impact of less than $250,000 per fiscal year.

iv. Addition of career technical certificates, specialized certificates, or degrees to existing career technical programs with a financial impact of less than $250,000 per fiscal year.

v. Inactivation of a career technical program (refer to paragraph 8 of this policy). Inactivation of a career technical program. Inactivation allows program re-evaluation and assessment in response to rapid changes in industry for up to three years. If industry demand for the program does not resume within three years following approved inactivation, the program shall be discontinued pursuant to paragraph 7 of this policy.
vi. Addition or removal of courses that represent a significant departure from existing career technical program offerings or method of delivery.

vii. Modification to existing career technical instructional or administrative units.

viii. Conversion or transition of one career technical program degree or certificate level to another degree or certificate level.

ix. Transition of a career technical program to an exclusively online format.

x. Addition of an online option to an existing career technical program.

xi. Transition of a career technical program with less than fifty percent (50%) of courses offered online exclusively to fifty percent (50%) or more of courses offered online exclusively.

For the addition or modification of career technical programs or certificates, a Program Profile Attachment B is required. Upon the recommendation of the State Administrator or at the discretion of the Executive Director or designee, institutions may be required to submit a Full Proposal for any action identified in this subsection.

c. Actions Requiring a Letter of Notification

Subsequent to institutional review and consistent with institutional policies, and within 30 days after implementation, institutions shall notify the State Administrator or the Executive Director or designee of the following changes to career technical programs or units via a Letter of Notification and Program Profile as appropriate:

i. Establishment of a new, modification to, or discontinuation of a career technical program component.

ii. Career technical program expansion within an institution’s Designated Service Region as defined in Board policy III.Z.

iii. Re-activation of a career technical program within three years from inactivation.

iv. A change from clock hours to credit hours for a career technical program.

v. A change in the name or title of any career technical program or instructional or administrative unit.

vi. A change of Classification of Instructional Program (CIP) code for any career technical program.

vii. A credit change to the total number of credits required to earn a certificate or degree to an existing career technical program.

viii. Minor changes to career technical courses. Requires a program profile Attachment B and letter.

Upon the recommendation of the State Administrator or at the discretion of the Executive Director or designee, institutions may be required to submit a Short Proposal or Full Proposal for any action identified in this subsection.
d. Requests to establish, modify, or discontinue a microcredential, as defined in Board Policy III.E, require approval by the State Administrator or shall be submitted by the institution in accordance with a template developed by the Division of Career Technical Education.

e. Requests requiring new state appropriations shall be included in the annual budget request of the Idaho Division of Career Technical Education for Board approval.

5. Sunset Clause for Academic and Career Technical Program Approval

Academic and career technical programs approved by the Board, or Executive Director, or State Administrator, must be implemented within five years. A program not implemented within five years from the approval date requires submission for approval of an updated proposal. Institutions shall notify the Executive Director, State Administrator, or designee in writing when an approved program has not been officially implemented within the sunset timeframe. Institutions may request a change in the sunset timeframe indicated in the program proposal if a program’s implementation is delayed.

6. Academic and Career Technical Program Proposal Review Timeline and Denial Procedures

a. The Executive Director, State Administrator, or designees shall act on any Full Proposal or Short Proposal within thirty (30) days from proposal submission.

b. If the Executive Director or designee denies a proposal, he/she shall provide specific reasons in writing to the institution. The institution shall have thirty (30) days in which to address the issue(s) for denial of the proposal. The Executive Director or designee shall have ten (10) working days after the receipt of the institution’s response to re-consider the denial. If the Executive Director or designee denies the request after re-consideration, the institution may send its request and the supporting documents related to the denial to the Board for final reconsideration.

7. Program Discontinuance

The primary considerations for program discontinuance are whether the program is an effective use of the institution’s resources, no longer serves student or industry needs, or when programs no longer have sufficient students to warrant allocation of resources. This policy does not apply to programs that are discontinued as a result of financial exigency as defined in Board Policy Section II.N.
a. Institutions shall develop policies, in accordance with the Northwest Commission on Colleges and Universities Accreditation Handbook, which requires institutions to make appropriate arrangements for enrolled students to complete affected programs in a timely manner with minimum interruptions.

b. Any faculty or staff members whose employment the institution seeks to terminate due to the discontinuance of a program based upon Board Policy Section III.G. shall be entitled to the following procedures:

i. Non-classified contract employees, including non-tenured faculty, may be dismissed or have their contracts terminated or non-renewed in accordance with Board and institutional policies.

ii. State of Idaho classified employees shall be subject to layoff as provided in the rules of the Division of Human Resources. Classified employees of the University of Idaho shall be subject to layoff as provided in the policies of the University of Idaho.

iii. Tenured faculty will be notified in writing that the institution intends to dismiss them as a result of program discontinuance. This notice shall be given at least twelve (12) months prior to the effective date of termination.

iv. An employee who receives a notice of termination as a result of program discontinuance is entitled to use the internal grievance procedures of the institution. The sole basis to contest a dismissal following a program closure is in compliance with these policies.

8. Career Technical Program Reduction, or Termination, Prioritization, and Inactivation

For the reduction or termination of career technical programs, institutions shall adhere to criteria set forth by Idaho Division of Career Technical Education (IDCTE).

a. Conditions for Reduction or Termination

A program is subject to reduction or termination when one-two or more of the following conditions exist. Standards for the metrics listed below will be predetermined at the local level according to the institution’s program health metrics for each category.

i. Inadequate Job Opportunities
ii. Inadequate Student Enrollment
iii. Inadequate Positive Placement
iv. Inadequate Completion Rate
v. Inadequate Finances

b. Inactivation allows program re-evaluation and assessment in response to rapid changes in industry for up to three years. If industry demand for the program does
not resume within three years following approved inactivation, the institution shall submit a discontinuation full proposal pursuant to paragraph 4 of this policy.

b-c. Notice to Employees

The institution must give notice in writing to employees who are affected by a program reduction or termination in accordance with Board and institutional policies.

9. Reporting

a. The Executive Director or designee shall report semi-annually all approved program changes shall be reported to the Board regarding all program proposals approved by the Executive Director or designee.

b. All baccalaureate and graduate level programs approved by the Board require a report on the program’s progress in accordance with a timeframe and template developed by the Executive Director or designee.
SUBJECT
Board Policy III.Q., Admission Standards – First Reading

REFERENCE
June 2007  Board approved the first reading of amendments to Board Policy III.Q.
August 2007 Board approved the second reading of amendments to Board Policy III.Q.
December 2013 Board approved the first reading of amendments to Board Policy III.Q.
February 2014 Board approved the second reading of amendments to Board Policy III.Q.
April 2017  Board approved the first reading of amendments to Board Policy III.Q.
June 2017 Board approved the second reading of amendments to Board Policy III.Q.
June 2020 Board approved a temporary waiver of the College Entrance Exam minimum admission requirement in response to the COVID-19 pandemic.
June 2021 Board approved removing College Entrance Exam minimum admission requirements.
April 2024 Board approved the first reading of amendments to Board Policy III.Q.

APPLICABLE STATUTES, RULE OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section III.Q, Admission Standards

BACKGROUND / DISCUSSION
In Spring 2024, postsecondary admissions representatives convened for several meetings to consider adopting consistent statewide measures for the Direct Admissions program that include use of students’ high school Idaho Standard Achievement Test (ISAT) scores as part of the criteria. To support the group’s deliberations, Board research staff provided data demonstrating the postsecondary outcomes of a specific cohort of students based on their ISAT scores, GPA, and SAT scores. This work resulted in approval of a Direct Admissions policy that expands to include grade point average and/or ISAT as direct admissions criteria. It also creates more specific criteria for Lewis-Clark State College and Idaho State University.

The proposed changes update and streamline this policy in multiple ways. First, the additional Direct Admissions descriptions will result in students receiving more tailored admissions communications. Secondly, the high school course requirements are clarified through removing specific course limitations that are no longer appropriate. Third, changes to Career Technical Education (CTE)
program admissions clarify CTE admission procedures and remove descriptions of advising processes that are better described elsewhere. Fourth, revisions to the provisional (proposed “alternative”) admissions process better reflect options for admitting and serving students, and in particular, high-achieving students from high schools without high school accreditation from a Board-recognized accreditor.

IMPACT
Approval of the policy amendments will improve readability and interpretability of the policy. Additionally, amendments provide clearer guidance to Board staff and institutions on direct admissions decisions and to institutional admissions offices on acceptable approaches for high school admission.

ATTACHMENTS
Attachment 1 – Board Policy III.Q. Admission Standards – First Reading

STAFF COMMENTS AND RECOMMENDATIONS
The Board heard a first reading of some of most of the proposed amendments at the February 2024 Board meeting and expressed no concerns. The Direct Admissions work concluded much earlier than anticipated, so staff are bringing the policy back to the Board for another first reading to incorporate the Direct Admissions policy language into the previously read version of the policy. This will eliminate the need for another round of readings to incorporate the Direct Admissions policy in the future.

The proposed policy amendments were reviewed by Board staff, enrollment/admissions staff at all eight institutions, career technical college deans, the Council on Academic Affairs and Programs at their March 28, 2024 meeting, and the Instruction, Research, and Student Affairs Committee of the Board at their April 4, 2024 meeting. Staff recommends approval.

BOARD ACTION
I move to approve the first reading of proposed amendments to Board Policy III.Q, Admission Standards as presented in Attachment 1.

Moved by __________ Seconded by __________ Carried Yes _____ No _____
Idaho State Board of Education
GOVERNING POLICIES AND PROCEDURES
SECTION: III. POSTSECONDARY AFFAIRS
SUBSECTION: Q. Admission Standards
June 2021

1. **Institution Policies**

Each postsecondary institution must establish institutional policies which meet or exceed the following minimum academic and career technical admission standards. Additional and more rigorous requirements also may be established by the institutions for admission to specific programs, departments, schools, or colleges. Consistent with institutional policies, admission decisions may be appealed by applicants to the institutional admissions committee. Career Technical Education program admission requirements apply to all technical colleges, including the College of Eastern Idaho, the College of Southern Idaho, the College of Western Idaho, Lewis-Clark State College, Idaho State University College of Technology, and North Idaho College.

2. **Institutional Academic Program Admission**

a. **Direct Admission**

Students attending an Idaho public school, or Idaho private school that has entered a Direct Admission participation agreement with the Board, may be notified of their admission to an Idaho public college or university through the State Board’s Direct Admission Program. Admission awarded through the program is contingent on the verified level of achievement in high school curriculum and successful completion of Idaho high school graduation requirements. Direct admissions offers are based on the following criteria:

<table>
<thead>
<tr>
<th>Verified Achievement</th>
<th>Institution Admission</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISAT Math level ≥3 and ELA/Literacy level ≥3</td>
<td>Admission to all Idaho public institutions.</td>
</tr>
<tr>
<td>OR</td>
<td></td>
</tr>
<tr>
<td>Unweighted GPA = 3.0</td>
<td></td>
</tr>
</tbody>
</table>

| Unweighted GPA between 2.25 and 2.99 | Admission to Idaho’s public community colleges, Lewis-Clark State College and Idaho State University. |
| Unweighted GPA < 2.25 | Admission to Idaho’s public community colleges. |

Admission awarded through the program is contingent on the verified level of achievement in high school curriculum (grade point average), performance on the...
11th grade Idaho Standards Achievement Test (ISAT), and successful completion of Idaho high school graduation requirements. Direct admission decisions apply only to offers of admission to Idaho public institutions made between October 1 to June 30 of the senior year of high school.

**a-b. Academic Program: Regular Admission**

An applicant who is not admitted under the Board's Direct Admission Program must graduate from a high school accredited by a body recognized by the Board and complete the Admission Standards Core Courses with a minimum 2.00 cumulative grade point average. **Cognia is the Board’s recognized high school accrediting body.** Applicants who graduated from high school prior to 1989-1995 will be subject to the admission standards at the time of their high school graduation. Each institution may develop a separate policy for the admissions and placement of international students.

### Admission Standards Core Courses

<table>
<thead>
<tr>
<th>Subject Area</th>
<th>Minimum Requirement</th>
<th>Select from These Subject Areas</th>
</tr>
</thead>
<tbody>
<tr>
<td>Secondary Language Arts and Communication</td>
<td>8 credits</td>
<td>Composition, Literature, and Oral Communication</td>
</tr>
<tr>
<td>Mathematics</td>
<td>6 credits</td>
<td>A minimum of six (6) credits. Secondary Mathematics includes Integrated Mathematics, Applied Mathematics, Business Mathematics, Algebra, Geometry, Trigonometry, Fundamentals of Calculus, Probability and Statistics, Discrete Mathematics, and courses in Mathematical Problem Solving and Quantitative Reasoning. A total of 8 credits are strongly recommended. Four (4) of the required mathematics credits must be taken after 9th grade. Courses not identified by traditional titles, (i.e., Algebra I or Geometry), may be used as long as they contain all of the critical components of higher math functions prescribed by the State Mathematics Content Standards. Institutions may recognize other Mathematics courses as meeting this requirement if those courses are taken in compliance with the Idaho state minimum graduation requirements.</td>
</tr>
<tr>
<td>Social Studies</td>
<td>5 credits</td>
<td>American Government (state and local), Geography, U.S. History, and World History. Other courses may be selected from Economics, including Consumer Economics, if it aligns to the state content standards, Psychology, and Sociology.</td>
</tr>
<tr>
<td>Science</td>
<td>6 credits</td>
<td>Secondary sciences include instruction in Applied Sciences, Earth and Space Sciences, Physical Sciences, and Life Sciences. A maximum of two (2) credits may be derived from career technical</td>
</tr>
</tbody>
</table>
science courses when courses are aligned to state career technical content standards, and/or Applied Biology, and/or Applied Chemistry. (Maximum of two (2) credits).

Institutions may recognize other Science courses as meeting this requirement if those courses are taken in compliance with the Idaho state minimum graduation requirements.

Must have laboratory science experience in at least two (2) credits.

A laboratory science course is defined as one in which at least one (1) class period per week is devoted to providing students with the opportunity to manipulate equipment, materials, or specimens; to develop skills in observation and analysis; and to discover, demonstrate, illustrate, or test scientific principles or concepts.

Arts and Humanities (including world languages) 2 credits

Humanities courses include instruction in Visual Arts, Music, Theatre, Dance, or World Language aligned to the Idaho content standards for those subjects. Other courses such as Literature, History, Philosophy, Architecture, or Comparative World Religions may satisfy the humanities standards if the course is aligned to the Interdisciplinary Humanities Content Standards. History courses beyond those required for state high school graduation may be counted toward this category.

World Language is strongly recommended. The Native American Languages may meet the world language credit requirement.

Other College Preparation 3 credits

Speech or Debate [no more than one (1) credit]. Debate must be taught by a certified teacher.

Studio/Performing Arts (art, dance, drama, and music).

Foreign Language (beyond any foreign language credit applied in the Humanities/Foreign Language category).

Secondary Career Technical courses, (no more than two (2) credits) in Agricultural Science and Technology; Business Technology Education; Computer Science Technology; Engineering; Family and Consumer Sciences; Marketing Technology Education; Technology Education, and individualized occupational training.

If the student graduated from a high school that does not offer a required course, applicants may contact the institutional admission officer for clarification of provisional admission procedures.

High school credit counted in one (1) category (e.g., Humanities/World Languages) may not also count in another category.

cb. Academic Provisional Alternative Admission

i. A degree-seeking applicants who does not qualify for admission based on
subsection 42.b.a. above, but who may be granted alternative admission if they satisfy one (1) or more of the criteria below, may seek provisional admission by petitioning the institutional admissions officer:

1) Graduated from a secondary school accredited by a body recognized by the Board but has not completed the Admission Standards Core courses set forth above;

2) Did not graduate from a secondary school accredited by a body recognized by the Board, [e.g. including home-schooled students, and has acceptable performance on either the General Educational Development (GED) diploma holders], and have acceptable predictive indicators of academic success approved test or another standardized diagnostic test accepted by the institution;

3) Deserves consideration by the institution because of special status (e.g., disadvantaged or minority students, delayed entry students, returning veterans, or gifted and talented students wishing to enter college early, or other students in unique circumstances as determined by the institution). Each institution may develop a separate policy for the admission of special status students.

A student seeking provisional admission to any public postsecondary institution must take at least one (1) assessment indicator that will allow the institution to assess competency and placement.

ii. If provisionally admitted, a student will enroll with provisional standing and is subject to the institutional grade retention. Students granted alternative admission may have conditions placed on their admission, subject to institutional policies. A provisionally admitted student may change to regular admission status upon satisfactory completion of Students may be granted admission and be required to satisfactorily complete up to fourteen (14) baccalaureate level credits, twelve (12) of which must be general education courses credits. Regular admission status must be attained within three (3) registration periods or the student will be dismissed, subject to institutional committee appeal procedures.

dc. Academic Transfer Admission

i. A degree-seeking student who, after graduating from high school or earning a GED, has earned at least fourteen (14) or more semester hours of transferable academic college level credit from a regionally accredited college or university with a minimum cumulative GPA of 2.00 may be admitted.

ii. A student not meeting the requirement in subsection 62.b.a. may petition the
institutional admissions officer to be admitted. If admitted, the student must enroll on probation status, meet all conditions imposed by the institutional admissions committee, and complete the first semester with a minimum 2.00 GPA, or may be dismissed, may have conditions placed on their admission, subject to institutional policies as described in subsection 2.cb.ii.

d. Academic Program Placement

Placement assessment indicating potential for success may be required for some academic programs. Placement requirements vary according to the program. Each institution shall establish academic program placement policies and publish these policies in an accessible manner on the institution’s website.

3. Career Technical Program Admissions

a. Admission Standards

Regular or Provisional-Institutional academic admission standards apply to individuals who seek a technical certificate or Associate of Applied Science (A.A.S.) degree through a career technical program. The admission standards and placement criteria do not apply to workforce development or short-term training programs. Career technical programs employ program admission and student advising/navigation processes in addition to institutional program academic admission.

b. Student Advising

i. Clarify the importance of career planning and preparation: high school students should be actively engaged in career planning prior to entering the 9th grade. Career planning assures that students have sufficient information about self and work requirements to adequately design an education program to reach their career goals.

ii. Emphasize that career technical courses in high school, including career technical advanced opportunities and work-based learning connected to school-based learning, are beneficial to students seeking continued education in career technical programs at the postsecondary level.

iii. Clarify the kind of educational preparation necessary to successfully enter and complete postsecondary studies. Mathematics and science are essential for successful performance in many career technical programs. Programs of a technical nature generally require greater preparation in applied mathematics and laboratory sciences.

iv. Clarify that career technical programs of one or two years in length may require additional time if applicants lack sufficient educational preparation.
c. Career Technical Program Regular Admission

Students desiring Regular Admission to any of Idaho’s technical colleges must meet the following standards. Students planning to enroll in programs of a technical nature are also strongly encouraged to complete the recommended courses. Admission to a specific career technical program is based on the capacity of the program and specific academic and/or physical requirements established by the technical college/program.

i. Standards for students who graduated from high school in 1997 or earlier

1) High School diploma with a minimum 2.0 GPA from a high school accredited by a body recognized by the Board; and

2) Placement examination as determined by the institution. Scores may also be used to determine placement eligibility for specific career technical programs; and

3) Satisfactory completion of high school coursework that includes at least the following:

a) Mathematics — 4 credits (6 credits recommended) from challenging math sequences of increasing rigor selected from courses such as Algebra I, Geometry, Applied Math I, II, and III, Algebra II, Trigonometry, Discrete Math, Statistics, and other higher-level math courses. Two (2) mathematics credits must be taken in the 11th or 12th grade. Less rigorous mathematics courses taken in grades 10-12 after 1998, such as pre-algebra, review mathematics, and remedial mathematics, shall not be counted.

b) Science — 4 credits (6 credits recommended, with 4 credits in laboratory science) including at least 2 credits of laboratory science from challenging science courses including applied biology/chemistry, principles of technology (applied physics), anatomy, biology, earth science, geology, physiology, physical science, zoology, physics, chemistry, and agricultural science and technology courses (500-level and above).

c) Secondary Language Arts and Communication — 8 credits. Applied English in the Workplace may be counted for English credit.

d) Other — Career technical courses, including postsecondary credits

---

An institution may substitute a composite index placement exam score and high school GPA for the GPA admission requirement.
earned pursuant to Board Policy III.Y. Advanced Opportunities and organized work-based learning experiences connected to the school-based curriculum, are strongly recommended. High School Work Release time not connected to the school-based curriculum will not be considered.

ii. Standards for Others Seeking Regular Career Technical Program Admission

Individuals who graduated from high school, received their GED prior to 1997, or who are at least 21 years old and who desire Regular Admission to the technical colleges must have a:

1) High School diploma with a minimum 2.0 GPA from a high school accredited by a body recognized by the Board; or

2) General Educational Development (GED) certificate; and

3) Diagnostic/placement tests as determined by the institution. Scores may also be used to determine admission eligibility for specific career technical programs.

d. Career Technical Program Provisional Admission

Students who do not meet all requirements for Regular Admission may apply to a technical program under provisional admission. Provisionally admitted students who are conditionally admitted must complete appropriate remedial, general and/or technical education coursework related to the career technical program for which Regular Admission status is desired, and to demonstrate competence with respect to that program through methods and procedures established by the technical college. Students desiring Provisional Admission must meet the following standards:

i. High School diploma or GED certificate; and

ii. Diagnostic/placement tests as determined by the institution. Scores may also be used to determine placement eligibility for specific career technical programs.

iii. Institutions may allow individuals who do not have a high school diploma or GED to be admitted if the applicant can demonstrate the necessary ability to succeed in a career technical program through appropriate tests or experiences as determined by the institution.

ea. Career Technical Program Placement Criteria
Placement test scores indicating potential for success are generally required for enrollment in a career technical program of choice. Placement score requirements vary according to the program.

Each institution shall establish career technical program placement policies and publish these policies in an accessible manner on the institution’s website.

Specific career technical programs may require different levels of academic competency and admission requirements. Students must also be familiar with the demands of a particular occupation and how that occupation matches individual career interests and goals. Therefore, before students can enroll in a specific program, the following placement requirements must be satisfied:

i. Specific program requirements (including placement exam scores) established by the technical program. A student who does not meet the established requirements for the program of choice will have the opportunity to participate in remedial education to improve their skills; and

ii. Formal procedures and definitions for program admission employed by the technical college. Program admission requirements and procedures shall be clearly defined and published for each program.
REFERENCE

October 2020
The Board approved the first reading of proposed amendments to Board Policy III.N. designating the Executive Director or designee as chair of the GEM Committee.

December 2020
The Board approved the second reading of proposed amendments to Board Policy III.N.

August 2021
The Board approved the first reading of proposed amendments to Board Policy III.N. expanding membership of the GEM Committee to representatives from digital learning, dual credit, and open education. This included amendments to GEM competency areas.

October 2021
The Board approved the second reading of proposed amendments to Board Policy III.N.

December 2022
The Board approved the first reading of proposed amendments to Board Policy III.N that changed the GEM Oral Communication requirement from a minimum of 2 to a minimum of 3 credits and the institutionally-designated credits from a minimum of 6 to a minimum of 5.

February 2023
The Board approved the second reading of proposed amendments to Board Policy III.N.

August 2023
The Board approved the first reading of proposed amendments to Board Policy III.N. to allow institutions to propose specialized baccalaureate degree programs that require fewer than 36 general education credits in rare instances.

October 2023
The Board approved the second reading of proposed amendments to Board Policy III.N.

February 2024
The Board approved the first reading of proposed amendments to Board Policy III.N. to clarify General Education Committee roles and responsibilities as well as further describe the role of the disciplinary rubrics.

APPLICABLE STATUTE, RULE OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section III.N. and III.V.
Idaho Code § 33-3729

BACKGROUND/DISCUSSION
Board Policy III.N., General Education, outlines the statewide General Education Framework, which provides guidance to Idaho’s public institutions in identifying courses that meet the General Education Matriculation (GEM) competencies for
the facilitation of seamless credit transfer for students. It also provides initial
guidance for the establishment of the General Education Committee. This
Committee has an important role in shaping the continued consistency of these
courses across our institutions as well as in providing leadership for innovation in
this curricular space.

The proposed amendments describe Committee roles, term limits, and
responsibilities. They also clarify the purpose of the rubrics that have been
developed for each Way of Knowing or disciplinary area.

IMPACT
Approval of the proposed amendments will facilitate Committee processes and
allow the Committee to fulfill its intended purpose.

ATTACHMENTS
Attachment 1 – Board Policy III.N. Statewide General Education – Second Reading
Attachment 2 – General Education Committee Bylaws

BOARD STAFF COMMENTS AND RECOMMENDATIONS
One minor technical correction was made between first and second readings. This
correction removes reference to “Figure 1.” The figure itself was removed in a prior
amendment.

The policy amendments and bylaws were reviewed by CAAP on February 1, 2024
and by the Instruction, Research, and Student Affairs Committee of the Board on
February 15, 2024. Board staff recommends approval.

BOARD ACTION
I move to approve the second reading of proposed amendments to Board Policy
III.N., Statewide General Education, as submitted in Attachment 1.

Moved by __________ Seconded by __________ Carried Yes _____ No _____
In our rapidly-changing world, students need to understand how knowledge is generated and created. They need to adapt to new opportunities as they arise as well as effectively communicate and collaborate with increasingly diverse communities and ways of knowing. In combination with major coursework, general education curriculum prepares students to use multiple strategies in an integrative manner to explore, critically analyze, and creatively address real-world issues and challenges. General education coursework provides students with an understanding of self, the physical world, and human society—its cultural and artistic endeavors as well as an understanding of the methodologies, value systems, and thought processes employed in human inquiries. General education helps instill students with the personal and civic responsibilities of good citizenship, and prepares them to be adaptive, life-long learners.

This policy shall apply to the University of Idaho, Boise State University, Idaho State University, Lewis-Clark State College, College of Eastern Idaho, College of Southern Idaho, College of Western Idaho, and North Idaho College (hereinafter “institutions”).

1. The state of Idaho’s general education framework for Associate of Arts, Associate of Science, and Baccalaureate degrees, outlined below in Figure 1, shall be:
   a. Thirty-one (31) credits or more of the general education curricula must fit within the General Education Matriculation (GEM) competency areas defined in subsection 4 of this policy, and
   b. Five (5) or more credits of the general education curricula, which are reserved for institutions to address the specific mission and goals of the institution. For this purpose, institutions may create new competency areas or they may choose to count additional credits from GEM competencies. Regardless, these institutionally designated credits must have learning outcomes linked to Association of American Colleges and Universities (AAC&U) Essential Learning Outcomes.

2. The intent of the general education framework is to:
   a. Establish statewide competencies that guide institutions’ determination of courses that will be designated as GEM courses,
   b. Establish shared disciplinary/Ways of Knowing rubrics that guide course/general education program assessment, institutional decision-making about designating courses to GEM competency areas, and
   c. Create a transparent and seamless transfer experience for undergraduate students.
3. There are six (6) GEM competency areas. The first two (2) emphasize integrative skills intended to inform the learning process throughout general education and major. The final four (4) represent ways of knowing and are intended to expose students to ideas and engage them in a broad range of active learning experiences.

The GEM competency areas are as listed:

a. Written Communication
b. Oral Communication
c. Mathematical Ways of Knowing
d. Scientific Ways of Knowing
e. Humanistic and Artistic Ways of Knowing
f. Social and Behavioral Ways of Knowing

4. GEM courses in each area shall include the following competencies:

a. Written Communication
   Upon completion of a course in this category, students are able to demonstrate the following competencies:
   
   i. Use flexible writing process strategies to generate, develop, revise, proofread, and edit texts.
   ii. Adopt strategies and genre appropriate to the rhetorical situation.
   iii. Use inquiry-based strategies to conduct research that explores multiple and diverse ideas and perspectives, appropriate to the rhetorical context.
   iv. Use rhetorically appropriate strategies to evaluate, represent, and respond to the ideas and research of others.
   v. Address readers’ biases and assumptions with well-developed evidence-based reasoning.
   vi. Use appropriate conventions for integrating, citing, and documenting source material.
   vii. Read, interpret, and communicate key concepts in writing and rhetoric.

b. Oral Communication
   Upon completion of a course in this category, students are able to demonstrate the following competencies:
   
   i. Research, discover, and develop information resources and structure spoken messages to increase knowledge and understanding.
   ii. Research, discover, and develop evidence-based reasoning and persuasive appeals for ethically influencing attitudes, values, beliefs, or behaviors.
   iii. Adapt spoken messages to the diverse personal, ideological, and emotional needs of individuals, groups, or contexts.
   iv. Employ effective spoken and nonverbal behaviors that support communication goals and illustrate self-efficacy.
v. Listen in order to effectively and critically evaluate the reasoning, evidence, and communication strategies of self and others.
vi. Demonstrate knowledge of key theories, perspectives, principles, and concepts in the Communication discipline, as applied to oral communication.

c. Mathematical Ways of Knowing
Upon completion of a course in this category, a student is able to demonstrate the following competencies:

i. Interpret mathematical concepts.
ii. Represent information/data.
iii. Use appropriate strategies/procedures when solving mathematical problems.
iv. Draw reasonable conclusions based on quantitative information.

d. Scientific Ways of Knowing
Upon completion of a non-lab course in this category, a student is able to demonstrate competencies i-iv. A student is able to demonstrate all five competencies, i-v, upon completion of a lab course.

i. Apply foundational knowledge and models of a discipline in the physical or natural sciences to analyze and/or predict phenomena.
ii. Apply scientific reasoning to critically evaluate assertions.
iii. Interpret and communicate scientific information via written, spoken and/or visual representations.
iv. Describe the relevance of specific scientific principles to the human experience.
v. Test a hypothesis in the laboratory or field using discipline-specific tools and techniques for observation, data collection and analysis to form a defensible conclusion.

e. Humanistic and Artistic Ways of Knowing
Upon completion of a course in this category, students are able to demonstrate at least five (5) of the following competencies:

i. Recognize and describe humanistic, historical, or artistic works within problems and patterns of the human experience.
ii. Distinguish and apply methodologies, approaches, or traditions specific to the discipline.
iii. Differentiate formal, conceptual, and technical elements specific to the discipline.
iv. Analyze, evaluate, and interpret texts, objects, events, or ideas in their cultural, intellectual or historical contexts.
v. Interpret artistic or humanistic works through the creation of art, language, or performance.
vi. Develop critical perspectives or arguments about the subject matter, grounded in evidence-based analysis.
vii. Demonstrate self-reflection, widened perspective, and respect for diverse viewpoints.

f. Social and Behavioral Ways of Knowing
Upon completion of a course in this category, students are able to demonstrate all five (5) of the following competencies.

i. Demonstrate knowledge of the theoretical and conceptual frameworks of a particular Social Science discipline.
ii. Describe self and the world by examining the dynamic interaction of individuals, groups, and societies as they shape and are shaped by history, culture, institutions, and ideas.
iii. Utilize Social Science approaches, such as research methods, inquiry, or problem-solving, to examine the variety of perspectives about human experiences.
iv. Evaluate how reasoning, history, or culture informs and guides individual, civic, or global decisions.
v. Identify the impact of the similarities and differences among and between individuals, cultures, or societies across space and time.

5. General Education Requirements

a. This subsection applies to Associate of Arts, Associate of Science, and Baccalaureate degrees. For the purpose of this policy, disciplines are indicated by course prefixes.

General education curricula must reflect the following credit distribution:

<table>
<thead>
<tr>
<th>Competency Area</th>
<th>Minimum Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Written Communication</td>
<td>6</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>3</td>
</tr>
<tr>
<td>Mathematical Ways of Knowing</td>
<td>3</td>
</tr>
<tr>
<td>Scientific Ways of Knowing</td>
<td>7 (from two different disciplines with at least one laboratory or field experience)</td>
</tr>
<tr>
<td>Humanistic and Artistic Ways of Knowing</td>
<td>6 (from two different disciplines)</td>
</tr>
<tr>
<td>Social and Behavioral Ways of Knowing</td>
<td>6 (from two different disciplines)</td>
</tr>
<tr>
<td>Institutionally-Designated Credits</td>
<td>5</td>
</tr>
</tbody>
</table>

i. GEM courses are designed to be broadly accessible to students regardless of major, thus college-level and non-GEM pre-requisites to GEM courses should be avoided unless deemed necessary by the institution.
ii. Additional GEM courses, beyond the general education curricula, may be required within the major for degree completion.

b. In rare instances, a specialized associate degree program might better serve students by distributing general education requirements differently than those listed above. Proposals for such programs shall be submitted to the Board office for review and approval on a case-by-case basis. Proposals must describe the demonstrable benefits that the alternative general education distribution will have for transfer students, the institutions’ plans for additional advising, and any other information that will demonstrate how students will not be harmed by this alternative structure.

c. This subsection pertains to Associate of Applied Science (AAS) degrees.

The general education curricula for the AAS degree must contain a minimum of fifteen (15) credits, so distributed in the following areas:

<table>
<thead>
<tr>
<th>Competency Area</th>
<th>Minimum Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Written Communication</td>
<td>3</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>3</td>
</tr>
<tr>
<td>Mathematical Ways of Knowing</td>
<td>3</td>
</tr>
<tr>
<td>Social and Behavioral Ways of Knowing</td>
<td>3</td>
</tr>
<tr>
<td>Any general education course including institutionally-designated courses</td>
<td>3</td>
</tr>
</tbody>
</table>

d. GEM courses and institutionally-designated courses shall transfer as meeting an associated general education competency requirement at any institution pursuant to Board policy Section III.V.

6. Governance of the General Education Program and Review of Courses

a. GEM courses are developed by faculty and approved via the curriculum approval process of the institution delivering the courses. Faculty discipline groups representing all institutions shall meet at least annually or as directed by the Board, to ensure consistency and relevance of general education competencies and courses approved for their respective GEM competency areas.

b. Common Course Indexing is developed for courses offered within the GEM framework to provide greater transparency and seamlessness within transfer processes at Idaho’s postsecondary institutions. Common-indexed courses are accepted as direct equivalents across institutions for transfer purposes. Common course indexing shall include common course prefix, common course number, common course title, and common GEM discipline area designation. The common
The course number shall be three digits in sequence, but can be preceded by a single digit if four numbers are utilized by the institution (x###).

The common course list shall be approved by the Board on an annual basis and shall be maintained by the Board office. Changes to the list may be proposed by faculty discipline groups to the General Education Matriculation Committee. Proposed additions or removal of courses on the common course list must be reviewed by the General Education Matriculation Committee prior to Board approval. The request to remove a common-indexed course from an institution’s academic catalog must be approved by the Board. The request to discontinue a course must be submitted in writing by the institution to the Board office. The request shall be submitted no less than a year in advance and provide rationale for the inability to offer the course.

c. The General Education Matriculation (GEM) Committee shall consist of a Board-appointed representative from each of the institutions (Institutional Representatives), as well as one Subject Representative from each of the following communities: from the Division of Career Technical Education, from the Idaho Registrars Council, from the digital learning community, from the dual credit community, from the open education community; and the Executive Director of the Board, or designee, who shall serve as the chair of the committee. Institutional Representatives are generally the directors or deans of general education (or equivalent). Upon Board approval, appointments for Institutional Representatives will be for the duration of the representative’s term as general education director. Subject Representative terms are for three years, commencing on July 1st. If Subject Representatives are amenable to continuing, they are affirmed by their respective groups prior to their term’s end. To ensure alignment with AAC&U Essential Learning Outcomes and subsection 1, the Committee shall meet at least annually to review the competencies and rubrics of the general education framework. The Committee shall make recommendations to the Board regarding the general education framework and the common course list. The Committee shall review and make recommendations on the general education competencies as necessary. GEM Committee duties are prescribed by the Board, including those that may involve addressing issues related to competency areas and course offerings. The GEM Committee reports to the Council on Academic Affairs and Programs.

d. The institutions shall identify all general education courses in their curricula and identify them in a manner that is easily accessible by the public via their respective websites, as well as relevant web resources maintained by the Board office.
General Education Committee Bylaws

Mission and Purpose

General education courses are a particularly powerful part of a college education. This set of courses provide students with the opportunity to cultivate the habits of mind associated with academic inquiry, to gain experience with disciplinary inquiry and communication, and to navigate a variety of perspectives. Further, general education courses have a direct and positive impact on student retention, persistence, and eventual graduation. Since general education courses are offered at all public postsecondary institutions in Idaho, providing coordinated guidance is especially important.

The General Education Committee is guided by a spirit of open inquiry and a shared interest in collaboration. The General Education Committee advocates for, supports, and coordinates general education among all Idaho public postsecondary institutions. As leaders of general education from each institution, the committee members individually contribute extensive institutional knowledge and disciplinary expertise to the shared commitment to continually improving general education across the state of Idaho.

A. Powers and Duties

The General Education Committee is responsible for collaborating on a statewide vision of general education, making recommendations about general education, reviewing the competencies and other supporting materials for the general education framework, making recommendations to the Board regarding the general education framework and common course list, revising and making recommendations on the general education competencies, and other duties as prescribed by the Board. The General Education Committee reports to the Council on Academic Affairs and Programs.

B. Meetings

1. The Committee holds two full Committee standing meetings annually. The two meetings are in person whenever possible; at least one of the meetings coincides with the annual GEM Summit. Follow-up remote meetings occur as needed. A quorum of the Committee consists of a simple majority of current voting members. A quorum shall be present to conduct any official business.

2. Meeting locations shall be determined by the Committee.

C. Membership

1. Committee membership is established by Idaho Board of Education policy III.N.

2. Committee members must uphold the goals and objectives of the Committee. Decision-making is a collective action and all members have a joint responsibility for decisions and actions.
D. Nominating Process

1. Institutional Representatives are generally the directors or deans of general education on campus (or equivalent). Upon Board approval, appointments for Institutional Representatives will be for the duration of the representative’s term as general education director.

2. Subject Representatives (registrar, technical college leadership, dual credit, open education, and digital learning) terms are for three years, commencing on July 1st. If Subject Representatives would like to serve additional terms, they are affirmed by their respective groups prior to their term’s end.

3. All official Committee members shall have equal voting privileges.

E. Committee Officers and Duties

1. There are two officers of the Committee: Chair and Vice Chair.

2. The Chair is a designee of the Executive Director of the Board. This role has historically been filled by the Associate Academic Officer. The Chair, in consultation with the committee, advocates for general education at the state level, coordinates proposed policy changes, plans the GEM Summit, coordinates the GEM Innovative Teaching Awards, and coordinates general education-related activities that arise.

3. The Vice Chair is elected by the voting members of the General Education Committee from among the Institutional Representatives. The Vice Chair is elected at a regular meeting for a three-year term. Whenever possible, the Vice Chair terms alternate between the four-year and two-year institutions. Vacancies are filled by election for the remainder of the unexpired term. The Vice Chair advises the Chair on meeting agendas and provides recommendations on matters related to the General Education Committee’s mission and the Chair’s general education responsibilities.

4. Committee representatives who serve on working groups and similar bodies are appointed by the Committee Chair.

F. Adoption, Amendment, and Repeal of By-laws

1. Recommendations for amendments or repeals of bylaws may occur at any regular or special meeting of the Committee and approved by a majority vote of the Committee, provided notice has been presented at the preceding meeting of the Committee.
BOISE STATE UNIVERSITY

SUBJECT
Online Master of Arts in Digital Communications Management

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section III.G. and Section V.R.

BACKGROUND/DISCUSSION
Boise State University proposes to offer a Master of Arts in Digital Communications Management. The proposed program will utilize the Online Program Fee outlined in SBOE Policy V.R. The Master of Arts in Digital Communications Management will provide the opportunity to transform entry- and mid-level professionals into industry leaders. Students will be taught advanced skills in managing projects, crafting compelling content, streamlining production, and fostering effective teams. They will delve into the driving forces of digital communication, with the intent of mastering the latest mobile technologies, intricacies of social media and location-based services, and the power of data-driven insights. Students will leverage data for strategic content creation, targeted messaging, and impactful campaigns, while cultivating effective leadership strategies tailored for the digital landscape. This versatile degree opens doors to diverse careers in journalism, broadcasting, advertising, public relations, content strategy, app development, sales, and beyond.

IMPACT
Idaho currently lacks an online Master's program in Digital Communications Management, a critical gap considering the strong regional and national demand for these skills. Workforce data reveal a significant need, with over 700 relevant job postings in Idaho alone requiring or preferring such qualifications from July 2021 to January 2022. This program presents a unique opportunity to empower students across various academic departments, equipping them with the expertise and leadership skills to excel in this dynamic field. By addressing this unmet need, the University can create a lasting positive impact on students and the digital landscape of Idaho.

The program’s size will scale to meet enrollment demand for the program. The projected enrollment is 6 students in year 1; 22 students in year two, and 40 students in year three. Faculty will maintain close contact with students and support them in their learning and instructor contact. The recruitment efforts will include digital and social media advertisements targeting potential candidates nationwide. The program will be offered at $525 per credit hour, which is lower than average for competitors. The total cost of the program is $15,750 (30 credits at $525 per credit). The program is fully supported through revenue generated from enrollment in the program.
The program will require program design and course development, marketing at $10,000 per year, and student advising, which is already planned with Boise State’s eCampus and built into the budget. No new faculty resources are required to create this program, and no additional sections of existing courses are needed.

Total expenditures are $69,420 - $228,800 of one-time funding over four years. The role of director/administrator will be filled by a current faculty member. This is an existing workload reallocation, not additional funding paid out for overload. Five percent of their time is allocated for year one and year two with a 5% increase annually through year five (capping at 20%).

ATTACHMENTS
Attachment 1 – Master of Arts in Digital Communications Management full proposal and budget

STAFF COMMENTS AND RECOMMENDATIONS
Boise State University anticipates six initial enrollments at implementation reaching 60 by year five and graduating 11 students by year three. These numbers were based on the average online degree completion numbers for similar programs at U.S. institutions, with similar brand recognition and marketing capabilities, during their first five years of launching the program. Because the program will be using the online program fee model, minimum enrollments are based on course registrations. This includes 53 annual credits and 2.2 annual FTEs in Year 1, 192 annual credits and 8.0 annual FTEs in Year 2, 353 annual credits and 14.7 FTEs in Year 3; 403 annual credits and 16.8 FTEs in Year 4, and 361 annual credits and 15.9 FTEs in Year 5. If enrollments are not met, Boise State will adjust to reflect actual activity and will evaluate annually. If the degree is not fiscally sustainable in the long term, the program will be discontinued.

Boise State’s request to offer a Master of Arts in Communication is consistent with their Service Region Program Responsibilities and their current institution plan for Delivery of Academic Programs in Region III. There are presently no comparable online programs offered in the state. A search in the state’s program inventory shows that Idaho State University offers an MA in Communication; however, it does not appear to be similar to the one proposed. Currently, no institution has statewide program responsibility specifically for communication programs.

Boise State also requests approval to assess an online program fee of $525 per credit for the master’s program consisting of 30 credits, which amounts to $15,750. Based on the information for the online program fee provided in the proposal, staff finds that the criteria have been met for this program.

The proposal completed the program review process and was presented to the Council on Academic Affairs and Programs on March 7, 2024; and to the Instruction, Research, and Student Affairs on April 7, 2024.
Board staff recommends approval.

BOARD ACTION
I move to approve the request by Boise State University to create an online Master of Arts in Digital Communications Management, as presented in Attachment 1.

Moved by __________ Seconded by __________ Carried Yes _____ No _____

AND

I move to approve the request by Boise State University to charge an online program fee of $525 per credit for the MA in Digital Communications Management program, in conformance with the program budget submitted to the Board in Attachment 1.

Moved by __________ Seconded by __________ Carried Yes _____ No _____

**SBOE/Executive Director or Designee Approval** Date
Before completing this form, refer to Board Policy Section III.G., Postsecondary Program Approval and Discontinuance. This proposal form must be completed for the creation of each new program. All questions must be answered.

Rationale for Creation or Modification of the Program

1. **Describe the request and give an overview of the changes that will result.** What type of substantive change are you requesting? Will this program be related or tied to other programs on campus? Identify any existing program that this program will replace. If this is an Associate degree, please describe transferability.

Boise State University proposes the creation of a wholly online program that will award a **Master of Arts (MA) in Digital Communications Management**. The proposed program will utilize the Online Program Fee outlined in SBOE Policy V.R.

The MA in Digital Communications Management is conceptualized for entry and mid-level professionals. The program provides advanced training in management of communications projects, communications content creation, communications production, and team management. With this master’s degree, graduates will be prepared to develop driving technology behind digital communications and apply the latest innovations in mobile technology, understand the principles of social media and location-based services; leverage data to inform content creation, messaging, and communication campaigns; and manage communications teams. This degree supports graduates to pursue journalism, broadcasting, advertising, public relations, content strategist, app development, sales, and other professions.

2. **Need for the Program.** Describe evidence of the student, regional, and statewide needs that will be addressed by this proposal to include student clientele to be served and address the ways in which the proposed program will meet those needs.

   a. **Workforce and economic need:** Provide verification of state workforce needs that will be met by this program. Include job titles and cite the data source. Describe how the proposed program will stimulate the state economy by advancing the field, providing research results, etc.

   Approximately 172,000 unique job postings in the U.S. from January 2021 to January 2022 required or preferred a master’s in digital communication and media/multimedia (Job Posting Analytics U.S. report, Lightcast, formerly EMSI). In Idaho, for the same period, there were approximately 737 unique jobs requiring or preferring a master’s in digital communication and media/multimedia (Job Posting Analytics U.S. report, Lightcast, formerly EMSI). With the growing influence of digital communication, it is crucial to provide graduate training to prepare people for jobs in the communications industry and serve other significant sectors of the economy.

   **Job Titles:**
   - Content Strategist
   - Advertiser
- Journalist
- Public Relations
- App Developer
- Sales

b. **Student demand.** What is the most likely source of students who will be expected to enroll (full-time, part-time, outreach, etc.). Provide evidence of student demand/interest from inside and outside of the institution.

There are four different types of students who will enter this program.

- The career starter is new to the field - e.g., a person interested in moving into the communications industry as a new career.
- The career advancer is employed in the field and is interested in moving up in the field - e.g., a person transitioning from a member of a communications team to leading that team.
- The degree finisher has previous college experience that fits within the field but has not yet finished a degree – e.g., a person who has some graduate-level coursework and wants to shift into a degree focused on professional training and career preparation.
- The career changer who is currently employed in a different field and is interested in changing fields - e.g., a person who is transitioning from one area of management such as operations into a VP of Communications position.
The career advancer is the primary audience for this program. Some examples could be:

- Working professionals in digital media communications and platforms aiming to expand their knowledge of how to connect with audiences through digital channels and social media as well as seeking career promotions to be more impactful in their organizations.
- Working professionals in media analytics eager to use data as a strategic competitive advantage for their companies and create new or complementary business segments.
- Working professionals involved in content creation hoping to be proficient in professionally-focused text, audio, video, and other legacy and contemporary media components.
- Students looking to continue their education after their first degree with a master’s focus on digital media analytics, communication design, strategic team coaching, and management.

Evidence of student demand: The following information is based on the U.S. institutions online completions in digital communication and media/multimedia (CIP code: 09.0702) master’s degree spanning AY 2018-2021. The number of completions is growing, indicating increased student demands.

- AY 2017-2018: 14 institutions reporting 416 distance degree completions.
- AY 2018-2019: 16 institutions reporting 531 distance degree completions.
- AY 2019-2020: 17 institutions reporting 725 distance degree completions.
- AY 2020-2021: 18 institutions reporting 1,050 distance degree completions.

c. **Societal Need**: Describe additional societal benefits and cultural benefits of the program.

Digital communication is now the dominant medium of communications in today’s society for both professional and daily life interactions. It is, therefore, crucial to educate interested members of the population to know how to manage as well as understand the mechanism and processes of digital communication to better support their civic and professional interests.

3. **Program Prioritization**

Is the proposed new program a result of program prioritization?

Yes_____ No__X__

If yes, how does the proposed program fit within the recommended actions of the most recent program prioritization findings.

4. **Credit for Prior Learning**

Indicate from the various cross walks where credit for prior learning will be available. If no PLA has been identified for this program, enter 'Not Applicable'.
Transfer credits are permitted but must satisfy the following restrictions, as per the university policy:

1. Transfer credit must be graduate academic credit representing a grade of B or better, awarded by a regionally accredited U.S. college or university or by a non-U.S. institution of higher education that is approved for transfer purposes by the International Admissions Office. Continuing education units (CEU) and non-academic credits are ineligible as transfer credit.

2. Culminating activity courses, courses where the grade is based only on attendance, and courses representing experiential learning, regardless of the level (undergraduate or graduate), are ineligible as transfer credit.

3. Application of transfer credit must be approved by the graduate program.

Outside of the transfer credits, no PLA has been identified for this graduate program, thus, not applicable.

5. Affordability Opportunities

Describe any program-specific steps taken to maximize affordability, such as: textbook options (e.g., Open Educational Resources), online delivery methods, reduced fees, compressed course scheduling, etc. This question applies to certificates, undergraduate, graduate programs alike.

We will offer this program at $525 per credit hour under an online program fee budget model, which is lower than the average for competitors.

Enrollments and Graduates

6. Existing similar programs at Idaho Public Institutions. Using the chart below, provide enrollments and numbers of graduates for similar existing programs at your institution and other Idaho public institutions for the most past four years.

No comparable programs were identified at Idaho public institutions.

<table>
<thead>
<tr>
<th>Instit.</th>
<th>Program Name</th>
<th>Fall Headcount Enrollment in Program</th>
<th>Number of Graduates From Program (Summer, Fall, Spring)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>FY25 FY26 FY27 FY28 (most recent)</td>
<td>FY__ _ FY__ _ FY__ (most recent)</td>
</tr>
<tr>
<td></td>
<td>No comparable online programs offered in Idaho</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

7. **Justification for Duplication** (if applicable). If the proposed program is similar to another program offered by an Idaho public higher education institution, provide a rationale as to why any resulting duplication is a net benefit to the state and its citizens. Describe why it is not feasible for existing programs at other institutions to fulfill the need for the proposed program.

None of the Idaho state institutions have a similar program.

8. **Projections for proposed program**: Using the chart below, provide projected enrollments and number of graduates for the proposed program:

<table>
<thead>
<tr>
<th>Program Name: Master of Arts in Digital Communications Management</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Projected Fall Term Headcount Enrollment in Program</strong></td>
</tr>
<tr>
<td>Fall 2024</td>
</tr>
<tr>
<td>6</td>
</tr>
</tbody>
</table>

9. **Describe the methodology for determining enrollment and graduation projections.** Refer to information provided in Question #2 “Need for the Program” above. What is the capacity for the program? Describe your recruitment efforts? How did you determine the projected numbers above?

The projected numbers were determined based on the average online degree completion numbers for similar programs at U.S. institutions, with similar brand recognition and marketing capabilities, during their first 5 years of launching the program.

The recruitment efforts will include digital and social media advertisements targeting potential candidates nationwide.

The program’s size will scale to meet enrollment demand for the program. The numbers in the table above reflect a reasonable and attainable scaling up of the program. Faculty will maintain close contact with students and support them in their learning and instructor contact.

10. **Minimum Enrollments and Graduates.**
    a. What are the minimums that the program will need to meet in order to be continued, and what is the logical basis for those minimums?
Based on estimated expenses for instruction and for support personnel expenses, the estimated minimum number of course registrations to achieve break-even is:

- Year 1: Annual credits, 53 Annual FTEs 2.2
- Year 2: Annual credits, 192 Annual FTEs 8.0
- Year 3: Annual credits, 353 Annual FTEs 14.7
- Year 4: Annual credits, 403 Annual FTEs 16.8
- Year 5: Annual credits, 361 Annual FTEs 15.0

b. If those minimums are not met, what is the sunset clause by which the program will be considered for discontinuance?

Programs operating under the institutional online program fee model at Boise State University are expected to be fiscally sustainable. If enrollments do not meet expectations, expenses will be adjusted to reflect actual activity. The program’s financial sustainability will be evaluated annually. If it is determined to be fiscally unsustainable in the long term, it will be discontinued.

11. **Assurance of Quality.** Describe how the institution will ensure the quality of the program. Describe the institutional process of program review. Where appropriate, describe applicable specialized accreditation and explain why you do or do not plan to seek accreditation.

**Regional Institutional Accreditation:** Boise State University is regionally accredited by the Northwest Commission on Colleges and Universities (NWCCU). Regional accreditation of the university has been continuous since initial accreditation was conferred in 1941. Boise State University is currently accredited at all degree levels (A, B, M, D).

**Program Review:** Boise State has instituted a new program review procedure. At the inception of new programs, the programs will submit to the Office of the Provost a three-year assessment plan to be scheduled into the Periodic Review/Assessment Reporting Cycle. The plan includes program learning outcomes; and an implementation plan with a timeline identifying when and what will be assessed, how the programs will gather assessment data, and how the program will use that information to make improvements. Then, every three years, the programs will provide Program Assessment Reports (PAR), which will be reviewed by a small team of faculty and staff using a PAR Rubric, which includes feedback, next steps, and a follow-up report with a summary of actions.

**Specialized Accreditation:** There is no specialized accreditation for this degree program.

**Program Development Support:**
The online Master of Arts in Digital Communications Management is supported by the eCampus Center at Boise State University.

- **Program Design:** Boise State’s online program development process includes a facilitated program design process to assist program faculty members in the
creation of an intentional, cohesive course progression aligned to both course and program learning outcomes.

- **Course Design and Development:** Each course is designed and developed by a faculty member. They have the option to work with the assistance of a team of experts, which includes an instructional designer, a multimedia developer, a quality assurance specialist, and a course developer. The end result is a program version of each course. All courses for the program are developed with a consistent look and feel using a common course template aligned with nationally recognized Quality Matters course design standards.

- **Course Maintenance:** The academic department is responsible for the continuous course improvement of online program courses.

### Academic Integrity:

**Academic Integrity:** Academic integrity is vital to the mission of Boise State University and encompasses the totality of academic rigor, ethical behavior, intellectual curiosity, appropriate teamwork, and persistence. All assignments submitted by a student must represent his/her own ideas, concepts, and current understanding or must cite the original source. Boise State proactively supports academic integrity by providing training, maintaining a website dedicated to academic integrity, providing tools such as pedagogical strategies, workshops, and tips for designing tests, as well as establishing policies and procedures for students who violate the academic integrity policy within the Student Code of Conduct. For this new online program, we will use the following strategies to encourage academic integrity:

- During the design and development of the curriculum and assessment of each course, instructors will be informed by staff of Boise State’s eCampus Center about best practices for online course design based on Quality Matters™ and best practice strategies to promote academic integrity in online education based on WCET’s recommendations (Version 2.0, June 2009)

- Through the program development process, course production, course launch support provided by the eCampus Center, and other means, instructors will be reminded about the importance of academic integrity and encouraged to report and act upon suspected violations.

- Academic integrity will be addressed within online student orientation. Programs may require online students to complete the university’s Academic Integrity Online Workshop.

- At the beginning of each course, the instructor will communicate expectations regarding academic integrity to students in the syllabus and verbally and may require completion of the university’s Academic Integrity Online Workshop.

### Student Authentication:

**Student Authentication:** Because the proposed program will be offered entirely online, it is important to include mechanisms by which we authenticate the identity of students enrolled in the program. We will use the following mechanisms:

- During the admissions process, the university will confirm required official transcripts and other documentation required for admission into the program.

- Associated with access to and use of our Learning Management System, a secure log-in environment will be provided and students will be required to use strong passwords and change them every 90 days.

- When high-stakes exams are required, faculty will be encouraged to utilize remote or online proctoring services when appropriate. In those instances, students will need to provide valid photo identification before gaining access to the graded assessments or other required activities.

- Instructors will utilize Turnitin plagiarism detection program when appropriate.
12. In accordance with Board Policy III.G., an external peer review is required for any new doctoral program. Attach the peer review report as Appendix A.

Not applicable.

13. Teacher Education/Certification Programs All Educator Preparation programs that lead to certification require review and recommendation from the Professional Standards Commission (PSC) and approval from the State Board of Education.

Will this program lead to certification?

Yes _____ No ____ X____

If yes, on what date was the Program Approval for Certification Request submitted to the Professional Standards Commission?

14. Three-Year Plan: If this is a new proposed program, is it on your institution’s approved 3-year plan?

Yes ____ X___ No ______

If yes, proceed to question 15. If no:

a. Which of the following statements address the reason for adding this program outside of the regular three-year planning process.

Indicate (X) by each applicable statement:

<table>
<thead>
<tr>
<th>Statement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program is important for meeting your institution’s regional or statewide program responsibilities.</td>
</tr>
<tr>
<td>The program is in response to a specific industry need or workforce opportunity.</td>
</tr>
<tr>
<td>The program is reliant on external funding (grants, donations) with a deadline for acceptance of funding.</td>
</tr>
<tr>
<td>There is a contractual obligation or partnership opportunity related to this program.</td>
</tr>
<tr>
<td>The program is in response to accreditation requirements or recommendations.</td>
</tr>
<tr>
<td>The program is in response to recent changes to teacher certification/endorsement requirements.</td>
</tr>
</tbody>
</table>

b. Provide an explanation for all statements you selected.

Educational Offerings: Curriculum, Intended Learning Outcomes, and Assessment Plan

15. Curriculum. Provide descriptive information of the educational offering.

a. Summary of requirements. Provide a summary of program requirements using the following table.
b. Curriculum. Provide the curriculum for the program, including credits to completion, courses by title and assigned academic credit granted.

30 credits in total. 18-credit core curriculum with 12 credits of electives. Students can choose an emphasis, or assemble graduate courses aligned with their professional goals.

**DCM Core Curriculum (18 credits, required courses)**
- DCM 500: Managing Digital Communications Projects (3 credits)
- DCM 510: Creating Digital Communications Content (3 credits)
- DCM 520: Engaging Communications Clients (3 credits)
- DCM 530: Mentoring Communications Teams (3 credits)
- DCM 570: Digital Communications Practicum (3 credits required, up to 12 credits allowed)
- DCM 599: Digital Communications Capstone; (3 credits)

**Choose an Emphasis Area**

**User Research (12 Credits)**
- ANTH 540: Fundamentals of Design Anthropology (3 credits)
- ANTH 541: Ethnography for User Experience Research (3 credits)
- ANTH 542: Emerging Digital Cultures (3 credits)
- DCM 570: Digital Communications Practicum (3 credits required)

**Conflict Management (12 credits)**
- CONFLICT 510: Conflict Management (3 credits)
- CONFLICT 513: Mediation and Negotiation (3 credits)
- CONFLICT 514: Conflict Coaching and Facilitation (3 credits)
- CONFLICT 515: Conflict and Culture (3 credits)

**Assemble an emphasis (12 credits) - Allowable categories include**
- Additional credits in DCM 580: Digital Communications Practicum (not to exceed 12 credits total)
- Electives of graduate courses (including a maximum of six credits from a program outside of Boise State).

There are no specific course prerequisites except for the capstone, which requires completion of the program courses.

c. Additional requirements. Describe additional requirements such as comprehensive examination, senior thesis or other capstone experience,
practicum, or internship, some of which may carry credit hours included in the list above.

The program requires three (3) credits of practicum (DCM570), intended to provide students ample opportunities to shadow an established professional and develop a comprehensive and realistic understanding of the practical aspects of the position they seek to apply for after graduation. Students in our program are encouraged but not required to apply practicum opportunities beyond the three (3) required credits. This allows each student to customize their learning experience.

The program requires a three (3) credit Capstone course (DCM599), intended to provide students with a culminating experience which aligns with the program learning outcomes.

   a. Intended Learning Outcomes. List the Intended Learning Outcomes for the proposed program, using learner-centered statements that indicate what students will know, understand, and be able to do, and value or appreciate as a result of completing the program.

   The proposed program will address the following learning outcomes:
   - Create action plans regarding the development and use of digital communications based on analysis of media metrics.
   - Produce and publish professional-level communications content to achieve identified goals.
   - Engage clients to define and achieve identified project goals.
   - Mentor communications team members to achieve identified project goals and develop team members.

17. Assessment plans.
   a. Assessment Process. Describe the assessment plan for student learning outcomes that will be used to evaluate student achievement and how the results will be used to improve the program.

   Students will produce a professional portfolio in the capstone class. Faculty will assess these portfolios in alignment with the program learning outcomes. In addition, we will develop robust opportunities for students to provide feedback on the ways and degree to which the program supported their professional development goals in line with the PLOs including especially identification of ways the program and its faculty could improve this support.

Resources Required for Implementation – fiscal impact and budget.
Organizational arrangements required within the institution to accommodate the change including administrative, staff, and faculty hires, facilities, student services, library; etc.

18. Physical Facilities and Equipment: Describe the provision for physical facilities
and equipment.

a. **Existing resources.** Describe equipment, space, laboratory instruments, computer(s), or other physical equipment presently available to support the successful implementation of the program.

The program will need and there are already plans for program design and course development (already planned with eCampus) as well as program marketing and student advising (already built into the budget).

b. **Impact of new program.** What will be the impact on existing programs of increased use of physical resources by the proposed program? How will the increased use be accommodated?

We see a significant potential to positively impact students by offering them a multi-department program in digital communications management which is not currently available. This potential positive impact includes students with BA/BS degrees who want and/or need a MA degree to specialize and advance their skills, people who have moved into management positions for communications teams and want to update their knowledge and skills to meet the needs of their team and clients. In addition, faculty involved in this program are communicating with multiple programs across campus to create accelerated Bachelor’s degree programs.

c. **Needed resources.** List equipment, space, laboratory instruments, etc., that must be obtained to support the proposed program. Enter the costs of those physical resources into the budget sheet.

The creation of this program does not require any technical or other laboratory space or instrumentation.

19. **Library and Information Resources:** Describe adequacy and availability of library and information resources.

a. **Existing resources and impact of new program.** Evaluate library resources, including personnel and space. Are they adequate for the operation of the present program? Will there be an impact on existing programs of increased library usage caused by the proposed program? For off-campus programs, clearly indicate how the library resources are to be provided.

Library resources are currently adequate with no anticipated impact on usage. The Albertson's library provides research databases, electronic textbook reserves and also books by mail for distance studies students.

b. **Needed resources.** What new library resources will be required to ensure successful implementation of the program? Enter the costs of those library resources into the budget sheet.

No additional library resources are required.

20. **Faculty/Personnel resources**
a. **Needed resources.** Give an overview of the personnel resources that will be needed to implement the program. How many additional sections of existing courses will be needed? Referring to the list of new courses to be created, what instructional capacity will be needed to offer the necessary number of sections?

No new faculty resources are required to create this program, and no additional sections of existing courses are needed. Each academic department will make available the graduate faculty member to teach their course once per year. Each department will receive 10% of that faculty member’s salary from the program and likely use those funds to hire adjunct faculty to cover undergraduate courses.

b. **Existing resources.** Describe the existing instructional, support, and administrative resources that can be brought to bear to support the successful implementation of the program.

The creation of these courses and the program will require the program to complete an online program development process and course development. These resources are already scheduled with eCampus.

c. **Impact on existing programs.** What will be the impact on existing programs of increased use of existing personnel resources by the proposed program? How will quality and productivity of existing programs be maintained?

We anticipate an overall positive impact on programs and the students from those programs as there is currently no option for advanced skill development available for students. The potential impact on those programs comes via the reassignment of workload from one undergraduate to one graduate course per year for each participating department. This potential negative impact is lessened somewhat because each department will receive funds adequate to hire a quality adjunct faculty member to backfill those needs at the undergraduate level.

d. **Needed resources.** List the new personnel that must be hired to support the proposed program. Enter the costs of those personnel resources into the budget sheet.

There are no new faculty hires anticipated or planned as part of the creation of this program. We do have a marketing budget of $10,000 per year and anticipate using these funds to acquire marketing talent from among existing staff or advanced student assistants.

21. **Revenue Sources**

a) **Reallocation of funds:** If funding is to come from the reallocation of existing state appropriated funds, please indicate the sources of the reallocation. What impact will the reallocation of funds in support of the program have on other programs?

Not Applicable. This program is supported through revenue generated from enrollment in the program.

b) **New appropriation.** If an above Maintenance of Current Operations (MCO) appropriation is required to fund the program, indicate when the institution plans to include the program in the legislative budget request.
c) **Non-ongoing sources:**
   i. If the funding is to come from one-time sources such as a donation, indicate the sources of other funding. What are the institution’s plans for sustaining the program when that funding ends?
      Not Applicable.
   ii. Describe the federal grant, other grant(s), special fee arrangements, or contract(s) that will be valid to fund the program. What does the institution propose to do with the program upon termination of those funds?
      Not Applicable.

d) **Student Fees:**
   i. If the proposed program is intended to levy any institutional local fees, explain how doing so meets the requirements of Board Policy V.R., 3.b.
      Not Applicable.
   ii. Provide estimated cost to students and total revenue for self-support programs and for professional fees and other fees anticipated to be requested under Board Policy V.R., if applicable.
      Not Applicable.

22. Using the excel **budget template** provided by the Office of the State Board of Education, provide the following information:

- Indicate all resources needed including the planned FTE enrollment, projected revenues, and estimated expenditures for the first **four** fiscal years of the program.

- Include reallocation of existing personnel and resources and anticipated or requested new resources.

- Second and third-year estimates should be in constant dollars.

- Amounts should reconcile subsequent pages where budget explanations are provided.

- If the program is contract related, explain the fiscal sources and the year-to-year commitment from the contracting agency(ies) or party(ies).

- Provide an explanation of the fiscal impact of any proposed discontinuance to include impacts to faculty (i.e., salary savings, re-assignments).

</table>

*Ongoing is defined as ongoing operating budget for the program which will become part of the base.*  
*One-time is defined as one-time funding in a fiscal year and not part of the base.*

### Budget Notes:

1. **A.** Calculation of FTE and headcount as follows:
   - 1 FTE = 24 credits
   - Headcount determined as the distinct number of students in the program that year.
   - Assume that 90% of the enrollments will be new enrollments and 10% will be shifting enrollments.
   - Assume 20% attrition from Y1 to Y2 then 3% attrition every semester thereafter.

2. **B.** Student Fee revenue calculated as Student Credit Hours * $525 per credit.
   - $525 calculated as estimate of 2024-2025 per credit rate.
   - To be conservative, assume in calculations that per-credit fee does not increase over time to align with the amount charged to traditional resident students.
### Expenditures

**Budget Notes:**

- Calculated using a 5% FTE rate for faculty, 30% FTE rate for other personnel (including associate, assistant, and full professors). Staff compensation includes a 30% fringe benefit rate.
- **FTE**: Full-Time Equivalency.
- **Salary**: Includes base salary and any additional compensation.
- **Benefits**: Includes health insurance, retirement contributions, and other benefits.

**Explanations:**

- **Salary**: Calculated based on the number of FTEs and their respective compensation rates.
- **Benefits**: Estimated based on the average benefits package for faculty and staff, including health insurance and retirement contributions.

**Budget Notes (specify row and add explanation where needed, e.g., "I.A.B. FTE is calculated using...")**:

**III.B.8** Program intends to revenue share. Calculated beginning Y4 using (Y3 program revenue-Y3 instructional costs)x20%/number of classes provided by partners. Potential partnering areas total 5 classes annually: COAS (2 classes), MEDA (1 class), IPS (1 class), and COMM (1 class).

Revenue sharing for elective course partners to be determined after Y5.

**III.E.1** Boise State University Support is defined as follows:
- Boise State Central Services (10.00% of revenue): A fund dedicated to funding support services for online students.
- Boise State eCampus Center (9.75% of revenue): Provides funding for initiative management, online course/program development, and other support services.
- Boise State Online Innovation Fund (2.3% of revenue): Seed funding for academic programs, course development stipends to faculty, open education resource grants, and eventually innovation grants.
- Boise State Online Military Tuition Fund (1.5% of revenue).
- Boise State Online Marketing, Recruitment, Enrollment, Advising and Retention Fund (7.45% of revenue): A fund dedicated to marketing online programs, recruiting students, enrolling qualified students, advising students and retaining students throughout the-life of the program.
IDAHO STATE UNIVERSITY

SUBJECT
Doctor of Nurse Anesthesia Practice

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section III.G. and Section V.R.

BACKGROUND/DISCUSSION
The Doctor of Nurse Anesthesia Practice (DNAP) program within the Idaho State University (ISU) School of Nursing will focus on preparing nurse anesthesiologists to practice within the full scope of anesthesia services for Idaho’s diverse patient population. Developed as a public-private partnership with West Idaho Anesthesia LLP, the DNAP program at ISU will prepare exemplary nurse leaders who integrate education, service, and scholarship through practice and research to enhance the quality of life for all Idahoans by expanding and enhancing anesthesia services within the state. The ISU program will meet all the requirements for students to take the National Certification Exam (NCE). Passing the NCE is required to become a Certified Registered Nurse Anesthesiologist (CRNA). This rigorous program emphasizes real-world clinical practice. The program culminates in the writing and presentation of a Capstone project which is designed to demonstrate program outcomes through the improvement of practice. The program is full-time, year-round, and completed over three years as required by the Council on Accreditation of Nurse Anesthesia Educational Programs (COA).

There are over 455 Certified Registered Nurse Anesthesiologists (CRNAs) in Idaho (2022 Idaho Nursing Workforce Report). At this time, there is neither a public nor private CRNA program in the state. Idaho is one of only a handful of states in the U.S. without a nurse anesthesia program. It is widely known that students tend to practice in the area where they received their education; however, registered nurses who want to become CRNAs must currently leave this state for their education. This ongoing issue has resulted in a loss of workforce for Idaho.

Despite having over 455 CRNAs licensed in Idaho, there is a major shortage of CRNAs across the state. Currently, in the greater Boise area, Saint Alphonsus is in need of 25 full-time CRNAs. St. Luke’s Health System is in need of 18 full-time CRNAs. Saint Luke’s also expects to need 10 more full-time CRNAs in the next 5 years (data received 11/2023 from Nick Russell, St. Alphonsus Anesthesia and Clint Allred, Chief CRNA, Anesthesia Associates of Boise). Many smaller anesthesia groups are looking for staffing as well. Based on these numbers as well as job postings from smaller groups found on Gaswork.com, we estimate there to be a shortage of approximately 60-70 full-time CRNAs within the state.

Because of the current shortages, salaries in Idaho have increased by 25% or
more within the last year (2023). The recruitment and retention costs are staggering. The use of locum contractors has overburdened many healthcare systems. Some outpatient procedures have had to be canceled or delayed for long periods of time due to a lack of adequate anesthesia personnel. Additionally, the majority of rural healthcare agencies use only CRNAs (due to the cost savings versus hiring a physician anesthesiologist) and would have difficulty continuing patient care requiring anesthesia without CRNAs. A majority of anesthetics delivered in the U.S. are delivered by CRNAs. Many of these anesthetics are delivered in independent practice settings almost exclusively by CRNAs. Idaho is one of 22 states in the U.S. that has opted out of physician supervision for Medicare reimbursement (Idaho opted out in 2002).

Currently, RNs leave Idaho to attend out-of-state CRNA programs. It is known that graduates tend to stay in the state where they complete the program due to extended time in the new area. Thus, Idaho is losing its own nursing workforce by not having an in-state CRNA program.

Other regional programs have reported high numbers of applicants to their programs with most programs receiving over 100 applicants for an average of 20 spots available. The program has not officially been announced, yet inquiries are coming into the School of Nursing on a weekly basis.

IMPACT

Idaho State University requests approval to add a professional fee to help fund the proposed Doctor of Nurse Anesthesia Practice program, in addition to normal graduate tuition and other fees, in accordance with Board Policy V.R., subsection 3.b.iii. The professional fee would initially be established at $7,957 per semester for three semesters per year. Estimated Professional Fees are $71,611.

Overview of the personnel resources that will be needed to implement the program:

- Year 1 - Program Director (PD) + 0.8 FTE Assistant Program Director (APD), adjunct faculty and administrative support
- Year 2 - PD + 0.8 FTE Assistant Program Director + 2 Instructors (0.8 each), adjunct faculty and administrative support
- Year 3 - PD + 0.8 FTE Assistant Program Director + 4 Instructors (0.8 each), adjunct faculty and administrative support

The Meridian campus has adequate classroom space and synchronous capabilities to include the L.S. and Aline W. Skaggs Treasure Valley Anatomy and Physiology laboratories. Students will also have access to computer labs. ISU will also look into possibly sharing simulation resources with Idaho College of Osteopathic Medicine and will use professional fees to supplement this shared opportunity. Total expenditures are $813,765 - $2,215,534 of ongoing funding over four years and $50,875 - $152,625 of one-time funding over four years. The
program will initially be supported by institutional reserves and ultimately funded by tuition and professional fees.

ATTACHMENTS
Attachment 1 – Doctor of Nurse Anesthesia Practice Program Proposal
Attachment 2 – Fee Justification for Doctor of Nurse Anesthesia Practice Program

STAFF COMMENTS AND RECOMMENDATIONS
Idaho State University is requesting approval to establish a new Doctor of Nurse Anesthesia Practice in Regions III and V. The program will be offered 70% face-to-face and 30% online. ISU plans to offer the program on their Meridian campus to start and then anticipates offering the program on the Pocatello campus during the second year of the program.

The program projects 14 initial enrollments reaching 68 by year five and graduating 14 starting in year three. Projections are based on responses provided through a survey conducted by ISU, recommendations by other programs, and number of quality clinical site rotations. Per program proposal, a cohort of 20-25 students per year is fairly standard across CRNA programs in the U.S. The program identified 15 students per year to financially breakeven. If minimums are not met after six years, the program will be considered for discontinuance and a three-year teach out period will be put in place.

Consistent with Board Policy III.G.3.a.i (2), an institution requesting a new doctoral program must complete an external peer review of the proposed program in addition to a full program proposal. The proposed DNAP program will require a specialized accreditation review, which can only occur once the program has been approved by the Board. This is a standard requirement for accreditation procedures. With that said, Idaho State University has submitted a request with the proposal for the specialized accreditation review to fulfill the Board's standard external peer review requirement. The specialized accreditation process is more rigorous, is conducted by an external review panel, and is required before students may be enrolled in the program. With that understanding, Board staff are supportive and have included amendments to Board Policy III.G.3. that provide procedures that will allow institutions to supplant the external review with initial specialized accreditation review, contingent on approval by the Executive Director or designee prior to proposal submission. In the meantime, the Board will need to waive this section of policy so that ISU may move forward with the DNAP program.

In accordance with State Board Policy III.Z. responsibilities, Idaho State University has statewide program responsibility specifically for Nursing at the Master of Science and Doctor of Nurse Practice levels and shares responsibility with Boise State University in Region III. The proposed program is not listed in ISU's current approved three-year plan; however, it has been added to their updated plan which will be reviewed by the Board in August of this year. ISU’s request to offer a Doctor of Nurse Anesthesia Practice is consistent with their program responsibilities for delivery of academic programs in Region III and V.
Currently, there are no DNP or DNAP programs offered in the proposed area of nurse anesthesia. ISU at present offers an online DNP program with a Family Nurse Practitioner Track and Psychiatric Mental Health Nurse Practitioner track. The DNP program prepares clinical leaders for comprehensive clinical nursing practice that influences health care outcomes for individuals or populations, grounded in evidence-based application, within a changing health care system. Students are required to come to ISU Pocatello or Meridian campuses 2-4 days each semester for clinical intensives for the Family Nurse Practitioner track. Psychiatric Mental Health Nurse Practitioner students are required to come to the Pocatello campus for new student orientation and Health Assessment intensives at the Meridian campus. Boise State University also offers an in-person DNP program with a Family Nurse Practitioner emphasis and an Adult/Gerontology Nurse Practitioner, Acute Care emphasis. These emphases represent some recent changes to align with national standards. Boise State’s DNP program prepares students to use evidence and advanced knowledge of technology to lead improvements in communication and the monitoring, collection, management, analysis, and dissemination of information that enhances health and health care safety and quality. The program is focused on design, selection, use, and evaluation of legal, ethical, just, and cost-effective information-management processes to evaluate health and practice outcomes in diverse, aggregate-focused, advanced practice settings.

Staff notes that University of Idaho has identified a need for a Doctor of Nurse Practice, Nurse Anesthetist in Region II and has added this to their updated plan for Fall 2026. Updated three-year plans will be reviewed by the Board in August 2024. The proposal completed the program review process and was presented to the Council on Academic Affairs and Programs on March 28, 2024; and to the Instruction, Research, and Student Affairs on April 4, 2024. Board staff recommends approval.

**BOARD ACTION**

I move to approve the request by Idaho State University to create a Doctor of Nurse Anesthesia Practice, as presented in Attachment 1.

Moved by __________ Seconded by __________ Carried Yes _____ No _____

AND

I move to approve the request by Idaho State University to charge a professional fee of $7,957 per semester for three semesters per year for the Doctor of Nurse Anesthesia Practice, in conformance with the program budget submitted to the Board in Attachment 1.

Moved by __________ Seconded by __________ Carried Yes _____ No _____

**Page 1**

**November 24, 2021**
Before completing this form, refer to Board Policy Section III.G., Postsecondary Program Approval and Discontinuance. This proposal form must be completed for the creation of each new program. All questions must be answered.

**Rationale for Creation or Modification of the Program**

1. **Describe the request and give an overview of the changes that will result.** What type of substantive change are you requesting? Will this program be related or tied to other programs on campus? Identify any existing program that this program will replace. If this is an Associate degree, please describe transferability.

There are over 455 Certified Registered Nurse Anesthesiologists (CRNAs) in Idaho (2022 Idaho Nursing Workforce Report). At this time, there is neither a public or private CRNA program in the state. Idaho is one of only a handful of states in the US without a nurse anesthesia program. It is widely known that students tend to practice in the area where they received their education; however, registered nurses who want to become CRNAs must currently leave this state for their education. This ongoing issue has resulted in a loss of workforce for Idaho.

All CRNA programs in the U.S. are required to be accredited by the Council on Accreditation of Nurse Anesthesia Educational Programs (COA). The COA currently requires a doctoral-level program over three years or more. These programs may either culminate in a DNAP or a DNP degree. (Institution dependent). Our committee recently conducted a survey of CRNA programs in the U.S. and found that a Doctor of Nurse Anesthesia Practice (DNAP) was the preferred degree for these programs when compared to a DNP (see Appendix E).

The ISU School of Nursing is now proposing a Doctor of Nurse Anesthesia Practice program. This is a new program and does not replace any existing programs and will comprise a public private partnership with West Idaho Anesthesia.

The program will admit eligible baccalaureate prepared RNs who, upon completing the three year program, will be awarded a Doctor of Nurse Anesthesia Practice degree and meet the qualifications for taking the National Certification Exam (NCE). Passing the NCE is required for licensure as a CRNA.

The 3-year doctoral requirement for graduating CRNAs is a recent change to accreditation standards (2024). The majority of CRNAs in Idaho are currently Master’s prepared (84% per Idaho Nursing Workforce Report), therefore a future post-Master’s option is anticipated for practicing CRNAs who wish to complete their Doctorate on a part-time basis while continuing working.

There are 20 credits of coursework in common with the ISU School of Nursing (DNP) program. Started in 2013, the ISU DNP programs are well established with over 80 students enrolled in any given year. They provide existing structure, policy and student support processes to the implementation of the DNAP program.

2. **Need for the Program.** Describe evidence of the student, regional, and statewide needs that will be addressed by this proposal to include student clientele to be served and address the ways

   a. **Workforce and economic need:** Provide verification of state workforce needs that will be
met by this program. Include job titles and cite the data source. Describe how the proposed program will stimulate the state economy by advancing the field, providing research results, etc.

Idaho is a full practice authority state; CRNAs can practice independently to their full scope of practice. CRNA costs are approximately 50% less than when the same services are provided by a physician anesthesiologist.

Despite having over 455 CRNAs licensed in Idaho, there is a major shortage of CRNAs across the state. Currently, in the greater Boise area, Saint Alphonsus is in need of 25 full-time CRNAs. Saint Luke’s Health System is in need of 18 full-time CRNAs. Saint Luke’s also expects to need 10 more full-time CRNAs in the next 5 years. (report received 11/2023 from Nick Russell, St. Alphonsus Anesthesia and Clint Allred, Chief CRNA Anesthesia Associates of Boise). Many smaller anesthesia groups are looking for staffing as well. Based on these numbers as well as job postings from smaller groups found on Gaswork.com, we estimate there to be a shortage of approximately 60-70 Full-Time CRNA's within the state.

Because of the current shortages, salaries in Idaho have increased by 25% or more within the last year (2023). The recruitment and retention costs are staggering. The use of local contractors has overburdened many healthcare systems. Some outpatient procedures have had to be canceled or delayed for long periods of time due to a lack of adequate anesthesia personnel. Additionally, the majority of rural healthcare agencies use only CRNAs (due to the cost savings versus hiring a physician anesthesiologist) and would have difficulty continuing patient care requiring anesthesia without CRNAs. A majority of anesthetics delivered in the U.S. are delivered by CRNAs. Many of these anesthetics are delivered in independent practice settings almost exclusively by CRNAs. Idaho is one of 22 states in the U.S. that has opted out of physician supervision for medicare reimbursement (Idaho opted out in 2002).

b. **Student demand.** What is the most likely source of students who will be expected to enroll (full-time, part-time, outreach, etc.). Provide evidence of student demand/interest from inside and outside of the institution.

Currently, RNs leave Idaho to attend out-of-state CRNA programs. It is known that graduates tend to stay in the state where they complete the program due to extended time in the new area. Thus, Idaho is losing its own nursing workforce by not having an in-state CRNA program.

Other regional programs have reported high numbers of applicants to their programs. with most programs receiving over 100 applicants for an average of 20 spots available. The program has not officially been announced, yet inquiries are coming into the School of Nursing on a weekly basis.

A statewide survey of RNs was conducted in the summer of 2023. Of 259 responses, 30% (n=78) indicated they were interested in attending a CRNA program if it was offered in Idaho and 66% (n= 171) wanted more information should such a program become available (see Appendix F).

In this same survey conducted, a majority of practicing CRNAs in Idaho stated they would
be interested in going back for their doctorate if a local doctoral program became available. A future completion program is anticipated.

c. Societal Need: Describe additional societal benefits and cultural benefits of the program.

The anesthesia shortage is state-wide; however, rural areas are harder hit because they rely heavily on nurse anesthetists. As one example, Valor Health in Emmett has stated it would be unable to offer surgical services should it no longer be able to provide anesthesia services due to a lack of CRNAs. As has already been mentioned, the ability for RN’s to stay in their home state to complete their advanced practice degree is a huge benefit for Idaho and our citizens.

3. Program Prioritization
Is the proposed new program a result of program prioritization?

Yes_____ No____X__

If yes, how does the proposed program fit within the recommended actions of the most recent program prioritization findings?  **Not applicable.**

4. Credit for Prior Learning
Indicate from the various cross walks where credit for prior learning will be available. If no PLA has been identified for this program, enter ‘Not Applicable’.

Not Applicable

5. Affordability Opportunities
Describe any program-specific steps taken to maximize affordability, such as: textbook options (e.g., Open Educational Resources), online delivery methods, reduced fees, compressed course scheduling, etc. This question applies to certificates, undergraduate, graduate programs alike.

Scholarship opportunities are being sought after through state health care organizations.

Enrollments and Graduates

6. Existing similar programs at Idaho Public Institutions. Using the chart below, provide enrollments and numbers of graduates for similar existing programs at your institution and other Idaho public institutions for the most past four years.

<table>

<td>0</td>
</tr>
</tbody>
</table>

November 24, 2021
7. **Justification for Duplication** (if applicable). If the proposed program is similar to another program offered by an Idaho public higher education institution, provide a rationale as to why any resulting duplication is a net benefit to the state and its citizens. Describe why it is not feasible for existing programs at other institutions to fulfill the need for the proposed program.

Not applicable. There are no other CRNA or DNAP programs in the State of Idaho.

8. **Projections for proposed program:** Using the chart below, provide projected enrollments and number of graduates for the proposed program:

The numbers below represent the projections for the proposed DNAP/CRNA program at ISU. There are no other CRNA programs in Idaho:

<table>
<thead>
<tr>
<th>Proposed Program: Projected Enrollments and Graduates First Five Years</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program Name: Nurse Anesthesia Practice, Doctor of</td>
</tr>
<tr>
<td>Projected Fall Term Headcount Enrollment in Program</td>
</tr>
<tr>
<td>FY 26</td>
</tr>
<tr>
<td>14</td>
</tr>
</tbody>
</table>

9. **Describe the methodology for determining enrollment and graduation projections.** Refer to information provided in Question #2 “Need for the Program” above. What is the capacity for the program? Describe your recruitment efforts? How did you determine the projected numbers above?

We extrapolated information based on the responses we received through our internal survey. We are incorporating recommendations from other programs on the starting numbers. We are also looking at the number of quality clinical site rotations, which is the main limitation to higher enrollment numbers. Finally, a cohort of 20-25 students per year is fairly standard across CRNA programs in the US.

10. **Minimum Enrollments and Graduates.**
   a. What are the minimums that the program will need to meet in order to be continued, and what is the logical basis for those minimums?

   The financial break-even point for the program is approximately 15 students per year. The logical basis for this determination is that this level of enrollment will cover the cost of the program.

   b. If those minimums are not met, what is the sunset clause by which the program will be considered for discontinuance?
Program demand is likely to be significant. The university is committed to funding the start-up of the program with existing reserves and a class size of 15 is sustainable. However, the program will receive ongoing institutional funding via a tuition + professional fees model; continued low enrollment will necessitate program review and possible sunsetting of the program. If, after 6 years, we do not have a minimum class size of 15 students, we will consider this program for discontinuance. A final decision to sunset will require a 3-year teach-out period.

11. **Assurance of Quality.** Describe how the institution will ensure the quality of the program. Describe the institutional process of program review. Where appropriate, describe applicable specialized accreditation and explain why you do or do not plan to seek accreditation.

All CRNA programs in the U.S. are required to be accredited by the Council on Accreditation of Nurse Anesthesia Educational Programs. Attached here is the statement from the COA regarding their accreditation process. Our anesthesia program has been working closely with the COA regarding the initial steps to take toward the accreditation process.

“The Council is responsible for establishing the standards for accreditation of nurse anesthesia educational programs and postgraduate CRNA fellowships, subject to consideration of recommendations from the communities of interest. In an effort of ongoing improvement, the standards will undergo continual review and be subject to periodic major and minor revisions as indicated. Compliance with the standards forms the basis for the Council’s accreditation decisions. Ongoing oversight by the Council is provided between formal programmatic reviews. Programs are required to advise the Council and get approval for major changes. The Council also investigates situations brought to its attention that may affect a program’s accreditation status. In a broad sense, accreditation of nurse anesthesia educational programs and fellowships provides quality assurance concerning educational preparation through continuous self study and review. The ultimate goals of the accreditation program are to improve the quality of nurse anesthesia education and provide competent nurse anesthetists for healthcare consumers and employers.” Standards for Accreditation of Nurse Anesthesia Programs, Practice Doctorate, Revised January 30, 2023

**Practice Doctorate Standards**

The practice doctorate standards address: (A) conducting institutions, (B) faculty, (C) students, (D) graduates, (E) curricula, (F) clinical sites, (G) policies, and (H) evaluations.

The accreditation process for established programs is based on the self-evaluation study document prepared by the program and an onsite review by a team of 2 or 3 reviewers. Certain Standards have been ascertained to have major significance regarding educational quality. Failure to fully comply with one or more of these Standards is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation and is marked with an asterisk (*). The Council reserves the right to identify other areas or Standards.

The process is repeated at intervals of up to 10 years. A summary report of the review is presented to the Council for an accreditation decision. New programs that seek accreditation status must successfully complete an initial accreditation review, become accredited, admit students and undergo a subsequent review when it is possible to evaluate educational outcomes following the first graduation. Each program is required to complete and submit an annual report.

Page 6
November 24, 2021
Graduation from an accredited program is a prerequisite for eligibility for national certification. It is also used as a criterion by licensing agencies, employers, and potential students in the decisions they make and in determining eligibility for government funding.” (Standards for Accreditation of Nurse Anesthesia Educational Programs- Revised May 2022)

12. **In accordance with Board Policy III.G., an external peer review is required for any new doctoral program.** Attach the peer review report as **Appendix A.**

This program requires specialized accreditation through the Council on Accreditation of Nurse Anesthesia Educational Programs. Included with this proposal is a request that the specialized accreditation review be acceptable to fulfill the Board's standard external review requirement. The program will develop a self-study and COA-NAEP will initiate plans for an on-site evaluation of the program once SBOE approval has been obtained.

13. **Teacher Education/Certification Programs** All Educator Preparation programs that lead to certification require review and recommendation from the Professional Standards Commission (PSC) and approval from the State Board of Education.

Will this program lead to certification?
Yes_____ No__X____

If yes, on what date was the Program Approval for Certification Request submitted to the Professional Standards Commission?

14. **Three-Year Plan:** If this is a new proposed program, is it on your institution's approved 3-year plan?

Yes  No  X

If yes, proceed to question 15. If no:

a. **Which of the following statements address the reason for adding this program outside of the regular three-year planning process.**

Indicate (X) by each applicable statement:

<table>
<thead>
<tr>
<th></th>
<th>Statement</th>
</tr>
</thead>
<tbody>
<tr>
<td>x</td>
<td>Program is important for meeting your institution's regional or statewide program responsibilities.</td>
</tr>
<tr>
<td>x</td>
<td>The program is in response to a specific industry need or workforce opportunity.</td>
</tr>
<tr>
<td></td>
<td>The program is reliant on external funding (grants, donations) with a deadline for acceptance of funding.</td>
</tr>
<tr>
<td></td>
<td>There is a contractual obligation or partnership opportunity related to this program.</td>
</tr>
<tr>
<td></td>
<td>The program is in response to accreditation requirements or recommendations.</td>
</tr>
<tr>
<td></td>
<td>The program is in response to recent changes to teacher certification/endorsement requirements.</td>
</tr>
</tbody>
</table>
b. **Provide an explanation for all statements you selected.**

Idaho State University has the statewide responsibility for health professions education in the state of Idaho. As such, the ISU College of Health, School of Nursing proposes this new program in response to the workforce need and timely opportunity to partner with West Idaho Anesthesia LLP to meet the CRNA workforce needs of Idaho. This public-private partnership provides the resources necessary to establish the program. Specifically, faculty expertise, clinical training sites, curriculum development from West Idaho Anesthesia and the programmatic, administrative and educational infrastructure from Idaho State University.

**Educational Offerings: Curriculum, Intended Learning Outcomes, and Assessment Plan**

15. **Curriculum.** Provide descriptive information of the educational offering.

a. **Summary of requirements.** Provide a summary of program requirements using the following table.

| Credit hours in required courses offered by the department(s) offering the program. | 101 |
| Credit hours in required courses offered by other departments: | 0 |
| Credit hours in institutional general education curriculum | 0 |
| Credit hours in free electives | 0 |
| Total credit hours required for degree program: | 101 |

b. **Curriculum.** Provide the curriculum for the program, including credits to completion, courses by title and assigned academic credit granted.

The DNAP program will be 101 credits. Baccalaureate-prepared RNs who are admitted will be enrolled in this three-year program. Students will have over 2000 hours of direct CRNA clinical experience prior to completion of the program. Students are supervised clinically by a CRNA or physician anesthesiologist. An additional 100 lab hours are spent in simulation or other clinical-related courses. 20 of the credits are shared courses with the School of Nursing Doctor of Nursing Practice (DNP) program. The three-year plan of study can also be found in the Appendices of this proposal.

**Fall- Year 1**

- Advanced Human Pathophysiology 3
- Pharmacotherapeutics for Advanced Practice 3
- Advanced Health Assessment for Anesthesia 3
- Teaching and Learning Strategies in Nursing Education 3

November 24, 2021
Total Credits = 12

Spring- Year 1
Advanced Physiology for Anesthesia I  4
Anesthesia Principles I  4
Advanced Simulation for Anesthesia Principles I  1
Advanced Pharmacology for Anesthesia I  3
Leadership in Health Policy  3
Total Credits = 15

Summer- Year 1
Anesthesia Principles II  4
Advanced Simulation for Anesthesia Principles II  1
Advanced Pharmacology for Anesthesia II  3
Advanced Physiology for Anesthesia II  4
Intro to Clinical Anesthesia  1
Total Credits = 13

Fall- Year 2
Regional Anatomy, Skills Lab & Simulation for Anesthesia Practice  3
Clinical Practicum for Anesthesia Practice I  3
Statistical Analysis in Evidence Based Practice  3
Anesthesia Principles III  4
Advanced Simulation for Anesthesia Principles III  1
Total Credits = 14

Spring-Year 2
Clinical Practicum for Anesthesia Practice II  4
Advanced Evidence Application  3
Human Factors, Patient Safety, Ethics & Diversity in Anesthesia Practice  3
Total Credits = 10

Summer-Year 2
Anesthesia Capstone I- Project Design  3
Clinical Practicum for Anesthesia Practice III  4
Crisis & Trauma Management, Advanced Concepts in Anesthesia Practice  3  
Total Credits =  10

Fall-Year 3  
Clinical Practicum for Anesthesia Practice IV  4  
Approaches to Scholarly Writing  2  
Anesthesia Capstone II- Project Development  3  
Total Credits = 9

Spring-Year 3  
Clinical Practicum for Anesthesia Practice V  4  
Anesthesia Capstone III- Project Implementation  3  
Anesthesia Board Prep I  2  
Total Credits = 9

Summer-Year 3  
Clinical Practicum for Anesthesia Practice VI  4  
Business and Leadership in Anesthesia  3  
Anesthesia Board Prep II  2  
Total Credits = 9

Program Total =101

Additional requirements. Describe additional requirements such as comprehensive examination, senior thesis or other capstone experience, practicum, or internship, some of which may carry credit hours included in the list above.

Similar to Idaho State’s DNP program, all students who are enrolled in the DNAP program will be required to complete a Capstone Project. The project will be completed over three semesters, guided by a doctoral-prepared CRNA faculty member, and designed to either improve anesthesia practice or address a problem in anesthesia practice. The students will apply the advanced knowledge and skills obtained throughout the program to complete all phases of the Capstone project: problem identification, review of the literature and other evidence, propose solution, implement and evaluate, and disseminate in both written and oral formats.

There will be an online component for some courses. The clinical component includes a minimum of 2,000 clinical hours as required by the COA. These hours are time spent delivering an anesthetic with a CRNA or physician anesthesiologist also assigned to the patient. In addition to clinical hours, the COA has minimum requirements for specific case types that must be completed by students. For example, all students must deliver an
anesthetic for a minimum of 75 intra-abdominal surgeries in order to graduate and sit for the NCE.

Simulation will be utilized in this program to reinforce the concepts taught in all of the principles of anesthesia courses as well as prior to performing skills on an actual patient.

a. Intended Learning Outcomes. List the Intended Learning Outcomes for the proposed program, using learner-centered statements that indicate what students will know, understand, and be able to do and value or appreciate as a result of completing the program.

The DNAP program prepares the students as leaders in advanced nursing to practice as CRNAs at the full scope of practice. Specific outcomes include:

- Apply the complex principles of anatomy, physiology, pathophysiology, pharmacology, chemistry, and physics related to the art and science of nurse anesthesia.
- Safely and skillfully administer a range of anesthetics for all patient populations and physiological conditions in urban and rural settings.
- Synthesize preoperative information from historical, physical, and testing data to develop a safe and evidence-based anesthetic plan.
- Utilize current evidence as a basis for clinical decision-making and to improve nurse anesthesia practices.
- Utilize ultrasound technology for regional anesthesia administration, invasive lines, and advanced patient assessment.
- Recognize and appropriately respond to anesthesia complications that occur during the perioperative and post-operative settings.
- Create a safe environment for patients and staff by minimizing the influence of human factors as well as inherent biases and by increasing situational awareness in all settings.
- Apply research and writing skills directed towards developing a solution to an anesthesia problem (Capstone Project).
- Demonstrate leadership abilities by completing a Capstone Project intended to improve anesthesia practice.
- Demonstrate effective communication skills to communicate with patients, healthcare colleagues, families, and members of the public.
- Provide evidence-based education on anesthetic concepts to patients, families, students-in-training, and groups within the community using adult learning best practices.
- Demonstrate leadership skills to navigate healthcare dilemmas and to advance the nurse anesthesia profession at local, state, and national levels.
- Identify the knowledge and tools needed to successfully run an anesthesia business.

17. Assessment plans.

a. Assessment Process. Describe the assessment plan for student learning outcomes that will be used to evaluate student achievement and how the results will be used to improve the program.
Evaluation processes similar to the existing DNP Program will be used along with accreditation requirement assessments to assess the efficacy of the DNAP program. Students complete an evaluation of each course and instructor near the end of the course. Faculty receive the feedback and are expected to incorporate it into future course offerings. The evaluations are also used as part of annual faculty evaluations.

For clinical experiences, students are assigned to a qualified Preceptor who completes a student evaluation based on the outcomes of the clinical experience. The clinical faculty are required to make on-site visits each semester and use a standardized form that has evaluative criteria. Students and faculty also evaluate the Preceptor and clinical site. Students must pass a clinical experience prior to progressing to the next clinical experience. Accreditation criteria have clear expectations of the number and type of clinical experiences. The assessment and evaluation of this program will be managed by the Program Director.

The School of Nursing uses EBI-Skyfactor, an externally contracted company that provides a standardized evaluation allowing the School of Nursing to assess not only itself but also compare it to regional and national benchmarks. We’ll ask the DNAP students to complete the EBI-Skyfactor survey to provide us with feedback on this program. The program will also reach out to the graduated students to obtain information on the successful completion of the certification and subsequent employment within 6 months of graduation.

In addition, the COA will require annual reports and will be visiting the program to ensure compliance with their standards.

**Resources Required for Implementation – fiscal impact and budget.**
Organizational arrangements required within the institution to accommodate the change including administrative, staff, and faculty hires, facilities, student services, library; etc.

18. **Physical Facilities and Equipment:** Describe the provision for physical facilities and equipment.

   a. **Existing resources.** Describe equipment, space, laboratory instruments, computer(s), or other physical equipment presently available to support the successful implementation of the program.

Initially, the program will be offered on the Meridian campus of ISU. Offering the program on the Pocatello campus is anticipated to occur during the second year of the program. The Meridian campus has classroom space that has synchronous capabilities. Additionally, the Meridian campus has the L.S. and Aline W. Skaggs Treasure Valley Anatomy and Physiology Laboratories, which will provide lab experiences for the DNAP students (see Appendix A). The Meridian campus also has a computer lab for students that has over 20 individual computer stations that can be used for studying and/or proctored exams. Additional spaces used by the Physician Assistant program have and will be used on-site on an as-needed basis. Student fees pay for the necessary equipment and supplies for the experience. An additional simulation partner exists at ICOM (Idaho College of Osteopathic Medicine). We have discussed the possibility of sharing simulation resources with ICOM, which neighbors our Meridian campus.
professional fees would supplement this shared opportunity.

The DNAP students will also have full access to the Graduate School resources, counseling services, and student learning resources, as with all ISU graduate students.

b. Impact of new program. What will be the impact on existing programs of increased use of physical resources by the proposed program? How will the increased use be accommodated?

The most significant impact on other programs will be with the DNP program, also housed within the School of Nursing. The School of Nursing faculty reviewed the proposal and approved it in the fall of 2023. The larger class sizes for the shared courses will be accommodated by faculty sharing these courses with other faculty, graduate teaching assistants, and/or adjunct faculty, who would be paid by the DNAP student fees and tuition.

The Meridian campus has adequate classroom space with the required learning and classroom technology. See the letter below from Dr. Gabriel Bargen, Executive Director of ISU-Meridian.

The library resources will need to be expanded to include subscriptions to commonly used CRNA journals and textbooks.

IT services, during initial implementation, will not require any additional resources.

c. Needed resources. List equipment, space, laboratory instruments, etc., that must be obtained to support the proposed program. Enter the costs of those physical resources into the budget sheet.

The only new resources that are needed include the Library and IT (see #19 below) and: L.S. and Aline W. Skaggs Treasure Valley Anatomy and Physiology Laboratories.

19. Library and Information Resources: Describe adequacy and availability of library and information resources.

a. Existing resources and impact of new program. Evaluate library resources, including personnel and space. Are they adequate for the operation of the present program? Will there be an impact on existing programs of increased library usage caused by the proposed program? For off-campus programs, clearly indicate how the library resources are to be provided.

There will be new journal subscriptions and textbook purchases required to promote student success in the program. These include those listed below and have been reviewed by the Dean of the Library, Dr. Sandra Shrompshire:

AANA Journals:
1) Journal of Clinical Anesthesia
2) Regional Anesthesia and Pain Medicine
3) Anesthesia Patient Safety Foundation Newsletter (APSF)
4) AANA Journal

Textbooks:

b. Needed resources. What new library resources will be required to ensure successful implementation of the program? Enter the costs of those library resources into the budget sheet.

$4000 for the above textbooks used by students (12 texts, 2 copies of each)
Costs for journal subscriptions.

20. Faculty/Personnel resources

a. Needed resources. Give an overview of the personnel resources that will be needed to implement the program. How many additional sections of existing courses will be needed? Referring to the list of new courses to be created, what instructional capacity will be needed to offer the necessary number of sections?
Add staffing plan here:

Year 1- Program Director (PD) + 0.8 FTE Assistant Program Director (APD), adjunct faculty and administrative support

Year 2- PD + 0.8 FTE Assistant Program Director + 2 Instructors (0.8 each), adjunct faculty and administrative support

Year 3- PD + 0.8 FTE Assistant Program Director + 4 Instructors (0.8 each), adjunct faculty and administrative support

b. Existing resources. Describe the existing instructional, support, and administrative resources that can be brought to bear to support the successful implementation of the program.

There are 7 already existing courses in the DNP curriculum (20 credits) that will work for the DNAP curriculum. Also, the staff for the graduate nursing department will be able to assist the DNAP program until it is able to be adequately staffed. There are existing classroom and IT resources allocated for the DNAP program as well as the Treasure Valley Anatomy and Physiology Lab (see letters of support).

The Idaho State University Libraries are situated to support the CRNA program. We have Health Science Librarians to provide library instruction and support the research needs of the students and faculty associated with this program. The CRNA program will require an expansion of our current nursing collection. The requested anesthesia books and journals, as noted in the SBOE application, will be acquired to promote student success in this program. The School of Nursing will provide the funds needed to acquire these additional resources to establish the program and their future research needs. The library has sufficient physical space to accommodate student studying, document delivery services, and the digital infrastructure needed to support remote access and online learning. All of these services are available through the University Libraries’ website, https://www.isu.edu/library/ (see Appendix D- Letter of Support).

c. Impact on existing programs. What will be the impact on existing programs of increased use of existing personnel resources by the proposed program? How will quality and productivity of existing programs be maintained?

Initially, the DNAP program will be small enough that the School of Nursing will be able to handle a few extra students, but within the first 3 years, the program will need to be fully staffed. By year 4, the program will more than cover its own costs.

d. Needed resources. List the new personnel that must be hired to support the proposed program. Enter the costs of those personnel resources into the budget sheet.

1.00 FTE Program Director
0.80 FTE Assistant Program Director
0.80 FTE Instructor
0.80 FTE Instructor
0.80 FTE Instructor
0.80 FTE Instructor
Adjunct Faculty
1.00 FTE Medical Assistant
1.00 FTE Simulation Technician

21. Revenue Sources
   a) Reallocation of funds: If funding is to come from the reallocation of existing state appropriated funds, please indicate the sources of the reallocation. What impact will the reallocation of funds in support of the program have on other programs?

   No reallocation from existing state appropriated funds is necessary. Some existing faculty will be assisting with the teaching of the students in this new program (non-anesthesia-related courses).

   b) New appropriation. If an above Maintenance of Current Operations (MCO) appropriation is required to fund the program, indicate when the institution plans to include the program in the legislative budget request.

   No new appropriation will be necessary from the State. The program will be funded by tuition and professional fees.

   c) Non-ongoing sources:
      i. If the funding is to come from one-time sources such as a donation, indicate the sources of other funding. What are the institution's plans for sustaining the program when that funding ends?
         Not applicable

      ii. Describe the federal grant, other grant(s), special fee arrangements, or contract(s) that will be valid to fund the program. What does the institution propose to do with the program upon termination of those funds?
         Not applicable

   d) Student Fees:
      i. If the proposed program is intended to levy any institutional local fees, explain how doing so meets the requirements of Board Policy V.R., 3.b.

      This program will be assessing professional fees in accordance with SBOE policy. A professional fee may be charged for an academic professional program if graduates of the program obtain a specialized higher education certificate or degree that qualifies them to practice a professional service involving expert and specialized knowledge for which credentialing or licensing may be required. The included budget form demonstrates the costs associated with offering this program and demonstrates the cost above and beyond the normal resident and non-resident tuition rates.
ii. Provide estimated cost to students and total revenue for self-support programs and for professional fees and other fees anticipated to be requested under Board Policy V.R., if applicable.

Total estimated cost to students to obtain this degree is $124,757
1. Estimated Tuition & Consolidated Mandatory Fees $53,146
2. Estimated Professional Fees $71,611

22. Using the excel **budget template** provided by the Office of the State Board of Education, provide the following information:

- Indicate all resources needed including the planned FTE enrollment, projected revenues, and estimated expenditures for the first **four** fiscal years of the program.
  - see attached budget

- Include reallocation of existing personnel and resources and anticipated or requested new resources.
  - No reallocation from existing state appropriated funds is necessary. Some existing faculty will be assisting with the teaching of non-anesthesia-related courses.

- Second and third year estimates should be in constant dollars.
  - see attached budget

- Amounts should reconcile subsequent pages where budget explanations are provided.
  - see attached budget and narrative above

- If the program is contract related, explain the fiscal sources and the year-to-year commitment from the contracting agency(ies) or party(ies).
  - Not applicable

- Provide an explanation of the fiscal impact of any proposed discontinuance to include impacts to faculty (i.e., salary savings, re-assignments).
  - There are no existing programs that will be discontinued to support this new program. The DNAP/CRNA program will be supported initially by institutional reserves and ultimately fully funded by tuition and professional fees. Should the DNAP/CRNA program have successive years of low enrollment a teach-out plan would be implemented and the program would be sunsetted.
ISU #2024-01  Doctor of Nursing Anesthesia Practice (DNAP)

Program Resource Requirements.
- Indicate all resources needed including the planned FTE enrollment, projected revenues, and estimated expenditures for the first four fiscal years of the program.
- Include reallocation of existing personnel and resources and anticipated or requested new resources.
- Second and third year estimates should be in constant dollars.
- Amounts should reconcile subsequent pages where budget explanations are provided.
- If the program is contract related, explain the fiscal sources and the year-to-year commitment from the contracting agency(ies) or party(ies).
- Provide an explanation of the fiscal impact of any proposed discontinuance to include impacts to faculty (i.e., salary savings, re-assignments).

**Budget Notes:**

II.4 Tuition is increased every year by 3%
II.5 Student Fees are professional Fees increased by 3% per year
II.6 Other is the Consolidated Mandatory Fees, which includes the activity fee, IT fee, facilities fee, and eISU fee for students
III.B.8 On-going newly instituted Administrative Recovery Fee
December 18, 2023
Dr. Francis Gerbasi, CEO
Council on Accreditation of Nurse Anesthesia Educational Programs
10275 W. Higgins Rd., Suite 906
Rosemont IL 60018-5603

Dear Dr. Gerbasi

On behalf of Idaho State University, I am pleased to announce our intent to establish a CRNA program within the state of Idaho. We have an immediate need for Certified Registered Nurse Anesthesiologists in our Idaho communities and look forward to providing an exceptional educational experience as we strive to fill this urgent need. The program will be housed in our School of Nursing which has a 65-year history of innovation and excellence. The School currently produces doctors of nursing practice and houses the only nursing research PhD in the state of Idaho in addition to several other degree programs.

The full-time curriculum we have prepared has been designed to award a Doctor of Nurse Anesthesia Practice. There will be a focus on serving our rural Idaho communities by preparing CRNA's to fill the need for a full scope of anesthesia services. We anticipate a start date in the fall of 2025. The proposed program will be 3 years/9 semesters in length and we propose to initiate the program with 14 students, increasing the class size each year by 4 to a total of 22 students per class by the third year of the program.

The Program Administrator, who has been working closely with our Idaho State University health sciences leadership team during the development of this program, is Shad Westover DNAP, CRNA. Dr Westover has extensive experience in Idaho and understands the curricular needs of students as well as the workforce needs of the Idaho health care system.

Idaho State University is in full support of this program which fits perfectly with our mission of “Engaging students through learning and research opportunities that improve the intellectual vigor, cultural vitality, and health of our communities.” The financial success of this program is a priority for us. We have prepared a program budget which we feel will enable the program to flourish. University reserves will be utilized during start-up and our budget models indicate program self-support and sustainability by year 3.

We look forward to working with you as we develop this program over the upcoming years.

Sincerely,

Kevin D. Satterlee
President, Idaho State University

Re: Meridian campus support for the CRNA program

To whom it may concern,

As Executive Director for the ISU Health Science Center in Meridian, I attest that our campus has adequate classroom space for both in class and simulation learning required for the Certified Registered Nurse Anesthetist (CRNA) program. The classrooms are equipped with the required learning and classroom technology. Additionally, our campus has on site staff that will be ready as needed to train and support the CRNA faculty regarding the use of the classrooms.

If there are questions or you would like more information regarding our learning space, please do not hesitate to contact me.

Sincerely,

Gabriel Bargen, PhD, CCC-A/SLP
Executive Director, ISU Health Science Center
Associate Professor of Audiology
Appendix C- Letter of Support 3

Sept 8, 2023

Good Afternoon Shad,

Thank you for your time reviewing the proposed DNAP curriculum with me today. Based on the information you have provided I feel confident that TVAPL will be able to support your curricular needs and assist with lab-based instruction. I look forward to collaborating with you as we work to develop and implement this exciting new program at ISU!

Best Wishes,
Noah

Appendix D- Letter of Support 4

December 18, 2023
Dr. Francis Gerbasi, CEO
Council on Accreditation of Nurse Anesthesia Educational Programs
10275 W. Higgins Rd., Suite 906
Rosemont IL 60018-5603

Dear Dr. Gerbasi,

The Idaho State University Libraries are situated to support the CRNA/DNAP program. We have Health Science Librarians to provide library instruction and support the research needs of the students and faculty associated with this program.

The CRNA program will require an expansion of our current nursing collection. The requested anesthesia books and journals, as noted in the SBOE application, will be acquired to promote student success in this program. The School of Nursing will provide the funds needed to acquire these additional resources to establish the program and their future research needs.

The library has sufficient physical space to accommodate student studying, document delivery services, and the digital infrastructure needed to support remote access and online learning. All of these services are available through the University Libraries’ website, https://www.isu.edu/library/.

We are excited to see a CRNA program in Idaho and contribute to their success!

Sincerely,

Benjamin Bolin
Health Sciences Librarian

Doctor of Nurse Anesthesia Practice (DNAP) - Professional Program Fee Justification

The School of Nursing at Idaho State University proposes to establish a Professional Program Fee per Idaho State Board Policy Section: V Financial Affairs, Subsection: R. Establishment of Fees, 3.b,iii. Professional Program Fee.

This program will admit eligible baccalaureate-prepared Registered Nurses (RNs) who, upon completion of the program, will be awarded a Doctor of Nurse Anesthesia Practice Degree. This program was developed as a public-private partnership with West Idaho Anesthesia LLP. This rigorous program will emphasize real-world clinical practice and culminates in the writing and presentation of a capstone project which is designed to demonstrate program outcomes through the improvement of practice. After completing this program, these RNs will meet the qualifications for taking the National Certification Exam (NCE). Passing the NCE is required for licensure as a Certified Registered Nurse Anesthesiologist (CRNA). Currently, there is neither a public nor private CRNA program in the state of Idaho. This is a new program and does not replace any existing programs at ISU or any other institution in Idaho.

The professional fee would be initially established at $7,957 per semester for three semesters per year (Fall, Spring, & Summer). This professional fee would be charged to students in addition to ISU’s traditional tuition and mandatory fees. The professional fee and traditional tuition are needed to cover the personnel costs of multiple instructors, a program director, and three other staff members to deliver the program. It is also necessary to cover the expensive simulation equipment, travel to clinical sites, faculty professional development, and consumable supplies. It is a requirement for all CRNA programs in the U.S. to be accredited by the Council on Accreditation of Nurse Anesthesia Educational Programs (COA).

The purpose of offering this program is to provide opportunities and access for RNs in the state of Idaho to become CRNAs. Currently, any RN in Idaho who wants to obtain this license has to leave the state to obtain the necessary education. Because of the major shortage of CRNAs across the state, some outpatient procedures have had to be canceled or delayed for long periods of time due to the lack of CRNAs. The ability for RNs to remain in Idaho to complete their education is a huge benefit not only for the students but for the general population. Being able to offer this program will have a significant positive impact on meeting the healthcare needs of the citizens in Idaho.

SUBJECT
Strategic Discussion of Board Policy III.Z., Planning and Delivery of Postsecondary Programs and Courses

REFERENCE

Jun/Aug 2003 The Board approved first and second readings of a new Board policy, III.Z. Delivery of Postsecondary Education, to guide planning and delivery of academic programs at the public postsecondary institutions.

Apr/Jun 2011 The Board approved first and second readings of proposed amendments to Board Policy III.Z., adding statewide program responsibilities and service region designations for the universities and Lewis-Clark State College.

Aug/Dec 2013 The Board approved first and second readings of proposed amendments to Board Policy III.Z., updating institutions' statewide responsibilities.

Oct/Dec 2016 The Board approved first and second readings of proposed amendments to Board Policy III.Z., updating institutions' statewide program responsibilities.

Dec 2017/Feb 2018 The Board approved first and second readings of proposed amendments to Board Policy III.Z., changing the planning timeframe from five years to three years.

Jun/Aug 2018 The Board approved first and second readings of proposed amendments to Board Policy III.Z., adding responsibilities for applied baccalaureate degrees to each region.

Jun/Aug 2020 The Board approved first and second readings of proposed amendments to Board Policy III.Z., changing the name of a statewide program listed for the University of Idaho.

Feb/Apr 2021 The Board approved first and second readings of proposed amendments to Board Policy III.Z., adding new definitions for high-demand and joint programs, as well as significant revisions to collaboration requirements.

Oct/Dec 2022 The Board approved first and second readings of proposed amendments to Board Policy III.Z., describing a set of minimum criteria by which the Board will evaluate proposals by the universities to offer new associate degrees and proposals by the community colleges to offer applied baccalaureate degrees.

Aug/Oct 2023 The Board approved first and second readings of Board Policy III.Z., exempting prison education from the policy.
The Board discussed findings and recommendations from the Policy III.Z. Working Group.

**APPLICABLE STATUTE, RULE, OR POLICY**
Idaho State Board of Education Governing Policies and Procedures, Section III.Z. and Section III.G.
Idaho Code §§ 33-113, 33-123, 33-2101

**BACKGROUND/DISCUSSION**
Board Policy III.Z Planning and Delivery of Postsecondary Programs and Courses was originally adopted by the Board in August 2003, to “ensure Idaho’s public postsecondary institutions meet the educational and workforce needs of the state through academic planning, alignment, collaboration and coordination of programs.” The policy aimed to “optimize the delivery of academic programs while allowing the institutions to grow and develop consistent with an appropriate alignment of strengths and sharing of resources.” The policy provided a critical framework to support the Board in meeting its constitutional and statutory oversight responsibilities by requiring appropriate levels of planning and accountability of postsecondary educational programming.

In Fall 2023, the Board President established a Working Group comprised of four Board members to closely examine Board Policy III.Z. and determine if further amendments should be made to the policy, particularly related to Designated Service Regions and Statewide Program Responsibilities.

Based on feedback from the institutions and input from Board staff, the Working Group brought a set of recommendations related to Board Policy III.Z. to the full Board for a Work Session discussion at the February 2024 Board meeting. At the conclusion of this Work Session, the Board directed staff to work with the eight institutions to revise Policy III.Z. to meet the following objectives: a) maintain access and affordability, and b) incentivize system-supporting behavior. The Board also directed that the policy should accomplish the following:

- Institutionalize a managed-competition approach
- Allow for effective implementation
- Be based upon mission areas with coordination responsibility
- Ensure timely response to emergent needs
- Address Baccalaureate of Applied Science degrees at community colleges and Associate degrees at the 4-year institutions
- Reward innovation
- Retain designated service regions

Additionally, the Board charged staff to develop a “High Demand Program Advisory Group.”
On April 10, the members of the Council on Academic Affairs and Programs met face-to-face in Boise for a day-long discussion about Policy III.Z, the Working Group recommendations, and the charge from the February Work Session.

IMPACT
The Work Session will allow for staff to update the Board on progress toward the charge given at the February Board meeting and discuss outcomes from the April 10 face-to-face CAAP meeting.

ATTACHMENTS
None

STAFF COMMENTS AND RECOMMENDATIONS
Staff will provide an update on progress-to-date during the Work Session.

BOARD ACTION
This item is for informational purposes only.
SUBJECT
FY 2025 Student Tuition and Fee Rates (Academic Year 2024-2025)

REFERENCE
December 2014  Board approved second reading for V.R. Policies regarding online program fees, clarifying the Technology Fee, adding Dual Credit and Summer Bridge Program fees, and revising special course fees.
December 2015  Board approved second reading for V.R. Policies regarding in-service teacher fees, clarifying online program fees, and adding Independent Study in Idaho fee.
April 2016     Board approved second reading for V.R. Policies eliminating requirement to obtain professional licensure prior to practicing a given profession as a prerequisite for establishing a professional fee for an academic professional program.
February 2020  Board approved updated list of peer institutions for University of Idaho, Boise State University, Idaho State University and Lewis-Clark State College.
April 16, 2020 Board approved FY 2021 Student Tuition and Fee Rates including waiver of Board Policy III.Y. on campus dual credit fee requirement.
April 2021     Board approved second reading for Board Policy V.R. Policies regarding transparency and simplicity of tuition and fee structure.
May 17, 2021  Board approved FY 2022 Student Tuition and Fee Rates including waiver of Board Policy III.Y. on campus dual credit fee requirement.
February 2022 Board approved second reading for Board Policy V.R. Policies regarding transparency and simplicity of tuition and fee structure including an opt-out portion of fees.

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies and Procedures, Sections III.Y. and V.R. Idaho Code § 33-3717A

BACKGROUND/DISCUSSION
Board Policy V.R. defines fees, the process to change fees, and establishes the approval level required for the various student fees (Chief Executive Officer or the Board). The policy provides in part:

“The Board may consider factors such as how tuition and fees compare to tuition and fees at peer institutions, how percent increases compared to inflationary factors, how tuition and fees are represented as a percent of per
capita income and/or household income, and what share students pay of their education costs. Other criteria may be evaluated as is deemed appropriate.”

Per board policy, Boise State University (BSU), Idaho State University (ISU), University of Idaho (UI), and Lewis-Clark State College (LCSC) notified students of proposed fee increases and conducted public hearings. Their respective presidents are now recommending to the Board student tuition and fee rates for FY 2025.

**Reference Documents**
Attachment 1 displays information showing the decline in the percentage of the General Fund allocated to the College and Universities over the last 24 years compared to other state budgeted programs.

Attachment 2 shows the percentage of total appropriation for General Fund, Higher Education Stabilization Funds (HESF), endowment funds, and tuition and fees since 1980.

Attachment 3 compares the WICHE average tuition and fees by Carnegie classification to the Idaho institutions for fiscal years 2023-24, 2022-23, 2018-19 and 2013-14 for undergraduate/graduate and resident/nonresident students.

Attachment 4 shows a summary of FY 2025 annual requested tuition and fees.

Staff has prepared charts similar to those included in each institution’s tab by aggregating the data for the 4-year institutions. The charts are described below:

Attachment 5 – Cost of Attending College vs. Per Capita Income
The purpose of this chart is to show the increasing cost to attend college (student fees, books and supplies, room and board, personal expenses, and transportation) compared to the per capita income from 2013 to 2024. Each institution has a chart showing similar information. The “cost” of attendance reflects full tuition and fees, which differs from the actual “price” of attendance which would reflect cost net of tuition discounts through financial aid and scholarships.

The average cost to attend Idaho’s 4-year institutions has grown from $18,567 in 2013 to $23,250 in 2023, or 25%, while the Idaho per capita income has increased from $35,335 to $57,894, or 64%. The increases in the cost to attend college from 2013 to 2023 are as follows:

<table>
<thead>
<tr>
<th></th>
<th>2013</th>
<th>2023</th>
<th>Increase</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tuition and Fees</td>
<td>$18,567</td>
<td>$23,250</td>
<td>25%</td>
</tr>
<tr>

<tr>
<td>Total Cost to Attend</td>
<td></td>
<td></td>
<td>25%</td>
</tr>
</tbody>
</table>
* Boise State University moved some personal and transportation costs to room and board in FY 2017.

Attachment 6: Cost to Deliver College
The purpose of this chart is to show the costs to deliver college to resident undergraduate students, changes in student enrollment, and cost per student full time equivalent (FTE.) The increases in the cost to deliver college (by major expenditure functional categories) from 2013 to 2023 are as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Increase</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instruction</td>
<td>22%</td>
</tr>
<tr>
<td>Academic Support</td>
<td>66%</td>
</tr>
<tr>
<td>Student Services</td>
<td>40%</td>
</tr>
<tr>
<td>Library Services</td>
<td>0%</td>
</tr>
<tr>

<td>Institutional Support</td>
<td>94%</td>
</tr>
<tr>
<td>Financial Aid</td>
<td>63%</td>
</tr>
<tr>
<td>Total Increase in Cost to Deliver College</td>
<td>36%</td>
</tr>
</tbody>
</table>

At the same time, student FTE (horizontal red line page 14) has decreased by 7.4%. Short-term fluctuations in FTE will result in fluctuations in the cost per FTE as the former is the denominator of the calculation. Put in constant dollars, the 10-year changes (blue line) are shown below.

<table>
<thead>
<tr>

</table>
Attachment 7: Resident Tuition and Fees, Consumer Price Index (CPI), Per Capita Income, and Average Annual Wage

The purpose of this chart is to show the annual percentage increase from 2011 to 2023 for resident tuition and fees, CPI, Idaho Per Capita Income, and Idaho Average Annual Wage. As the chart indicates, historically, when per capita income and annual wages have increased at a higher rate than the previous year, fees have correspondingly increased at a lesser rate. The opposite is also true, when income and wages have increased at a slower rate than the previous year, fees have correspondingly increased at a faster rate.

Attachment 8: Average CU Full-time Resident Fees as a % of Per Capita Income
The purpose of this chart is to show the percentage the sticker price for Idaho resident students is to the Idaho per capita income. The rate has grown from 5.1% in 1981 to 13.7% in 2023.

Attachment 9: Percentage of CU Total Appropriation by Source
The purpose of this chart is to show the percentage of the total appropriation for the College and Universities from state General Fund, Student Fees, and Endowment funds. The impact of two consecutive years of holding tuition flat is demonstrable.

Attachment 10: Tuition/Fee Waivers and Discounts
The purpose of this report is to show the dollar value of tuition and fee waivers granted by each institution along with the Board policy section authorizing each type of waiver. The report also includes discounted fees that are used in lieu of tuition such as staff, spouse, dependent, and senior citizen fees, which are not waivers.

The chart shows the amount of discounts and waivers as a percentage of gross student fees.

Institution Fee Proposals
The detailed fee proposals for each institution are contained in separate tabs (LCSC, UI, BSU and ISU), and each section includes the following:

- Narrative justification of the fee increase request and planned uses of the additional revenue.
- Schedule detailing the tuition and fee changes.
- Schedule displaying a 4-year history of Board-approved fees and the FY 2025 requested fees.
- The same charts as found on pages 13-15 (and described above) at a disaggregated, institution specific level:
  - Chart: Cost of Attending College vs. Per Capita Income
  - Chart: Cost to Deliver College and Cost to Deliver Per Student FTE
o Chart: Annual % Increase for Fees, CPI, Per Capita Income, and Average Wage

- Chart showing comparison of institution tuition and fees to peer averages with and without aspirational peers. National data was not available at time of agenda preparation, so these charts are similar to previous year.

IMPACT

Full-time resident tuition and fee increases being requested by the institutions for FY 2025 (academic year 2024-2025) are as follows (in the order they will be presented):

<table>
<thead>
<tr>
<th>Institution</th>
<th>FY24</th>
<th>FY25</th>

<td>3.0%</td>
</tr>
</tbody>
</table>

STAFF COMMENTS

For FY 2020-2022, the presidents of Idaho’s four-year higher education institutions committed to not seek tuition increases for resident undergraduate students. In FY 2023, each institution requested an increase to its Consolidated Mandatory Fee. In FY 2024, the institutions requested an increase of around 5%. This year the institutions were directed to include a fee request for resident undergraduate students of not more than 3%.

In addition to setting the FY 2025 annual undergraduate resident and nonresident tuition rates, the proposed Board action includes approval by the Board of all other tuition and fees set forth in the institutions’ tuition and fees worksheets. This may include an increase of professional, self-support, and/or online program fees previously set by the Board.

BOARD ACTION

See following pages
BOISE STATE UNIVERSITY:
I move to approve the FY 2025 annual undergraduate full-time resident tuition at Boise State University in the amount of _____, the consolidated mandatory fee in the amount of _____, and the annual undergraduate full-time nonresident tuition and fees in the amount of _____.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____

AND

I move to approve all other fees set forth in the FY 2025 Boise State University tuition and fees worksheet as reported in Attachment _____.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____

IDAHO STATE UNIVERSITY:
I move to approve the FY 2025 annual undergraduate full-time resident tuition at Idaho State University in the amount of _____, the consolidated mandatory fee in the amount of _____, and the annual undergraduate full-time nonresident tuition and fees in the amount of _____.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____

AND

I move to approve all other fees set forth in the FY 2025 Idaho State University tuition and fees worksheet as reported in Attachment ______.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____

LEWIS-CLARK STATE COLLEGE:
I move to approve the FY 2025 annual undergraduate full-time resident tuition at Lewis-Clark State College in the amount of ______, the consolidated mandatory fee in the amount of _____, and the annual undergraduate full-time nonresident tuition and fees in the amount of _____.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____

AND

I move to approve all other fees set forth in the FY 2025 Lewis-Clark State College tuition and fees worksheet as reported in Attachment _____.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____

____________________________

UNIVERSITY OF IDAHO:
I move to approve the FY 2025 annual undergraduate full-time resident tuition at University of Idaho in the amount of ______, the consolidated mandatory fee in the amount of _____, and the annual undergraduate full-time nonresident tuition and fees in the amount of _____.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____

AND

I move to approve all other fees set forth in the FY 2025 University of Idaho tuition and fees worksheet as reported in Attachment _____.

Moved by_____________ Seconded by_____________ Carried Yes_____ No_____
Dual Credit Fee
I move to set the statewide dual credit fee at $75 per credit for courses delivered through a secondary school, including courses taught online using instructional staff hired by the high school or the Idaho Digital Learning Academy, for fiscal year 2025.

Note: Graduate/Instructional Assistant waivers can vary among institutions due to the difference in their respective missions.

(1) Includes only waivers for incoming exchange students.

(2) WUE is accounted for as a rate and not a waiver. The waived amount is the difference in the out-of-state rate minus the WUE rate.

Boise State University
Fiscal Year 2025 Tuition and Fee Narrative

Background

Boise State strives to remain affordable while delivering the high-quality programs and outcomes our students and other stakeholders expect. The institution continuously works to balance the cost of education for students with funding priorities that are essential to student success, retention and graduation. Our cost of delivery per credit hour remains the lowest in the state among four-year public institutions, demonstrating our efficient stewardship of the dollars invested in us. Moreover, for every $1 spent on instruction, Boise State spends only $0.18 on administration, the lowest of any public or private institution in the state, and 30% less than the national average.

Additional indicators of Boise State’s ongoing commitment to affordability and value include:

- Boise State’s FY24 inflation-adjusted undergraduate tuition and fees are more than $400 less than actual tuition and fees in FY19.
- Students’ annual ROI on their investment in Boise State is 15.9%, more than 5% higher than the stock market 30-year average annual rate of return of 10.6% (Boise State Economic Impact Study, Lightcast.com).
- One of three pillars of Unbridled, Boise State’s comprehensive campaign, is Student Access and Success, which aligns with Blueprint for Success. Fundraising for merit and need-based scholarships helps ensure that a quality education remains within reach for all students regardless of their circumstances.

Boise State’s success in balancing the cost of education with high quality programs and outcomes is evidenced by record-breaking outcomes, including:

- A 39% increase in 4-year graduation rates over the past 5 years
- Highest retention rate among Idaho’s public institutions in FY22
- Record number of doctoral degree graduates in FY23, a 33% increase over the past 4 years

In order to continue to balance affordability with high quality programs and outcomes, Boise State is requesting a combined FY25 tuition and fee increase of 3%. For full-time students (11+ credit hours per semester), this equates to an annual tuition increase of $178.22 and fee increase of $87.78 ($266 total), bringing total annual in-state tuition and fees to $9,048. Part-time, in-state tuition and fees would increase by $12.13 per credit hour. These increases will generate approximately $4.5 million in additional revenue, with 27% of the increase dedicated to fees and the remaining 73% to tuition.

This increase is necessary to offset inflationary increases in goods and services as well as help fund CEC. A more detailed discussion of these needs follows.

Inflationary Impacts and CEC
Inflation has significantly impacted all areas of the university, including salaries. Historically Boise State relied on the low cost of living in the area to offset lower-than-average salaries, but that is no longer the case. This has resulted in a high annualized employee turnover rate as employees seek (or are recruited away) to higher-paying jobs. Consequently, the university has had to increase salaries in critical roles to attract and retain qualified faculty and staff.

<table>

<td>7.7%</td>
</tr>
<tr>
<td>Professional</td>
<td>21.14%</td>
</tr>
<tr>
<td>Classified</td>
<td>36.77%</td>
</tr>
</tbody>
</table>

Because of Boise State's general fund appropriation relative to its dedicated fund appropriation, roughly only one third of the university's salary expense and CEC is funded by the state. As a consequence, the university has to self-fund the remaining two-thirds. In FY24, self-funded CEC and healthcare cost increases were approximately $5.4M for Boise State. A 1% increase in tuition yields approximately $1M for the university, demonstrating that the requested overall tuition and fee increase of 3% is critical to our ability to fully fund CEC.

The Fee Hearing Process

Boise State’s Executive Tuition and Student Fee Committee works closely with the Student Activity Fee Advisory Board (SAFAB) and the Associated Students of Boise State University (ASBSU) on tuition and fee recommendations. This approach is designed to give the student body an active role throughout the process. They provide recommendations to the university president regarding the specific use of student activity fee revenues. The Advisory Board consists of ASBSU officers, students, and advisory staff.

On March 4, 2024, the Executive Tuition and Student Fee Committee, which in addition to ASBSU representatives includes members of the university’s executive and administrative councils, faculty senate, and our staff associations, held a public hearing that included presentations on the proposed rate increases. Following the hearing, the proposed increases were discussed, and recommendations regarding student tuition and fees were finalized and provided to President Tromp for consideration. While the Committee’s recommendation was for an overall 6% increase in tuition and fees, the university is requesting only half of that amount, or 3%.
Other Fees

An annual library subscription and materials fee of $70 is proposed. This fee will allow for additional investment in open educational resources (OER), expanded access to journals, databases and other reference materials, and the expansion of other student services in the library.

Consolidated Mandatory Fees

The State Board of Education (SBOE) has adopted the use of a consolidated mandatory fee, which includes all facilities, activity, and technology fees. SBOE policy describes this fee as “the fee charged for such activities as intercollegiate athletics, student health center, student union operations, the associated student body, financial aid, intramural and recreation, and other activities which directly benefit and involve students.”

Per SBOE guidance, all elements of the consolidated mandatory fee fall within one of the following four categories. A description of each and Boise State’s requested FY25 increase is detailed below.

Student Enrollment, Engagement, and Success

The student enrollment, engagement and success fees provide funding to support the multitude of activities and services available to students, both on and off campus. Included in these fees are scholarships, student employment opportunities, funding to support student success initiatives, and enrollment (recruitment and retention) activities.

An annual increase of $4.06 is proposed and supported by the SAFAB. The additional fee will support CEC, benefit increases and staff salaries for current employees in these areas.

Institutional Operations, Services, and Support

These fees support departmental and infrastructure needs of the college and universities, including construction and maintenance of facilities and related debt service; instructional and computing resources; student involvement services and participation with athletic, arts, and cultural events.

An annual increase of $71.60 is proposed in this category. Fifty dollars of that fee will be allocated to buy down the debt associated with the new science building and create a repayment funding source. Ten dollars will be used to fund inflationary increases in technology equipment and services. Nearly $7 will be allocated to the Boise State Student Union Building (SUB) to cover utility and CEC increases. The remaining increase is in the student activity fee and transportation. The additional activity fee will primarily support CEC and staff salaries for current employees. The transportation fee supports new shuttle routes that help students move around the main campus, downtown campus, and housing.
Student Health & Wellness
The student health and wellness fee supports students' physical and mental health and well-being. Student fees support the university’s health and counseling centers, including supporting the uncompensated care fund for services for students who do not have adequate insurance coverage or the means to pay for care. This fee supports student well-being programming and facilities, as well as recreation and intramural programs. In addition to student demand for these services, evidence demonstrates an overall improvement in the student experience when these opportunities are available. This directly impacts our student body.

A $7.12 annual increase is proposed to support the student health center. This will provide additional support for the uncompensated care fund as well as Bronco fit programming, crisis counseling and mental health screening. The funding will also be used to cover CEC and medical equipment replacement.

An annual increase of $5.00 is proposed to support the student recreation center. This increase will address CEC and benefit increases as well as student salaries. Any remaining funds will offset utility cost increases.

Student Government
This fee supports student government officers elected by students to advance their voice, initiatives, and to improve the student experience. ASBSU provides students with the opportunity to engage in discussions, events, and learning experiences that interest them and improve their learning. Students may elect to opt-out of a portion of this fee dedicated to student activities, clubs, and organizations.

No increase is proposed in this category as the units will utilize reserves to fund their initiatives.

Professional Fees, Self-Support Programs and Online Fee Programs
The university is requesting the following increases to professional fees, self-support and online programs, which are required to cover increased costs:

- Master of Athletic Leadership: $10 increase
- Executive Education Leadership: $30 increase
- Master in Organizational Performance & Workplace Learning: $20 increase
- Master in Population & Health Systems Management: $195 increase

Notably, all self-support and online programs are required to cover all program costs, including CEC, and increases in employee benefits costs.

BOISE STATE UNIVERSITY

SUBJECT
Professional fee for the Boise State University College of Business and Economics (COBE)

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section III.G. and Section V.R.

BACKGROUND/DISCUSSION
Boise State University requests permission to implement a tiered professional fee to support business education. Pre-business students enrolled in COBE programs in their first 2 years will pay a $50 per semester fee (100-200 level classes). Students taking upper-division undergraduate coursework (300-499 level classes) will pay $40 per credit hour and those taking graduate-level coursework (500-699 level classes) will pay $50 per credit hour. This professional fee will be applied to all College of Business and Economics’ traditional programs. It will not apply to the Executive MBA, Online MBA, Online MSA, or Online BBA.

Boise State University’s College of Business and Economics is AACSB-accredited in business and accounting, the highest standard globally, placing COBE in the top 6% of business colleges. It is among only 2% of business colleges accredited in both Business and Accounting. Accreditation ensures a well-developed and assessed curriculum, qualified faculty engaged in ongoing professional development and cutting-edge research, and stringent standards for student success and career services. These services include tutoring, writing assistance, academic advising, and career placement preparation. Maintaining these high standards has been and continues to be a financial challenge, especially in the last decade.

COBE engaged in direct dialogue with its students about the proposed professional fee through multiple informational meetings. Discussions began with student organization leaders, including those from Beta Alpha Psi, Business Professionals of America, and the Women in Business Association. These yielded constructive feedback and general support for the fee, recognizing its necessity. Student leaders expressed their readiness to help disseminate information about the proposed fee among the student body. COBE invited all students likely to be affected by the fee to two informational sessions. During these sessions, the purpose and need for the fee were explained, resulting in further endorsement from those in attendance, which included students as well as two parents.

This fee proposal meets the criteria for professional fees as detailed in the above-referenced policy as follows:
Credential or Licensure Requirement:
Boise State University College of Business and Economics students enroll to gain the preparation and academic credentials necessary for competitive entry into professional occupations. Many of these opportunities require or are significantly enhanced by obtaining specialized certificates. Students across various COBE undergraduate and graduate programs are eligible to pursue a range of professional certifications. According to Hanover Research, two of the top four certifications most frequently sought by employers depend on business school education, specifically the Certified Public Accountant and the Project Management Professional. A non-exhaustive list of the most highly demanded certifications COBE students pursue is included in Appendix A.

Accreditation Requirement:
The College of Business and Economics (COBE) at Boise State is accredited by the Association to Advance Collegiate Schools of Business (AACSB) in both Business and Accounting.

Demonstration of Program Costs
1. Professional Student Success Personnel Expenses

   COBE is increasing investments in student success and career development, aligning with the university’s focus on enrollment and retention. COBE career services, which serves all students taking business classes, has witnessed a consistent 11% annual increase in student use since 2020. Unique in Idaho, COBE’s array of student services offers a comprehensive range of academic and professional services, including business-oriented academic advising, tutoring, program operations, and career mentoring. With AACSB accreditation standards emphasizing discipline-specific career support, COBE ensures high-quality advising, preparation, and placement services. Requiring academic advising before enrollment has boosted the number of students that graduate in less than five years to nearly 90% of its bachelor’s degree graduates, reducing the cost and time to degree completion.

2. Attract and Retain High-Quality Faculty

   A portion of the professional fee will be dedicated to securing and retaining top-tier faculty, thereby enriching the student experience. This involves hiring additional faculty to expand teaching capacity, addressing salary gaps to stay competitive, and sustaining critical research resources. Current salary levels lag behind those of comparable business schools, resulting in faculty attrition to other institutions.

3. Investment in Research Support for Faculty and Students
Investing in faculty professional development and research support is crucial for high-quality faculty, enhancing both their expertise and research contributions to the classroom. These funds also play a vital role in supporting student research, in both cases covering expenses like data acquisition, human subjects, and conference travel.

4. Professional Fees at Similar Business Schools

COBE conducted a benchmarking analysis on professional fee usage and overall tuition at peer, aspirant, and competitor business schools. For AACSB purposes, six listed schools are considered peers, and for benchmarking, twelve regional competitors were reviewed. The analysis included the full-time resident undergraduate tuition per semester, the presence of a professional fee, and the average professional fee amount.

Among the six peer schools, four have professional fees. The average annual resident undergraduate tuition for these six schools was $10,250, with an average per-credit professional fee of $46. Of the 18 regional competitor schools, 13 charge a professional fee. The average resident undergraduate tuition for these 18 schools was $9,817, and the average per-credit professional fee was $41. Boise State University's current resident undergraduate tuition is $8,782, and the proposed professional fee for undergraduate courses is $50 per semester for COBE program-enrolled students, and $40 per credit for upper-division courses.

In a sample of 60 AACSB-accredited business colleges (available upon request) comparable to COBE (public) in the western region, 60% charge a business professional fee, most on a per-credit basis. This includes universities in Montana, Oregon, Utah, and Colorado.

IMPACT

To meet the challenges of evolving business education in Idaho, we propose a professional fee to attract and retain qualified faculty, bridge salary gaps, and support their professional development. The fee enhances the student experience and ensures an excellent return on investment. Total professional fees over a full business curriculum for undergraduates will range between $1,320 and $1,920 total during the entirety of their academic career in COBE, depending on the specific business major, while graduate fees will range between $1,500 and $2,600 total, depending on the degree pursued.

Appendix A

Certifications frequently sought by Boise State University College of Business and Economics students:

- Certified Public Accountant (CPA)
• Certified Management Accountant (CMA)
• Certified Fraud Examiner (CFE)
• Certified Associate in Project Management (CAPM)
• Project Management Professional (PMP)
• Certified Business Analysis Professional (CBAP)
• Certified Supply Chain Professional (CSCP)
• Society for Human Resource Management-Certified Professional (SHRM-CP)
• Google Digital Marketing and eCommerce Professional Certification
• Various Microsoft, Linux, SQL, and Oracle technical certifications
• Six Sigma Certification
• Certified Financial Analyst (CFA)
• Certified Financial Planner (CFP)
• Amazon Web Services (AWS) Certified Solutions Architect
• Certified Information Systems Auditor (CISA)
• Certified Information Systems Security Professional (CISSP)

$^2$ The 18 schools in this analysis include the six peer schools above and San Diego State University, the University of Colorado Denver, Washington State University, Utah State University, Weber State University, Oregon State University, the University of Oregon, Colorado State University, Montana State University, the University of New Mexico, the University of Montana, and the University of Utah.
BOISE STATE UNIVERSITY

SUBJECT
New Online Program Fees

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section V.R.

BACKGROUND/DISCUSSION
Boise State University proposes to offer one online undergraduate certificate, and one master’s program utilizing an online program fee consistent with Board Policy V.R, Establishment of Fees. The certificate and the graduate program will operate under the guidelines of Board Policy V.R. as it pertains to wholly online programs. Descriptions of the certificates are included below.

The new undergraduate certificate in AI for All provides students with an understanding of how to effectively use prominent generative AI platforms. Generative artificial intelligence technologies were released to the public in fall 2022. Given the integration of generative AI technologies in workplaces and the culture at large, students need an opportunity to learn how to effectively use dominant generative AI platforms, identify and understand their weaknesses, and have an opportunity to apply them in their domains of study.

The new Master of Arts in Digital Communications Management is conceptualized for entry and mid-level professionals. The program provides advanced training in management of communications projects, communications content creation, communications production, and team management. With this master’s degree, graduates will be prepared to develop driving technology behind digital communications and apply the latest innovations in mobile technology, understand the principles of social media and location-based services; leverage data to inform content creation, messaging, and communication campaigns; and manage communications teams. This degree supports graduates to pursue journalism, broadcasting, advertising, public relations, content strategist, app development, sales, and other professions.

IMPACT
The undergraduate certificate in AI for All is being offered at a price point of $375 per credit which aligns with the majority of Boise State University’s undergraduate online programs. The projected enrollment for FY 25-26 is 5 students; FY 26-24 is 10 students and FY 27-28 are 20 students. There are no additional instructional resources required. The cost of the program is $2,625 (7 credits at $375 per credit).
The fully online Master of Arts in Digital Communications Management will be offered at $525 per credit hour, which is lower than average for competitors. The total cost of the program is $15,750 (30 credits at $525 per credit). The program is fully supported through revenue generated from enrollment in the program.

The workforce data suggest a strong need for a program in digital communications management in Idaho, regionally, and in the United States broadly. The projected enrollment for 6 students in year 1; 22 students in year two, and 50-60 students when fully established, in year 5 and beyond.

Questions?
Idaho State University
FY2025 Student Tuition and Fee Request

Proposed Changes to Student Tuition and Fees

Notice of public hearings to seek testimony on proposed tuition and fee increases for the 2024-2025 academic year was sent to the Associated Students of Idaho State University on February 26, 2024, and published in the ROAR Weekly on February 28 and March 6, 2024. Public hearings were held on March 13 and March 14, 2024 to discuss and review proposed rates, answer questions, and receive feedback from students and the campus community.

The attached worksheet presents the requested tuition and fee rate changes for FY2025.

Background

The FY2025 College and Universities budget proposed by the Governor and approved by the Joint Finance and Affairs Committee includes partial funding of a proposed 3% CEC, a capacity enhancement line item, and an enrollment workload adjustment, reflecting a net $3.6M in additional state resources for ISU.

FY2025 increased maintenance expenses in ISU’s central university funds for CEC and inflation total $6.1M, leaving a budget gap of $2.5M relative to the FY2024 budget.

While overall the University is in a healthy financial position, it is in the midst of a multi-year initiative to solve a deficit in central university funds. If this $2.5M gap in state support is not addressed through a modest increase in base tuition and fees, it will impede ISU’s multi-year deficit reduction plan, slow progress in workforce-oriented program growth and expansion, and negatively impact student outcomes.

Access and affordability are key issues for Idaho State University and are central to our mission. ISU is the only university in Idaho to offer a tuition lock program where Idaho students who are in good academic standing and have attended college continuously since their freshman year will not pay more tuition than they paid in their first semester.

When proposing tuition rate increases, the University carefully balances student access and affordability with the need to maintain high-quality instruction, facilities, and services that support retention and success.

The proposed tuition and fees submitted herewith for your approval, in conjunction with our multi-year budget optimization initiative, will provide fiscal sustainability and resources for mission fulfillment.
Summary of Proposed Tuition and Fees

Resident Undergraduate Tuition & Fees

Resident undergraduate tuition and fees are proposed at $4,305 per semester ($8,610 per year), a $127 ($254 per year) or 3% increase over FY2024 rates. Part-time resident undergraduate tuition and fees are proposed at $439.75 per credit hour, a $13 or 3.0% increase over FY2024 rates.

These increases will support CEC, fringe rate increases, other inflationary factors, and continued investments in student retention and success.

The chart below shows ISU’s resident undergraduate tuition and fees indexed to the Higher Education Price Index (HEPI). Proposed rates for FY2025 are equivalent to a 1.8% annual increase over the five-year period from FY2021 to FY2025 and are still not on pace with inflation.

</tbody>
</table>

HEPI: FY2021 2.7%, FY2022 5.2%, FY2023 4%, FY2024 est. 4%, FY2025 est. 3.5%

Resident Graduate Tuition & Fees

Full-time resident graduate tuition and fees are proposed at $5,761 per semester ($11,522 per year), a $127 ($254 per year) or 2.3% increase over FY2024 rates. Part-time resident graduate tuition and fees are proposed at $577 per credit hour, a $13 or 2.3% increase over FY2024 rates. These proposed rates align part-time resident graduate tuition at 1/10 full-time tuition.

These recommended fee increases consider market factors and costs required for delivering high quality graduate educational programs, to include anticipated CEC and fringe rate increases, inflationary factors, and program investments.
Non-Resident Tuition & Fees

Full-time non-resident undergraduate tuition and fees are proposed at $13,860 per semester ($27,720 per year), a $127 ($254 per year) or .9% increase over FY2024 rates. Part-time non-resident undergraduate tuition and fees are proposed at $1,039.75 per credit hour, a $181.75 or 21.2% increase over FY2024 rates. These proposed rates align part-time non-resident undergraduate tuition at 1/13 full-time tuition and reflect a multi-year effort to bring part-time non-resident rates to 1/10 full-time non-resident rates.

Full-time non-resident graduate tuition and fees are proposed at $15,316 per semester ($30,632 per year), a $240 ($480 per year) or 1.6% increase over FY2024 rates. Part-time non-resident graduate tuition and fees are proposed at $1,177 per credit hour, a $235 or 24.9% increase over FY2024 rates. These proposed rates align part-time non-resident graduate tuition at 1/13 full-time tuition and reflect a multi-year effort to bring part-time non-resident rates to 1/10 full-time non-resident rates.

These recommended fee increases consider market factors and costs required for delivering high quality educational programs and services, to include anticipated CEC and fringe rate increases, inflationary factors, and program investments.

Mandatory Student Activity Fees

Mandatory Student Activity Fees are included in the rates presented above. They are proposed at $1,252.78 per semester ($2,505.56 per year), a $70.90 ($141.80 per year) or 6% increase over FY2024 rates. Part-time rates are proposed at $88.17 per credit hour, a $5.04 or 6.1% increase over FY2024 rates. These increases support CEC, fringe rate increases, and other inflationary costs for services and activities housed in local and auxiliary funds, with an emphasis on expanded student health and wellness programs and services. They also include increases in the Facilities and Information Technology fees to support extraordinary inflationary cost increases and multi-year phase-out of the per-credit fee for online courses. Proposed Mandatory Student Activity fees include an opt-out Student Clubs and Organizations Fee of $4.50/semester for full-time students and $.45/credit hour for part-time students.

Professional, Online, and Self-Support Program Fees

ISU is proposing increases to select professional fees as outlined below. These recommendations are based on an analysis of program costs, equipment and technology needs, student impact, workforce outcomes, and market conditions.

Athletic Training

The College of Health is proposing a professional fee increase of 1.8% ($14 per semester) for the Master of Science in Athletic Training. The program is also moving to a three-session per year format, which will increase the annual cost from $1,590 to $2,427. The three-session format will better support program pedagogy and student outcomes. Increased revenue will help offset costs associated with CEC, additional faculty, medical malpractice insurance, and other inflationary factors.
Audiology
The Audiology program in the Department of Communication Sciences Disorders (CSD) is proposing a professional fee increase of 20.6% ($29 per credit hour). This increase will help offset costs associated with CEC, significant equipment upgrade and replacement needs, medical malpractice insurance, and other inflationary factors.

Communication Sciences and Disorders
The Bachelor of Science in Communication Sciences and Disorders program is proposing a professional fee increase of 6.7% ($12 per credit hour). This increase will help offset costs associated with CEC, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors. This increase maintains alignment between Speech Language Pathology on-campus, online, and pre professional programs while keeping program costs in line with peer institutions and covering program expenses.

Dental Hygiene Bachelor of Science Program
The Dental Hygiene Department is proposing a professional fee increase of 6.2% ($311 per session, $622 per year) for its Dental Hygiene Bachelor of Science Program. This increase will help offset costs associated with CEC, dental supplies and personal protective equipment, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors.

Dental Hygiene Master of Science Program
The Dental Hygiene Department is proposing a professional fee increase of 7% ($14 per credit hour) for its Master of Science in Dental Hygiene Didactic Program and 6.9% ($19 per credit hour) for its Master of Science in Dental Hygiene Thesis program. These increases will help offset costs associated with CEC, adjunct faculty, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors.

Dietetics
The Master of Science in Nutrition with Dietetic Internship Program within the department of Nutrition and Dietetics is proposing a professional fee increase of 2.8% ($32 per session, $96 per three-session year). This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.

Graduate Counseling
The Department of Counseling is proposing a professional fee increase of 2.4% ($19 per session, $38 per year) for the Master in Counseling program. This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.

Idaho Dental Education Program (IDEP)
IDEP provides access to dental education for Idaho students through a cooperative agreement between ISU and Creighton University in Omaha, Nebraska. The program fee is set by Creighton University.

Medical Laboratory Science
The Medical Lab Science program is proposing a professional fee increase of 1.8% ($15 per session, $30 per year). This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.
Nursing BSN / RN to BS Completion / BS Accelerated
The BSN, RN to BS Completion, and the BS Accelerated programs in the School of Nursing are proposing a professional fee increase of 3.8% ($47 per session, $94 per year). This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.

Nursing CRNA
The new Nursing CRNA program within the School of Nursing will begin enrolling students in FY2026. The program is proposing a professional fee of $7,957 per session ($23,871 per three-session year) to support program faculty, equipment, materials and supplies, and medical malpractice insurance.

Nursing DNP
The Nursing DNP program in the School of Nursing is proposing a professional fee increase of 5.4% ($138 per session, $276 per year). This increase will help offset costs associated with CEC, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors.

Nursing Graduate Education Certificate
The Graduate Education Certificate program in the School of Nursing is proposing a professional fee increase of 1.7% ($2 per credit hour). This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.

Nursing MSN
The Nursing MSN program in the School of Nursing is proposing a professional fee increase of 1.8% ($27 per session, $54 per year). This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.

Nursing PhD
The Nursing PhD program in the School of Nursing is proposing a professional fee increase of 1.8% ($36 per session, $72 per year). This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.

Nursing PMHNP Certificate
The Nursing PMHNP Certificate program is a new program within the School of Nursing. The program is proposing a professional fee of $200 per credit hour to support program faculty, equipment, materials and supplies, and medical malpractice insurance.

Occupational Therapy
The Occupational Therapy (OT) Program is proposing a professional fee increase of 6.6% ($254 per session, $762 per three-session year) for non-resident students and 9.1% ($156 per session, $468 per three-session year). These increases will help offset costs associated with CEC, technology, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors.
Paramedic Science
The Paramedic Science program within the College of Health is proposing a professional fee increase of 13.5% ($99 per session, $198 per year). This increase will help offset costs associated with CEC, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors.

Pharmacy
The College of Pharmacy is proposing a professional fee increase of 9.5% ($882 per session, $1,764 per year) for non-resident students and 9.5% ($641 per session, $1,282 per year) for resident students. These increases will help offset costs associated with CEC, faculty promotion, computer software, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors.

Physical Therapy
The Physical Therapy (PT) Program is proposing a professional fee increase of 10.5% ($439 per session, $1,317 per three-session year) for non-resident students and 9.6% ($185 per session, $555 per three-session year) for resident students. These increases will help offset costs associated with CEC, clinical affiliations, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors.

Physician Assistant
The department of Physician Assistant Studies is proposing a 4.4% ($389 per session, $1,167 per three-session year) increase in professional fees for non-resident students and a 4.4% ($380 per session, $1,140 per three-session year) increase for resident students. These increases will help offset costs associated with CEC, faculty promotion, equipment, medical malpractice insurance, and other inflationary factors.

Radiographic Science
The Radiographic Science Program is proposing a professional fee increase of 1.8% ($9 per session, $18 per year). This increase will help offset costs associated with CEC, medical malpractice insurance, and other inflationary factors.

Sign Language Interpreting
The Sign Language Interpreting program is proposing a professional fee increase of 25.6% ($33 per credit hour). This increase will help offset costs associated with CEC, external assessments, adjunct faculty, site visits, medical malpractice insurance, and other inflationary factors.

Social Work BA
The Social Work BA program is proposing a professional fee increase of 5.1% ($9 per session, $18 per year). This increase will help offset costs associated with CEC, student field experiences, and other inflationary factors.

Social Work MS
The Social Work MS program is proposing a professional fee increase of 5.1% ($13 per session, $26 per year). This increase will help offset costs associated with CEC, student field experiences, and other inflationary factors.
Speech-Language Pathology MS (On-Campus)
The Speech-Language Pathology (SLP) On-Campus program in the Department of Communication Sciences Disorders is proposing a professional fee increase of 17.3% ($32 per credit hour). This increase will help offset costs associated with CEC, SimuCase and Exxat software, equipment upgrade and replacement, medical malpractice insurance, and other inflationary factors. This increase supports increased parity between on-campus and online SLP programs.

Speech-Language Pathology (Online)
The Speech-Language Pathology (Online) program in the Department of Communication Sciences Disorders is proposing a professional fee increase of 5.3% ($21 per credit hour). This increase will help offset costs associated with CEC, medical malpractice insurance, SimuCase and Exxat software, and other inflationary factors. This increase supports increased parity between on-campus and online SLP programs.

Speech Language Pathology Online Pre-Professional
The Speech-Language Pathology Online Pre-Professional program in the Department of Communication Sciences Disorders is proposing a professional fee increase of 6.7% ($12 per credit hour). This increase will help offset costs associated with CEC, equipment upgrade and replacement, medical malpractice insurance, faculty promotion, and other inflationary factors. This increase supports increased parity between on-campus and online SLP programs.

Online and Self-Support Program Fees
ISU is proposing increases to select online and self-support program fees as outlined below. These recommendations are based on an analysis of program costs, student impact, workforce outcomes, and market conditions.

Bachelor of Social Work
The College of Arts and Letters, in collaboration with the Kasiska Division of Health Sciences, is proposing an online program fee of $450 per credit for the associate to bachelor degree program offered as part of ISU’s partnership with Roseburg, Oregon and Umpqua Community College (UCC). This fee will be used to support program faculty, technology, and student practica.

Clinical Psychopharmacology
The Clinical Psychopharmacology program in the College of Pharmacy is proposing an online program fee increase of .3% ($2 per credit hour). This increase will help offset costs associated with medical malpractice insurance.

Elementary Education BA/BS
The Elementary Education BA/BS programs in the College of Education are proposing an online program fee increase of 4.9% ($14 per credit hour). These increases will help offset costs associated with CEC, program expansion, and other inflationary factors.

Fire Services Administration
The Fire Services Administration program in the Department of Emergency Services is proposing an online program fee increase of 3% ($8 per credit hour). This increase will help offset costs associated with CEC.
Health Informatics
The Health Informatics program is proposing an online program fee increase of 1.8% ($10 per credit hour) for the Master of Science in Health Informatics program. This increase will help offset costs associated with medical malpractice insurance.

Special Education BA/BS
The Special Education BA/BS programs in the College of Education are proposing an online program fee increase of 4.9% ($14 per credit hour). These increases will help offset costs associated with CEC, program expansion, and other inflationary factors.

Diagnostic Medical Sonography
The Diagnostic Medical Sonography Program within the Department of Radiographic Sciences is proposing a self-supporting program fee increase of 6.8% ($23 per credit hour). This increase will help offset costs associated with CEC, program equipment, medical malpractice insurance, and other inflationary factors.

Pharmacy Alaska
The Pharmacy Alaska program within the College of Pharmacy is proposing a self-supporting program fee increase of 9.3% ($1,363 per session, 2,726 per year). This increase will help offset costs associated with CEC, program equipment and maintenance, computer software, medical malpractice insurance, and other inflationary factors.

Lewis-Clark State College
Tuition & Fees Proposal

Proposed Changes to Student Fees

Lewis-Clark State College requests State Board approval to increase tuition and fees by approximately 3.0% for FY2025 to meet institutional needs. The revenue generated will provide support for increases in the ongoing costs of the institution, including the change in employee compensation, Intramurals and Club Sports, a new ID Card system and increases in contractual obligations such as technology.

The specific components of the proposed tuition and fee increases are as follows:

Resident Full-Time Tuition & Fees

- A 3.0% increase in full-time tuition/fees which includes an additional annual $178 in tuition, and $44 in consolidated mandatory fees for a total increase of $222 per year. The proposed FY25 full-time tuition and fees is $7,610 per year versus the prior year fee of $7,388.

Part-Time Tuition & Fees

- A 2.9% increase in the part-time (per credit hour) fee which includes $8.25 in tuition and $2.75 in consolidated mandatory fees for a total increase of $11 per credit hour. The proposed FY25 part-time fee is $389 versus the prior year fee of $378.
- A 2.9% increase in the summer (per credit hour) fee or $9.50 in tuition and $1.50 in consolidated mandatory fees for a total increase of $11 per credit hour. The proposed FY25 summer fee is $389 versus the prior year fee of $378.

Summer Full-Time Tuition & Fees

- A 3.0% increase in the full-time tuition/fees which includes $89 in tuition and $22 in consolidated mandatory fees for a total increase of $111. The proposed FY25 summer full-time tuition and fees is $3,805 versus the prior year fee of $3,694.

Consolidated Mandatory Fees Detail

The State Board of Education adopted the use of a consolidated mandatory fee which is inclusive of facilities, activity, and related technology fees. Per State Board guidance, all elements of the consolidated mandatory fee then fall within one of the following four subcategories:

- Student Enrollment, Engagement, and Success
- Institutional Operations, Services, and Support
- Student Health & Wellness
- Student Government – A subset of this fee includes funding for student activities, clubs, and organizations; of which students shall be allowed to opt-out of payment of this subset of the fee. For LC State, the opt-out amount is $3 per semester.
Institutional Operations, Services, and Support Fees

The college is requesting a $5 increase in the Intramurals and Club Sports activity fee and a $5.50 increase in the ID Card activity fee for full-time students. Additionally, the college is requesting a $.75 increase in the Intramurals and Club Sports activity fee and a $.50 increase in the ID Card activity fee for part-time students. These fees were vetted with the college’s student government representatives (ASLCSC) and, in turn, the representatives showed support for the fee increases via a formal resolution.

In addition, the college is requesting an increase in the technology fee. The technology fee funds computer labs, a pay for print system, and the campus enterprise resource planning system. The requested $11.50 per semester ($23 per year) increase for full-time students and $1.50 per credit hour for part-time students will provide the revenue necessary for the rising cost of technology and software maintenance contracts.

Non-Resident Tuition & Fees
- A 3.0% annual increase in non-resident tuition and fees per year. The proposed FY25 non-resident tuition and fees is $22,028 per year versus the prior year of $21,386.
- A 3.0% annual increase in Asotin County non-resident tuition and fees per year. The proposed FY25 Asotin County non-resident tuition and fees is $12,036 per year versus the prior year $11,686.

Graduate Resident Full-Time Tuition & Fees
- A 3.0% increase in full-time tuition/fees which includes an annual $184 in tuition, $70 in graduate fees, and $44 in consolidated mandatory fees for a total increase of $298 per year. The proposed FY25 full-time tuition and fees is $10,230 per year versus the prior year fee of $9,932.

Graduate Non-Resident Full-Time Tuition & Fees
- A 3.0% increase in non-resident full-time tuition/fees which includes an annual $622 in tuition, $70 in graduate fees, and $44 in consolidated mandatory fees for a total increase of $736 per year. The proposed FY25 full-time tuition and fees is $25,296 per year versus the prior year fee of $24,560.

Graduate Part-Time Tuition & Fees
- A 2.8% increase in the part-time (per credit hour) fee which includes $11.25 in tuition and $2.75 in consolidated mandatory fees for a total increase of $14 per credit hour. The proposed FY25 part-time fee is $510 versus the prior year fee of $496.

Idaho Correctional Education Per Credit Hour Fee
- A 0.0% increase in the per credit hour fee as the program transitions from Experimental Pell status to a federally approved prison education program. The proposed FY25 per credit hour fee is $310.

Idaho Correctional Education Full-Time Tuition
• A 0.0% increase in the full-time tuition as the program transitions from Experimental Pell status to a federally approved prison education program. The proposed FY25 full-time tuition is $3,439.

**Industry BAS Per Credit Hour Fee**
• The college is requesting a new $228 per credit hour fee to be effective with SU 2024. This new fee is intended to help professional populations of students who hold an Associate of Applied Science and a minimum of 3 years’ experience in the field. A lower per credit hour fee than the traditional rate is proposed due to the limited access to services for these working professionals, such as limited or no campus activities or services.

**Industry BAS Full-Time Tuition**
• The college is requesting a new $2,500 full-time tuition to be effective with SU 2024. This new tuition is intended to help professional populations of students who hold an Associate of Applied Science and a minimum of 3 years’ experience in the field. A lower full-time rate than the traditional full-time rate is proposed due to the limited access to services for these working professionals, such as limited or no campus activities or services.

The Fee Process

The University of Idaho collaborative fee process kicked off last fall with the call for proposed changes to dedicated student activity fees. At the same time, university leadership focused on identifying funding needs and potential sources, including state and tuition funds. Throughout the fall and early spring, this work continued, with active participation by the Dedicated Student Activity Fee Committee (DSAFC). The DSAFC representative committee includes student leaders from the Associated Students of the University of Idaho (ASUI), the Graduate and Professional Students Association (GSPA), and the Student Bar Association (SBA) representing the law school. All units currently receiving dedicated fees or requesting a new dedicated fee submitted data to the DSAFC. A public meeting of the DSAFC was held on January 25, 2024, with each unit requesting an increased or new fee presenting their request.

The DSAFC committee met several times in February to discuss the fee requests from each unit. A comprehensive activity fee proposal was developed by student leaders and presented to executive leadership on February 27th. This fee proposal was incorporated into the overall proposed tuition and fee package and published for public review via the formal University Notice of Intent to Adopt Student Tuition and Fee Changes, which was issued on March 6th as required by Board policy. The period of public comment is open through April 16th and will include a public presentation and open forum on proposed student fees on March 28th. During this period, students and interested citizens may provide comments, in writing, regarding the proposed fee increases. Written comments will be forwarded to the Regents, and a recording of the March 28th open forum will be available.

Tuition and Fee Request Overview

The FY 2025 proposal for tuition and fee changes reflects the University of Idaho's ongoing commitment to maintain accessibility, while at the same time addressing the rising costs of providing high quality education and experiences to our students. The university is requesting tuition increases of $216 per year for undergraduate and graduate students. These increases will generate approximately $2.0M to fund the non-state funded portion of the 3% CEC for General Education positions and a portion of the impact of inflation. The FY 2025 proposal also includes a $52 per year increase for full-time mandatory fees which funds the 3% CEC for fee-funded positions as well as several programmatic fee increases as proposed by the Dedicated Student Activity Fee Committee. Overall, the tuition and fee increase for full-time undergraduate students is $268 per year, or 3.0% for residents and 1.0% for non-residents. For full-time graduate students, the proposed increase is $268 per year as well, or 2.5% for residents and 0.9% for non-residents.
The specific components of the tuition and fee request are as follows:

**Undergraduate Resident and Non-Resident Tuition**

The University of Idaho is requesting a $216 per year increase to the undergraduate resident tuition of $6,540, and the undergraduate non-resident tuition of $25,776 per full-time student per year, bringing the proposed tuition rates to $6,756 per year for residents and $25,992 per year for non-residents. When combined with proposed fees, this results in a total tuition and fee package of $9,084 per year for undergraduate resident and $28,320 per year for undergraduate non-resident students.

**Western Undergraduate Exchange (WUE) Tuition and Fees – New Students (FY 2023, FY 2024 and FY 2025)**

FY 2025 represents the third year of a four-year phased implementation of the WICHE WUE rate calculation methodology. Prior to FY 2023, the university had set the WUE rate equal to 150% of the full-time undergraduate resident combined tuition and fee rate. Per WICHE, the correct calculation is 100% of the full-time resident combined tuition and fee rate plus 50% of only the full-time resident tuition rate. To shift to the correct methodology, the university has the approval of WICHE to implement the WICHE methodology for new students starting FY 2023 (Fall 2022), while continuing the old methodology for students enrolled prior to FY 2023. Based on this, the University of Idaho is requesting an increase of $376 per year to the WUE tuition and fee package for WUE students enrolled starting in FY 2023, FY 2024, or FY 2025 taking it from $12,086 to $12,462. This is based on the WICHE calculation equal to the full-time resident combined tuition and fee rate of $9,084 plus 50% of the full-time resident tuition only of $6,756 or $3,378.

**Western Undergraduate Exchange (WUE) Tuition and Fees – Ongoing (Prior to FY 2023)**

As indicated above, the university will continue using 150% of the full-time undergraduate tuition and fee rate for WUE students who enrolled prior to FY 2023. Based on this, the University of Idaho is requesting an increase of $402 per full-time student per year to the WUE tuition and fee package total for ongoing WUE students. This will increase the WUE total tuition and fees from $13,224 to $13,626 and is based on the requested full-time resident tuition and fee total of $9,084 multiplied by 150%.

**Graduate Resident and Non-Resident Tuition**

The University of Idaho is requesting a $216 per year increase to the graduate resident tuition of $8,272 and the graduate non-resident tuition of $27,508 per full-time student per year, bringing the proposed tuition rates to $8,488 per year for residents and $27,724 per year for non-residents. When combined with proposed fees, this results in a total tuition and fee package of $10,816 per year for graduate resident and $30,052 per year for graduate non-resident students.
**Consolidated Mandatory Fee Details**

Increases to elements of the consolidated mandatory fee are as follows and will generate an estimated $825K per year:

- $ 8.36 Student Enrollment, Engagement and Success
- 31.40 Institutional Operations, Services and Support
- 9.30 Student Health and Wellness
- 2.64 Student Government
- 0.30 Student Government – Opt Out Portion

**$52.00 Total Consolidated Mandatory Fee Increase**

These mandatory fee changes include a $5.26 per year increase to the student computing fee to fund the 3% CEC for positions fully or partially funded by this fee, continue improvement of the statewide wireless network, improve student training and communications from Office of Information Technology (OIT), and fund new student positions in OIT. Additionally, it includes a $34.38 per year increase in student activity fees aimed at funding the 3% CEC for fee-funded positions and $14.94 in increases for programmatic funding support including a new $4.00 fee supporting career services. Finally, this proposal includes a decrease of $2.58 per year to the facility fee, bringing the total consolidated mandatory fee increase to an even $52.00 per year or $2,328.00.

**Part-Time Tuition and Fees**

The University of Idaho is requesting a tuition increase of $13 per student credit hour for undergraduate and a $15 per student credit hour for graduate students. This, coupled with no change in the proposed part-time fee rates results in total part-time tuition and fee rates of $454 and $601 per student credit hour for resident undergraduate and graduate students respectively and $1,416 and $1,670 per student credit hour for nonresident undergraduate and graduate students respectively.

**New Student Orientation**

The University of Idaho is proposing an increase from $125 to $180 per student to address the increased expenses associated with staffing, venue and food at the event. The department has been actively working to reduce expenses without cutting the necessary programming for the orientation. The increased revenue from this increase will allow the University of Idaho to continue offering a high-quality welcoming event and a highlight for our incoming students and families.
Professional, Self-Support and Online Program Fees

The University of Idaho is requesting the following changes to professional, self-support fees and online program fees:

**Professional Fees:**
- Law Professional Full-Time Fee: Increase to $15,884 per year; an increase of $500 or 3.3%
- Law Professional Part-Time Fee: Increase to $882 per credit hour; an increase of $27 or 3.2%
- Art & Architecture Full-Time Fee: No change, remains at $1,432 per year
- Art & Architecture Part-Time Fee – Undergraduate: No change, remains at $72 per credit hour
- Art & Architecture Part-Time Fee – Graduate: No change, remains at $80 per credit hour

**Self-Support Program Fees:**
- McCall Field Campus Environmental Ed Graduate Certificate: Increase to $21,768 for the 2-semester program; an increase of $1,232 or 6.0%
- McCall Field Campus MNR Environmental Ed/Science Communications: Increase to $27,534 for the 2-semester + summer program; an increase of $1,558 or 6.0%
- Master of Science in Athletic Training: No change, remains at $23,571 for the 1 year/3 semester program.
- Doctorate in Athletic Training: No change, remains at $21,462 for the 1 year/3 semester program.

**Institutional Online Program Fees:**
- Master of Public Administration: No change, remains at $3,750 per semester
- Bachelor of Business Administration: No change, remains at $360 per credit hour
- Master of Business Administration: New fee, $850 per credit hour
- Master of Natural Resources: New fee, $738 per credit hour
- Master of Science in Environmental Science: New fee, $738 per hour
Memos providing additional information related to professional, self-support and online program fee changes are included in the agenda materials.

Re: College of Law Professional Fee Proposal Request

Dear Members of the Board,

The College of Law requests an increase in the Law School Dedicated Professional fee of $500 per year for Fiscal Year 2025. This dollar amount represents almost an increase of 3% over the current level of $15,384 per year to $15,884 per year.

This proposed fee is necessary to maintain the high quality of education we provide to students. This fee is not, nor should it be perceived as, a substitute for other funding from the University or from any other source. We fear that that perception could lead to the ultimate functional privatization of the College of Law, which would be detrimental to legal education in the State of Idaho. Out of necessity, the fee has been used by the College of Law to preserve the quality of legal education despite recent years of financial challenges.

The requested fee increase serves two general purposes: it allows us to continue to achieve our statewide, land grant mission as Idaho’s public law school, and it supports specific areas of strategic investment identified by our faculty as well as the accreditation visit by the American Bar Association. This fee increase is driven in large part by our need to hire and replace a significant number of faculty and staff in an employment market that is very competitive (especially in Boise, which is currently among the least affordable cities in the United States). Moreover, because the College pays a number of faculty and staff using the professional fee fund, we must also ensure that we have sufficient funds available to meet any requirements that the legislature and/or the University impose with respect to CEC for those fee-funded employees.

These proposed uses for the fee increase have long been supported by the law student leadership. It is important to the students that the College of Law remain competitively priced while still taking reasonable steps to ensure that needed programming and other fiscal requirements are met. The fee increase reflects this balancing of interests, though the College’s overall funding needs are greater than can be supported by fee increases alone.

Sincerely,

Johanna Kalb
Dean, College of Law

Re: College of Natural Resources/McCall Field Campus Environmental Education and Science Communication Graduate Certificate Program Fee

Dear Members of the Board,

In 2011, the State Board of Education approved a self-support program fee request from the College of Natural Resources (CNR) to support the operation of a successful graduate residency program at the McCall Field Campus, home of the award-winning McCall Outdoor Science School (MOSS). The program culminates in a graduate certificate in Environmental Education and Science Communication (Board approved in 2005).

The purpose of this memo is to request a 6% increase in the self-support program fee for the school year 2024 - 2025 from the current rate of $10,268 per semester, to $10,884 per semester.

Specifically, this requested increase:

1) Will defray the increased cost of faculty teaching the program and staff providing administrative support resulting from state approved CEC increases; costs of technology and scientific equipment needed for teaching, travel, and field study;

2) Will proportionately cover increased costs of operating and maintaining the 14-acre McCall Field Campus and the buildings contained therein generally attributed to normal inflation and in keeping with a comprehensive new Campus Master Plan completed in 2014. Please note that the requested fee increase will only support facility costs appropriate to the graduate program and that other facility costs will be covered using other appropriate budget lines;

3) Will not affect any students currently enrolled in the program. This requested increase would take effect for the new cohort of graduate students entering in Fall 2024.

Talented students come to our program in McCall from within the state as well as from across the U.S. and Canada, with many students having graduated from highly selective undergraduate institutions. Students apply their graduate coursework through hands-on teaching and outreach to form a unique link between university level STEM education and the Idaho K12 education system. They instill a STEM identity in 2,500 Idaho elementary, middle and high school students annually to help them become the innovators and problem solvers that our state needs to compete in the 21st century economy.

I am happy to discuss this request further with you or to answer any questions you might have. Thank you for your consideration.

Sincerely,

Dennis Becker, PhD
Dean, College of Natural Resources
Re: College of Natural Resources/McCall Field Campus Environmental Education and Science Communication Masters of Natural Resources (MNR) Program Fee

Dear Members of the Board,

In 2017, the State Board of Education approved a self-support program fee request from the College of Natural Resources (CNR) to support the operation of a successful Master of Natural Resources (MNR) program at the McCall Field Campus, home of the award-winning McCall Outdoor Science School (MOSS). The program culminates in a MNR with special emphasis on Environmental Education and Science Communication.

The purpose of this memo is to request a 6% increase in the self-support program fee for the school year 2024 – 2025 from the current rate of $12,988 per semester, to $13,767 per semester.

Specifically, this requested increase:

1) Will defray the increased cost of faculty teaching the program and staff providing administrative support resulting from state approved CEC increases; costs of technology and scientific equipment needed for teaching, travel, and field study;
2) Will proportionately cover increased costs of operating and maintaining the 14-acre McCall Field Campus and the buildings contained therein generally attributed to normal inflation and in keeping with a comprehensive new Campus Master Plan completed in 2014. Please note that the requested fee increase will only support facility costs appropriate to the graduate program and that other facility costs will be covered using other appropriate budget lines;
3) Will not affect any students currently enrolled in the program. This requested increase would take effect for the new cohort of graduate students entering in Fall 2024.

Talented students come to our program in McCall from within the state as well as from across the U.S. and Canada, with many students having graduated from highly selective undergraduate institutions. Students apply their graduate coursework through hands-on teaching and outreach to form a unique link between university level STEM education and the Idaho K12 education system. They instill a STEM identity in 2,500 Idaho elementary, middle and high school students annually to help them become the innovators and problem solvers that our state needs to compete in the 21st century economy.

I am happy to discuss this request further with you or to answer any questions you might have. Thank you for your consideration.

RE: University of Idaho Master of Business Administration (MBA) - Online Program Fee

Dear Members of the State Board of Education,

The University of Idaho’s College of Business and Economics faculty recently updated the curriculum of our Master of Business Administration (MBA) degree program. These changes include updating/modernizing core requirements and other curricular updates (e.g., enabling students to take electives across other University of Idaho colleges to promote an interdisciplinary focus, breaking courses into eight-week modules). Additionally, the delivery modality of the program has been updated from face-to-face delivery to 100% online delivery. These changes have made their way through our institutional curricular process, and the revised MBA will launch in Fall 2024.

When the University of Idaho last offered its MBA Program, the University levied a “Self-Support Academic Program Fee.” Because of the changes made to the program's delivery modality, the purpose of this memo is to request an institutional online program fee consistent with Board Policy V.R.3.b.ii at $850 per credit hour in lieu of tuition and the consolidated mandatory fee. This price point generally aligns with the per credit hour rate at our regional peer institutions, and the total costs to complete the program will be lower than our peers. This program meets the requirements of this board policy as (1) the program consists of a “grouping of courses that provide the student with the knowledge required for a baccalaureate, masters’, specialist or doctoral degree” and (2) all courses will be offered and delivered via a distance learning modality.

Sincerely,

Lisa M. Victoravich, Ph.D.
Dean, College of Business and Economics
University of Idaho

Re: College of Natural Resources/Master of Natural Resources Online Professional Fee Proposal Request

Dear Members of the Board,

The Master of Natural Resources (MNR) degree is a fully online interdisciplinary professional graduate degree program designed for current and aspiring professionals to enhance their educational credentials for a career in natural resources. The fundamental objective of the MNR program is to integrate and scale various perspectives — ecology and management; planning, policy, and society; and tools and technology — into a systems view of natural resources. The MNR program is accessible to graduate students of diverse academic backgrounds providing credentials and skills for the effective management of the environment and its natural resources.

MNR students currently choose from 59 different online graduate courses (500+ level), plus an additional 21 upper division online undergraduate courses. MNR courses may also be used to fulfill degree requirements for M.S. in Environmental Science and other graduate degree programs at the University of Idaho, including on-campus residential students. All MNR courses can be combined with any certificate program at the University of Idaho, including the GIS Certificate in the College of Science, professional certification by the Association for Fire Ecology, and certification for Federal Series GS-401, GS-408, GS-454, and GS-460. The Federal Series certifications in natural resources are among the few fully online credentialing programs in the United States. MNR is considered a terminal professional degree.

The purpose of this memo is to request the conversion of the MNR program from a tuition-based program to an institutional online fee-based program. The College of Natural Resources is requesting a fee beginning in Academic Year 2024-5 with a per credit cost of $738.00.

Specifically, this request will:

1) Set a per credit rate still below national averages and trends while providing resources directly to the MNR program to create a self-determination route for growth and contraction;

2) Provide direct resources to this unique online program to ensure the necessary instruction, technology and student support is applied directly to this unique cohort of students;

3) Set competitive pricing for MNR, typically completed through 30 credit hours with a total cost for degree attainment per student at $22,140;

4) Will not affect any students for the academic year 2023-4.

Eduventures conducted a national market analysis of online master’s programs in the Natural Resources cluster during the fall 2023. Five competitor online programs were profiled: Colorado State University, Denver University, Oregon State University, Unity Environmental University, and Virginia Tech. According to the Eduventures analysis, peer institutions account for 27% of all natural resource specific programs nationally, but just 15% of master’s degrees awarded, suggesting high competition. Within this cluster, Environmental Studies has gained share at the expense of Environmental Science, while Natural Resource
codes have posted flat share. Regionally, online master’s programs in the western United States are less common, suggesting market opportunity.

The Eduventures (2023) analysis identified UI-MNR as the largest natural resources program in the country. Eduventures estimates that the UI-MNR program is approaching a 9% national market share for natural resource master’s degrees in the United States. Eduventures analysis shows continuing strength and undercapacity of online natural resource master’s programs that should benefit UI-MNR

I am happy to discuss this request further with you or to answer any questions you might have. Thank you for your consideration.

Sincerely,

Dennis Becker, PhD
Dean, College of Natural Resources

Re: College of Natural Resources/Master of Environmental Science Online Professional Fee Proposal Request

Dear Members of the Board,

The Master of Environmental Science Online Degree (ENVS-online) is a fully online interdisciplinary degree program geared toward working professionals who are passionate about the role of science in environmental issues. ENVS-online incorporates concepts of waste management, pollution, policy and law, water science, land use, and energy systems. The ENVS-online program is accessible to graduate students of diverse academic backgrounds providing credentials and skills for the effective management of the environment and its natural resources.

ENVS-online students currently choose from 45 different online graduate courses (500+ level) for a total of 107 credits, plus an additional 16 upper division online undergraduate courses for an additional 45 credits. ENVS-online courses may also be used to fulfill degree requirements for the Master of Natural Resources and other graduate degree programs at the University of Idaho, including on-campus residential students. All ENVS-online courses can be combined with any certificate program at the University of Idaho, including the GIS Certificate in the College of Science and certification for Federal Series GS-401, GS-408, GS-454, and GS-460. The Federal Series certificates are among the few fully online credentialing programs in the United States. ENVS-online is not considered a terminal professional degree.

The purpose of this memo is to request the conversion of the MNR program from a tuition-based program to an institutional online fee-based program. The College of Natural Resources is requesting a fee beginning in Academic Year 2024-5 with a per credit cost of $738.00.

Specifically, this request will:

1) Set a per credit rate still below national averages and trends while providing resources directly to the ENVS-online program to create a self-determination route for growth and contraction;

2) Provide direct resources to this unique online program to ensure the necessary instruction, technology and student support is applied directly to this unique cohort of students;

3) Set competitive pricing for ENVS-online, typically completed through 30 credit hours with a total cost for degree attainment per student at $22,140;

4) Will not affect any students for the academic year 2023-4.

Eduventures conducted a national market analysis of online master’s programs in the Natural Resources cluster during the fall 2023. Five competitor online programs were profiled: Colorado State University, Denver University, Oregon State University, Unity Environmental University, and Virginia Tech. According to the Eduventures analysis, peer institutions account for 27% of all natural resource specific programs nationally, but just 15% of master’s degrees awarded, suggesting high competition. Within this cluster, Environmental Studies has gained share at the expense of Environmental Science, while Natural Resource
codes have posted flat share. Regionally, online master’s programs in the western United States are less common, suggesting market opportunity.

Like our competitors, the ENVS-online program appeals to aspiring and working professionals. Most are seeking to enhance their skills to take on new responsibilities, move up in their organizations, or qualify for new jobs. Most are part-time students (76%) with an average time to completion of three years to attain the required 30 credits.

I am happy to discuss this request further with you or to answer any questions you might have. Thank you for your consideration.

Sincerely,

[Signature]

SUBJECT
FY 24 Accountability Oversight Committee Annual Report

REFERENCE
August 2017 The Board approved Idaho’s ESSA Plan, including a new state and federal accountability system that utilizes multiple measures to identify schools.

December 2018 The Board received the AOC’s fiscal year 2019 report with an analysis on the first year of implementation of the state’s new K-12 school accountability system.

June 2020 The Board received the AOC’s fiscal year 2020 report with recommendations regarding assessment and accountability, as related to analysis of the data in the SDE’s 2018-19 Student Achievement Report.

February 2021 The Board adopted recommendations from the AOC related to the state’s high school accountability assessment, initiating the negotiated rulemaking process which led to changes to IDAPA 08.02.03.111.

April 2021 The Board adopted recommendations from the AOC to shift the accountability school quality measure to chronic absenteeism, initiating the negotiated rulemaking process which led to changes to IDAPA 08.02.03.112.

June 2021 The Board received the AOC’s fiscal year 2021 report with recommendations to restructure future reports.

April 2022 The Board received the AOC’s fiscal year 2022 report with recommendations to improve student outcomes, as related to analysis of the data in the SDE’s 2020-21 Student Achievement Report.

April 2023 The Board received the AOC’s fiscal year 2023 report and supported use of the executive summary.

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies and Procedures, Section I.Q. Accountability Oversight Committee
Idaho Code § 33-110
Idaho Administrative Code, IDAPA 08.02.03.111, 112, and 114

BACKGROUND/DISCUSSION
The Board’s Accountability Oversight Committee (AOC) was established in April 2010 as an ad-hoc committee. Board policy I.Q. assigns two responsibilities to the committee:

a. Provide recommendations to the Board on the effectiveness of the statewide student achievement system and make recommendations on improvements and/or changes as needed.
b. Develop and review an annual report of student achievement. This report shall be compiled collaboratively by Board and State Department of Education (SDE) staff and submitted to the committee for review. The committee will forward the report to the Board with recommendations annually.

The AOC’s annual reports are focused on recommendations to the Board and SDE resulting from the committee’s review and analysis of substantial data, as presented in annual SDE Student Achievement Reports. The data included at the request of the AOC includes standard measures given annually and additional data related to the subject-area focus for that year. For the 2022-23 Student Achievement Report, the focus area was English Language Arts and English Learners. As a result, the committee put particular emphasis on analyzing data related to the Idaho Reading Indicator (IRI), Idaho Standards Achievement Test (ISAT) in English Language Arts / Literacy, and the English Language Proficiency Assessment for English Learners.

To ensure the Board and public can identify the AOC’s highest priority recommendations, the committee’s FY 24 Report (Attachment 1) includes a focused Executive Summary. With support from the Board, the AOC will publish the Executive Summary as a separate document for distribution and implementation. The full report includes conclusions summarizing data analysis by subject and then presents recommendations, divided between policy recommendations for the Board and implementation recommendations for SDE. The recommendations are further separated between short-term and long-term actions. The FY 24 Accountability Report includes one appendix: Appendix A, the 2022-2023 Student Achievement Report.

The following recommendations and corresponding data from the FY 24 AOC Recommendations Report have been identified as the most critical for the Board to understand in depth:

**Early Literacy**

**Priority Recommendation for the Board and Department (short-term):**

- Develop a growth model for the IRI that creates fall-to-spring targets at the individual student level to encourage continued growth for all students.

**Middle Grades Math**

**Priority Recommendation for the Board and Department (short-term):**

- Collaborate with Smarter Balanced to create an actionable report on student performance on Idaho’s Academic Content Standards for Mathematics.

**High School to Postsecondary Go On Rates**

**Priority Recommendation for the Board and Department (short-term):**
• In alignment with Idaho Launch and Idaho’s job market, substantially expand the data reported, to include degrees and certifications completed in high school and a broader range of students’ postsecondary choices.

IMPACT
The recommendations outlined in the FY 24 AOC Recommendations Report are intended to guide the Board and Department to adjust policies, practices, and systems to support improved student achievement in areas aligned to the Board’s strategic plan. Board staff and IDE staff will need to collaborate on next steps toward implementation, including distribution of the Executive Summary. As written, none of the priority recommendations impact statute or administrative code at this time. However, agency staff could determine that steps towards implementation necessitate change. If this occurs, staff will bring the suggested changes to the Board for approval through the appropriate process.

All other recommendations in the full report will be reviewed individually by the appropriate agency to determine timelines and appropriate actions. Any recommendations that impact statute or Administrative Code may be brought back to the Board for consideration as legislative ideas.

ATTACHMENTS
Attachment 1 – FY 24 Accountability Oversight Committee Recommendations Report, March 2024 (including Appendix A: 2022-23 Student Achievement Report)

BOARD STAFF COMMENTS AND RECOMMENDATIONS
Priority recommendations from this report are aligned to the Board’s strategic plan, specifically increasing performance across K-3 literacy, middle-grades math, and the go-on rate. Board Staff recommends continued support for the priority recommendations presented in the Executive Summary of the FY 24 Accountability Oversight Committee Recommendations Report.

BOARD ACTION
This agenda item is for informational purposes only.

Appendix A: 2022-2023 Student Achievement Report
SECTION 1: INTRODUCTION

Background

The Accountability Oversight Committee (AOC) was created in 2010 as an ad hoc committee of the State Board of Education (Board). The committee’s membership is provided at the end of this report.

Per Board policy, the AOC is tasked with providing the Board with recommendations regarding the effectiveness of or need for changes to the statewide accountability system. Additionally, the committee is expected to annually review student achievement data and provide recommendations to the board.

This report is intended to build upon other data sources to aid the Board in understanding K-12 student achievement and to present the Board with short-term and long-term recommendations regarding how the state can continue to make progress. Per the AOC’s FY 21 Recommendations Report, as approved by the Board in June 2021, the AOC reviews certain data in alternating years, with attention given to certain content areas each year (particularly English language arts (ELA) or math). The FY 24 report has an ELA focus.

In summer and fall 2023, the AOC, Board staff, and State Department of Education (SDE) staff agreed to continue the collaborative approach that has been used in recent years for this work. The group reviewed previously established plans regarding the data the AOC would review, and the SDE compiled the data into the 2022-2023 Student Achievement Report (Appendix A).

On January 12, 30, 31 and February 16, 2024, the AOC reviewed the data included in the 2022-2023 Student Achievement Report and began developing this report. Each data review included a time for analysis, discussion, and development of related recommendations to improve outcomes. Additionally, AOC members made suggestions regarding potential data analyses to be considered for future reports, as provided in Appendix B.

The AOC is presenting this report to the State Board of Education for consideration at the April 2024 meeting.
Report Structure

The following report is structured around key metrics of student achievement. The FY 24 report has an English Language Arts (ELA) emphasis.

A brief and focused Executive Summary is provided as Section 2. If approved by the Board, the Executive Summary will also be released as a stand-alone document for distribution to districts, schools, and partners. The Executive Summary provides the AOC’s three priority recommendations paired with figures that summarize related data.

Section 3 provides the AOC’s conclusions and recommendations. The conclusions represent a summary of the AOC’s data interpretations with an emphasis on points of celebration and concern. The AOC’s recommendations are presented after the conclusions, split between policy recommendations for the Board and implementation recommendations for the SDE. The recommendations are further separated between short-term and long-term actions and include notes to indicate if they are ongoing recommendations (e.g., previously included in the FY 22 or FY 23 AOC Report). The conclusions presented in Section 3 are based on the AOC’s full analysis of the Student Achievement Report data, as provided in Section 4.

Section 5 includes a list of AOC committee members and their affiliations.

DISCLAIMER

This report is an internal working document of the Accountability Oversight Committee (AOC), an ad hoc committee of the Idaho State Board of Education. The recommendations presented here are the opinions of the AOC and not necessarily that of the Board unless explicitly accepted by them.
SECTION 2: EXECUTIVE SUMMARY

The purpose of this section is to provide a compact overview of the highest priority findings and recommendations found in the FY 24 AOC Recommendations Report, including Appendix A: 2022-2023 Student Achievement Report. Please see the full report for additional details.

Positive Findings

➢ After the percentage of K-3 students At Grade Level on the IRI fell to a pandemic low of 65% in 2021, the All Students K-3 group had an At Grade Level rate of 69% in 2023.
➢ High school ISAT ELA scores continue to improve when compared to prior years.
➢ Longitudinal ISAT math mean scale score data for all grades shows that while math scores were impacted by the pandemic and have not fully recovered, progress has been made.
➢ English Learners’ performance on the English Language Proficiency Assessment shows students steadily improving over time.
➢ American Indians / Alaskan Natives have had a steadily increasing 5 Year Cohort Graduation Rate for the past five years; 2018: 63%; 2019: 70%; 2020: 68%; 2021: 73%; and 2022: 76%.

Early Literacy

Figure 1: IRI 2022-23 Performance Relative to 2021-22 Score

![Graph showing IRI performance relative to 2021-22 score]

Findings

➢ Most Below and At Grade Level students score in the same category both years.
➢ There is upward movement, with 36% of students who scored Below Grade Level and 49% of Near Grade Level moving up.
➢ There is some downward movement of At Grade Level students and Near Grade Level students scoring in a lower category in 2023.

Priority Recommendation

Develop a growth model for the IRI that creates fall-to-spring targets at the individual student level to encourage continued growth for all students.
ACCOUNTABILITY OVERSIGHT COMMITTEE - RECOMMENDATIONS REPORT

Middle Grades Math

Figure 2: Longitudinal Mean ISAT Math Scale Score, Composite & Claims, 2021-22 Grade 10 Matched Cohort (n=15,998)

Finding
Cohort data shows performance differences between the test’s sub-categories (claims), but does not allow identification of specific skills that are particularly challenging for students at certain grade levels.

Priority Recommendation
Collaborate with Smarter Balanced to create an actionable report on student performance on Idaho’s Academic Content Standards for Mathematics.

High School to Postsecondary Go On Rates

Figure 3: 3 year Go On Rates, by Graduation Cohort

Finding
While the current Go On Rate data is accurate, it does not allow for a clear understanding of what students are doing after high school, and is missing key metrics.

Priority Recommendation
In alignment with Launch and Idaho’s job market, substantially expand the data reported, to include degrees and certifications completed in high school and a broader range of students’ postsecondary choices.

AOC Recommendations Report - March 2024
SECTION 3: RECOMMENDATIONS

Suggestions for Reading Section 3

Before reading the following subsections, readers should look at the Associated Analysis and Associated Data lists directly under the header of each subsection. The Associated Analysis guides readers to the data analyses and interpretations found in Section 4 of this report. The Associated Data directs readers to the relevant figures, tables, and bulleted data interpretations found in the 2022-2023 Idaho State Department of Education Student Achievement Report (Appendix A). Reviewing this relevant information will prepare readers to process the conclusions and recommendations contained in each subsection. To further guide readers, the relevant SDE Student Achievement Report figures and tables are listed within the body of the following subsections so readers can quickly revisit them as they read.

Recommendations Definitions

Based on the AOC’s experience with the time and energy it takes to implement recommendations, the following definitions are used when referring to Short-term Actions and Long-term Actions in the Recommendations tables in Section 3.

✓ Short-term Actions: Work on this recommendation should begin as soon as possible, with the goal that the recommendation be completed within approximately two (2) years after the Board’s approval.

✓ Long-term Actions: While planning can begin sooner, these are recommendations that generally are expected to take more than two (2) years to come to fruition. Sometimes, these recommendations first require the completion of a Short-term Action.

Important Data Consideration

For all categories of data, in recent years, there was a noticeable decrease in the group (n) size for Economically Disadvantaged students. This is primarily attributable to difficulty in accurately identifying students for this category for two specific reasons. First, during the past decade or so, the number of schools identified as schoolwide Title I schools has increased. When schools are identified for schoolwide Title I, lunch is provided free for all students and families are not asked to complete free and reduced lunch forms. Second, during the pandemic (SY 2020-21 and 2021-22), free lunch was provided to all students across all schools, regardless of their Title I status. These changes made it more challenging for schools to accurately identify students as economically disadvantaged.
English Language Arts/Literacy and English Language Learning

Conclusions: Idaho Reading Indicator (IRI)

**Associated Analysis**: AOC Recommendations Report, Section 4, pgs. 23-27
**Associated Data**: 2022-2023 Student Achievement Report (App. A), Figures 2-19, pgs. 15-31

**Data Considerations**:

- Idaho’s vendor for the IRI, Istation, made two significant changes to the test between 2021-22 and 2022-23.
  - For 2022-23, Istation re-normed their test, which adjusted the expectations for students to be identified at a certain percentile, and therefore, to fall into each performance category (At Grade Level, Near Grade Level, Below Grade Level).
  - For 2022-23, Istation developed a continuous scale for their test, thus adjusting the scale score ranges for each performance category.

**Conclusions**:

- Spring 2023 At Grade Level performance for All Students (K-3) was 69%, up from the pandemic low of 65% and close to the 2019 pre-pandemic high of 70%.
  - Kindergarten and 2nd grade had 2023 performance that met or exceeded pre-pandemic levels.
  - 1st and 3rd grades have not recovered to pre-pandemic levels, which may reveal a longer-term pandemic impact. The 3rd grade At Grade Level rate hit a post-pandemic low in spring 2023.
  - Growth during 2nd grade is the greatest of any grade and accounts for most of the improvement that occurs between kindergarten and 3rd grade.

- Student subgroup performance (i.e., race/ethnicity & student group) is not comparable across school years 2021-22 and 2022-23 because of the re-norming and re-scaling of the IRI. Thus, additional years of data are needed to detect trends.

- Although Idaho is effective at advancing most K-3 students from lower to higher performance categories, some students have performance that stagnates.
  - Cohort analyses show that by spring of 2nd grade, approximately 25% of students remain Near or Below Grade Level and most do not successfully move upward during 3rd grade.
  - Cohort analyses show that the strongest IRI gains occur during 2nd grade. This could be due to any combination of the following: effective instruction, robust curricula, and alignment between instruction and the IRI. Further research on what is spurring 2nd grade growth could allow for identification of best practices.
• Year-over-year comparisons of individual student performance levels between reveal that 64% of students who scored Below Grade Level in spring 2022 remained at that level in spring 2023, while between 10-17% of students performing At Grade Level or Near Grade Level in spring 2022 fell back to a lower performance category in spring 2023.

➢ IRI domain analyses provide important insights into strengths and weaknesses in early literacy.
➢ Additional years of data are needed to determine full-time kindergarten impacts on early literacy achievement.

• When comparing fall to spring scores in 2022-23, students in full-time kindergarten had a higher increase in the percentage of students At Grade Level (improvement in proficiency was 7 points higher than part-time kindergartners).
• There may be differences in the type of students in full-time and part-time kindergarten, so additional demographics data is needed to conduct a deeper analysis of the data.

Conclusions: ISAT English Language Arts (ELA)

Associated Analysis: AOC Recommendations Report, Section 4, pgs. 27-29

Data Considerations:

– After a gap in testing in 2019-20, for the following two years (2020-21 and 2021-22), Idaho used a shortened blueprint with a computer adaptive test (CAT) that is approximately half the length of the full blueprint. However, in 2022-23, Idaho used the full (longer) blueprint. We do not know the extent to which lowered scores in 2022-23 are reflective of test fatigue due to the longer test and/or a latent pandemic impact.

– In 2022-23, Idaho moved the high school assessment from 10th grade to 11th grade. Students whose 10th grade score from the prior year (2021-22) was proficient or advanced using the 11th grade cut scores were allowed to re-use their score in 2022-23 without re-testing. It is impossible to know the impact this may have had on high school scores.

Conclusions:

➢ Given the blueprint changes, more years of data are needed to re-establish consistent monitoring of post-pandemic trends.
➢ Year-over-year high school performance is consistently improving.
➢ After gains of 1 to 3 percentage points across grades 3-8 in 2020-21 and 2021-22, the percentage of students scoring proficient dropped to new lows in 2023. Notably, these drops may be due to test fatigue caused by the lengthened blueprint.
ACCOUNTABILITY OVERSIGHT COMMITTEE - RECOMMENDATIONS REPORT

➢ Individual student comparisons of year-over-year performance levels reveal substantial numbers of students in a given performance category one year falling into lower performance categories the following year. For example, of students who scored Proficient in 2021, 26% scored Basic or Below Basic in 2022.

  • There is some evidence, however, that Idaho can initiate and sustain solid year-over-year growth. Between 2017 and 2019, the mean scale score rose by 9 points. It is possible the pandemic disrupted this emerging upward trend and once the test blueprint is stabilized, improved performance will re-emerge.

➢ Performance gaps between subgroups and their reference groups remain. While the All Students group had a proficiency rate of 52% in 2023, students in most other subgroups did not have the majority score proficient or advanced.

➢ Cohort analyses reveal consistent group average performance at or slightly above proficiency across the grade levels both pre and post pandemic.

Conclusions: English Language Proficiency Assessment

Associated Analysis: AOC Recommendations Report, Section 4, pgs. 29-30

Data Considerations:

  – Idaho adjusted (lowered) the cut scores needed for students to exit English Learner (EL) programs in 2019-20, resulting in many more students “testing out” of the programs. As a result, the 2020-21 cohort of students was substantially different than the prior year, since higher performing students had tested out.

  – Since modified exit criteria were implemented during the pandemic, it is impossible to know how much the scores in 2020-21 and future years (2021-22, 2022-23) are a result of the change in exit criteria vs. pandemic impacts.

Conclusions:

➢ English Learner performance consistently improves the longer they are in the program. This is a highly positive finding and should be recognized.

  • Additional research should be conducted, including comparisons to performance in other states to determine if Idaho has a standout program.

  • A case study would be beneficial to identify best practices.
Recommendations - ELA/Literacy and English Learning

Policy Recommendations – State Board of Education

Short-term Actions
1. Maintain the commitment to K-3 Literacy (FY 22 & FY 23 Rec).
   a. Focus on cohorts of students most impacted by the pandemic (FY 23 Rec).
   b. Continue to monitor cohorts up to grade 6 to identify if accelerated learning efforts have addressed pandemic impacts.
   c. Ensure the state’s new professional development/mentoring platform has an effective mechanism for identifying and sharing best practices in K-3 Literacy (FY 23 Rec).
2. Continue systematic collection and analyses of data regarding the impact of expanded full-time kindergarten in the state (FY 23 Rec).
3. Expand partnerships with stakeholder groups committed to serving specific populations to engage in coordinated efforts to identify short- and long-term strategies to address performance differentials (FY 22 & FY 23 Rec).

Long-term Actions
1. Based on recommendations from appropriate stakeholder groups, develop plans to reduce performance differentials between subgroups (FY 22 & FY 23 Rec).

Implementation Recommendations – State Department of Education

Short-term Actions
1. Provide focused professional development to districts, schools, administrators, and other educational leaders on how to interpret IRI and ISAT data (particularly domain and claim data) and use it to make instructional and curriculum decisions (FY 22 & FY 23 Rec).
   a. Support districts and schools in identifying how to use IRI and ISAT data to formulate strategic

Long-term Actions
1. Track cohorts and continue implementation support related to K-3 literacy (FY 22 Rec), with expansion to K-6 to ensure accelerated learning continues with students impacted by the pandemic (FY 23 Rec).
2. Maintain high quality professional development on literacy and use of IRI and ISAT Claim level data (FY 23 Rec).
ACCOUNTABILITY OVERSIGHT COMMITTEE - RECOMMENDATIONS REPORT

interventions for specific student subgroups.
  − Promote use of the ISAT interims and interim data as tools to support instruction (FY 23 Rec).
  − Collect and analyze data to measure how the use of ISAT interims impacts summative assessment performance.

b. Ensure professional development is appropriately targeted and differentiated across roles (teachers, vs. administrators, etc.) (FY23 Rec).

c. Review the effectiveness of existing state literacy initiative efforts to ensure LEAs receive strong support (FY23 Rec).

2. Facilitate sharing of full-time kindergarten best practices between LEAs (FY 23 Rec).

3. In coordination with the Board, expand partnerships with stakeholder groups committed to serving specific student populations (FY 22 & FY 23 Rec).

4. Identify highly effective districts and schools performing above expectations, particularly with specific subgroups of students. Recognize / reward them and share their strategies (FY 22 & FY 23 Rec).

5. Conduct analysis of other states EL programs to establish Idaho’s relative performance standing.
   a. Identify and share best practices.
Mathematics

Conclusions: ISAT Math

Associated Analysis: AOC Recommendations Report, Section 4, pgs. 30-31

Data Considerations:

- After a gap in testing in 2019-20, for the following two years (2020-21 and 2021-22), Idaho used a shortened blueprint for the computer adaptive portion of the test that is approximately half the length of the full blueprint. However, in 2022-23, Idaho used the full (longer) blueprint. We do not know the extent to which lowered scores in 2022-23 are reflective of test fatigue due to the longer test and/or a latent pandemic impact.

- In 2022-23, Idaho moved the high school assessment from 10th grade to 11th grade. Students whose 10th grade score from the prior year (2021-22) was proficient or advanced using the 11th grade cut scores were allowed to re-use their score in 2022-23 without re-testing. It is impossible to know the impact this may have had on high school scores.

Conclusions:

- Given the blueprint changes, more years of data are needed to re-establish consistent monitoring of post-pandemic trends.

- Mean scale score changes show the impact of the pandemic, and though math performance has not fully recovered, steady post-pandemic improvement is clear.

- Performance trends both before and after the pandemic reveal underlying system capabilities able to produce mathematics performance improvements for the All Students group of about 3 scale score points per year.
  - These improvements are reflected in quite small changes in the percentages of students scoring basic (slightly decreased) and advanced (slightly increased).
  - There were no meaningful changes in the percentages of students who scored below basic and proficient as mean scale scores improved.

- Mathematics performance continues to deteriorate with increasing grade level. The percentage of students scoring proficient is highest in 3rd grade and lowest in high school. This pattern has been consistent for many years.

- Analysis of multiple cohorts reveals a consistent pattern of mean scale scores falling below grade level proficiency expectations after 4th grade. After 4th grade, the gap between the cohort’s mean score and proficiency expectations widens.

- Performance gaps of all sizes remain between subgroups and their reference groups.
Recommendations – Mathematics

Policy Recommendations – State Board of Education

Short-term Actions
1. Support the recommendations of the Math Work Group (FY 23 Rec).
2. Expand partnerships with stakeholder groups that focus on specific populations to engage in coordinated efforts to identify short- and long-term strategies to address performance differentials (FY 22 & FY 23 Rec).
   a. Actively engage in the newly formed STEP group to improve coordination with Idaho’s American Indian tribes and identify best practices from this work that could be used with others.

Long-term Actions
1. Develop budgets and engage with the legislature to identify and request resources and funds needed to implement the Math Work Group’s long-term recommendations (FY 23 Rec).

Implementation Recommendations – State Department of Education

Short-term Actions
1. Support the recommendations of the Math Work Group (FY 23 Rec).
2. Build upon previous efforts to engage districts and schools in quality, ongoing, focused professional development to improve math instruction (FY 20, FY 22, FY 23 Rec).
   a. Professional development needs to be embedded and connected to content (FY 22 & FY 23 Rec).
   b. Ensure professional development is appropriately differentiated by role (FY 23 Rec).
   c. Support educators in understanding and engaging their students in the depth and rigor of the math standards (FY 23 Rec).
   d. Ensure math performance data is widely shared and used (FY 23 Rec).
      – Promote use of ISAT interims and interim data as tools to support instruction.

Long-term Actions
1. With support of the Board, ensure plans are developed to implement the Math Work Group’s recommendations (FY 23 Rec).
2. Work with the Board to develop budgets and engage with the legislature to develop support for providing resources and funds to implement the Math Work Group recommendations (FY 23 Rec).
3. While developing the new ISAT aligned to Idaho’s updated academic content standards, work with the vendor(s) to create a plan to report computer adaptive test (CAT) and performance task (PT) scores separately.
ACCOUNTABILITY OVERSIGHT COMMITTEE - RECOMMENDATIONS REPORT

- Use ISAT claim and target data at all appropriate levels to guide professional development and instructional changes.

3. Promote on-grade level core math instruction for all students, including students in special education, ELs & Title I (FY 23 Rec).

4. Work with appropriate vendors to gather more specific ISAT math data and improve the individual student report that goes to students and families.
   a. Work with Smarter Balanced to create a report on student performance on the Mathematics Academic Content Standards.
   b. Work with Cambium to improve the individual student reports, including adding individual student growth targets.

5. Identify highly effective districts and schools with math performance above expectations. Recognize / reward them and share their strategies (FY 22 and FY 23 Rec.)
High School - Graduation and Go On Rates

Conclusions: Graduation Rates

Associated Analysis: AOC Recommendations Report, Section 4, pgs. 32-33

Data Considerations:

- The cohort graduation rate model is established in federal law and has specific requirements regarding the students who are and are not included in a cohort. It is important to note that students who leave their cohort but pursue and receive a grade equivalency diploma (GED) or high school equivalency exam (HSE) are considered dropouts. Thus, a 100% graduation rate is not achievable unless a state fully eliminates this path for high school students.

Conclusions:

➢ From 2017 to 2023, 4 year and 5 year graduation rates remained stable, with 4 year between 80-82% and 5 year between 82-84%.
➢ From 2018 to 2023, when disaggregated by race, ethnicity, and student group, 4 year and 5 year graduation rates remained stable for most groups, but substantial differences in graduation rates remained between the subgroups.
➢ An important exception to the relative stability of graduation rates occurred with the American Indian/Alaskan Native group. Their 4 year cohort graduation rates varied between 65% and 74% with some evidence of a small upward bias through the years. Their 5 year cohort graduation rates, however, showed a clearer upward trend: 2018: 63%; 2019: 70%; 2020: 68%; 2021: 73%; and 2022: 76%.

Conclusions: Go On Rates

Associated Analysis: AOC Recommendations Report, Section 4, pgs. 33-35

Data Considerations:

- The current process for gathering data included in the Go On rates necessitates a one-year delay in this metric. As a result, the most recent 1 year Go On rates are for the 2021-22 graduates who pursued postsecondary education in the 2022-23 school year, and the most recent 3 year Go On rates are for 2019-20 graduates who pursued opportunities in 2020-21, 2021-22, or 2022-23.
There has been a nationwide decrease in the percentage of high school graduates pursuing higher education during and post-pandemic. The decline in Go On rates since 2018 (from 69% to 62%) has been significant.\(^1\)

**Conclusions:**

- The All Students 1 year Go On rate was stable (44-46%) between 2019-20 and 2021-22.
  - Differences in 1 Year Go On rates persist between subgroups and their relevant comparison groups.
- 3 Year Go On rates for the All Students group decreased between 2017-18 and 2019-20, from 62% to 53%. However, most of this drop (6 percentage points) occurred with the 2019-20 graduates who graduated the year of the pandemic.
- More years of data (both 1 year and 3 year) are needed to understand post-pandemic Go On rates trends.
- The current Go On Rate data does not allow for a clear understanding of what students are doing after high school, as it is a combination of metrics, and is missing key data.

\(^1\) NCES, 2023
Recommendations – High School – Graduation and Go On Rates

Policy Recommendations – State Board of Education

Short-term Actions
1. Continue to expand efforts to use Next Steps Idaho, college and career advising, and other initiatives to encourage students to graduate from high school and support them in pursuing appropriate postsecondary options (FY 22 & FY 23 Rec).
2. Utilize partnerships with stakeholder groups focused on specific student subgroups to develop strategies to address differentials in graduation rates between student groups (FY 22 & FY 23 Rec.).
3. In alignment with Launch and Idaho’s robust job market, substantially expand the data reported about students’ postsecondary choices. At a minimum, separately report the following:
   - % of high school graduates who earned associate degrees before graduation
   - % of high school graduates who earned certificates before graduation
   - % of high school graduates who go on to pursue certificates (1 yr+)
   - % of high school graduates who enroll in an apprenticeship
   - % of high school graduates who enter the military
   - % of high school graduates who sign up for 1 yr + of service (missions, etc.)
   - % of high school graduates who go on to a community college
   - % of high school graduates who go on to a 4 year college or university

Long-term Actions
1. Engage with the SDE to collaboratively develop a dropout prevention plan (FY 22 & FY 23 Rec).
2. As a part of the SLDS / ISEE remodel, create standardized codes for: common high school courses, credit given (full, partial, incomplete), and course recovery (FY 23 Rec).
### Implementation Recommendations – State Department of Education

#### Short-term Actions

1. **Direct LEAs to establish early warning systems to identify students at risk for dropping out, coupled with robust interventions and supports for students (FY 23 Rec).**
   
   a. Gather evidence regarding districts’ early warning systems and dropout prevention efforts. Identify best practices used within and out of state. Present research and recommendations to the Board (FY 22 Rec).
   
   b. Guide LEAs to leverage absenteeism data and supports as a key early warning sign for dropout prevention (FY 23 Rec).

2. **Identify highly effective districts and schools with graduation rates above expectations. Recognize / reward them and share their strategies (FY 22 & FY 23 Rec).**

3. **Provide outreach and professional development to LEAs to support the Board’s efforts to report more diverse data about students’ postsecondary choices.**

#### Long-term Actions

1. **Implement the dropout prevention plan, as collaboratively developed by Board and SDE (FY 22 & FY 23 Rec).**
Enrollment and Attendance

Conclusions: Enrollment

Associated Analysis: AOC Recommendations Report, Section 4, pg. 35
Associated Data: 2022-2023 Student Achievement Report (App. A), Figure 1, pg. 14

Conclusions

➢ Enrollment dipped during the 2020-21 school year, likely due to the pandemic and multiple modes of instruction (in-person, remote, hybrid).
➢ Annual enrollment increases in Idaho appear to have resumed post-pandemic, although at a lower growth rate.

Conclusions: Attendance

Associated Analysis: AOC Recommendations Report, Section 4, pgs. 35-36

Attendance Definitions

The following definitions for attendance are used in this report, as aligned to the Attendance Works model:

✓ Adequate Attendance: 91% to 100% attendance
✓ Chronically Absent: 81 to 90% attendance
✓ Severely Chronically Absent: 80% or lower attendance

Data Considerations

➢ The definition of “chronically absent” and “severely chronically absent” include absences for any reason, including excused absences (based on district or school policy).
  o Since absences for medical reasons (including contracting Covid-19 or being quarantined due to a close contact) are included, the population of students identified as chronically absent during 2020-21 and 2021-22 likely includes students who would not have had similar absenteeism pre-pandemic.
  o Anecdotal information received by AOC members and Board and SDE staff indicates that some districts and schools made policies regarding student attendance while sick stricter (requiring no fever, etc..) during and after the pandemic, which could lead to additional absences related to illness.
  o The correlation between absenteeism and performance may be lower during and coming out of the pandemic than at other times, since the group of students...
ACCOUNTABILITY OVERSIGHT COMMITTEE - RECOMMENDATIONS REPORT

experiencing absences could include higher performing students who are more likely to maintain proficiency despite their absences.

Conclusions

➢ Rates of chronic absenteeism and severe chronic absenteeism were highest in 2021-22 (25%), but improved modestly in 2022-23 (20%). Additional years of data are needed to determine if this is the beginning of a trend of improved attendance post pandemic.

➢ Except for 2020-21, rates of chronic absenteeism and severe chronic absenteeism exhibit little variability across grade level bands (i.e., K-5, 6-8, & 9-12). Thus, efforts to address absenteeism are needed across all grades. However, the resources and strategies chosen should be tailored to the specific challenges of each age group.

Recommendations – Enrollment and Attendance

Policy Recommendations – State Board of Education

Short-term Actions
1. Research a valid and reliable metric to identify students facing economic disadvantage, ensuring the data gathering process is consistent and manageable for LEAs (FY 23 Rec).
2. Continue support for the Attendance Works framework (FY 23 Rec).
3. Work to ensure all parties (Board, SDE, LEAs) understand and use common terminology and measures related to attendance and absenteeism (FY 23 Rec).

Long-term Actions
1. Once a new way of identifying students facing economic disadvantage is identified, integrate the data gathering into the SLDS / ISEE remodel.
2. Develop budget plans that address sustainability of funding to LEAs for implementing strategies to reduce chronic absenteeism in alignment with the Attendance Works model (FY 22 & FY 23 Rec).

Implementation Recommendations – State Department of Education

Short-term Actions
1. Work with the Board to find a valid and reliable metric to identify students facing economic disadvantage (FY 23 Rec).
2. Provide districts and schools with professional development and data regarding the impact attendance has on student outcomes and recommend Attendance Works strategies to improve attendance (FY 22 & FY 23 Rec).

Long-term Actions
1. Implement an updated collection process for economic disadvantage data and ensure LEAs understand the collection process (FY 23 Rec).
2. Work with the Board to support development of budgets to sustain funding to LEAs for implementation of strategies to reduce chronic absenteeism in alignment with the Attendance Works model (FY 22 & FY 23 Rec).
3. Collaborate with stakeholder groups to build awareness and knowledge of the inclusion of chronic absenteeism in the state’s accountability framework and the strategies outlined in the Attendance Works model (FY 22 & FY 23 Rec).
SECTION 4: DATA ANALYSIS

Important Data Consideration

For all categories of data, in recent years, there was a noticeable decrease in the group (n) size for Economically Disadvantaged students. This is primarily attributable to difficulty in accurately identifying students for this category for two specific reasons. First, during the past decade or so, the number of schools identified for schoolwide Title I schools has increased. When schools are identified for schoolwide Title I, lunch is provided free for all students and families are not asked to complete free and reduced lunch forms. Second, during the pandemic (SY 2020-21 and 2021-22), free lunch was provided to all students across all schools, regardless of their Title I status. These changes made it more challenging for schools to accurately identify students as economically disadvantaged.

English Language Arts/Literacy

Data Analysis: Idaho Reading Indicator (IRI)

Data Considerations:

- Idaho’s vendor for the IRI, Istation, made two significant changes to the test between 2021-22 and 2022-23.
  - For 2022-23, Istation re-normed their test, which adjusted the expectations for students to be identified at a certain percentile, and therefore, to fall into each performance category (At Grade Level, Near Grade Level, Below Grade Level).
  - For 2022-23, Istation developed a continuous scale for their test, thus adjusting the scale score ranges for each performance category.

IRI – Composite Scores

Associated Data: 2022-2023 Student Achievement Report (App. A), Figures 2-10, pgs. 16-24

Data Analysis

➢ When comparing across years on the same set of norms (i.e., the old norms used by Istation through 2021-22), spring 2018-19 (pre-pandemic) set the high of 70% of All Students K-3 performing At Grade Level, and spring 2020-21 set a low of 65%. After achieving 68% in spring 2021-22, performance increase slightly in spring 2022-23 to 69%. Please note that spring 2023 performance decreased to 66% At Grade Level when looking at results from the re-norming (fig. 2, pg. 16).
➢ Post-pandemic recovery varies by grade level (old norms, fig. 3, pg. 17)
  • As off 2022-23, kindergarten spring At Grade Level performance recovered all pandemic losses (2 percentage points) and exceeded the grade’s previous high performance (pre-pandemic, 63%) reaching a new high of 66%.
  • By 2022-23, 2nd grade At Grade Level performance recovered all pandemic losses (6 percentage points) and matched the pre-pandemic high of 75%.
  • 1st and 3rd grade have not recovered to pre-pandemic highs. After gaining 2 to 4 percentage points in 2021-22, both grades had decreased performance (by 2 to 3 points) in 2022-23.

➢ Student subgroup performance is not comparable across school years 2021-22 and 2022-23 because of the re-norming and re-scaling of the IRI. Thus, additional years of data are needed to detect trends (figs. 4-6, pgs. 18-20).

➢ Comparing the performance category a student is in spring of one year to the performance category the student is in the following spring (figs 7-8, pgs. 21-22) reveals:
  • 36-40% of students who scored Below Grade Level in the spring of one year moved higher into Near Grade Level or At Grade Level performance in the following year. However, 60-64% of these students remained Below Grade Level the following spring.
  • Approximately 50% of students who scored Near Grade Level in the spring of one year moved higher into At Grade Level performance the following spring. 35% remained at Near Grade Level the following spring, while 14-17% dropped into Below Grade Level performance.
  • 90% of students performing At Grade Level in spring of one year remained At Grade Level the following spring, while 10% dropped into Near Grade Level and Below Grade Level performance.

➢ 2023 Grade 2 and 2023 Grade 3 cohort analyses reveal similar patterns of longitudinal performance (figs. 9-10, pgs. 23-24).
  • Although increases in the number of students At Grade Level occurred each year, the largest increases (11 and 13 percentage points) occurred when students were in Grade 2.
  • Although decreases in the number of students performing Near Grade Level occurred each year, the largest decreases (9 percentage points for each cohort) occurred when students were in Grade 2.
  • Below Grade Level performance decreased each year but to a lesser degree when compared to Near Grade Level decreases.
IRI – Domain Scores

Associated Data: 2022-2023 Student Achievement Report (App. A), Figures 11-17, pgs. 25-29

What the IRI Domains Measure

✓ Text Fluency: The Text Fluency subtest measures the ability to read text accurately with meaning in a specified period of time.
✓ Vocabulary: The Vocabulary subtest measures knowledge of word meanings by identifying pictures, synonyms, and definitions.
✓ Letter Knowledge: The Letter Knowledge subtest measures the ability to identify the symbol for a letter’s name and its sound.
✓ Phonemic Awareness: The Phonemic Awareness subtest measures the ability to recognize the beginning sound of a word presented orally and to blend phonemes (the smallest spoken parts of language) into a word.
✓ Spelling: The Spelling subtest measures the ability to apply Letter Knowledge and Alphabetic Decoding skills to correctly spell words.
✓ Reading Comprehension: The Reading Comprehension subtest measures the ability to read and understand text.
✓ Listening Comprehension: The Listening Comprehension subtest measures the ability to listen to and understand grade-level sentences and paragraphs.
✓ Alphabetic Decoding: The Alphabetic Decoding subtest measures the ability to apply Letter Knowledge skills to identify non-words presented by the narrator.

Data Analysis

➢ Text Fluency Domain (fig. 11, pg. 25): 2nd grade demonstrated strong fall to spring growth in the percentage of students At Grade Level on this domain. 3rd grade did not have the same trend, as fall and spring scores were similar.
➢ Vocabulary Domain (fig. 12, pg. 26): Kindergarten showed no improvement in percent At Grade Level from fall 2022 to spring 2023, while 1st grade achieved a 3 percentage point gain, and 2nd and 3rd grades had 8 percentage point gains.
➢ Letter Knowledge Domain (fig. 13, pg. 27): Kindergarten At Grade Level performance increased 20 percentage points fall to spring, and the percentage of students performing Below Grade Level fell from 29% in the fall to 13% in the spring.
   • Most 1st grade students are not administered this domain test because they scored high enough in kindergarten to “test out.” Thus, only the lowest performing kindergarteners in spring are administered this test in the fall of 1st

---

2 Istation, n.d.

AOC Recommendations Report - March 2024
grade, so the percentage of students scoring At Grade Level will be lower than the Kindergarten results.

- Phonemic Awareness Domain (fig. 14, pg. 27): Kindergarten At Grade Level performance increased 19 percentage points fall to spring, and the percentage of students performing Below Grade Level fell from 25% in the fall to 16% in the spring.
  - This is an additional domain that is primarily for kindergarten students, with most 1st grade students not tested because they scored high enough in kindergarten to “test out.” Thus, only the lowest performing kindergarteners in spring are administered this test in the fall of 1st grade, so the percentage of students scoring At Grade Level will be lower than the Kindergarten results.

- Spelling Domain (fig. 14, pg. 28): 1st grade At Grade Level performance improved 1 percentage point fall 2022 to spring 2023. 2nd grade gained 14 percentage points and 3rd grade gained 7 percentage points.

- Comprehension Domain (fig. 15, pg. 29): 57% of 1st graders, 68% of 2nd graders, and 70% of 3rd graders in spring 2023 performed At Grade Level.

- Listening Comprehension Domain (fig. 16, pg. 29): Kindergarten At Grade Level performance increased 5 percentage points from fall 2022 to spring 2023. The percentage performing Near Grade Level decreased by 4 percentage points and Below Grade Level decreased by 1 percentage point.

- Alphabetic Decoding Domain (fig. 17, pg. 29): The percentage of 1st graders At Grade Level increased 10 percentage points from 50% in fall 2022 to 60% in spring 2023, while the percentage Below Grade Level decreased by 9 percentage points.
  - Given the number of 1st graders who did not score At Grade Level on this important skill in spring 2022-23, continued monitoring should be considered.

IRI – Full-time vs. Part-time Kindergarten

Definitions

✓ Part-time kindergarteners: Students who attend kindergarten a partial day, 4 to 5 days per week or for a full school day 2 to 3 days per week.

✓ Full-time kindergarteners: Students who attend kindergarten for a full school day, 4 to 5 days per week, thus completing similar instructional hours as other elementary students in their LEA.
Data Considerations

- It is important to note that due to changes in funding, there was a significant increase in the number of LEAs offering full-time kindergarten to some or all of their students free of charge. Thus, there are population differences between 2021-22 and 2022-23, so comparisons across years should be done cautiously, as additional years of data are needed to understand the difference in performance between full-time kindergartners and their part-time peers.

Data Analysis

- As of 2023, 77% of kindergarteners were full time. This is up from 38% in 2020. Additionally, between 2022 and 2023 there was a 27 percentage point increase in the percentage of full-time kindergarteners (fig. 18, pg. 30).

- Data from 2021-22 and 2022-23 appears to show that full-time kindergarten is more effective at increasing the percentage of students At Grade Level between the fall and spring administrations of the IRI.
  - During 2022-23, there was a 25 percentage point increase from fall to spring in the percentage of full-time kindergarten students who scored At Grade Level and an 18 point increase for part-time kindergarteners. This is a 7 percentage point difference in favor of full-time kindergarten (fig. 19, pg. 31).
  - In 2021-22, when 50% of kindergartners were full-time, the fall-to-spring growth in the percentage of full-time kindergartners scoring At Grade Level was 10 percentage points higher than their part-time kindergarten peers.

**Data Analysis: Idaho Standards Achievement Test (ISAT) ELA**

**ISAT ELA**

**Associated Data:** 2022-2023 Student Achievement Report (App. A), Figures 20-30, pgs. 32-46

**Data Considerations:**

- After a gap in testing in 2019-20, for the following two years (SY 2020-21 and 2021-22), Idaho used a shortened blueprint with a computer adaptive test that is approximately half the length of the full blueprint. However, in 2022-23, Idaho used the full (longer) blueprint. We do not know the extent to which lowered scores in 2022-23 are reflective of test fatigue due to the longer test and/or a latent pandemic impact. Thus, when longitudinal comparisons are made in this report, 2021-22 data is the last year considered since 2023-24 data is needed to provide context to the 2022-23 scores.

- In 2022-23, Idaho moved the high school assessment from 10th grade to 11th grade. Students whose 10th grade score from the prior year (2021-22) was proficient or advanced using the 11th grade cut scores were allowed to re-use their score in 2022-23
without re-testing. It is impossible to know the impact this may have had on high school scores.

Data Analysis

➢ Proficiency rates for the All Students (grades 3-8 and 11 combined), individual grade levels (grades 3-8), and the majority of student groups decreased in 2023 (as compared to 2022). However, these year-over-year decreases may be due to test fatigue caused by the increased length of the 2023 assessment. Thus, additional years of data, particularly with the return to the shortened blueprint in 2023-24, are needed to understand long-term trends (figs. 20-24, pgs. 34-38).

➢ The High School (grade 11) Total Proficient rate increased 3 percentage points in 2023 (fig. 21, pg. 35). It is impossible to know if this was impacted by the test’s shift from grade 10 to grade 11.

• Prior to 2023, the high school proficiency rate had increased 1 percentage point per year since 2019. The 3 point jump in 2023 might be an acceleration of that trend, but if so, the cause is not known at this time.

➢ Substantial achievement differences between racial and ethnic subgroups remained and showed no evidence of decreasing (fig. 22, pg. 36).

• For example, the percentage of Hispanic/Latin students scoring Basic or Below Basic has ranged between 62% to 66% since 2019. The same statistic for Whites is 39% to 43%. American Indian/Alaskan Native and Black/African American subgroups have even larger differences between them and Whites.

➢ Except for Female, Male, and Students of Military Families, large achievement differentials remain between student subgroups and their reference groups. These subgroups include special education, English Learners (EL), migrant, homeless, foster, etc. (figs. 23-24, pgs. 37-38).

➢ Analyses of year-over-year movement of individual students between performance levels reveal underlying challenges with ensuring all students progress one academic year or more between testing years (fig. 26, pg. 40).

• 65% of students who scored Below Basic in 2021 scored in the same category in 2022.
• 22% of students who scored Basic in 2021 scored Below Basic in 2022.
• By 2022, 26% of the 2021 Proficient students had fallen back into Basic or Below Basic, and 35% of Advanced students had fallen one or more categories.

➢ From 2017-18 to 2019-20, the ISAT ELA mean scale score rose from 2516 to a pre-pandemic high of 2525. After the mean scale score dropped 2 points to 2523 in 2020-21, the score recovered to 2525 in 2021-22. However, in 2022-23 the mean scale score dropped 5 points to 2520, the level it was at in 2018. It is likely this drop was caused by
the change in the test blueprint, but additional years of data are needed (fig. 28, pgs. 42-43).

➢ Cohort analyses reveal consistent group average performance at or slightly above proficiency across the grade levels both pre- and post-pandemic (fig. 29-30, pgs. 44-46).

➢ 8th grade cohort differences across claim scores were relatively stable until 6th grade and then during 7th grade all the claim scores converged into consistent performance at or above the proficiency cut score. The convergence eliminated or reduced the historical differences across claim scores. All claim scores then decreased in unison in 2023 (fig. 30, pg. 46). Similar patterns in other cohorts were found in previous analyses.

- Please note that these interpretations are based on visualizing patterns of lines in figures. Therefore, more in-depth and sophisticated statistical analyses of these patterns are needed to verify that they exist and measure their magnitude.

Data Analysis: English Language Proficiency Assessment (ELPA)

Data Considerations:

- Idaho adjusted (lowered) the cut scores needed for students to exit English Learner (EL) programs in 2019-20, resulting in many more students “testing out” of the programs. As a result, the 2020-21 cohort of students was substantially different than the prior year since higher performing students had tested out.

- Since modified exit criteria were implemented during the pandemic, it is impossible to know how much the scores in 2020-21 and future years (2021-22, 2022-23) are a result of the change in exit criteria vs. pandemic impacts.

Data Analysis

➢ After the modified exit criteria / pandemic drop in 2021, performance category percentages for All Students (K-12) essentially held steady in 2022 and 2023 (fig. 32, pg. 49).

➢ All grade level bands exhibited substantial improvement in student performance the longer students remained in the program (fig. 34, pg. 51).

- For example, in 2023, 51% of K-5 students in their first year in the program scored in the two lowest levels, Entering and Emerging. By comparison, for K-5 students who were in the program 4 or more years, only 8% performed at the two lowest levels.

➢ Cohort analyses of students provide additional insight into students in the program for four years or more (figs. 35-37, pgs. 52-53).
ACCOUNTABILITY OVERSIGHT COMMITTEE - RECOMMENDATIONS REPORT

- Note: The cohort analysis does not include data for students who exited the cohort, so particularly for the middle school and high school cohorts, the cohorts are likely made up of students who are experiencing the greatest challenges acquiring English. Additionally, our data for this report does not include contextual information regarding how long students had been in the EL program before the first year of cohort analyses (i.e., the 7th grade cohort could include students new to the U.S. along with students who had been in the program for multiple years without exiting).

- Cohort analyses provide some support for the assertion that student performance improves the longer they remain in the program, but it also might provide important context for this assertion since program effects appear stronger for younger students.
  - For example, the 2023 Grade 3 cohort demonstrated steadily improved performance between kindergarten and 3rd grade. The percentages of students in the top three categories (i.e., 4, 5, & 6) climbed from 11% in kindergarten to 46% in 3rd grade. Similarly, category 3-Developing went from 14% to 40% (fig. 35, pg. 52).

Mathematics

Data Analysis: ISAT Math

Data Considerations:

- After a gap in testing in 2019-20, for the following two years (2020-21 and 2021-22), Idaho used a shortened blueprint for the computer adaptive portion of the test that is approximately half the length of the full blueprint. However, in 2022-23, Idaho used the full (longer) blueprint. We do not know the extent to which lowered scores in 2022-23 are reflective of test fatigue due to the longer test and/or a latent pandemic impact. Thus, when longitudinal comparisons are made in this report, 2021-22 data is the last year considered since 2023-24 data is needed to provide context to the 2022-23 scores.

- In 2022-23, Idaho moved the high school assessment from 10th grade to 11th grade. Students whose 10th grade score from the prior year (2021-22) was proficient or advanced using the 11th grade cut scores were allowed to re-use their score in 2022-23 without re-testing. It is impossible to know the impact this may have had on high school scores.
Data Analysis

➢ After steadily increasing in the years leading up to the pandemic, the All Students (grades 3-8 and 11) mean ISAT Math scale score dropped 11 percentage points in 2020-21 to 2506, matching its 2015 level. While the ISAT Math mean score has not yet fully recovered, it has increased 3 points the past two years, to 2509 in 2021-22 and 2512 in 2022-23 (fig. 42, pg. 60).

➢ The Total Proficient rates for the All Students group, majority of grades, and most student groups decreased between 2022 and 2023. However, these year-over-year decreases may be due to test fatigue caused by the increased length of the 2023 assessment. Thus, additional years of data, particularly with the return to the shortened blueprint in 2024, are needed to understand long-term trends (figs. 38-41, pgs. 55-59).

- From a pre-pandemic high of 44%, the All Students Total Proficient rate fell to a post-pandemic low of 40% in 2021, a level roughly equivalent to 2014-15 (the first year of ISAT by Smarter Balanced testing). However, 3 percentage points of the loss were recovered in 2022 (fig. 38, pg. 55).
- Except for high school, no grade level has recovered to pre-pandemic highs in Total Proficient students (fig. 39, pg. 57).
  - High school performance has been unchanged since 2019 with 34 to 35% of students scoring Proficient or Advanced (the lowest proficiency rate of any grade).
  - Mathematics performance continues to deteriorate with increasing grade level. In 2023, 49% of 3rd graders scored Proficient or Advanced. By high school, the proficiency rate was 35%.

➢ Achievement differences between student groups persist (figs. 40-41, pgs. 58-59).

- For example, in 2023, 61% of Asians and 46% of Whites performed at proficient or advanced levels. Only 19% of American Indians and Black, African Americans performed at proficient or advanced levels in 2023 (fig. 40, pg. 58).
- In 2023, 42% of military connected students, 39% of females, and 44% of males performed at proficient or advanced levels. Only 16% of migrants, 14% of English learners, and 12% of students with disabilities performed at proficient or advanced levels (fig. 41, pg. 59).

➢ Longitudinal data of multiple cohorts shows similar performance patterns (fig. 43, pgs. 62-63).

- Cohort trend lines from three previous AOC Student Achievement Reports plus this one (i.e., 8 cohorts of students) show performance diverging from and thereafter underperforming grade level proficiency expectations after 4th grade.
- All but one of the eight cohort trend lines show an additional divergence in the middle grades that accelerates the underperformance in relation to grade level proficiency expectations.
ACCOUNTABILITY OVERSIGHT COMMITTEE - RECOMMENDATIONS REPORT

- Please note that these interpretations are based on visualizing patterns of lines in figures. Therefore, more in-depth and sophisticated statistical analyses of these patterns are needed to verify that they exist and measure their magnitude.

High School – Graduation and Go On Rates

Data Analysis: Graduation Rates

Associated Data: 2022-2023 Student Achievement Report (App. A), Figures 44-48, pgs. 64-68

Data Considerations:
- The cohort graduation rate model is established in federal law and has specific requirements regarding the students who are and are not included in a cohort. It is important to note that students who leave their cohort but pursue and receive a GED or HSE are considered dropouts. Thus, a 100% graduation rate is not achievable unless a state fully eliminates this path for high school students.

Data Analysis

- For the 2017 to 2023 cohorts, the 4 year cohort graduation rates remained stable between 80% and 82% (fig. 44, pg. 64).
- For the 2017 to 2022 cohorts, the 5 year cohort graduation rates remained stable between 82% and 84% (fig. 44, pg. 64).
- Between the 2019 and 2023 cohorts, 4 year cohort graduation rates grouped by race/ethnicity appear stable. No groups experienced appreciable increases or decreases, when taking into consideration the group’s size and potential pandemic year impacts. Group size is an important consideration since smaller groups will usually have greater variability across the years (fig. 45, pg. 65).
- While rates are generally stable for each group, there are graduation rate differences between race/ethnicity subgroups.
  - For the lowest performing groups, graduation percentages range in the high 60’s to low 70’s (e.g., American Indian/Alaskan Native and Black/African American).
  - For the middle performing groups, graduation percentages range in the 70’s (e.g., Hispanic/Latin, Native Hawaiian/Other Pacific Islander, and Two or More Races).
  - For the highest performing groups, graduation percentages range in the 80’s (e.g., Asian and White).
- From 2019 to 2023, 4 year cohort graduation rates grouped by student group appear stable. No groups experienced appreciable increases or decreases, when taking into
consideration the group’s size and potential pandemic year impacts. Group size is an important consideration since smaller groups will usually have greater variability across the years (fig. 46, pg. 66).

- While rates are stable for each group, there are graduation rate differences between student groups.
  - Graduation rates for Students in Foster Care range in the high 30’s to low 40’s.
  - Students Who are Homeless and Students with Disabilities have graduation rates ranging in the 50’s.
  - For Economically Disadvantaged, English Learners, and Migratory Students graduation percentages range in the 60’s to low 70’s.
  - For Students of Military Families, Males, and Females graduation rates range from the mid 70’s to the low to mid 80’s.

- In general, 2018-2022 five year cohort graduation rates, grouped by either race-ethnicity or student group, were higher by a few percentages points when compared to 4 year rates for the same groups and followed the patterns found in the 4 year cohort graduation rates (figs. 47-48, pgs. 67-68).

- An important exception to these patterns occurred with the American Indian/Alaskan Native group. Their 4 year cohort graduation rates varied between 65% and 74% with some evidence of a small upward bias through the years. But their 5 year cohort graduation rates show a clearer upward trend: 2018: 63%; 2019: 70%; 2020: 68%; 2021: 73%; and 2022: 76%.

Data Analysis: Go On Rates

Data Considerations:

- The Go On rates for a given year (i.e. 2021-22) are the rate for that graduation cohort (i.e. students who graduated in 2021-22).

- The current process for gathering data included in the Go On rates necessitates a one-year delay in this metric. As a result, the most recent 1 year Go On rates are for the 2021-22 graduates who pursued postsecondary education in the 2022-23 school year, and the most recent 3 year Go On rates are for 2019-20 graduates who pursued opportunities in 2020-21, 2021-22, or 2022-23.
1 Year Go On Rates

Data Analysis

➢ The All Students 1 Year Go On rates remained steady at about 45% between 2019-20 and 2021-22 (fig. 49, pg. 70).

➢ 1 Year Go On rates varied by race / ethnicity (fig 50, pg. 70).
  • American Indian/Alaskan Native rates decreased from 39% in 2019-20 to 29% in 2021-22. This was the lowest go on rate for any ethnic group in 2021-22.
  • The 1 year Go On rate for Native Hawaiian/Other Pacific Islander increased from 28% in 2019-20 to 47% in 2021-22.
  • After dropping 4 percentage points between 2019-20 and 2020-21, the Asian group's Go On rate increased 8 percentage points in 2021-22, a post-pandemic high.
  • All other ethnic groups experienced some variability in Go On rates between 2019-20 and 2021-22, with no trends emerging.
  • Black/African Americans, a historically lower performing group on other measures, have the second highest Go On rate of all ethnic groups.
  • Differences in go on rates persist between groups based on race/ethnicity. However, as 2021-22 and 2022-23, except for American Indian/Alaskan Native and to a lesser degree Hispanic/Latin groups, all other groups have Go-On rates that meet or exceed the All Students group.

➢ 1 Year Go-On rates varied by student subgroup (fig. 51, pg. 71).
  • All of the student subgroups, including Economically Disadvantaged, English Learners, Students Who are Homeless, and Students with Disabilities, performed below the All Students group by 10 to 28 percentage points, depending on the group and year being compared.
  • Students with Disabilities were the lowest performers. Of the 2021-22 cohort, 19% went on within one year of graduation, compared to 45% of the All Students group.

3 Year Go On Rates

Data Analysis

➢ The 3 Year Go On rates for the All Students group decreased each year between 2017-18 and 2019-20, from 62% to 53%. However, most of this drop (6 percentage points) occurred with the 2019-20 graduates (fig. 52, pg. 71).
Based on 2019-20 3 Year Go On rates, it appears that for most race/ethnicity groups, rates were negatively impacted by the pandemic, but additional years of data are needed to fully understand the effects (fig. 53, pg. 72).

- The 3 Year Go On rates for American Indian/Alaskan Native and Asian students were not as impacted as other groups, as their rates held steady between 2018-19 and 2019-20 (American Indian/Alaskan Native: 44% and Asian: 70%).
- All other race/ethnicity groups experienced negative trends in 3 Year Go On rates from 2017-18 to 2019-20.
  - Decreases over the three years ranged from a high of 16 percentage points for Native Hawaiian/Other Pacific Islander to a low of 4 percentage points for Black/African American.

It appears that 3 Year Go On rates for other student groups were negatively impacted by the pandemic, but additional years of data are needed to fully understand possible effects (fig. 54, pg. 72).

- Across the two years leading up to the pandemic (2017-18 and 2018-19), Economically Disadvantaged, Students Who are Homeless, and Students with Disabilities all experienced year-over-year declines of 2 to 4 percentage points. These declines then accelerated during the 2019-20 pandemic year with additional decreases of 4 to 5 percentage points.
- English Learners also experienced a drop in 3 Year Go On rates for 2019-20 graduates. The difference between them and the other groups is that for English Learners their 3 Year Go On rates did not show a downward trend before the 2019-20 pandemic year. They remained steady at 41% the two years prior to the pandemic year and then dropped 5 percentage points for the 2019-20 cohort.

**Enrollment and Attendance**

**Data Analysis: Enrollment**

**Associated Data:** 2022-2023 Student Achievement Report (App. A), Figure 1, pg. 14

**Data Analysis**

- Idaho public schools enrolled an additional 866 students in 2022-23 (fig. 1, pg. 14).
- After a pandemic low in enrollment occurred in 2020-21, enrollments rebounded by 5,415 students in 2021-22, exceeding the pre-pandemic high (fig. 1, pg. 14).
Data Analysis: Attendance

Associated Data: 2022-2023 Student Achievement Report (App. A), Figures 55-56, pgs. 73-75

Attendance Definitions

The following definitions for attendance are used in this report, as aligned to the Attendance Works model:

- Adequate Attendance: 91% to 100% attendance
- Chronically Absent: 81 to 90% attendance
- Severely Chronically Absent: 80% or lower attendance

Data Considerations

- The definition of “chronically absent” and “severely chronically absent” include absences for any reason, including excused absences (based on district or school policy).
  - Since absences for medical reasons (including contracting Covid-19 or being quarantined due to a close contact) are included, the population of students identified as chronically absent during 2020-21 and 2021-22 likely includes students who would not have had similar absenteeism pre-pandemic.
  - Anecdotal information received by AOC members and Board and SDE staff indicates that some districts and schools made policies regarding student attendance while sick more strict (requiring no fever, etc.,) during and after the pandemic, which could lead to additional absences related to illness.
  - The correlation between absenteeism and performance may be lower during and coming out of the pandemic than at other times, since the group of students experiencing absences could include higher performing students who are more likely to maintain proficiency despite their absences.

Data Analysis

- In pre-pandemic 2018-19, 87% of Idaho students had adequate attendance. During and after the pandemic, adequate attendance dropped to 82% in 2020-21 and just 75% in 2021-22. The percentage rebounded to 80% in 2022-23 (fig. 55, pg. 74).
- In 2018-19 (pre-pandemic), adequate attendance rates were similar across grade bands (K-5: 88%, 6-8: 87%, and 9-12: 86%). In 2020-21 (during the pandemic), adequate attendance rates diverged across grade bands (K-5: 86%, 6-8: 82%, 9-12: 77%). Highly similar adequate attendance rates across all grade bands re-emerged post-pandemic in 2021-22 and 2022-23 (fig. 56, pg. 75).
SECTION 5: ACCOUNTABILITY OVERSIGHT COMMITTEE MEMBERS

**Chair**
Roger Stewart, Ph.D.  
Retired Professor, College of Education, Boise State University  
Designated Seat: Student Achievement Assessment and Data

**Ex-Officio Members**
Linda Clark, Ed.D  
Vice President, Idaho State Board of Education  
Retired Superintendent, West Ada School District #2

Cindy Siddoway  
Member, Idaho State Board of Education  
Owner, Siddoway Sheep Co. and Juniper Mountain Ranch  
Former School Board Trustee, West Jefferson School District #253

Ryan Cantrell, Ed.S  
Chief Deputy Superintendent, Idaho State Department of Education

**Designated Members**
Julian Duffey, M.Ed.  
Special Education Director, Jefferson County School District #251  
Owner, Balance Point, LLC.  
Designated Seat: Special Education

Jodie Mills, Ed.S.  
Administrator of Teaching and Learning, Boise School District #1  
Designated Seat: School District Assessment and Accountability

Geoff Penrose, Ed.S.  
Principal, Sandpoint Middle School, Lake Pend Oreille School District #84  
Designated Seat: School Level Administrator

Wendy Johnson, Ed.S.  
Superintendent, Kuna School District #3  
Designated Seat: School District Superintendent

DATA NOTES

The data presentations in this report conform to the rules and standard practices adopted by the Idaho Department of Education (the Department) to protect potentially personally identifiable information (PII), and to guard against overinterpretation of small differences.

Redaction

In compliance with Idaho law, we redact data to protect personal identity. This means that we do not report data in any cells of fewer than 5 students or where the difference between the total of one or more cells of categorical data is fewer than 5 of the total student population. In addition, Data Management Council (DMC) Policies and Procedures call for at least two cells to be redacted in most cases where any total is available, to prevent any cell required for redaction from being derived. Under DMC policy, additional cells may be required to be redacted until the total of the exempt and therefore redacted aggregate data in a line or column equals 5 or more. Zero is considered a number.

The Department uses two levels of redaction communication to protect privacy: (1) reporting no data at all or (2) by “blurring” the actual data, which provides some numeric information, without exposing underlying private data. Specifically, cells that meet the standard fewer-than-five redaction rule are reported using the “NSIZE” notation. Cells that meet the n size requirement but cannot be disclosed because of their relationship to another cell that is redacted, are blurred with the use of “>” or “<” notations. Please be aware that the blurred results are always true (e.g. a cell listed with < 25% will have a real value of under 25%), but do not include an indication of how much above or below the listed value the actual percentage falls.

Level of Precision and Rounding Error

In this report, most composites, rates, percentages, and averages are calculated to 10 places beyond the decimal. For reporting, they are rounded to full numbers, with no places beyond the decimal. The resulting level of precision better matches the level of accuracy of the underlying data, and helps avoid the overinterpretation of small, inconsequential differences that likely result from the types of random error that affect all data. Slight, apparent differences from 100% of up to one percentage point in the sum of rates per category (usually a stacked bar) result from rounding error and not real discrepancies.
School Year (SY) Naming Convention

By convention, school years (SYs) are labeled according to the calendar year of the spring semester. For example, the 2019-20 school year is labeled 2020. In this report, when a school year is identified with one date, for example 2023 refers to the school year starting in the previous calendar year’s fall (i.e., 2022) and ending in named school year’s spring (i.e., 2023).

Sample Size

Throughout this report, the sample size or student count is expressed within parenthesis with or without a notation of “n=”.
DATA CONSIDERATIONS

The following considerations should be considered when interpreting the results available in this report.

2019 Pre-Pandemic Baseline

This report includes results from the 2018-19 school year as the pre-pandemic baseline. Idaho continues to make a recovery from the COVID-19 pandemic, and it is important to keep track of the effect and progress. Because of COVID-19, many programs, including statewide assessments, ceased in Spring 2020. For this reason, results from the school year 2020 may not be available.

IRI Considerations

IRI scores were put on a vertical scale and were subsequently renormed in 2022 using data from the 2018-19 school year. This was to align the IRI vendor’s PreK-grade 3 early-reading assessment and Grades 4-5 advanced-reading assessment and make the scores continuous and comparable. For any norm-referenced assessments, the norm needs to be updated every four to five years to represent the performance of the current population. The change in norms affected the proficiency-level (Tier) assignment. Several graphs show 2022-23 findings using both the new and old norms.

ISAT Considerations

The Idaho State Board of Education adopted the adjusted (shortened) blueprints in 2020. The shortened blueprint has 50% fewer computer adaptive items in each claim area compared to the original full (long) blueprint. The shortened blueprint still covers all content standards, and results are comparable. Although combined claim scores are in development, the shortened blueprint does not offer claim-level scores. Idaho used shortened blueprint in 2020-21 and 2021-22 school years. Idaho returned to full-length blueprint in the 2022-23 school year.

After students take the ISAT ELA assessment, their results are reported in two primary ways: four categorical achievement levels and scale scores. Students fall into one of four categories of performance called achievement levels, based on their scale scores. The graphs available in this report show the performance of students in grades 3-8 and high school (grade 10 through 2022, grades 10 and 11 in 2023), across the four achievement levels. As of 2023, the high school ISAT was taken in Grade 11 and evaluated against Grade-11 standards. Two other features were
added: (1) students could use a “banked” ISAT score from a prior high school year’s test, usually a Grade-10 test, rather than re-take the test in Grade 11; and (2) Grade-10 or other high school students could take the Grade-11 ISAT for banking, if they had completed relevant curriculum. Please see Accountability Business Rules or Appendix I for details.

ELPA Considerations

In 2017, the Department slightly lowered the individual language domain (Reading, Writing, Listening, and Speaking) proficiency level targets for exiting the program from 5.0 on each of the four domains to 4.0, leaving overall composite cut-off unchanged. Three years later, based on its statewide analyses comparing ACCESS performance levels and ISAT ELA performance, the Department implemented another exit criterion update in 2019-20. These modifications lowered the overall composite proficiency level exit cut score from 5.0 to 4.2; the Reading, Writing, and Listening domain cut scores from 4.0 to 3.5; and the Speaking cut from 5.0 to 1.0¹.

¹ This low score of 1.0 took into account that the Speaking measure relied on a recording technology that artificially reduced the Speaking score to 1.0 if a student stopped and re-started the recorder.
INTRODUCTION

The Assessment and Accountability Department, on behalf of the Idaho Department of Education, presents Idaho’s 2022-23 annual Student Achievement Report. The information presented is a compilation of the results of the summative assessments for all students, unless otherwise noted. The data presented may not match reports published to fulfill accountability requirements. Student demographic designations represent information that districts and charters provided through the Idaho System for Educational Excellence (ISEE).

The observations provided represent the reflections, understanding, and experience of the Assessment and Accountability staff, as well as reflections from other department staff.

Questions about the data or observations can be directed to the Assessment and Accountability Department.

---

2 Inclusion and weighting rules vary depending on the accountability metric and requirement.
ENROLLMENT

This report reviews the achievements of the 309,191 students in Idaho’s public schools in 2022-23. These official numbers come from the Spring Enrollment Count, which includes all students in grades kindergarten through 12 enrolled on the first Friday of May. The districts and charter schools statewide report enrollment via ISEE to the Idaho Statewide Longitudinal Data System (SLDS). The count does not show whether a student is enrolled on a half-time or full-time basis. The enrollment count for the following entities are not part of the report card: (1) Juvenile Detention Centers; (2) Idaho Digital Learning Academy (IDLA); and (3) Schools governed by: (a) Idaho Department of Correction; (b) Idaho Department of Juvenile Corrections; (c) Idaho Educational Services for the Deaf and Blind; (d) Tribal organizations; (e) Special purpose schools, as accredited; and (f) Summer schools/programs.

As seen in Figure 1, enrollment has increased by about 900 students since last year; by 4,600 students over the past four years since 2019-20, and by about 22,000 since 2015-16. Growth since last year is 0.3%, considerably lower than the 1.1% annual growth from 2016 through 2023. Coming years will reveal whether this slowed growth will continue.

Figure 1: Idaho Public School Enrollment over Three Years
ENGLISH LANGUAGE ARTS AND LITERACY

This section reviews Idaho students’ performance on English language arts and literacy assessments including the Idaho Reading Indicator (IRI) for students in kindergarten through grade 3; the Idaho Standards Achievement Test (ISAT/IDAA) for students in grades 3-8 and 10; and the English Language Proficiency Assessment (ELPA) for students learning English in kindergarten through grade 12.

IRI

School year 2018-19 was the first year of the statewide implementation of the new IRI. Legacy IRI scores could not be compared directly with scores from the new IRI, for two reasons. First, the legacy IRI testing procedure was a one-on-one assessment between the proctor and student. Second, it was approximately 2-4 minutes long and it measured one aspect of literacy – oral reading fluency.

By contrast, the new IRI is a computer-adaptive screener and diagnostic assessment taken on a tablet or computer. It uses multiple, short tests to measure the foundational skills of literacy: Listening Comprehension, Letter Knowledge, Phonemic Awareness, Vocabulary, Spelling, Alphabetic Decoding, Reading Comprehension, and Text Fluency. Students in each grade complete a specific combination of these sub-tests. For example, kindergarteners are not assessed in text fluency. The IRI reports scores for each subtest and for overall literacy ability.

Data Considerations
IRI scores were put on a vertical scale and were subsequently renormed in 2022 using data from the 2018-19 school year. This was to align the IRI vendor’s PreK-grade 3 early-reading assessment and Grades 4-5 advanced-reading assessment and make the scores continuous and comparable. For any norm-referenced assessments, the norm needs to be updated every four to five years to represent the performance of the current population. The change in norms affected the proficiency-level (Tier) assignment. Several graphs show 2022-23 findings using both the new and old norms.
Figure 2 shows old norms in the top section, and new norms for 2022-23 in the bottom section.

How much did Idaho students move across proficiency levels?
Two types of cohort analyses were conducted on IRI to better understand the achievement trend. First, Figure 7 shows the change versus stability of students' IRI performance levels across two measurement times, 2022 versus 2023. Each vertical, stacked bar includes all the students in the cohort who started at a specific IRI performance level in 2022: the far-left bar represents those starting at Below Grade Level; at the far right are students starting in At Grade Level. The stacked sections within a bar show where a student was 2023, e.g., 64% who started Below Grade Level in 2022 were still there in 2023 (red section, first bar).

This analysis only includes grades 1 through 3 in 2023 and grades K through 2 in 2022 because those included had to be in tested grades in each of the analyzed years, which were separated by a 1-year gap. Students needed to be in a grade in 2022 that was one grade below those included in 2023. Matching across time also loses students who move from the state or leave public schools.

Figure 7: IRI Performance Level in 2023 Per 2022 Starting Level (Old Norms)
Figure 8 below from 2022 compares to the updated version for 2023, seen on the prior page.

Spring ISIP: Initial School Performance Indicator
IRI Performance per Domain in 2023 – Per Grade (New Norms)

All scores reported in this section are SY 2023 evaluated against new norms, meaning they are based on the norms newly adopted in SY 2023.

At the beginning of the academic year, all students (K-3) are assessed on the IRI in many different subtests assigned to their corresponding grade level. As students engage in the assessment through the year, they have the chance to "gate up" from a subtest, indicating that they have achieved a score high enough to no longer require testing in that specific skill area. Students may also have a chance to “gate down” to subtests at their level. Consequently, by the end of the year, most students do not take every subtest, because they have progressed beyond the need for certain skills assessments. This produces a variation in the number of children taking each subtest at the beginning and end of each year and compromises the interpretability of that subtest’s findings. In two instances graphed below, Letter Knowledge and Phonemic Awareness, the Spring of 1st grade is eliminated from the graph. A data note accompanies the affected graphs.

Also, performance rates are calculated at 10 places beyond the decimal and rounded for reporting. Slight, apparent differences from 100%, up to one percentage point in the sum of rates per bar result from rounding error and not real discrepancies.

IRI Performance: Full-time v. Part-time Kindergarten

The kindergarten enrollment count has been stable from 21,000 to 22,000 since 2019. In 2019, about 40% of kindergarteners in Idaho were enrolled in a full-time program. The proportion of students in a full-time kindergarten program has increased by nearly 40 percentage points between 2019 and 2023. See Figure 18.

- Part-time kindergarteners: Students who attend kindergarten a partial day, 4 to 5 days per week or for a full school day 2 to 3 days per week.
- Full-time kindergarteners: Students who attend kindergarten for a full school day, 4 to 5 days per week, thus completing similar instructional hours as other elementary students in their LEA.

**Figure 18: Full- vs. Part-time Kindergarten Fall Enrollment Count in Idaho: SYs 2020-23**

**Note.** By convention, school years (SYs) are labeled according to the calendar year of the spring semester. For example, the 2019-20 school year is labeled 2020. The numbers above are enrollment counts in the fall of each school year, which occurs in the calendar year preceding the labeled year.
IRI and Full-time v. Part-time Kindergarten: Proficiency Rate Changes

Full-time and part-time kindergarten IRI fall to spring increases in at-grade level performance were compared across 2022 and 2023. We compared performance across the two years using the same (“old”) norming system, though in 2023 the Department no longer reports these old norms for any official use.

As seen below, those attending full-time kindergarten were more likely than those attending part-time school to move from non-proficient to proficient performance from their kindergarten fall to spring. In 2022, the difference was greater, with ten (10) percentage points more full-time than part-time students moved into proficiency by spring. This gap decreased to seven (7) points in SY 2023.

Figure 19: IRI Kindergarten Change in Proficiency Rate by Full- v. Part-time on Old Norms

<table>
<thead>

</tr>
</tbody>
</table>

Note. Old norms prior to 2023 were the official norms; New norms are official as of SY 2023. Old norms in 2023 appear here for comparison purposes, only but are not reportable to the Department’s accountability system.
ISAT English Language Arts and Literacy (ELA)

Students in grades 3-8 and 11 take the Idaho Standards Achievement Test (ISAT) to determine whether they have met the standards for their grade level in English Language Arts/Literacy (ELA), Science, and Mathematics (Math). These tests are administered to provide ongoing monitoring of individual, school, district, and state progress. ISAT Math and ELA comprise key elements of Idaho’s school accountability system.

The ISAT English language arts and math items address a variety of aptitudes, from short-term recall to reading, subtraction, and problem solving. The ISAT summative assessment is administered during the last 8 weeks of the school year. It consists of two parts, a computer-adaptive test and performance tasks. The main objectives are threefold: (1) To indicate both student achievement and learning growth as part of program evaluation and accountability for schools, districts, and the state; (2) to provide valid, reliable, and fair measures of students’ progress toward, and attainment of, the knowledge and skills required to be college and career ready; and (3) to optimize students’ ability to demonstrate their full knowledge and skills by leveraging the strengths of computer-adaptive testing. These summative assessments are an important component of the statewide comprehensive assessment detailed IDAPA 08.02.03.111.06.

Students with disabilities can participate in the statewide comprehensive ISAT assessment system in one of three ways. They can take the:

- general assessment without accommodations,
- general assessment with accommodations, or
- Idaho Alternate Assessment or IDAA for students who qualify.

The Idaho Alternate Assessment (IDAA) is the alternate assessment option under the ISAT assessment system. It is intended for students with the most significant cognitive disabilities who meet four participation criteria. They represent about 1% of the total student population, and their Individual-Education-Program (IEP) team determines if they qualify for the IDAA based on the participation criteria.

---

3 School Year 2021-22 is the last year in which students will take their Summative ELA and Math ISAT assessment in 10th grade. Starting in School Year 2022-23, high school students will instead take only the 11th-grade ELA, Math, and Science ISAT assessments, but they may take the Math or ELA assessments in 10th grade, or rarely 9th grade, after completing instruction on all high school standards.
This document adopts the shorthand of referring to findings from the Idaho Standards Achievement Test as ISAT findings, even though they are formally ISAT/IDAA findings, because they include IDAA test results, unless otherwise indicated.

Data Considerations
The Idaho State Board of Education developed adjusted (shortened) blueprints in 2020. The shortened blueprint has 50% fewer computer adaptive items in each claim area compared to the original full (long) blueprint. The shortened blueprint still covers all content standards, and results are comparable. Although combined claim scores are in development, the shortened blueprint does not offer claim-level scores. Idaho used shortened blueprint in 2020-21 and 2021-22 school years. Idaho returned to full-length blueprint in the 2022-23 school year.

After students take the ISAT ELA assessment, their results are reported in two primary ways: four categorical achievement levels and scale scores. Students fall into one of four categories of performance called achievement levels, based on their scale scores. The graphs below show the performance of students in grades 3-8 and high school (grade 10 through 2022, grades 10 and 11 in 2023), across the four achievement levels. As of 2023, the high school ISAT was taken in Grade 11 and evaluated against Grade-11 standards. Two other features were added: (1) students could use a “banked” ISAT score from a prior high school year’s test, usually a Grade-10 test, rather than re-take the test in Grade 11; and (2) Grade-10 or other high school students could take the Grade-11 ISAT for banking, if they had completed relevant curriculum. Please see Accountability Business Rules or Appendix I for details.

ISAT ELA – How Much Did Idaho Students Move Across Proficiency Levels?

Figure 25 compares ISAT ELA performance of one cohort of all Idaho students across two years. Each vertical, stacked bar includes all the students in the cohort who started at a specific ISAT ELA proficiency level in 2022: the far-left bar represents those starting at Below Basic; at the far right are students starting in Advanced. The stacked sections within a bar show where a student was in 2023, e.g., 67% who started Below Basic in 2022 were still there in 2023 (red section, first bar).

This analysis only includes grades 4 through 8 in 2023 and grades 3 through 7 in 2022 because those included had to be in tested grades in each of the analyzed years, which were separated by a 1-year gap. Students needed to be in a grade in 2022 that was one grade below those included in 2023. Matching across time also loses students who move from the state or leave public schools.

**Figure 25: ISAT ELA Proficiency Level in 2023 Per 2022 Starting Level**

ISAT ELA Mean Performance Across the Years
This section compares the mean statewide ELA performance of Idaho students per year, across all grades, with the expected proficiency cut score of those students by comparing mean scale scores and mean expected scores.

**Calculation of mean scale score per year.** Each year’s reported scale score is a weighted average, calculated as follows.

- Multiply each grade’s mean scale score by the number of students taking the assessment in that grade;
- Sum those products;
- Divide the sum by the total number of test-takers that year.

**Calculation of expected mean cut score per year.** A parallel method was used to calculate the expected cut score per year:

- Multiply each grade’s standard cut score (which rises gradually from grade 3-10) by the number of students taking the assessment in that grade, that year;
- Sum those products;
- Divide the sum by the total number of test-takers that year.

This method explains why the expected mean cut scores differ somewhat per year. They reflect the differing numbers of students per grade taking the assessment.
Figure 28 shows relatively stable means since COVID-19, except for a decline of five points this year. When analyses removed newly included 11th-graders from this year’s mean and cut score, both dropped by three (3) points to 2017.

**Figure 28: ISAT ELA Mean Scale Scores per Year**

- **Note.** This graph included just 10th graders through SY 2022, but it included both 10th-graders (14,680) and 11th-graders (7,118) in 2023, because students could use either grade's scores in their final year.

- No data were available in 2020 because of COVID-related lapses in testing.
Longitudinal Review of ISAT ELA Performance

The following graphs show cohort analyses of two student cohorts: those in Grade 7 in 2023 and those in Grade 8 in 2023. The analyses followed each group of students, starting in their 3rd grade and progressing through their cohort grade (either Grade 8 or Grade 7).

Method. The cohort analyses and graphs for 2023 were generated following the same process as the cohort analysis in 2022, with adjustments to the formatting and specific cohorts. Data were taken from all summative tests with claim scores in Idaho back to 2018. Students who took two summative tests in one school year or who repeated a grade across school years were removed from the dataset. Test scores for individual students were linked across years using the student identification variable.

The different cohorts for ELA were then formed separately by selecting all students who had summative tests for the corresponding grade in each year. Those years appear in Table 1. Shaded areas indicate that no testing was performed in 2020 because of COVID-19.

### Table 1: Cohort Test Grades and Years for 2022-23 Analysis

<table>
<thead>
<tr>
<th>Grade 8 Cohort</th>
<th>Grade 7 Cohort</th>
</tr>
</thead>
<tbody>
<tr>
<td>Test Grade</td>
<td>Year</td>
</tr>
<tr>
<td>8</td>
<td>2023</td>
</tr>
<tr>
<td>7</td>
<td>2022</td>
</tr>
<tr>
<td>6</td>
<td>2021</td>
</tr>
<tr>
<td>5</td>
<td>2020</td>
</tr>
<tr>
<td>4</td>
<td>2019</td>
</tr>
<tr>
<td>3</td>
<td>2018</td>
</tr>
</tbody>
</table>

Note: No testing in 2020 because of COVID-19.

For each of the two ELA cohorts, the same analysis was performed:

1. Calculate the mean overall and mean claim scores for each year.
2. Calculate the merge rate for each cohort for each year as the number of students in the cohort divided by that year’s total sample size for the grade.

Three plots in total were generated.

1. Grade-8 cohort graph with overall, claim scores, and proficient cut—the same formatting as plots from last year.
2. Overall score and proficiency cut score with Grade-7 and Grade-8 cohorts (no claim scores). In this graph, there are three lines (two overall score lines for the two cohorts and the proficiency cut line).

A slash line “\"” symbol appears over years with missing data in the plots to indicate the lack of data for that year.

ELPA

The WIDA suite of assessments is used to screen, monitor, and exit Idaho students from a research-based English language instruction educational program. The WIDA Screener for Kindergarten and the WIDA Screener (second semester grade 1-12), is used to identify newly enrolled, potential English learners for additional language support services. After identification, Idaho English learners (ELs) participate annually in a standardized statewide English language proficiency assessment (ACCESS for ELLs/WIDA Alternate ACCESS) to monitor academic English language growth in four language domains: Reading, Writing, Listening, and Speaking. ACCESS for ELLs is typically administered in the last week of January to the first week in March.

ACCESS for ELLs delivers proficiency level scores ranging from 1.0 to 6.0 for students in kindergarten through grade 12. Proficiency levels are reported under the following domain and composite scores: Reading, Writing, Listening, Speaking, Oral Proficiency, Comprehension, Overall, and Literacy. Idaho has based screening and exit criteria on these proficiency level scores since 2016.

Data Considerations

In 2017, the Department slightly lowered the individual language domain (Reading, Writing, Listening, and Speaking) proficiency level targets for exiting the program from 5.0 on each of the four domains to 4.0, leaving overall composite cut-off unchanged. Three years later, based on its statewide analyses comparing ACCESS for ELLs performance levels and ISAT ELA performance, the Department implemented another exit criterion update in 2019-20. These modifications lowered the overall composite proficiency level exit cut score from 5.0 to 4.2; the Reading, Writing, and Listening domain cut scores from 4.0 to 3.5; and the Speaking cut from 5.0 to 1.0⁴.

---

⁴ This low score of 1.0 took into account that the Speaking measure relied on a recording technology that artificially reduced the Speaking score to 1.0 if a student stopped and re-started the recorder.
Languages of Origin Spoken by English Learners

Nearly 85% of English learners speak Spanish in Idaho.

Figure 31: Top 10 Languages of Origin Spoken by English Learners, 2023

Top 10 of the 111 Original Languages Spoken by English Learners

- Spanish: 84% (14,262)
- Swahili: 4% (611)
- Arabic: 2% (350)
- Russian: 1% (248)
- Kinyarwanda: 1% (194)
- Persian: 1% (186)
- Somali: 1% (138)
- Ukrainian: 1% (137)
- Chinese: 1% (103)
- Pashto: 1% (79)
ELPA Performance, All Grades

Figure 32 shows that from 2019 through 2023, the proportions of English learners in each proficiency level remained relatively stable, considering the exit criteria applied in 2020\(^5\).

The relative stability since 2021 included slightly more in the two middle categories – Emerging and Developing – and slightly fewer in the top two categories.

**Figure 32: English Learners’ (ELs) ELPA Performance, 2019-2023**

The ELPA Performance Levels chart for School Years 2019-2023 illustrates the distribution of ELs across proficiency levels. The chart shows the percentage of ELs in each proficiency level for each school year, with a noticeable decline in the total proportion of ELs in Expanding and Bridging categories in 2021, primarily due to modified exit criteria applied in 2020:

- **2019:**
  - Entering: 12%
  - Emerging: 20%
  - Developing: 41%
  - Expanding: 23%
  - Bridging & Reaching: 4%

- **2021:**
  - Entering: 14%
  - Emerging: 24%
  - Developing: 45%
  - Expanding: 16%
  - Bridging & Reaching: 1%

- **2022:**
  - Entering: 13%
  - Emerging: 24%
  - Developing: 46%
  - Expanding: 16%
  - Bridging & Reaching: 1%

- **2023:**
  - Entering: 15%
  - Emerging: 25%
  - Developing: 45%
  - Expanding: 14%
  - Bridging & Reaching: 1%

The categories Bridging and Reaching are separate but combined in this chart. Percentages do not all sum to 100 because redacted values were combined by substituting such values as <18% with 18%.

\(^5\) In 2021, the total proportion of ELs in Expanding and Bridging declined by 12 percentage points, mostly because of the modified exit criteria applied in 2020.

**ELPA Cohort Analysis**

This analysis followed those English learners who were in kindergarten in the 2019-20 school year for the subsequent four years for their ELPA performance trend. Students who entered or exited the cohort between the school year 2020-21 and 2022-23, who did not advance their grade level chronologically, who participated in Alternate Assessment, or who missed one or more administration are not included in this analysis. Similarly, the same analysis was conducted for the 2023 4th grade cohort and 2023 11th grade cohort.

MATHEMATICS

Idaho students are tested in mathematics using the Idaho Standards Achievement Test (ISAT).

ISAT Math

Students in grades 3-8 and 11 take the Idaho Standards Achievement Test (ISAT) to determine whether they have met the standards for their grade level in Mathematics (Math). These tests are administered to provide ongoing monitoring of individual, school, district, and state progress. ISAT Math comprises a key element of Idaho’s school accountability system.

The ISAT Math items address a variety of aptitudes, from subtraction to problem solving. The ISAT summative assessment is administered during the last 8 weeks of the school year. It consists of two parts, a computer-adaptive test and performance tasks. The main objectives are threefold: (1) To indicate both student achievement and learning growth as part of program evaluation and accountability for schools, districts, and the state; (2) to provide valid, reliable, and fair measures of students’ progress toward, and attainment of, the knowledge and skills required to be college and career ready; and (3) to optimize students’ ability to demonstrate their full knowledge and skills computer-adaptive testing. These summative assessments are an important component of the statewide comprehensive assessment detailed IDAPA 08.02.03.111.06.

Students with disabilities can participate in the statewide comprehensive ISAT assessment system in one of three ways. They can take the:

- general assessment without accommodations,
- general assessment with accommodations, or
- Idaho Alternate Assessment or IDAA for students who qualify.

The Idaho Alternate Assessment (IDAA) is the alternate assessment option under the ISAT assessment system. It is intended for students with the most significant cognitive disabilities who meet four participation criteria. They represent about 1% of the total student population, and their Individual-Education-Program (IEP) team determines if they qualify for the IDAA based on the participation criteria.

---

6 School Year 2021-22 is the last year in which students will take their Summative ELA and Math ISAT assessment in 10th grade. Starting in School Year 2022-23, high school students will instead take only the 11th-grade ELA, Math, and Science ISAT assessments, but they may take the Math or ELA assessments in 10th grade, or rarely 9th grade, after completing instruction on all high school standards.
This document adopts the shorthand of referring to findings from the Idaho Standards Achievement Test as ISAT findings, even though they are formally ISAT/IDAA findings, because they include IDAA test results, unless otherwise indicated.

**Data Considerations**

The Idaho State Board of Education developed adjusted (shortened) blueprints in 2020. The shortened blueprint has 50% fewer computer adaptive items in each claim area compared to the original full (long) blueprint. The shortened blueprint still covers all content standards, and results are comparable. Although combined claim scores are in development, the shortened blueprint does not offer claim-level scores. Idaho used shortened blueprint in 2020-21 and 2021-22 school years. Idaho returned to full-length blueprint in the 2022-23 school year.

After students take the ISAT Math assessment, their results are reported in two primary ways: four categorical achievement levels and scale scores. Students fall into one of four categories of performance called achievement levels, based on their scale scores. The graphs below show the performance of students in grades 3-8 and high school (grade 10 through 2022, grades 10 and 11 in 2023), across the four achievement levels. As of 2023, the high school ISAT was taken in Grade 11 and evaluated against Grade-11 standards. Two other features were added: (1) students could use a “banked” ISAT score from a prior high school year’s test, usually a Grade-10 test, rather than re-take the test in Grade 11; and (2) Grade-10 or other high school students could take the Grade-11 ISAT for banking, if they had completed relevant curriculum. Please see Accountability Business Rules or Appendix I for details.

*Note. Data are not available because of COVID-related lapses in test-taking.*

*Both 2021 and 2022 ISAT were on the shortened blueprint.*
Idaho students’ achievement in math is measured annually in the Spring summative ISAT Math assessment. After students take the ISAT Math assessment, their results are reported in two primary ways: four categorical achievement levels and scale scores. Students fall into one of four categories of performance called achievement levels, based on their scale scores.

In this section we review the performance of (a) proficiency levels of all students across all grades (3-8 and 10); (b) scale scores of three grade cohorts of student as they progress from grades 3 through 10; (c) average scale scores versus cut scores for all students; and (d) performance of various race-ethnicity and other student groups, averaged across all grades 3-8 and 10.

ISAT Math Average Performance Across the Years
This section reviews the mean scale scores in Math per year, across all grades.

**Figure 42: ISAT Math Mean Scale Scores across Years**

![ISAT Math Mean Scale Scores across Years](chart.png)

**Note.** This graph included just 10th-graders through 2022 but included both 10th-graders (12,615) and 11th-graders (9,173) in the final grade in 2023. This change made a difference in the distance to the cut score in 2023, (27 points instead of 24), and it lowered both the cut score (to 2534) and the Idaho mean scale score (to 2509).

No data are available in 2020 because of COVID-related lapses in testing.
Calculation of mean scale score per year. Each year’s reported scale score is a weighted average, calculated as follows.

- Multiply each grade’s mean scale score by the number of students taking the assessment in that grade;
- Sum those products;
- Divide the sum by the total number of test-takers that year.

Calculation of expected mean cut score per year. A parallel method was used to calculate the expected cut score per year:

- Multiply each grade’s standard cut score (which rises gradually from grade 3-10) by the number of students taking the assessment in that grade, that year;
- Sum those products;
- Divide the sum by the total number of test-takers that year.

This method explains why the expected mean cut scores differ somewhat per year. They reflect the differing numbers of students per grade taking the assessment.
Longitudinal Review of ISAT Math Performance
The following graphs show cohort analyses of two student cohorts: those in Grade 7 in 2023 and those in Grade 8 in 2023. The analyses followed each group of students, starting in their 3rd grade and progressing through their cohort grade (either Grade 8 or Grade 7).

Method. The cohort analyses and graph for 2023 were generated following the same process as the cohort analysis in 2022, with adjustments to the formatting and specific cohorts included. Data were taken from all summative tests with claim scores in Idaho going back to 2018. Students who took two summative tests in one school year or who repeated a grade across school years were removed from the dataset. Test scores for individual students were linked across years using the student identification variable.

The different cohorts for Math were then formed separately by selecting all students who had summative tests for the corresponding grade in each year. Those years appear in Table 2. Shaded areas indicate that no testing was performed in 2020 because of COVID-19.

</table>

Note: No testing in 2020 because of COVID-19.

For each of the two Math cohorts, the same analysis was performed:

3. Calculate the mean overall and mean claim scores for each year.
4. Calculate the merge rate for each cohort for each year as the number of students in the cohort divided by that year’s total sample size for the grade.

Three plots in total were generated.

3. Overall score and proficiency cut score with Grade-7 and Grade-8 cohorts. In this graph, there are three lines (two overall score lines for the two cohorts and the proficiency cut line)

A slash line “\” symbol appears over years with missing data in the plots to indicate the lack of data for that year.

Grade 8 Cohort (n=17,622)
HIGH SCHOOL GRADUATION RATES AND GO-ON RATES

Idaho students’ rates of graduation and going on to post-secondary education appear in this section.

Graduation Rate

We report graduation rate in two measures: the proportion graduating within four years of entering 9th grade (4-year Graduation Rate) and the proportion graduating within five years of entering 9th grade (5-year Graduation Rate). The 5-year rate is typically higher, because it includes all students who graduated in four years, plus those requiring an additional year to complete their high school requirements. Both include students who were enrolled in an Idaho school from their 9th grade onward, and any who moved into Idaho at some time during their high school years. The two counts appearing below each point on the graph are the 4- and 5-year cohort counts. The two may differ if students moved into or out of Idaho’s public-school system in their fifth year.

Cohort Graduation Rate: Cohort Classes of 2017–2023

In 2023, 81% of Idaho’s high school students graduated in four years. As seen in Figure 44:

Figure 44: 4-year and 5-year Graduation Rates per Cohort

Go-On Rates

Students’ rates of continuing to post-secondary training strongly affect a state’s economy and its citizens’ lifetime earnings. Idaho’s go-on rates reflect the percentage of high school graduates who pursue post-secondary education within one, three, or five years of graduation. Go-on status is counted based on the student’s graduation year (not on the graduation cohort, which drives the calculation of graduation rates). The denominators used to calculate go-on rates include all students who graduated in the spring or summer of the academic year. For instance, the 1-year go-on rate for 2019-20 is the proportion of all students graduating in spring or summer 2019 (at the end of the 2019-20 academic year) who pursued higher education within one year of graduating. The 3-year go-on rates maintain the same graduating class but consider the percentage that enrolled in post-secondary education within three years of graduating.

Idaho’s Office of the State Board of Education (OSBE) provided the go-on data, which it now terms “college-going” data. Counted in these data are Idaho high-school graduates taking courses at any 4-year or 2-year institution of learning beyond high school, whether the student is pursuing a certificate, a degree, or is just taking courses. Also counted are training or job-preparation programs, such as cosmetology and barber training, massage, and other trades training that appear in the available data sources.

The two data sources OSBE consults are (1) the eight Idaho public, post-secondary institutions; and (2) the National Student Clearinghouse (NSC) ⁷, which receives data from institutions nationwide that accept federal financial aid. Some known post-secondary programs and program types are not included in these reported rates because they do not appear in either source, e.g., Career Technical Education badges, Northwest Lineman, U.S. military, apprenticeship programs except those linked to the reported institutions, and some small training programs, e.g., for cosmetology, massage, barber. ⁸

---

⁷ National Student Clearinghouse: https://www.studentclearinghouse.org/

⁸ Included in the rate calculation are students attending all Idaho pubic, post-secondary institutions, and all students attending any institutions listed in the National Student Clearinghouse (NSC). These Idaho schools appeared in the NSC counts last year: Apollo College, Boise State University, Brigham Young University – Idaho, Broadview University, College America - Stevens Henager, College of Eastern Idaho, College of Southern Idaho, College of Western Idaho, Idaho State University, ITT Technical Institute – Boise, Lewis-Clark State College, North Idaho College, Northwest Nazarene University, Stevens-Henager College, Stevens-Henager College Nampa, The College of Idaho, University of Idaho. In addition, in a typical year, Idaho graduates attend post-secondary institutions in about every state in the USA. The full list is available from OSBE-Research on request.

Figure 53: 3-Year Go-On Rates by Race/Ethnicity and Graduation Cohort

![Bar chart showing 3-year go-on rates by ethnicity and graduation cohort]

Figure 54 shows that several student groups experienced quite low 3-year go-on rates. The disparity between the highest- and lowest-matriculating groups dropped from 31 percentage points in 2017 to 28 points in 2022.

Figure 54: 3-Year Go-On Rates by Student Groups and Class Cohort

![Bar chart showing 3-year go-on rates by student group and graduation cohort]
ATTENDANCE AND CHRONIC ABSENTEEISM

For this report, we categorized and analyzed the proportion of reported days a student is in attendance during the school year among all students identified in the official accountability roster of students in attendance in an Idaho school on the first Friday in May. Adequate Attendance is defined as attendance on 91%-100% of the days in the entire school year. Chronic Absence is defined as attendance on less than 90% of the days in the entire school year. Specifically, chronic absence is further divided into two categories:

- Chronically absent: 81%-90% of days in attendance
- Severely chronically absent: 80% or fewer days in attendance.

How attendance is calculated

Proportion of Days Reported Positive Attendance = Numerator /Denominator, where:

- Denominator = total number of reported instructional days, at the enrolled school, for the entire year.
- Numerator = total number of instructional days of positive reported attendance for at least 1 hour, at the enrolled school, for the entire school year.

We analyzed those percentages using 10-percentage-point categories.

In all four years, at least 2% of students reported attendance in more than one school. We analyzed and reported students in only a single school, choosing the one with the highest proportion, because we lacked the data required to combine multiple values.
Absenteeism Category per Year

Figure 55 shows the impact of the COVID years on absenteeism, and the recovery that appears to be underway. The proportion attending adequately has partially rebounded from the deep decline post-COVID, hitting 80% this year. This represents a 5-percentage-point increase since last year, a significant portion of the distance back to the pre-COVID level of 87%.

FY 24 RECOMMENDATIONS REPORT
Positive Findings

• In reviewing IRI data using the old norms, IRI K-3 All Students for spring 2022-23 reached a high of 69% At Grade Level.

• HS ISAT ELA proficiency continues to steadily increase.

• Math mean scale score data shows some improvement in scale scores post-pandemic.

• English Learners performance on the English Language Proficiency Assessment shows students steadily improve over time.

• The American Indian / Alaskan Native group has improved their 3 year Go On rates from 63% in 2017-18 to 76% in 2021-22.
Executive Summary - Early Literacy

Priority Recommendation

Develop a growth model for IRI that creates fall-to-spring targets at the individual student level to encourage continued growth for all students.
Additional IRI Data - Cohort Data

Spring IRI Performance for 2023 Grade 3 Cohort, Old Norms (n=19,391)

- **Below Grade Level:**
  - Spring ISIP 2021 Grade 1: 16%
  - Spring ISIP 2022 Grade 2: 14%
  - Spring ISIP 2023 Grade 3: 12%

- **Near Grade Level:**
  - Spring ISIP 2021 Grade 1: 23%
  - Spring ISIP 2022 Grade 2: 12%
  - Spring ISIP 2023 Grade 3: 11%

- **At Grade Level:**
  - Spring ISIP 2021 Grade 1: 61%
  - Spring ISIP 2022 Grade 2: 74%
  - Spring ISIP 2023 Grade 3: 77%
2022-23 Full-time vs. Part-time K Enrollment

Full-time vs. Part-time Kindergarten Fall Enrollment

- 2019-20: 13,612 (38% Full Time: 8,364)
- 2020-21: 11,598 (45% Full Time: 9,381)
- 2021-22: 10,988 (50% Full Time: 11,032)
- 2022-23: 5,045 (77% Full Time: 16,845)

Work Session - PPGA
Additional IRI Data - Kindergarten Data

Percentage-point Change in Proficiency Rate
Fall-to-Spring for Full- v. Part-time Kindergarteners, Old Norms

SY 2022, Old Norms
- PT (10,895) 19 pts
- FT (10,985) 29 pts

SY 2023, Old Norms
- PT (4,237) 18 pts
- FT (17,551) 25 pts

Part-time Full-time
Executive Summary - Middle Grades Math

Longitudinal Mean ISAT Math Scale Score, Composite & Claims, 2021-22
Grade 10 Match Cohort (n = 15,998)

Priority Recommendation

Collaborate with Smarter Balanced to create an actionable report on student performance on Idaho’s Academic Content Standards for Mathematics.
Additional Math Data - ISAT Math Data

Note. This graph included just 10th-graders through 2022 but included both 10th-graders (12,615) and 11th-graders (9,173) in the final grade in 2023. This change made a difference in the distance to the cut score in 2023, (27 points instead of 24), and it lowered both the cut score (to 2534) and the Idaho mean scale score (to 2509).

No data are available in 2020 because of COVID-related lapses in testing.
Priority Recommendation

In alignment with Launch and Idaho’s job market, substantially expand the data reported, to include degrees and certifications completed in high school and a broader range of students’ postsecondary choices.
Additional Go On Rates Data

1 Year Go On Rates, by Graduation Cohort

- 2019-20 Grads (n=20,300): 44%
- 2020-21 Grads (n=19,839): 46%
- 2021-22 Grads (n=20,256): 45%
Go On Rates Recommendation Specifics

To better understand the postsecondary work students complete during high school and their postsecondary choices, the AOC recommends that, at a minimum, the state gather and report the following data:

- % of HS grads who earned associate degrees before graduation
- % of HS grads who earned certificates before graduation
- % of HS grads who go on to pursue certificates (1 yr +)
- % of HS grads who enroll in an apprenticeship
- % of HS grads who enter the military
- % of HS grads who sign up for 1 yr + of service (missions, etc.)
- % of HS grads who go on to a community college
- % of HS grads who go on to a 4 year college or university

Next Steps

• Staff will create a stand-alone Executive Summary for distribution.

• Staff will develop a timeline for work with Smarter Balanced to create a report to show student performance on the ISAT Math at the academic standards level.

• The AOC will begin work on a model to create individual student growth targets on the IRI.

• Board and SDE staff will create a plan and timeline for expanding the Go On Rates data.

SUBJECT
   Intercollegiate Athletics Reports of Revenues and Expenses

REFERENCE
   June 2016 Board directed that the universities’ National Collegiate
   Athletics Association (NCAA) “Agreed Upon Procedures
   Reports” would be provided to the Board and would also serve
   as the revenues/expenses reporting template for Lewis-Clark
   State College.

APPLICABLE STATUTE, RULE OR POLICY
   Idaho State Board of Education (Board) Governing Policies & Procedures, Section
   V.X.5.

BACKGROUND/DISCUSSION
   Responsibility, management, control, and reporting requirements for athletics are
detailed in Board Policy V.X. The college and universities are required to submit
regular financial reports as specified by the Board office. For the universities, the
revenue and expenses reported must reconcile to the NCAA “Agreed Upon
Procedures Reports” that are prepared annually and reviewed by the Board’s
external auditor.

   Board policy V.X. establishes limits on how much state appropriation (including
appropriated spending authority for tuition and fees) each institution can expend
for intercollegiate athletics. Increases to the limits are generally tied to changes to
the appropriated funds (General Funds and tuition and fees), or through Board
approval. The policy provides a mechanism for Chief Executive Officers to request
Board approval for one-time or ongoing changes to the limits when justified on the
basis of adding or expanding programs, investing in facility upgrades or repairs,
meeting new federal or state regulatory compliance requirements, and/or meeting
intercollegiate athletic association or conference requirements. The current policy
allows the ability for institutions to increase the student athletic fees without regard
to the general education appropriation.

IMPACT
   The reports of Revenues and Expenses are presented for each institution for fiscal
year 2023 in Attachments 1 through 4.

ATTACHMENTS
   Attachment 1 Boise State University
   Attachment 2 Idaho State University
   Attachment 3 University of Idaho
   Attachment 4 Lewis-Clark State College
STAFF COMMENTS AND RECOMMENDATIONS

The Athletics Reports show results for fiscal year 2023. It should be noted that state funds are critical to support the student athletes and athletic programs at the four institutions. Ticket sales, contributions, and program revenues are insufficient to enable the athletic programs to be fully self-supporting.

It should be noted that Idaho State University and University of Idaho both ended FY 2023 in a deficit position. Representatives from all four (4) institutions will be available to respond to questions from Board members if necessary.

BOARD ACTION

This item is for informational purposes only.
**BOISE STATE UNIVERSITY ATHLETIC DEPARTMENT**

SUBJECT
Intercollegiate Athletics Employee Compensation Report

REFERENCE
April 2023 Board received FY 2022-23 athletics compensation reports

APPLICABLE STATUTE, RULE OR POLICY
Idaho State Board of Education (Board) Governing Policies & Procedures, Section II.H.

BACKGROUND/DISCUSSION
The attached reports show actual compensation figures for FY2023 and estimated compensation figures for FY2024. The sources of funding for athletic department positions vary widely. A number of the most highly paid coaching positions are funded entirely from program revenues.

IMPACT
The reports detail the contracted salary received by athletics administrators and coaches, including bonuses, supplemental compensation and perquisites, if applicable.

ATTACHMENTS
Attachment 1 – Boise State University FY23 Actual
Attachment 2 – Boise State University FY24 Estimate
Attachment 3 – Idaho State University FY23 Actual
Attachment 4 – Idaho State University FY24 Estimate
Attachment 5 – University of Idaho FY23 Actual
Attachment 6 – University of Idaho FY24 Estimate
Attachment 7 – Lewis-Clark State College FY22 Actual
Attachment 8 – Lewis-Clark State College FY24 Estimate

STAFF COMMENTS AND RECOMMENDATIONS
The Board has delegated, through Board Policy II.B., personnel management authority to the president of each institution, except for those responsibilities specifically retained by the Board. Board policy II.H. authorizes the president of an institution to enter into a contract for the services of a coach or athletic director with that institution for a term of up to three (3) years. A contract with a term (whether fixed or rolling) of more than three (3) years, or with a total annual compensation amount of $350,000 or higher, is subject to approval by the Board.

BOARD ACTION
This item is for informational purposes only.

**Notes:**
- **FTE** represents the Full-Time Equivalent, indicating the proportion of a coach's workload.
- **Base Salary** is the fixed compensation based on the coach's role.
- **Camp/Clinics** and **Media & Other** indicate additional compensation for camps, clinics, media, and other activities.
- **Academic Perform.** and **Winning Perform.** reflect bonuses based on academic and winning performance metrics.
- **Club Membership** and **Car Other** are perks associated with club membership and car expenses.
- **Multi-Yr Contract** indicates the type of contract in place for the coach.
- **State Appropr.**, **Program Revenue**, and **All Other** factors are part of the funding structure.

(A) = indicates previous coach / employee  
(B) = indicates current coach / employee

(*) These coaches receive pay for their participation in off-campus clinics or events.  
These earnings are not reflected in the Regular Salary payroll costs for Idaho State University.

If a coach has an agreement with an apparel company, cash payments (payroll) should be reported as compensation. Report the value of clothes and equipment that you know coaches receive in the Perks–Other column.  
Payments from the foundation should be reported in the other column.  
Indicate "Yes" or "No" if department employees have an assigned car. If there has been turnover in a position, the FTE should reflect the percent of time employed.

(A) = indicates previous coach / employee  
(B) = indicates current coach / employee

(*) These coaches receive pay for their participation in off-campus clinics or events. These earnings are not reflected in the Regular Salary payroll costs for Idaho State University.

If a coach has an agreement with an apparel company, cash payments (payroll) should be reported as compensation. Report the value of clothes and equipment that you know coaches receive in the Perks--Other column. Payments from the foundation should be reported in the other column. Indicate "Yes" or "No" if department employees have an assigned car. If there has been turnover in a position, the FTE should reflect the percent.

SUBJECT
Athletics Gender Equity Reports

REFERENCE
June 2016
Board adopted the reports required by the institutions’ federal regulatory body regarding compliance with Title IX in athletics programs, along with summaries of such reports, as the method to report to the Board on gender equity.

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section V.X.

BACKGROUND/DISCUSSION
Title IX of the Education Amendments of 1972 is the federal legislation that bans gender discrimination in schools, whether in academics or athletics. Title IX states: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance ...." (20 U.S.C. § 1681(a)). Relative to intercollegiate athletics, the Office for Civil Rights considers three broad areas in determining whether or not an institution is meeting its Title IX obligations. The three areas address equity in athletic participation opportunities, athletically-related financial aid and other program benefits, supports and services.

In 1996 the US Department of Education’s Office for Civil Rights (OCR) issued a “Clarification of Intercollegiate Athletics Policy Guidance" This guidance addressed the three broad areas of Title IX compliance and made clear that relative to area 1 regarding participation opportunities, any of the 3 prongs may be used to demonstrate compliance.¹

First, the selection of sports and the level of competition must accommodate the students' interests and abilities, using one of the three prongs listed below. Institutions may demonstrate they are meeting Title IX obligations using any of the three prongs.

1. Participation opportunities for male and female students are provided in numbers substantially proportionate to their respective enrollments.
2. Where the members of one gender have been and are underrepresented among intercollegiate athletes, whether the institution can show a history and continuing practice of program expansion, which is demonstrably responsive to the developing interests, and abilities of that gender.
3. Where the members of one gender are underrepresented among intercollegiate athletes and the institution cannot show a continuing practice of program expansion, whether it can be demonstrated that the interests

¹ See: https://www2.ed.gov/about/offices/list/ocr/docs/title9-qa-20100420.html
and abilities of the members of that gender have been fully and effectively accommodated by the present program.

Second, athletic-related financial assistance must be substantially proportionate to the ratio of male and female athletes. Institutions within 1% variance are considered compliant.

Third, benefits, opportunities, and treatments afforded sports participants are to be equivalent, but not necessarily identical, including equipment and supplies, scheduling of games and practices, travel expenses, availability and compensation of coaches, quality of facilities, medical services, housing, dining, and recruitment.

Overall, compliance is determined based on a program-wide consideration, and, not on a sport-by-sport comparison.

Idaho State Board of Education (Board) Policy V.X.4.c. requires the four-year institutions to provide gender equity reports for review by the Board. The reports include a narrative discussion of gender equity-related issues along with a summary table, which distills data from the detailed gender equity report provided annually by each institution to the U.S. Department of Education.

IMPACT
The attached summary worksheets show the institutions' enrollment, financial aid, and participants by gender. The worksheets also show the actual revenues and expenses for the most current completed fiscal year by sport, as well as overall operating (Game Day) expenses, number of participants, and operating expenses per participant. Finally, the worksheets provide information on average salaries of coaches and the count of coaches per sport by gender.

Attachment 1: BSU Gender Equity Narrative
Attachment 2: BSU Gender Equity Worksheet
Attachment 3: ISU Gender Equity Narrative
Attachment 4: ISU Gender Equity Worksheet
Attachment 5: UI Gender Equity Narrative
Attachment 6: UI Gender Equity Worksheet
Attachment 7: LCSC Gender Equity Narrative
Attachment 8: LCSC Gender Equity Worksheet

STAFF COMMENTS AND RECOMMENDATIONS
Significant information on gender equity aspects of athletic operations at the individual institutions is included in the attached narrative documents. The actual detailed "Equity in Athletics Data Analysis (EADA)" reports are also available for review and analysis by the public on the U.S. Department of Education website at https://ope.ed.gov/athletics/. This site also provides tools to download EADA
reports for any NCAA or NAIA institution and to compare groups of institutions and review trends.

In their narratives, the institutions reported the status of compliance across the areas of Title IX.

Representatives from the four affected institutions will be available in the event that Board members have questions on specific areas related to Gender Equity reports or on the institutions' efforts related to achieving/maintaining equity.

**BOARD ACTION**

This item is for informational purposes only.
BOISE STATE UNIVERSITY GENDER EQUITY NARRATIVE

Boise State University is committed to supporting its student-athletes both academically and athletically and to complying with Title IX of the Education Amendments of 1972 (Title IX). Boise State monitors compliance with Title IX internally and through periodic external reviews from qualified consultants. These reviews provide recommendations that are intended to help achieve compliance in areas where gender differences may currently exist and help maintain compliance in areas where gender differences may be developing.

Last year, Boise State University utilized the comprehensive review of the intercollegiate athletic program completed in the 2021-2022 school year to strategize, develop policy, and guide budget decisions affecting rates of participation, financial aid awarded, and enhancement of program areas in 2022-2023 and beyond where gender discrepancies exist or could be developing.

**Accommodation of Interests and Abilities (Participation)**

**Prong 1: Proportionality**

**Factors:** Participation Opportunities

**Summary:** In 2022-2023, women made up 56.7 percent of undergraduate enrollment (an increase of 2.4 percent since the 2019-2020 school year) and 51.1 percent of the athletic participants (a decrease of 1.3 percentage points over FY22), meaning Boise State did not meet the proportionality test in FY23.

**Prong 2: History and Continuing Practice of Program Expansion**

**Factors:** Additional Opportunities

**Summary:** Boise State does not meet test two (program expansion for the underrepresented sex). A net of four women’s teams have been added since the 1970s.

**Prong 3: Underrepresented gender is fully and effectively accommodated by present program**

**Factors:** Sufficient Interest

**Summary:** Boise State does not meet test three (full accommodation of the underrepresented sex), as sufficient interest, ability and competition appear likely for women’s lacrosse, swimming, and water polo, which Boise State does not currently offer.

**Action:** The university is in the process of making changes to meet test one (proportionality), as it has done for nine out of the last thirteen academic years. Over the next year, Boise State will evaluate the best way to have a net addition of a minimum of 38 opportunities for women, which will allow the program to match current undergraduate enrollment rates with athletic participation. This can be achieved through continued monitoring of existing participation, responsible department-wide roster management to
ensure equitable participation opportunities on existing teams for female student-athletes, and the evaluation of the addition of another women’s sport program. The university will create a committee to help guide these decisions including reviewing existing data, determining what additional data is needed, and creating surveys to guide the decision-making process.

**Athletic Financial Assistance**

**Summary:** An analysis of athletic financial aid in FY23 shows that women were awarded scholarships at a rate 4.6% less than their rate of participation, exceeding the 1% variance for presumed compliance. This is an improvement over the FY22 variance of 5.4 percentage points.

**Action:** Absent extenuating circumstances, Athletics will fully award female athletic scholarships during the academic school year. Emphasis will be placed on providing adequate resources for all women’s equivalency sports to be able to recruit and fully award allowable scholarships.

**Other Athletic Benefits and Opportunities**

**Summary:** Boise State has engaged in a comprehensive analysis and prioritization plan to address areas where gender disparities exist in the 11 other areas of athletic benefits and opportunities.

In the area of practice, competition and locker room facilities, many of the previously identified disparities have been addressed. The university installed stadium lights at both the soccer and softball facilities, improving each of those team’s competition and practice facilities as well as improving scheduling for games and practices. At soccer, new goal standards were installed at their practice and competition facility to improve field conditions for the goalkeeper’s box. The volleyball practice and competition court was resurfaced.

Additionally, as part of a multi-phase renovation, phase one improvements and furniture upgrades were made in the following locker rooms: women’s indoor volleyball, beach volleyball, women’s golf, and women’s cross country and track. Phase two locker room improvements for these programs are underway and will provide new lockers, furniture, privacy walls, and carpeting once completed.

To improve concerns in the areas of coaching and support staff, the department created two new positions by hiring Directors of Operations for both gymnastics and softball. Additionally, new multi-year contracts or contract extensions were approved for the head coaches of beach volleyball, gymnastics, women’s golf, and softball, as well as a multi-year contract for the associate head gymnastics coach. To improve discrepancies in recruitment, the soccer head coach was assigned a courtesy car for FY23.

</table>
Idaho State University and the Department of Athletics are committed to providing quality opportunities and experiences to all student-athletes, and complying with Title IX of the Education Amendments of 1972.

In order to inform its long and short term efforts, Idaho State University executed an internal review of Title IX compliance relative to gender equity. In 2018 we commissioned a comprehensive external gender equity review, the results of which were delivered early in 2019. This review was followed by 9 months of work by a Gender Equity Committee, with representation from across campus, to develop a Five Year Gender Equity Plan. The resulting plan continues to guide our efforts. Implementation of many facets of that plan were interrupted by COVID 19, and robust efforts toward implementation were embarked upon beginning in 2021. Currently, ISU is undergoing a 3 year review of progress. This review is being conducted by a Gender Equity Review Committee with oversight of the FAR. A full report is expected late spring 2024.

This narrative will outline steps taken to address recommendations of the original external review, demonstrate progress on the Five Year Gender Equity Plan, and provide a snapshot of the current status of compliance.

**Prong I of Title IX - Participation Proportionate to Enrollment**

The 2021-22 Idaho State University Enrollment ratio of males to females was 41% : 59%, which became our target for proportionality for 2022-23. The ratio of males to females participating in ISU Athletics, however, was 49% : 51%. This is due to 2 factors: (1) The expansion of the football roster to a limit of 110, which is within the NCAA allowable number, and is in the middle of the range of roster sizes to be competitive in the Big Sky Conference. We found that the smaller roster limit not only impacted team performance in this high injury sport, but we observed a negative effect on student-athlete health and wellness due to depleted rosters. (2) Women’s rosters experienced some natural attrition due to the exit of the extra “COVID seniors” previously carried on rosters, as well as normal fluctuations in roster size.

The 49%:51% based on raw EADA data fails to meet the exact proportion of women to men represented in enrollment by 8%, the actual evaluation by OCR would differ from this raw data.
Guidelines presented at ATIXA Gender Equity Compliance Training suggested that an OCR evaluation of compliance on campus would involve a significant number of factors, including the removal of students on the roster who did not have the opportunity to participate in any competition due to injury, hardship, redshirt, or other circumstance. Further, the OCR takes into consideration the other prongs of compliance, performance against a plan, non-discriminatory reasons for differences in ratios, and other factors considered in a case by case evaluation. Idaho State Athletics continues to make good faith efforts to become "substantially proportionate" and we are actively incorporating Title IX at the institutional level in the spirit the law expects.

While annual participation ratios remain relatively constant, the ever-growing proportion of women to men in Idaho State University’s enrollment continues to make achieving precise compliance with the proportionality prong of Title IX challenging. The most current enrollment figures, 2022-23, have once again moved the target, now 40% : 60% for the coming year. Efforts will be made to expand the rosters of women’s teams, however, ISU Athletics is mindful of how that may impact the experience of student athletes. Ultimately, the University will need to add a women’s sport to fully comply according to proportionality. Doing so will require Idaho State Board of Education support, and would be best served through a collaborative effort among Idaho institutions and Big Sky Conference member institutions. Further, a sustainable budget would most certainly require some level of appropriated and legislative support.

For 2022-2023, ISU Athletics imposed unchanged roster limits in the sports of Men’s Basketball (17), Football (110), Men’s Indoor Track & Field, Men’s Outdoor Track & Field/Cross Country (79), and Men’s Tennis (10), to which men’s teams successfully adhered. Simultaneously, women’s rosters experienced natural fluctuations in size and this year resulted in smaller numbers for reasons noted above. The department will continue to work to offer increased female participation by adding a modest number of opportunities to rosters of existing women’s teams as feasible, and at the discretion of the respective head coach. While Idaho State University has instituted the roster limits noted above in an effort to move closer to proportionality, it is not a sustainable practice due to continual increase in female students enrolled at ISU.

It is evident that to achieve full proportionality, Idaho State University will have to add a women’s sport. This will become possible at such times as institutional funding and the State Athletics Funding Cap are sufficient to include a base personnel and operating budget for an additional sport. Such future funding will need to be accompanied by significant private philanthropic support.
Prong II of Title IX - History and Continuing Practice of Program Expansion for the Underrepresented Sex

Idaho State University currently offers 15 NCAA Division I teams, six teams for men and nine teams for women. Aside from expanding rosters of current women’s teams, ISU has not added a women’s sport in more than 5 years. In order to demonstrate a significant expansion of opportunities, Idaho State University will need to explore adding a women’s sport in the future.

Two sports which represent opportunities because of interest and proximity to competition, are beach volleyball (12 opportunities) and women’s wrestling (25 opportunities).

Prong III of Title IX - Full and Effective Accommodation of the Interests/Abilities of Underrepresented Sex

The determination of whether women are fully and effectively accommodated by the present program includes determining whether there is sufficient interest and ability among women for a viable team not currently offered in the intercollegiate program. The Director of Athletics has been approached by some constituents who advocate for the addition of wrestling, which is now offered at Idaho High Schools, including a State Championship in Women’s Wrestling.

A survey was conducted by the previous FAR and the Athletics Advisory Board (AAB) in 2019 to gather data regarding the level of interest and ability with regard to potential women’s sport additions. The most recent survey targeted all current full-time students at Idaho State University, and identified (1) swimming, (2) rugby and (3) beach volleyball as having the most significant interest. No steps were taken to begin long term planning for the addition of a women’s sport due to the need for more statistically valid data, and a lack of operating funds.

Financial Aid

Idaho State University fully funds the NCAA maximum level of scholarships in each sport it sponsors. In 2022-23, $2,816,402 or 54% of financial aid was distributed to male student-athletes and $2,362,768 or 46% of financial aid was distributed to female student athletes. As demonstrated on the chart below, this difference is attributed to the fact that ISU is meeting NCAA maximums for all sports, which limits the total number of scholarships which can be provided to women to 85.

### NCAA Scholarship Limits for Big Sky Conference Core Sports

<td>Basketball</td>
<td>13</td>
<td>13</td>
</tr>
</tbody>
</table>
Efforts are made to ensure the NCAA maximums are awarded in all women’s sports, but fluctuations occur in rosters with early graduations, transfers, and recruiting gaps. The practice of allowing unutilized scholarship funds within a program to be spent to fund other areas of that program was discontinued in 2018, eliminating an unintended incentive to “save” scholarship funds in order to supplement other budgetary needs in women’s programs.
Equitable Treatment and Quality of Experience Within Programs

Providing a quality experience and appropriate support to all student athletes is a priority for the Department of Athletics. While the long term goal is to achieve proportionality, the short term goal is to provide an equal and quality experience for Bengal student-athletes across genders. We feel strongly that we must invest properly in existing opportunities prior to creating additional opportunities as this could diminish the overall quality of all programs. Ensuring equitable, high quality experiences for all student athletes, and addressing specifically identified deficiencies in women’s programs, has been the focus of program reallocations and investments over a period of years.

A zero-based and collaborative budgeting process has guided the department in the appropriate allocation of resources to address areas of inequity. Improvements have been funded through (1) reallocations of existing funding (2) student fee revenue and (3) fundraising and sponsorship increases.

This year, under the direction of the FAR, a Committee including these professionals and many others from across campus, has conducted a comprehensive review of progress against the Five Year Gender Equity Plan and will deliver a report prior to the end of Fiscal Year 2024.

The following are initiatives and elements which have been added to positively impact the equitable experience of all student athletes since the last report.

<td>$120,000</td>
</tr>
<tr>
<td>A charitable gift has been secured to provide new flooring and equipment for a full renovation of the Strength and Conditioning Center. The upgrade is intended to allow multiple teams to utilize the space at one time, therefore increasing access and scheduling opportunities across all sports.</td>
<td>$375,000</td>
</tr>
<tr>
<td>Implemented a robust mental health and sports performance program</td>
<td>$37,000</td>
</tr>
</tbody>
</table>
to include a counseling platform called MindFlow, 2 days monthly of services from a sports psychologist, and the addition of 1 FTE counselor which will be available to student athletes. Services are distributed equitably across all programs.

| FTE is funded by Division of Health Sciences through patient billings |

| Added to WBB travel budget to allow flights out of Pocatello instead of SLC. | $20,000 | Fundraising |

| Sent Associate AD for Compliance and FAR to ATIXA Gender Equity Compliance Conference to continue to learn how ISU can be a model for excellence in Gender Equity. | $5,000 | Institutional Support |

Idaho State University Five Year Gender Equity Plan
We have advanced through three years of the five year plan drafted by the Gender Equity Committee under the oversight of the FAR. At this time, we are again collaborating with the FAR to evaluate progress against the plan, and to accept formal recommendations for adjustments and additions. We continue to monitor progress and work toward full compliance.

The University of Idaho Athletic Department is committed to gender equity in all facets as directed by the Title IX Statute of 1972. Further, Title IX protocol is followed simply because we believe in its fundamental principle. The Office of Civil Rights issued an Intercollegiate Athletics Policy Interpretation in 1979 which is the major source for specific requirements of all NCAA athletic programs and identifies three program components that are listed below. As a civil rights law, two basic provisions are to be followed: equal access to programs and equal treatment once in the program. We incorporate these principles and policies into our daily routine to strive to meet the requirements.

Equal access will be addressed by the accommodation of interest and abilities in Section 1 Participation Opportunities. Section II will outline Financial Aid. The last section, Athletic Benefits and Opportunities, will include, but is not limited to, the areas of equipment, travel, scheduling of contests and practices, salaries, facilities, medical and training facilities and services, recovery options, and academic support.

Athletics’ Senior Leadership staff members are designated as specific sport administrators. They continually monitor each of the sections mentioned above and implement policy or procedural changes when needed. All the program component areas-participation, financial aid, and athletic benefits are also monitored by staff. Beginning this year a student-athlete will be involved in the process per NCAA rules. A systematic approach of utilizing a three-year snapshot was implemented in Spring of 2020 and will continue to be utilized going forward for comparable data.

I. Participation Opportunities

To begin addressing the proportionality gap, roster management was implemented beginning in Fall of 2021. After the implementation process started, student-athletes were granted additional seasons of eligibility by the NCAA due to COVID-19 and male student-athletes took advantage of this opportunity more than their female counterparts. This has continued to skew the numbers slightly, but the gap is starting to close. A committee was formed in Fall of 2021 to evaluate roster numbers, scholarship dollars, and average NCAA squad sizes. The roster management process is ongoing and assigns our men’s teams a maximum roster target number to hit and assigns the women’s programs a minimum number to meet or exceed. In the roster management implementation planning meetings with the current coaching staffs, these target numbers were deemed attainable. While the numbers are attainable, not all programs hit their assigned numbers. Of course, campus enrollment numbers and percentages fluctuate and thus it is challenging to hit upon the exact percentage number year in and year out. Athletics will adjust the numbers as best as possible, however, it is not feasible to hit a “moving” target of enrollment without denying promised participation opportunities to student-athletes. We would prefer not to limit anyone’s opportunity to participate in order to hit the targeted percentages of campus enrollment.

II. Financial Aid

All coaches and sport programs at the University of Idaho are given the opportunity to offer the NCAA maximum scholarship limits of their respective sport. The actual scholarship dollars vary due to in-state and out-of-state tuition rates. There are no limits placed upon the sport regarding the location of where the student comes from and what they can offer up to a full scholarship. This allows our coaches to recruit across the state, nation, and internationally, which is critical to bringing diversity into our programs and to campus. With this philosophy in place and the campus gender percentage fluctuation in enrollment, it is difficult, if not impossible, to be compliant with financial aid awards exactly matching campus enrollment participation percentages. Another challenge is that not all coaches award the full number of allotted scholarships, even though they are allowed the opportunity to do so. This occurs for various reasons, most frequently due to balancing out the number of incoming recruiting classes. However, coaches are strongly encouraged to use all available scholarship allotments, particularly for our female sport programs.

A summer school aid policy has been implemented to ensure equitable gender access to designated female and male sports and to correct eligibility issues. Certain sports, such as Football, Men’s and Women’s Basketball, and to some extent Volleyball and Women’s Soccer, can utilize the summer period to train their teams with coaching staff or strength coaches present. The other sports offered at Idaho have NCAA restrictions that do not allow this practice opportunity with staff members present, unless there is a safety exemption. This opportunity skews the amount of summer aid offered as football has the largest NCAA scholarship limit of 63 and no other female sport has such a high number of scholarship opportunities. Our two largest roster count women’s sports do not have summer access opportunities, which in theory could help offset the cost of funding football scholarship awards if the access to workouts were granted.
As noted in the EADA report, the Student Aid dollars awarded were:
2019-2020  57% males and 43% females
2020-2021  56% males and 44% females
2021-2022  57% males and 43% females
2022-2023  57% males and 43% females

III. Athletic Benefits and Opportunities

Processes have been implemented to develop budgets and to regularly review the incurred spending. This has led to ensure sport sponsorship support and equitable support of programs. Reviews of spending, contract evaluation, and benchmarking with conference members are continually being analyzed. Reviewing these processes and evaluating their implementation will continue to allow that equitable policies and procedures are in place.

The Athletic Department continues to hold a weekly scheduling meeting to ensure all sports have equal access to facilities for practice and competition. Sports medicine, academic services, strength and conditioning, access to an athletic department nutritionist, and access to a mental health counselor. The fueling center is open to all athletes equally as well as our recovery services.

IV. Conclusion

As stated earlier, a three-year rolling report was created to monitor all areas of Title IX and track not only overall progress, but also specific nuances. This report will also track trends and keep record of substantial differences between genders. Our Gender Equity review committee is in place to monitor these trends and accomplishments.

I. Participation Opportunities: Compliance for this component means meeting one test of the three-part test for participation opportunities. LCSC does not currently meet these criteria.

A. Proportionate to enrollment

Title IX compliance is assessed relative to interest and abilities, athletic financial aid and other program areas. Relative to interest and abilities and prong #1 of the 3-prong test, substantial proportionality, in FY23, athletic participation was 56% male to 44% female. LC State’s fulltime undergraduate enrollment in FY23 was 38% male and 62% female. This results in a 18% overrepresentation of male student-athletes. Prongs 2 and 3 look at the history and continuing practice of program expansion for the under-represented sex and full and effective accommodation of expressed interest and abilities of the under-represented sex. With these aspects of compliance in mind, LC State’s 2-part Title IX Compliance Plan was accepted and approved by the SBOE in the spring of 2019. Part 1 of the Plan involved maximizing women’s sport roster capacities with expansion which started in the fall of 2019. Part 2 involved the addition of a women’s intercollegiate sport, dance, effective fall 2023. Additionally, LC State will add another women’s intercollegiate sport, cheer, effective fall 2024.

In order to achieve the roster goals in Part 1, coaching personnel, operating budgets and student-athlete scholarship dollars needed to be increased. In FY 2020, a total of 2.62 FTE was spread across three coaching positions, in essence moving the head women’s and men’s golf coach to full-time, and the assistant volleyball and assistant women’s basketball coach from part-time to full-time, inclusive of fringe and benefits. In addition, a concerted effort to increase scholarship funding (through the Warrior Athletic Association and LC State Foundation) for athlete recruitment is continuing. In response to these efforts LC State’s overall women’s sport roster increased from a total of 123 20/21 to 140 in 21/22. There was a slight decrease to 134 for 22/23. Currently, the women’s sport roster is at 136 for 23/24. This is especially noteworthy given the general negative impact on higher education enrollments associated with the pandemic and the overall nationwide enrollment declines. Finally, it is relevant that LC State’s 20/21 coaching contracts were uniformly modified with language making roster growth and management a condition of supplemental compensation considerations.

LC State’s continued fiscal conservatism in FY2023 allowed for funding streams to support continued Plan progress to move forward. Specifically, (a) Warrior Athletic Association fundraising, in essence, taxed themselves 5% on dollars raised. These dollars are to be allocated, under the direction of the Director of Athletics, to support operating expenses (OE) associated with expanded sport rosters; (b) proceeds from the Hospitality area (sales and sponsorship) during the NAIA World Series, will go towards the Title IX plan; and (c) revenue captured in response to reduced travel expenses with the move from the Frontier to Cascade conference have been directed toward Plan OE (e.g., increased travel costs to accommodate expanded rosters).

B. Demonstrate continuing program expansion

Part 1 of the Plan is the cornerstone of ongoing demonstration of a continuing practice of program expansion. The timeline for this part of the plan has been extended and will be ongoing. Part 2 of the LC State’s Title IX Compliance Plan involved the addition of a
women’s sport. Dance was added effective fall 2023. Considerations for adding women’s soccer are being put on hold; and the near-term focus shifting to adding an additional women’s sport, cheer, in fall 2024. The NAIA recognizes competitive dance and competitive cheer as a collegiate sport. While the Cascade Collegiate Conference (CCC) does not yet sponsor competitive dance or cheer as a sport, we are able to find competitive competitions in the Midwest which allows us to have multiple competitions in a weekend. LC State has demonstrated interest in spirt-squad/dance performance, existing facilities that can accommodate practice and performances, and a coach currently employed as a faculty member teaching physical, life, movement and sport science courses. A hiring process will start this spring of 2024 to hire a full-time head coach for Cheer and Dance.

C. Fully accommodate the interest and abilities of the underrepresented gender

Relative to Title IX compliance, given its athletics history and tradition, LC State’s compliance efforts are focused on growing women’s sport participation, while holding men’s sport participation relatively constant. Part 1 of the Plan has resulted in a net gain of 11 women’s sport participants since FY2021, which translates to 47% women’s sport participation. Part 2 included the addition of a women’s sport. LC State officially implemented Dance beginning with the Fall 2023 semester. The initial roster size is 9 participants, with a potential to grow to 20 participants within 3 years of sport launch. This sport addition would translate to 51% - 49% women’s sport participation with a roster size of 20. Re-evaluation of substantial proportionality, which is a moving target pending enrollment trends, will need to be ongoing and will dictate next steps (e.g., plan part 3?). Note, in an effort to further guide assessment of this aspect of Title IX compliance, as of Fall 2020, LC State added sport participation specific questions to its annual student survey. These questions and the sport participation interest and abilities information the survey reflects are used to help guide LC State’s Title IX considerations and obligations.

II. Financial Aid: The Financial Assistance requirement of Title IX, requiring assistance to be substantially proportionate to the ratio of male and female athletes, is currently tilted toward females. Athletic student aid totals (allocation of actual resources in FY23) were 53.4% to males and 46.6% to females in comparison to the unduplicated participation rate of 57.9% males to 42.1% females. This results in a 4.5% proportional advantage for females. The recruitment efforts identified in the previous section will assist in progressing towards compliance by increasing female participation.

III. Equal Treatment of Programs: The benefits, opportunities, and treatments afforded sports participants are equivalent. LC State is compliant with the Equal Treatment of Programs requirement of Title IX. The LC State Athletics Department has adopted an intercollegiate athletics manual, with standardized policies and procedures that helps ensure ongoing compliance in this area.

UNIVERSITY OF IDAHO

SUBJECT
University of Idaho (U of I) Utility Public Private Partnership Update 2024

REFERENCE
November 2020 Public-Private Partnership Transaction for Utility Systems and Infrastructure
February 2023 University of Idaho Utility Public Private Partnership Update

APPLICABLE STATUTE, RULE, OR POLICY
Idaho State Board of Education Governing Policies & Procedures, Section V.I.3 Acquisition of Personal Property and Services

BACKGROUND/DISCUSSION
On November 2, 2020, the U of I’s Board of Regents approved a 50-year public-private partnership (P3), to lease the University’s utility system to Sacyr/Plenary (Concessionaire) and grant it the exclusive right to operate the utility system and provide utility services to the University of Idaho campus. On December 30, 2020, the University received an upfront payment of $225,000,000 in connection with the partnership. As discussed with the Board in November, numerous benefits accrue to U of I as a result of this transaction. The $225,000,000 upfront consideration has been invested in a separate single-purpose entity, aptly named the Strategic Initiatives Fund (SIF), that will distribute at least $6,000,000 annually (depending on market performance of SIF investment assets) from the corpus and earnings of the upfront consideration to fund the university’s strategic initiatives to drive enrollment growth, provide scholarship opportunities to students, and grow the research enterprise as we march towards R1 status. Additionally, U of I benefits from having a world-class operator, McKinstry (Sub-Operator), that leverages its expertise and experience in energy infrastructure to operate and maintain the utility system. Finally, the Concessionaire is required to submit an annual Five Year Plan, proposing capital improvements that U of I can approve at its sole discretion that will be financed over 20 years.

During the lifetime of the contract, U of I pays an annual Utility Fee to the Concessionaire, consisting of:

(1) a Fixed Fee which is set at $7.6M and increases by 1.5% annually starting in 2026;
(2) an Operation and Maintenance (O&M) fee, which is based initially on the U of I’s historic costs, with future increases based on a rolling 3-year average of costs, adjusted pursuant to changes in CPI;
(3) and a Capital Expenditure Fee to provide cost recovery and return on utility-related capital expenditures made by the Concessionaire (“CapEx”).
After three years operating under the Concession Agreement, U of I seeks to update Idaho State Board of Education on the Concession Agreement, utility system operations and capital improvements, financial outcomes, the SIF, and student outcomes from SIF investment in student success, marketing, and the pursuit of R1.

IMPACT

Operations and Capital Improvements

Since operational transition to the Concessionaire in January 2021, the Concessionaire and Sub-Operator have increased safety processes and procedures and implemented an annual operations plan (Attachment 1). The Concessionaire and Sub-Operator developed a routine maintenance schedule for our critical utility infrastructure and in 2023 completed inspection and condition testing of all distribution level electrical transformers on campus. Additionally, through the annual Five Year Plans (Attachments 2 - 5) and emergent needs, U of I has approved and/or completed 20 capital improvements to the utility system to date.

These capital improvements include:

(1) Reclaimed Water Hypochlorite Generator Replacement
(2) South Kibbie Dome Transformer Replacement
(3) Utility Tunnel Improvements - 7th and Line Streets
(4) Utility Tunnel Improvements - Renfrew Hall
(5) SCCP Cooling Tower Improvements
(6) McClure Chiller Improvements
(7) Thermal Energy Storage Tank Sensor Upgrades
(8) Energy Plant Catwalk Ladder and Safety Upgrades
(9) Domestic Waterline Replacement - Campus Drive
(10) SCCP Chiller Replacement and Upgrade
(11) Water Treatment Improvements
(12) Wood Fuel Handling System Upgrades
(13) Kibbie Dome Electrical System Replacement
(14) CAT Loader Replacement
(15) Ash Handling System Replacement
(16) Boiler Controls Modernization
(17) Electrical Transformer Reserve
(18) Electrical Distribution Study
(19) Sanitary Sewer Repairs at Library and Memorial Gym
(20) East Kibbie Dome Catch Basin
Finances

The Concession Agreement is supported by a financial model which estimates the annual net cash flow resulting from the costs to the University for the Utility Fee described above and the return on the strategic initiative investments in the form of additional tuition, fees, auxiliary revenues, and research grant indirect cost recovery (F&A). The financial model estimates a positive net cash flow over the 50-year agreement. Over the first three years of the agreement, the actual Utility Fee has exceeded the estimate due to acceleration in the need for capital renewal of our aging utility system infrastructure and high inflation rates which have impacted operating, maintenance, and capital costs. The additional costs are funded by the Utility Subsidy Fund (described under Strategic Initiatives Fund section below), which was established specifically for this purpose.

Concession Agreement

The Concession Agreement describes a 50-year relationship between U of I and Sacyr/Plenary, attempting to account for every conceivable ‘what if’ in nearly 900 pages of contract language. Over the initial three years of the agreement, both partners have collaborated closely to develop shared understanding and adhere to the spirit of the agreement to fulfill its intended purpose. Through those dealings, the Concessionaire and U of I have determined that a number of changes to the agreement are necessary to account for unforeseen conditions, better align with day-to-day operations, and ensure the longevity of the agreement.

(1) Procurement of property insurance coverage is the sole responsibility of the Concessionaire. However, the hard insurance market, characterized by high premiums/deductibles and lack of available coverage, has made it impossible for the Concessionaire to attain some of the required property coverage. In the second pre-closing amendment, U of I (with the support of State Risk) has agreed to retain property coverage under the state’s plan. U of I will seek to amend the concession agreement to memorialize the rights and responsibilities of each party should property continue to be covered under the state’s plan, and outline a process of self-insurance for any utility system assets not covered under the state’s plan or a commercially available plan. The university will receive compensation for any retained risk (not recoverable through the Utility Fee) and will retain full discretion as to the retention of any risk.

(2) Some of the key performance indicators outlined in the Concession Agreement are not consistent with the actual operations of the utility system, disproportionately advantage one party over the other, or require additional clarity to implement and track. U of I will propose a series of changes to this section of the Concession Agreement to better align with actual operations and ensure ongoing and consistent utility service to the Moscow campus.
(3) Despite the best efforts of the drafting parties, some of the technical
descriptions, roles and responsibilities, and language used to describe the
utility system and the agreement between the parties are not accurate or
require revision. U of I will propose an amendment that better aligns the
agreement with the work on the ground.
(4) The Concession Agreement, as written, anticipates that all capital
improvements to the utility system will be financed through the agreement,
performed solely by the Concessionaire and its contractors, and funded
through existing university resources. U of I will propose an amendment
that allows U of I to use other state, federal, and private funding sources
(and adhere to state competitive bidding process in those instances) in
specific instances.

Strategic Initiatives Fund

Upon receipt of the upfront consideration, U of I established the Strategic Initiatives
Fund (SIF), a single purpose 501(c)(3), to invest, manage, and distribute the net
closing proceeds of the P3 transaction to U of I for investment in our core mission.
Distributions from the fund will provide ongoing resources throughout the 50-year
life of the concession to advance the University’s three primary strategic initiatives:

1. Student success and increased enrollment through undergraduate
   scholarships and investment in online education;
2. Elevate the research enterprise through increased graduate student
   scholarships and stipends and strategic research support;
3. University marketing, communications and outreach promoting U of I
   brand in support of enrollment and revenue-generating activities

A portion of the net upfront proceeds was also set aside by the SIF to fund two
other purposes: (1) A Utility Subsidy Fund for the purpose of paying the Utility Fee
in the early years of the agreement before strategic initiative investments result in
revenue growth; and (2) a Terminal CapEx fund to pay off the estimated balance
of capital improvements at the end of the 50-year term.

Distributions to strategic initiatives are governed by the SIF board of directors, who
have adopted a spending policy that reflects the fundamental objective of providing
the maximum, yet equitable, value to current and future beneficiaries over the next
50 years, considering the effects of inflation. The annual spending amount is
computed using a two-part spending formula to ensure all funds are spent down
by the end of the 50-year term. $6 million was distributed in FY2022, $7.357 million
in FY2023, and $6.403 million will be distributed during FY2024. Over the past
three years, these funds have been invested in the three primary strategic
initiatives as follows: approximately 35% in student success, 53% in research, and
12% in marketing and related activities.
Outcomes

Investment in the university’s strategic initiative through the SIF has yielded significant returns in the form of increased enrollment, increased revenues, and increased research activity.

Over the last three years, FY2022 through FY2024, student enrollment has increased by 1,058 students (599 FTEs), generating tuition and fee growth (net of scholarship allowance) of $11.3M (12% growth). This student growth has also resulted in a 33% increase in on-campus housing occupancy and $10.3M in auxiliary revenue. Research expenditures grew by 30% over these three years as research awards grew by $37.1 million (30%). This data is as of the second quarter of 2024 ending December 31, 2023.

BOARD STAFF COMMENTS AND RECOMMENDATIONS
The Board requested at its April 2023 meeting for UI to provide an informational update to the Board in one calendar year (2024) regarding the University of Idaho’s Utility Public Private Partnership.

BOARD ACTION
This item is for informational purposes only.
Operations Plan for the Utility System
for the
University of Idaho

Moscow, Idaho
April 1, 2023

INTRODUCTION

The purpose of the Operation Manual for the Operations and Maintenance Plan for the Utility and Energy Systems is to communicate and provide access to basic standardized information across all our programs. This manual is also prepared in accordance with the Sub-Agreement for The University of Idaho Utility System (Sub-OMCA) as the “Operations Plan” as defined in the Sub-OMCA. This Operations Plan follows the Performance Standards section of the agreement and is offered to satisfy the requirements and components of the Performance Standards and Prudent Industry Practices.

This manual includes baseline information required for all positions and best practices. Since this manual is addressed to all programs, it does not describe in detail site specific information. Site specific information shall be housed in appendices, computerized maintenance software, and other locations as required by the site.

This manual will evolve in accordance with changing industry best practices, Moscow Idaho Eco District I, LLC (MIEDI) program needs, and OEM recommendations.

EXECUTIVE SUMMARY

MIEDI is contracted as the Sub-Operator of the utility functions as an integral part of the University of Idaho (U of I) by providing quality operations and maintenance functions in support of the buildings and outdoor spaces that enhance learning opportunities for students. MIEDI supports the provision of critical utility and essential life support services to the campus. These services include maintaining and operating the District Energy Plant, Water Systems, Electrical System, and Compressed Air Systems.

We are thoroughly engaged in the practice of implementing proactive solutions, which helps us address problems before they become critical. An important component of this philosophy is to employ journeyman level trades, professional people, and front-line staff, who are empowered to solve issues on site while supporting a variety of activities on campus. By empowering our staff with the ability to make decisions on the front line, we can respond to the requests of individual customers quickly, while serving the larger needs of the University effectively.

Our organization is fervent about safety, employee well-being, regulatory compliance, record keeping, transparency, and cooperation with campus and state level entities. We host a high expectation of quality work within our organization to ensure an exceptional educational environment, that is accessible, functional, and beautiful.

As we fulfill our vision, MIEDI is expanding its role as a critical component of the U of I. Our commitment to the University and students extends beyond simply caring for the Utility Systems serving campus buildings; instead, we serve as a vital part of recruitment through maintaining and operating the utility systems on campus that enhance and provide quality facilities. The future of the U of I campus demands a partner that understands that a traditional service delivery model is not enough for a campus that is as visionary the U of I. Our operation is predicated by the following service delivery values:
Experiential Service Delivery: Going beyond the core utility management, and facilities operational services, we deliver multi-faceted service focused on customer experience.

World-class Leadership: Enabling our team with the best on-site leadership, their knowledge, expertise, and service delivery benefits from the continued direct access to support resources across all disciplines with training that continually improves and reinforces a culture of operational and service excellence.

Service Delivery Driven by our Asset Preservation Management Structure: Our program is a solid framework of technical processes ensuring that the state of good repair is applied to the facilities and equipment resulting in performance to its fullest lifecycle.

Energy and Sustainability: To pursue these goals, MIEDI and its energy services partner McKinstry Essention, have significantly invested in applied innovation programs at various locations successfully reducing the energy baseline, enhancing sustainability, and have engaged and served our clients through the development and deployment of industry-leading building performance solutions. Moving forward as partners the UES team will introduce programs to U of I that drive savings and enable sustainability roadmaps.

Continuous Innovation and Quality Assurance with Technology tools: Furthering our ability to deliver with the latest in equipment technology, our tools not only enable communication, but they allow our team to make critical decisions that improve facility performance and reduce unnecessary cost overruns.

ASSET MANAGEMENT PROGRAM

PLAN FOR REPLACEMENT OF THE UTILITY FACILITIES AND UTILITY SYSTEM ASSETS

Please refer to the Five-Year Plan FY24 submitted by the Concessionaire.

ANTICIPATED CHANGES TO ENVIRONMENTAL PERMITTING REQUIREMENTS

- Potential change in wood boiler emissions permitting requirements:
  - The current particulate matter (PM) size allowed is 10 microns in Idaho, however some nearby states are transitioning to no more than 2.5 microns. If similar standards are adopted by Idaho, an upgrade may be required to meet regulations. MIEDI is tracking this and will propose a Capital Improvement to meet regulations as needed.
  - Idaho does not have a NOx emissions standard; however its neighboring states do. If adopted by Idaho, MIEDI may need to start reporting NOx emissions and upgrade the wood boiler emissions equipment. MIEDI is tracking this and will propose a Capital Improvement to meet regulations as needed.

ANTICIPATED CHANGES TO REGULATORY REQUIREMENTS

- Fire hydrant flow testing requirements are increasing in frequency from 10 years to 5 years.
• MS4 stormwater permit – new dry weather testing requirement expected.

MAINTENANCE MANAGEMENT PROGRAM

OVERVIEW
The Maintenance Management Plan (MMP) assures the reliability and continuous operation of the Utility Systems on the U of I campus. This plan includes OEM recommendations, building environment experience, and industry best practices. Comprehensive, smart utility operations allows operators to trend and track performance resulting in continuous improvement in staffing plans, materials, PM schedules, and spare parts recommendations. The main purpose of the Preventative Maintenance Program is to:

- Protect and preserve assets
- Provide an organized, planned, and scheduled program
- Ensure safety and code compliance
- Support reliability of systems
- Minimize risk

Through the use of a maintenance program, MIEDI ensures that all preventive, predictive, and corrective maintenance measures are scheduled and performed on all systems. The following pages outline the approach to a unified program that meets the goals of the Operations Plan.

MIEDI is responsible for the utility production facilities and the Utility System assets including the preservation of these assets and ensuring they are optimized for the maximum lifespan possible. Preventative maintenance is a key aspect of this process, a practice that is part of our proactive approach to solving issues in their infancy.

The execution of a successful preventative maintenance program results in many benefits. Some of those benefits include improved systems reliability, reduced impact to campus end-user groups, enhanced safety, energy conservation, extended product and equipment life, extension of building life, and improved student satisfaction as a result of higher quality learning environments.

At times, measures are necessary to repair or replace campus elements that have failed unexpectedly. Defined as corrective maintenance, this portion of the Facilities Management workload is minimized as a result of preventative measures and planned system replacement that help ensure a reduction in downtime and a virtually seamless user experience.

BEST PRACTICES
The MIEDI team utilizes industry best practices and methods while conducting the preventative maintenance services on the MEP, FLS, and control systems of the utility system. Most of the PM program is executed by the onsite team, however the program is also augmented by qualified vendor-partners who share the same commitment to excellence and perform all maintenance activities in
accordance with industry and OEM best practices and requirements. The PM Plan is continuously evaluated for improvements and will be updated as appropriate.

**PROCEDURES**

MIEDI ensures that all maintenance and repair activities associated with the Utility Systems are performed with an approved procedure. These procedures include in-depth detail, safety and regulatory guidelines, and Activity Hazard Analysis (AHA) information. These procedures document the exact steps to take when responding to emergency and routine situations with the critical systems.

**SAFETY**

A core belief of MIEDI is safety, providing a safe and clean work environment for our employees and customers. Every employee is required to meet the requirements for their site and encouraged to expand knowledge at every opportunity.

**INSPECTIONS**

Daily, monthly, quarterly, semi-annual, and annual inspections are identified and performed to assist in trending the operational integrity of mechanical, electrical, and control system equipment. This provides predictive analyses to assist in the prevention of failure from fatigued components. The operations team site staff self performs the vast majority of these inspections and uses subcontractors when needed for their expertise with associated systems. The delivery of these select services is contracted and approved by the MIEDI Manager in coordination with the University Facilities management team. All service activities use a specified and approved procedure.

**STAFFING**

McKinstry’s technical teams supporting this program are highly trained and experienced in supporting district energy systems and other facilities. Subject matter experts are available to assist in site training, procedure development, troubleshooting, and emergency response, and in determining root cause analysis of a failure event. The support staff for the scheduled and corrective maintenance activities include the MIEDI site operations team and subcontractors.

Some of the services are complete through vendor-partnerships. MIEDI typically elects to subcontract services that are proprietary to infrastructure, code compliant, or when the client prefers OEM support. This ensures that the client benefits from our strengths and those of our partners, increasing our collective effectiveness. We measure and hold our vendor-partners accountable to the same high standards of integrity, professionalism, business performance, and cost control/delivery quality as we do of ourselves.
TRAINING AND DRILLS
MIEDI’s standard for training includes establishing a training curriculum for onsite staff to increase preparedness during scheduled and non-scheduled events.

CMMS PROGRAM
MIEDI utilizes a Computerized Maintenance Management System (CMMS), InfoCentre, in conjunction with a local call center to manage all maintenance and corrective work orders associated with the Utility System. InfoCentre generates all PM work orders with task lists as well as any repair or corrective work orders. Each piece of equipment has a QR code affixed to it. Through the use of an InfoCentre enabled tablet and/or smartphone, QR codes placed on the equipment provide instantaneous access to nameplate information, open work orders associated with the equipment, historical data, maintenance checklist, relevant maps, common use components, operational manuals, and warranty dates.

Benefits of InfoCentre include:

- Work Order Management
  - Ensures all issues are seen and addressed
  - Ensures a timely resolution for work orders
  - Allows staff to organize and focus their workload to priorities
- Workflow and Operations
  - Single point of ownership via CMMS Planner Scheduler
  - Predicts, builds, and standardize procedures
- Data Analytics and Reporting
  - Ensures data is accurate, actionable, and available
  - Analysis of the utility systems data
  - Data driven operations and maintenance
  - Measurable KPI reporting of service tickets
- Coordinator Support
  - CMMS Planner Scheduler and support team owns the processing and triaging of issues
  - Streamlines the issue response and follow-up process
  - Minimizes management and staff administrative time
CRITICAL SPARE PARTS
The facility management team manages and maintains critical spare parts in a safe and clean environment. An initial identification of critical spare parts per system is being generated. This list will be evaluated periodically and updated as appropriate to support the critical systems and risk associated with the failure of certain parts. A Critical Spare Parts Log (CSPL) will be used to track the use and inventory of these parts. When a part is removed from inventory for use, a new part will be ordered and replaced in the spare parts inventory. The CSPL will be updated with the appropriate inventory count when the replacement part arrives.

REPAIRS AND CORRECTIVE MAINTENANCE
Repairs and corrective maintenance occurs using the same processes and staff used to support the scheduled maintenance defined in the PM Program. Although MIEDI makes every effort to ensure every system is reliable as possible by completing the required preventative maintenance, the systems still fail at times. Thus, repair and corrective maintenance is an important component of maintenance activities. The MIEDI team self performs repairs and corrective maintenance services on the electrical, mechanical, and control systems, as required, maintaining uninterrupted utility services to critical loads. If a
subcontractor is required to make a repair, management will be notified and will provide approval before the team calls out the subcontractor and incurs costs.

These services include work, for example, that is identified from on-site staff observation during daily rounds, through preventative maintenance inspections, call outs/reports to the InfoCentre call center, and unforeseen work on equipment or systems because the critical infrastructure of the facility is impaired. Corrective maintenance activities supersede all other categories of maintenance.

The process of response is composed of five major steps, as shown below:

**PROCEDURE DEVELOPMENT AND APPROVAL**

The following flowchart outlines the process to create, approve, and make available for use any facility procedure used by MIEDI. Included is the review and update policy that is completed annually, or when a user suggests a need for changes.
PREVENTATIVE AND PREDICTIVE MAINTENANCE
When performing any form of maintenance or repair on the Utility Systems, an approval process must be followed to ensure all responsible groups are aware of the activity and its scope/risk. The flowchart below outlines the workflow for activities used in performing PM and Corrective Maintenance activities.
A written procedure is normally required prior to performing any type of preventative or corrective maintenance activity. In cases where a written procedure is not available, and there isn’t sufficient time to develop and approve a method of procedure, special coordination is required with U of I Facility management and EHS personnel. This ensures that all hazards associated with the maintenance activity are evaluated and mitigated to acceptable levels prior to work being performed. As each case is different, parties involved need to determine appropriate timelines and methods for accomplishing the task.

Upon completion of a task that does not have a method of procedure, MIEDI begins the process of procedure development based on the approved interim process and the lessons learned from the work performed. This procedure development process will follow the same steps outlined earlier.

**RISK LEVEL CLASSIFICATIONS**

All maintenance activities carry an inherent risk when performed on systems. These are characterized using one of three levels of risk defined below:
**Level 1 – High Risk**
This type of maintenance presents a high level of risk and has a partial anticipated impact to operations. It generally involves pre-planned maintenance during normal business hours which would remove or take offline any redundant infrastructure support.

**Level 2 – Medium Risk**
This type of maintenance presents a medium risk and minimal anticipated impact to the operations. It generally involves routine planned maintenance occurring outside of normal business which would remove or take offline any primary or redundant infrastructure support.

**Level 3 – Low Risk**
This type of maintenance presents a low level of risk and has no anticipated impact to operations. It generally involves routine planned maintenance on a system component that can be taken offline without impact to the production environment.

**Risk Mitigation**
In all cases, risk is mitigated by observing the following requirements prior to the performance of any work:

- The method of procedure must be followed without deviation and always be available for those performing the work.
- Methods of procedure must be reviewed, updated and approved by MIEDI management prior to any work being performed.
- The manager must be involved to coordinate necessary functions (e.g., lockout/tagout procedures) at least two weeks prior to the work being performed.
- The Change Management request must be fully approved prior to any work being performed.

### PM PROGRAM EQUIPMENT TYPES AND FREQUENCY
The following information is intended to be a comprehensive guide but may not be all-inclusive. The all-inclusive list of equipment, tasking, and frequencies is available in the CMMS database and will be updated from time to time as appropriate for the facility.

### FREQUENCY KEY
Preventative Maintenance (PM) Task Orders are based on the following frequency schedule. The scheduled dates and maintenance task plans for performing maintenance are available in the CMMS. W – Weekly; M – Monthly; Q – Quarterly; SA – Semi-Annually; A – Annually; SST – Seasonal Start-Up; SSH – Seasonal Shut Down.

The below image represents an example of a single utility system asset and the option of PM Frequency to select service type and upload into the CMMS tool.
PM PROGRAM STRATEGY

During the first year of operation, the historic ‘run to fail’ maintenance approach continued while assets were loaded into InfoCentre and PM and PdM maintenance programs were developed. As assets are loaded, InfoCentre autogenerates work orders associated with the asset’s associated maintenance program. Maintenance in MIEDI’s second year of operation continued the transition to preventative maintenance with the goal of reducing the number of corrective work orders. As the program continues to grow maintenance will transition from time based to predictive maintenance.

Every piece of equipment has its own maintenance Scope of Work requirement. Example Scopes of Work with schedules and tasks are provided below.
Example PM Checklists

Transformers
- Daily/weekly/monthly
  - Check for excessive heat, vibration, noise, and odors (electrical etc.)
  - General checks for cleanliness of environment and cabinet
- Verify proper ventilation
- Annual
  - Complete daily/weekly/monthly
  - Check main foundation and mounting pads
  - Check all fuses (if applicable)
  - Perform thermal imaging, correcting any discrepancies
  - Perform verification of all critical alarming to the BMS
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/ performed
- 3-year
  - Oil sampling

Distribution Switchgear/Utility Switchgear
- Daily/weekly/monthly
  - Check for excessive heat, vibration, noise, and odors (electrical etc.)
  - General checks for cleanliness of environment and cabinet
  - Verify proper ventilation
- Annual
  - Inspection of panel instrumentation verifying operational status
  - Clean the switchgear by vacuuming interior and wiping down exterior
  - Perform thermal imaging, correcting any discrepancies
  - Circuit breaker injection testing
  - Perform verification of all critical alarming to the BMS
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/ performed
- 5-year
  - Inspect physical, electrical and mechanical condition including evidence of moisture or corona
  - Inspect anchorage, alignment, grounding, and required area clearances
  - Inspect bolted electrical connections for high resistance, torque as required
  - Confirm correct operation and sequencing of electrical and mechanical interlock systems
  - Lubricate all moving current-carrying parts and on moving and sliding surfaces
  - Verify correct barrier and shutter installation and operation
  - Exercise all active components
Inspect mechanical indicating devices for correct operation
Verify that filters are in place and/or vents are clear
Perform visual and mechanical inspection of instrument transformers
Inspect control power transformers for physical damage, cracked insulation, broken leads, and tightness of connections, defective wiring, and overall general condition.
Verify that primary and secondary fuse ratings or circuit breakers match drawings.
Verify correct functionality of draw-out disconnecting and grounding contacts and interlocks
Resistance measurements
Insulation-resistance tests on each bus section, phase-to-phase, and phase-to-ground
Over potential test on each bus section and each phase-to-ground
Insulation-resistance tests on control wiring with respect to ground
Electrical tests on instrument transformers
Ground-resistance tests
Insulation-resistance test on control power transformers
Verify correct function of control transfer relays

Chiller Plants

- **Daily/weekly/monthly**
  - Check for excessive heat, vibration, noise, odors (electrical etc.), and leaks
  - General checks for cleanliness of environment, proper ventilation, and ambient temperature

- **Quarterly**
  - Complete daily/weekly/monthly inspections
  - Check unit for proper operation
  - Check oil level and add as necessary
  - Check oil temperature
  - Check dehydrator or purge system; remove water if observed in sight glass
  - Run system control tests
  - Check refrigerant charge/level add as necessary
  - Check compressor for excessive noise or vibration
  - Check sensor and mechanical safety limits, replace as needed
  - Clean area around equipment
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/Performed

- **Annual**
  - Complete quarterly inspections
  - Clean dehydrator float valve
  - Perform spectrochemical analysis of compressor oil, replace oil as necessary
  - Replace oil filters and add oil as needed
  - Inspect cooler and condenser tubes for leaks, clean screens as necessary
Moscow ID Eco District I, LLC

Bringing the value of experience to the future of education for the University of Idaho

- Inspect utility vessel vent piping and safety relief valve; replace as necessary
- Inspect/clean the economizer(vane) gas line damper valve and actuator arm
- Run an insulation test on the centrifugal motor
- Perform verification of all critical alarming to the BMS
- Provide written report and list any recommendations including discrepancies and corrective actions scheduled/ performed

Cooling Towers

- **Daily/weekly/monthly**
  - Check for excessive heat, vibration, noise, odors (electrical etc.), and leaks
  - General checks for cleanliness of environment, proper ventilation, and ambient temperature
  - Verify BMS status information

- **Quarterly**
  - Complete daily/weekly/monthly inspections
  - Check unit for proper operation
  - Remove any mineral and algae deposits
  - Flush sump and remove all debris
  - Check conditions and mounting of all valves
  - Exercise all valves
  - Check spray eliminators
  - Check distributor pans for blockage
  - Verify fan blades are free of debris and move freely.
  - Check belt for condition and proper tension.
  - Verify that the bearings are in good condition. Lubricate as directed by OEM.
  - Check the pulleys and motor mounts for tightness and proper alignment
  - Inspect motor
  - Inspect disconnect switch
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/ performed

- **Annual**
  - Complete quarterly inspections
  - Clean and wash down outside of cooling tower cell
  - Wash down interior walls and surfaces of cooling tower cell
  - Change oil in gear box (if applicable)
  - Run cell fan in manual mode checking for vibrations and noises
  - Inspect all pipe hangers
  - Inspect all flanges and groove type connections for leaks
  - Exercise all valving in condenser piping (use caution - do not shutdown plant)
  - Inspect all piping for signs of external corrosion
  - Perform verification of all critical alarming to the BMS
Thermal Energy Storage Tank

- **Daily/weekly/monthly**
  - Check for excessive vibration, noise, and leaks
  - General checks for cleanliness of environment, proper ventilation, and ambient temperature

- **Semi-annual**
  - Complete daily/weekly/monthly inspections
  - Check unit for proper operation
  - Verify temperature probe and float operations
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/performe

- **Annual**
  - Complete semi-annual inspections
  - Verify fill operations from city water and local well.
  - Perform verification of all critical alarming to the BMS
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/performe

Pumping Systems

- **Daily/weekly/monthly**
  - Check for excessive heat, vibration, noise, and odors (electrical etc.) And leaks.
  - General checks for cleanliness of environment, proper ventilation, and ambient temperature
  - Verify BMS status information

- **Quarterly**
  - Complete daily/weekly/monthly inspections
  - Check unit for proper operation
  - Check for leaks on suction and discharge piping, seals, packing glands, etc.
  - Check pump and motor operation for vibration, noise, overheating etc.
  - Check alignment of pump and motor
  - Lubricate pump and motor
  - Check operation of pressure gauges and run pressure testing
  - Clean exterior of pump, motor and surrounding area
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/performe

- **Annual**
  - Complete quarterly inspections
  - Check alignment of pump and motor, adjust as necessary
  - Perform verification of all critical alarming to the BMS
o Provide written report and list any recommendations including discrepancies and corrective actions scheduled/performedd

Variable Frequency Drives

- **Daily/weekly/monthly**
  - Check for excessive heat, vibration, noise, and odors (electrical etc.).
  - General checks for cleanliness of environment, proper ventilation, and ambient temperature
  - Verify BMS status information

- **Semi-annual**
  - Complete daily/weekly/monthly inspections
  - Component inspection
  - Perform a complete visual inspection of the equipment including wiring and major components.
  - Inspect all wiring for insulation breakdown or damage.
  - Inspect all terminal connections for tightness.
  - Electrical inspection
  - Rectifier tests and dc bus capacitor tests when applicable.
  - Check all voltages and motor amperages.
  - Calibrate frequencies
  - Document all parameter readings.
  - Check dc link inductor.
  - Measure motor control card resistors.
  - General maintenance
  - Change filter when applicable
  - Verify the operation of alarm circuits and specific restart capabilities.
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/performedd

- **Annual**
  - Complete semi-annual inspections
  - Perform verification of all critical alarming to the BMS
  - Provide written report and list any recommendations including discrepancies and corrective actions scheduled/performedd

Air Compressors

- **Daily/weekly/monthly/quarterly**
  - Check for excessive heat, vibration, noise, and odors (electrical etc.)
• General checks for cleanliness of environment, proper ventilation, and ambient temperature
• Check oil level
• Drain condensation
• Check filters
• General checks for cleanliness of environment, proper ventilation, and ambient temperature

• Annual
  • Complete daily/weekly/monthly/quarterly inspections
  • Check filters/replace if needed
  • Inspect all connections and lines for damage or air leaks
  • Change compressor oil
  • Inspect/replace drive belt
  • Grease all points
  • Calibrate gauges
  • Perform functional test of high and low cutoff/cut on
  • Provide written report and list any recommendations including discrepancies and corrective actions scheduled/performed

GOALS FOR THE UTILITY SYSTEM

1 YEAR SHORT TERM LIST OF GOALS AND EXPECTATIONS

Steam System
• Start base loading the new absorption chiller to support campus chilled water needs and generate additional power via the steam turbines
• Develop operator training program for steam turbines
• Continue uploading assets to the CMMS and build maintenance programs
• Complete the following Capital Improvement Projects:
  • 23/1-001 Energy Plant Catwalk, Ladder, and Safety Upgrades
  • 23/1-006 Water Treatment Improvements, Project I
  • 23/1-007 Wood Fuel Handling System Upgrades

Chilled Water System
• Start base loading the new absorption chiller to support campus chilled water needs and generate additional power via the steam turbines
• Repair the damage to the exterior of the TES tank
• Complete the following Capital Improvement Projects:
  • 2022-15 SCCP Chiller Replacement and Improvements
• Continue uploading assets to the CMMS and build maintenance programs

**Electricity System**

- Complete the following preventative maintenance items:
  - Continue and expand thermography program
  - Start transformer oil sampling
- Establish plan to complete the following maintenance:
  - Dissipation factor (Tan Delta) testing on underground distribution
  - Partial discharge testing on underground distribution
  - Switch exercising
- Complete the following Capital Improvement Projects:
  - 23/3-027 Kibbie Dome Building Electrical Service Replacement
- Continue uploading assets to the CMMS and build maintenance programs

**Domestic Water System**

- Replace the Water Systems SCADA through Idaho DPW Project 21-257 SCADA Systems Upgrades and Improvements
- Establish the water loss control program to include:
  - Coordinating Planned Outages with the University
  - Level of current losses in the system
  - Develop Capital Improvements to address losses where feasible
- Complete the following Capital Improvement Projects:
  - 2022-12 Domestic Waterline Replacement Campus Dr. to Blake Ave.
- Continue uploading assets to the CMMS and build maintenance programs

**Sanitary Sewer System**

- Continue uploading assets to the CMMS and build maintenance programs

**Stormwater System**

- Continue uploading assets to the CMMS and build maintenance programs

**Reclaimed Water System**

- Replace the Water Systems SCADA through Idaho DPW Project 21-257 SCADA Systems Upgrades and Improvements
- Establish the water loss control program to include:
  - Coordinating Planned Outages with the University
  - Level of current losses in the system
  - Develop Capital Improvements to address losses where feasible
- Continue uploading assets to the CMMS and build maintenance programs
Moscow ID Eco District I, LLC

Bringing the value of experience to the future of education for the University of Idaho

**Compressed Air System**
- Continue uploading assets to the CMMS
- Expand predictive maintenance program

**5 YEAR LIST OF STRATEGIC GOALS**

**Steam System**
- Fully implement the preventative maintenance program for all equipment in the system.
- Completely build out the metering of steam and condensate for each of the end users on the system.
- Steam and condensate flow models to support distribution upgrades and pipe replacements.

**Chilled Water System**
- Fully implement the preventative maintenance program for all equipment in the system.
- Chilled water flow model to support capacity and distribution upgrades.
- Completely build out the metering of temperature and flows for each of the end users on the system.

**Electricity System**
- Fully implement the preventative maintenance program for all components in the system.
- Completely build out electrical metering for each of the end users on the system.
- Secure backup electric generator(s) to support Unplanned Outages.

**Domestic Water System**
- Fully implement the preventative maintenance program for all machines in the system.
- Completely build out the metering of domestic water for each of the end users on the system.
- Implement the water loss control program.

**Sanitary Sewer System**
- Fully implement the preventative maintenance program for all components in the system.
- Update maps.

**Stormwater System**
- Fully implement the preventative maintenance program for all components in the system.
- Update maps.
Reclaimed Water System
- Fully implement the preventative maintenance program for all components in the system.
- Implement the water loss control program.

Compressed Air System
- Fully implement the preventative maintenance program for all equipment in the system.
- Identify all end users of the system.

PLAN TO KEEP SCADA NETWORK COMPONENTS UP TO DATE
The Domestic Water SCADA network is obsolete and needs to be replaced. It is scheduled to be replaced in an Idaho DPW project DPW21-257. This project is in the later stages of design and is expected to be completed by the end of the year.

TREATMENT AND CHEMICAL PLAN
WATER SYSTEMS
Water Systems are monitored and sampled frequently to ensure drinking water standards are being met. Test results for water systems are submitted to Idaho DEQ and are typically available online and as part of the annual Consumer Confidence Report (CCR). CCRs are available on the university’s website at https://www.uidaho.edu/dfa/division-operations/utilities.

The below tests are conducted for each of the water systems:

Domestic Water
- Annual
  - Well 3: DBP2 – Stage 2 samples twice a year
  - Well 3: Nitrate sample
  - Well 4: DBP2 – Stage 2 samples twice a year
  - Well 4: Nitrate sample
  - Twenty lead and copper samples at predetermined locations
- Monthly
  - Minimum of 10 coliform bacteria samples
- Weekly
  - None
- Daily/Continuous
  - Total chlorine residuals
Reclaimed Water

- Annual
  - None
- Monthly
  - Nitrate sample
  - Nitrite sample
  - Total nitrogen sample
  - Total phosphorous sample
- Weekly
  - Three coliform bacteria samples
  - E-Coli bacteria sample
- Daily/Continuous
  - Total chlorine residuals

Sewer

- Annual
  - None
- Monthly
  - None
- Weekly
  - None
- Daily/Continuous
  - None

STEAM AND CHILLED WATER

Feedwater and condensate is monitored and tested frequently at the Energy Plant as any deviation needs to be corrected quickly to prevent damage to the boilers. The chilled water loop is tested twice a year for contaminants as it is a closed loop system. Make-up water to cooling towers is tested by Kurita continuously and a chemical treatment program is in place to prevent corrosion, scaling, fouling, and biological contamination.

The steam system is protected from excessive corrosion using a triple acting amine. To provide chemistry consistently to the steam and condensate systems, there is a porta-feed tank that stores several months’ worth of amine. The tank is equipped with a chemical injection pump, plastic tubing and an injection quill to deliver the amine to the boiler feedwater. If there is a failure of the injection pump, tubing, or quills; there are spare parts on hand at the Energy Plant. If amine is unable to be ordered or delivered from the current chemical supplier, there are other chemical suppliers that could be used in the interim.

The make-up water, boiler feed water, and chilled water systems require chemicals to purify water, prevent scaling, inhibit corrosion, and control biological growth. To provide chemistry consistently to these systems, there are porta-feed tanks that store large quantities of chemical to be used for long
time periods. These porta-feed tanks range in size from 100 gallons to 400 gallons depending on the chemical used. The tanks are equipped with chemical injection pumps, that use plastic tubing and injection quills to deliver the chemical to the desired location. If there is a failure of the injection pumps, tubing, or quills; there are spare parts for each system on hand at the Energy Plant. If chemicals were unable to be ordered or delivered from the current chemical treatment company, there are other chemical companies that could be used in the interim.

The below tests are conducted for the Steam and Chilled Water systems:

**Steam and condensate**
- Annual
  - None
- Monthly
  - None
- Weekly
  - None
- Daily
  - Water softener testing six times per day
  - Boiler feedwater and condensate testing

**Chilled Water**
- Annual
  - Chilled water loop testing twice per year
- Monthly
  - None
- Weekly
  - None
- Daily
  - Continuous monitoring for cooling tower make-up water

STAFFING PLAN

ORGANIZATION CHART

SHIFT STRUCTURE
A standard workday shall be on the basis of eight (8) hours per day for the management team and maintenance team, with twelve (12) hours per day for the operators.
Employees Shift Start / Stop times

<table>
<thead>
<tr>
<th>Management</th>
<th>8:00 am – 5:00 pm</th>

</tr>
<tr>
<td>Night Shift (2)</td>
<td>9:00 pm – 9:00 am</td>
</tr>
</tbody>
</table>

- 8-hour will be the standard Monday through Friday, 8am to 5pm
- 12-hour will consist of 4 shifts (Operators only)
  - D1 (days 1) primary days Sunday, Monday, Tuesday
  - N1 (nights 1) primary nights Sunday, Monday, Tuesday
  - D2 (days 2) primary days Thursday, Friday, Saturday
  - N2 (nights 2) primary nights Wednesday, Thursday, Friday
  - With days swing day on Wednesdays
  - With nights swing day on Saturday

For shift tie in purposes, employees will be required to participate in a brief pass down at the end of shift.

Overtime shall be paid for non-exempt employees for all hours worked over 40 per work week and over 8 hours per day at 1.5 times the rate of pay.

When Daylight Savings and Standard Time Changes occur, during a shift, employees will be paid for actual hours worked.

**ON CALL POLICY**

Staff who are on-call will be identified, selected, and added to the UES department on-call list based on their ability to provide technical, emergency, and critical support to the UES site. A minimum of one UES staff will be identified and scheduled on a weekly rotating schedule.

**EXPECTATIONS AND PRACTICES**

- On-call staff are expected to response and cover all assigned shifts, perform task in a highly productive, efficient and professional manner.
- On-call weekly schedule:
  - Weekdays (Mon-Fri): 5:00 pm to 8:00 am, daily
Weekends (Sat-Sun): 12:00 am to 11:59 pm, daily
- Response & Access: The on-call staff must have access to a phone and be available during the shift to respond to the emergency/alarms. Failure to respond within the required response times will not be a basis for disciplinary action but may affect future on-call scheduling.
  - Response Requirement: On-call staff must respond within 60 minutes.
  - Weekly Performance Bonus: A weekly performance bonus will be paid if the on-call person regularly responds to requests within 60 minutes.
- Trading Shifts: The on-call staff must coordinate with his or her lead/supervisor to trade on-call shifts.
- Drug and Alcohol Use: The on-call staff should refrain from the use of drugs and alcohol while on-call.

COMPENSATION
- Staff participating in the on-call rotation will receive compensation for time worked and are eligible for a weekly performance bonus as follows:
  - Time Worked: The employee will be paid for shall receive a minimum of two hours of pay if called to work or shall receive pay for actual hours worked, whichever amount is greater.
  - Holiday Pay: Holiday pay plus time worked (New Year’s Day, Martin Luther King Jr Day, Memorial Day, 4th of July, Labor Day, Thanksgiving & Day After, and Christmas)
  - Weekly Performance Bonus: $200 for each on-call week
    - Eligibility: The weekly performance bonus will be paid if the on-call person regularly responds to requests within 60 minutes.

Time Worked policy only applies to only non-exempt employees.

POSITION JOB DUTIES AND RESPONSIBILITIES
Job duties and responsibilities are available upon request.

EMPLOYEE DEVELOPMENT PLAN
McKinstry is committed to providing opportunities and support to employees as they build a career with the company and has established programs to foster growth and development. Although McKinstry is committed to providing both the opportunities and the tools, employees are ultimately responsible for managing their careers.

Employee Orientation – Ensuring new hires experience a smooth transition personally and professionally into the company is very important to McKinstry. New Hires participate in comprehensive Activation and Initiation sessions to further their knowledge of McKinstry’s mission, vision, and values, and are provided with an introduction to the company’s systems and tools.
MCKINSTRY UNIVERSITY
McKinstry University, or McKU, provides access to numerous training and development programs with topics ranging from safety to leadership, from technical to soft skills.

McKinstry University courses are broken down into five “Colleges”: Business, Leadership, McKinstry Tools, Professional Development, and Technical Training. These courses provide pathway for employees to improve performance in their current role and an opportunity for personal and professional development that supports overall career growth.

CREDENTIALS, CERTIFICATIONS, AND LICENSES
This section is under development.

DIVERSITY AND INCLUSION
Our focus on diversity and inclusion at McKinstry is longstanding, and McKinstry is deeply committed to advancing equity and inclusion in our company and in the industry overall. Addressing the equity crisis is a top-line aspiration – one of only three – in our guiding 2025 plan. As part of this effort, we have developed a comprehensive five-year plan focused around advancing racial equity, strengthening inclusive jobsite culture, upskilling our people, building personal ownership, driving equity outcomes in local communities, and demonstrating durability and commitment. In December, we became a leading signatory to the Washington Employers for Racial Equity commitment to advance racial equity across Washington and beyond.

To complement and build upon our existing efforts, we have organized our efforts into three focus areas:

Inclusive culture: We will foster a culture of inclusion and belonging at McKinstry that represents the mosaic of diversity in the communities where we live and work. Our culture of inclusion will ensure that our people are treated fairly and respectfully, have equal access to opportunities and resources, are empowered to bring their full authentic selves to work each day and experience a sense of belonging within the McKinstry family. We will demonstrate authenticity and durability of this commitment to our people. This includes employee engagement, talent development and acquisition, internal culture building, goal setting and accountability and values alignment.

Industry influence: We will influence our industry, including within the trades, to diversify jobsites and the skilled labor pipeline. We will leverage our relationships with associations, clients and partners to drive meaningful and durable actions and demand that jobsites provide safe, inviting, respectful and equitable work environments for all. Our enhanced partnerships with disadvantaged businesses will help nurture an increase in diverse organizations to lead and thrive in our industry. This includes industry and trade association partnerships, union collaboration, procurement and supply chain, brand building and client engagement.
Community impact: We will make a substantial impact in our communities by more strategically aligning our community engagement and philanthropy to drive equity. We will leverage our time, talent and resources to evaluate and advance equity work within our existing community priorities of education, the environment and nurturing children. We will leverage equity as a critical lens to evaluate how and where we engage. This includes philanthropy, community service, educational outreach and community partnerships.

We must do more to achieve our dream of a fair, just and equitable society for all. As a company, we will do our part and contribute to a legacy of which we can all be proud.

RATES OF PAY
Premium/shift differential pay is based on standard workday schedules and the date of start time of the shift. For the twelve (12) hour workdays, day shift (1) will be paid at the regular rate, and night shift (2) at your regular rate plus 5% shift differential.

## Notes:

* Rates include labor burden for items such as: FICA, FUTA, SUTA, workers comp, medical, 401k, life insurance & PTO.

* Rates are adjusted at the start of each year to reflect raises and cost of living (CPI-W, Mountain).

* Rates do not include travel, subsistence, or other travel expenses.

## Subcontractors / Materials

Subcontractors and materials will be marked up at a rate of 13.5% for overhead and profit on these costs.

Effective 01/01/23 - 12/31/23
ONE AND FIVE YEAR STAFFING PLANS
Continuing to maintain the current number of resources to deliver Operations and Maintenance is key to stabilization efforts and will result in no changes to the staffing level plan in one year.

- Operations team (working 12-hour shifts) of the district energy plant
- Maintenance team of the district energy plant, chilled water system, and other utility systems
- Water system team for the four water utility systems
- Project manager for capital projects
- CMMS Planner/Scheduler
- Local management team overseeing the program delivery

As capital projects get approved that brings new technology in utility system/equipment infrastructure and control systems that provide data analytics, an opportunity to adjust our staffing level plan in year 5 will present itself.

INCIDENT RESPONSE

SUMMARY
A set of policies and procedures to help guide facility personnel responding to incidents of varying severity that, if not properly managed, could significantly impact the facility operations, their people, or their ability to function productively. Used both in preparation for and in response to major incidents and should be closely reviewed by major facility stakeholders and team members who would participate in the response to an incident. The plan is designed to provide guidance on how to react to a variety of crisis or disaster scenarios with the intent of providing a safe, timely, and sound resolution that minimizes business impact.

DEFINITIONS
- Incident – A situation of extreme difficulty, which is outside the scope of prepared responses.
- Disaster – An event that results in severe damage or injury.
- Incident Response Plan – This is the detailed plan of action on what to do during an incident.
- Plan Implementation Procedures – These are the procedures (EOPs, MOPs, SOPs, and APs) that are used to put the plan into effect.
- Response Testing and Training – These procedures apply to the continued maintenance, testing and training requirements of the plan.
- Task Force Leader – is the operational leader for the level of business leadership represented by the task force. The Task Force (TF) leader is responsible for initiating the task force, conducting the meetings, and communicating TF status, findings, and actions to senior leadership. The TF leader is responsible for ensuring the TF members are prepared, to include being trained and proficient with their responsibilities.
• **Facility Representative** – is the TF member responsible for information regarding facility status, to include utility and structural status following a catastrophic physical event.

• **Operations Representative** – is the TF member(s) responsible for determining the near and long-term impacts of the critical event on normal operations, information regarding their area of operations, and the employees performing them.

• **Safety Representative** – is the TF member responsible for information regarding the overall work environment safety, medical response events or investigations into those type of events.

• **HR Representative** – is the TF member responsible for information regarding the broader situation, actions of other organizations, and the impact on our employees.

• **Legal Representative** – is the TF member responsible for consuming the local, state, and federal response guidance and distilling into actionable intelligence for the development of response plans.

• **Finance & Accounting Representative** – is the TF member responsible for information regarding the broader financial picture, to include impacts on the financial markets affecting McKinstry businesses, customers, vendors, and subcontractors.

• **Information Technology Representative** – is the TF member responsible for information regarding the health and security of McKinstry’s communications infrastructure and critical software platform performance.

• **Communications Representative** – is the TF member responsible for capturing TF meeting minutes, drafting TF communications for approval, and coordinating timing of communications release with other internal and external teams.

• **Supply Chain Representative** – is the TF member responsible for information regarding the health of the overall supply chain, to include any short- or long-term forecasted supply chain disruptions of critical personal protective equipment, transportation of goods, or job site tools and equipment.

• **Additional Subject Matter Experts** – are specialized TF members added to the TF to raise the general awareness of the other TF members on a subject or aspect of the crisis event. Their participation will be at the pleasure of the Task Force Leader and will be assigned specific responsibilities to best serve the TF.

### PREPARATION AND PREVENTION

This set of activities can help prevent a crisis, reduce the chance of a crisis happening, or reduce the damaging effects of a crisis.

• **Frequency of Testing** – The Incident Response Plan will be tested no less than once every year. The objectives of the tests are as follows:
  - To determine the effectiveness of the Plan procedures
  - To determine the state of readiness and ability of designated personnel to perform their assigned responsibilities; and to validate and update the contact information for the Facility support personnel (as necessary).
  - To test and determine Communication Plan (Contingency Communications Equip.)
• **Frequency of Training** – Training will occur on a quarterly basis on the following topics:
  o Notification Procedures
  o Emergency Response
  o Incident Reporting
  o First Response

**DRILLS**

The UES team will perform drills every quarter to evaluate the training of the emergency procedures, team skills and communication, and the overall effectiveness of the facility team. The focus is to identify areas of improvement from training, documentation, actions required, and predictive failure points. These drills will be orchestrated and overseen by the UES facility management team (Drills POC) and may be implemented in the following manner:

- **Tabletop:** The UES Team will meet together with the drill POC and discuss failure scenarios. During this exercise all team members will be encouraged and expected to participate. This drill session could include:
  o White boarding the sequence of operations
  o Identifying the communication structure with escalations as identified by the overseeing drill POC
  o A written test of scenarios and equipment knowledge
  o Expected Results:
    - All members participate
    - The team can draw/explain the sequence of operation (SOO) with the understanding of why the equipment reacts the way it does
    - The team can explain how they should respond in the given scenario

- **Mock Drill:** The drill POC will coordinate a failure scenario to simulate what a team member may see during an actual failure. Once everything is staged and all required managers are in place a mock email will be sent out to trigger the team’s response. The team will then respond as if it were an actual alarm/event and perform the following:
  o Investigate and Assess
  o Communicate and Escalate
  o Simulate any required or instructed actions
  o There will be no actual changing of state of any equipment during this exercise. The team will identify what actions are required and discuss what they would do and expect to see as results
    - Expected Results:
      - The team responds in a rapid, safe, and organized manner
      - Identification of abnormalities that are being simulated
      - The team understands the SOO of the equipment and why it is in that simulated state and if that simulated state is correct.
      - Communication is being correctly escalated
• Process sequence is correct and there is confidence in the team to speak up:
  o If instructed to perform an action that is out of sequence
  o If the individual is not comfortable performing the action

• Live Drill: The drill POC will coordinate a failure scenario and identify the impact to the Facility. This exercise involves actually changing state of equipment and is hands on. Activities include:
  o This scenario will be documented and shared with the client for approval prior to initiating the live drill and will be scheduled for a time where this activity could take place without any outage. This document will also include a back out plan.
  o Upon approval, and with the participation of the client, notifications will be sent out to the appropriate teams and business units to notify them of any possible alarms and what they should expect to see. This notification will include a date and time frame.
  o Once confirmed that all participants are ready, the drill POC will get permission to initiate the live drill from the client. The drill will then be initiated as identified in the Procedure and the UES team will be ready to react and evaluate.
  o Expected Results:
    ▪ The team responds in a rapid, safe, and organized manner
    ▪ The team is able to assess the abnormalities resulting from the live drill
    ▪ The Facility system(s) react to the initiated event and the SOO of the effected equipment performs as expected.
    ▪ Notifications, alarms, and BMS reflect the new state
    ▪ Actions performed are in accordance with the approved processes
      • Equipment and systems should react as designed
      • The team should communicate if the expected results differ from the actual results
  o A meeting with the UES team and the University will occur to discuss lessons learned and overall success of the live drill.

We aim to get the whole team involved in these drills each quarter but scenarios may be too sensitive to capture the whole team. In order to balance the training the McKinstry UES Management will schedule the different types of drills to allow the best cross exposure. In addition, the McKinstry UES Management will share and discuss the drills during pass down and team meetings. The drill POC will also document the drill, the results, and any lessons learned for continuous improvement.

DETECTION AND INCIDENT CLASSIFICATION
How do you recognize a crisis when it occurs? Quite often a manageable situation will transform into an incident over time, possibly catching the observer off guard. It is important to be able to recognize the early warning signs and threshold qualities.

One of the defining characteristics of an incident is a loss of control. If a situation passes outside the boundaries of what can be reliably managed and becomes, or threatens to become, out of control an
incident may ensue. Another characteristic of an incident would be a high level of severity. For example, even though there may be an incident response plan in place for an unplanned outage, the severity of the event may dictate that incident management take place immediately.

**INCIDENT TYPES**

- Unanticipated System Failure – Failure of known, but unanticipated origin. No standard response procedures exist.
- Extended or Compound Failure – Emergency response procedures may exist for the failure and/or its components, but the extent, duration or complexity of the failure is outside the limits of established procedures.
- Severe Failure – A system failure or situation of extreme severity. A procedure exists.
- Unresponsive Failure – Known failure type that does not respond to established procedures in the prescribed time frame.

**DISASTER TYPES**

Disasters are easier to identify. When serious damage has occurred to property, personnel, or business continuity a disaster has occurred or is in progress.

- Man-made
  - Attack on facility or personnel
  - Equipment fire/explosion
  - Hazardous material release
  - Catastrophic Mechanical, Electrical, Data, or Plumbing (MEDP) failure
- Natural
  - Severe weather
  - Earthquake
  - Flood
  - Fire

In the event of an incident or disaster the ability to quickly identify and classify the event is the crucial first step in the process. This is necessary for an effective response and communication strategy.

**DEFINITIONS OF INCIDENT (EVENT)**

- **Class 1**: Life Safety
  - This class overrides all other classes. A threat to human life is more important than a threat to business operations. This class covers fire, natural disasters, threat to human life, and security.
- **Class 2**: Critical
  - Defined as an event that interrupts business functions, Utility System has been or will be lost.
- **Class 3**: Significant
Defined as an event that interrupts business functions, or if “Normal” or “N” status is lost in any critical building system, Mechanical or Electrical. A Class 2 event can be determined by asking one of two questions: Have we lost “N” redundancy in a Utility System has it been compromised.

- **Class 4: Advisory**
  - This class is intended to notify the team of an informational event. Examples include 30+mph wind warning, lightning warning. This class is mainly for notification of situations that could have a possibility of escalating to a higher class.

### ALL CLEAR EMAIL
An “All Clear Email” is to notify a return to normal from a previous event notification.

### FAULT EVENT RESPONSE DIAGRAM
The following flowchart outlines the standard actions taken on each class of events.

### RESPONSE AND MITIGATION
The proper response and mitigation actions will ensure the timely stabilization of the facility and business operations.

### FIRST RESPONSE
If there is an immediate threat to human safety or the facility that can be safely mitigated, immediate action should be taken. If someone is, or is about to be, injured the need for action outweighs the need for deliberation - provided that the consequences of such actions do not endanger anyone. Similarly, if there is a containable fire and the safe means to extinguish it, such an action would take precedence over any other activity. These are just two possible examples where a first response would be justifiable and prudent if the responder is appropriately trained. Extreme caution should be used in any situation where the need for an immediate first response is determined. Only when the stakes are high, the consequences predictable, and appropriate training previously completed should such actions be considered.

### EVALUATION
After, or in lieu of, any first response activities the primary task is to assess the situation. Basic information must be gathered about the scope and severity of the incident, as well as the state of what was affected. This data must be quickly established and continuously updated in order to ensure good decision making and accurate communications.

The following is a list of data points that should be part of the evaluation process:
• **Scope** – What are the event boundaries, in terms of the physical and functional extents?
  o Source of the incident and possible root causes:
    ▪ Human error
    ▪ Equipment failure
    ▪ Natural disaster
    ▪ Other
  o Area(s) affected.
    ▪ Utility Buildings, MEDP areas, rooms, etc.
  o Business processes affected.
    ▪ What properties are affected?
    ▪ Severity - How severe is the damage or risk?
  o Human impact – were there any injuries?
  o Structural damage
  o Mechanical, Electrical, Data or Plumbing (MEDP) damage
  o Risk classification – Class 1, 2, 3, 4

• **Status** – What is the current state of the situation?
  o Safety of occupants
  o Damage assessment
  o Current system redundancy level
  o Systems currently on/offline
  o Applications currently on/offline
  o Emergency personnel on the scene
  o Available personnel – (are there sufficient resources available to respond?)
  o Estimated time to restore business operations

• **Stability** – Is the situation getting better or worse, or is it stable?
  o Conditions improving
  o Conditions deteriorating
  o Not able to determine

**NOTIFICATION**
When an event has occurred or is in progress, timely and accurate communications must take place to all stakeholders.

• **Initial Notification** – This may precede a full evaluation (as defined in the previous step) if that process will cause a significant delay in getting notification out about the incident. In many cases, a quick notice containing the event location, type and status is preferable to waiting for a full report.
  o Send a message per the Incident Notification Administrative Procedure for the facility
  o Notify all applicable parties on the site Escalation List. This can either be done directly by site personnel, or by calling Security and invoking an Emergency Escalation Plan.
• **Establishing a Phone Bridge** – As an event occurs; McKinstry will classify and evaluate the alarm while following the escalation process. Concurrently, the client will be following their escalation processes. McKinstry will be responsible for establishing a phone bridge within the first 30 minutes for all Class 1 and Class 2 events and distribute the login information per the Escalation Appendices below. McKinstry Facility management will determine if a phone bridge is required for any Class 3 events. If the client determines an internal phone Bridge is required, the client will establish that bridge and distribute the login information. At this time, all personnel on the McKinstry Phone Bridge will migrate to the internal Phone Bridge.

• **Periodic Status Updates** – At set intervals, changes of state (including problem resolution), or when significant new information becomes available status updates shall be sent to all stakeholders via email or communicated via the Phone Bridge.

• **Abnormal Incident Report** – Within 24 hours of an event or as soon as possible, an Abnormal Incident Report (AIR) will be provided by McKinstry.

**RESPONSE LOGISTICS**

• Identify the members of the Emergency Response Team (ERT)
  o UES Team
  o Concessionaire Team
  o University EHS Team
  o University Public Safety and Security
  o Other

• Establish team roles
  o ERT Leader (final decision maker)
  o Communication manager
  o Event Documentation Manager
  o Safety Manager

• UES team role
  o On-call staff are expected to cover all assigned shifts, perform tasks in a highly productive, efficient and professional manner. The responsibilities include (but are not limited to) the following:
    ▪ Responding to all emergency calls related to campus utility systems:
      • Domestic, Reclaimed, Waste and Stormwater Water systems, Electrical Systems – Water Tech on-call technician
      • Chilled Water, Compressed Air & Steam – Steam & Chilled Water on-call technician
    ▪ Evaluating, investigating, and shut down systems if necessary, to mitigate adverse impacts of both planned and unforeseen shutdowns to all situations
including weather events. Coordinate with a manager for shutdowns as necessary.

- Staff scheduling for on-call weeks will vary based on the business need and UES staff availability. The schedule for each week will be as follows:
  - Weekdays, 5pm – 8am
  - Weekends, 5pm Friday – 8am Monday
- The on-call staff must have access to a cell phone and be available during the shift to respond to the emergency/alarms or phone calls.
- Response Requirement:
  - On-call staff must answer the emergency call and if necessary be on site within 60 minutes.
  - Failure to respond within the required response times will not be a basis for disciplinary action but may affect future on-call scheduling.
- Trading Shifts: The on-call staff must coordinate with his or her lead/supervisor to trade on-call shifts.
- Drug and Alcohol Use: The on-call staff should refrain from the use of drugs and alcohol while on-call.

- Conduct event briefing containing:
  - The current situation assessment
  - A round-table discussion between all teams responding to the event to review the following:
    - Life safety
    - Team member availability
    - Business Operations Impact
    - Root cause
    - Problem resolution and strategies
    - Impact of implementing work without established procedures

- Establish objectives
  - Stabilize System
  - Isolate Problem(s)
  - Restore Redundancy
  - Return to Normal Operations

**Deliberation:** Take the time to make good decisions. Hasty actions may worsen the situation. Utilize the ERT and its extended members to establish action items.

**Delegation:** Assign tasks to team members

**Mitigation:** Perform agreed upon actions to mitigate and/or reverse the effects of the event

**Iteration:** Repeat steps as needed
RECOVERY AND ANALYSIS

POST-INCIDENT ANALYSIS AND REPORTING

The following must be completed within 24 hours after an event occurs:

- Complete the first sections of the Abnormal Incident Report (AIR) prior to the Root Cause Analysis sections (RCA).

The following must take priority and be completed in a prompt and timely fashion:

- A Root Cause Analysis (RCA) must be performed, documented, and submitted on the same AIR form created for the event occurrence. The RCA should include the below examples:
  - Detailed Sequence of Events
  - Associated Work Order Tickets
  - Pictures
  - Any Procedures that were used
  - Any other information/detail relevant to the root cause of the event

- Lessons Learned Report must be completed for distribution of relevant knowledge about the event to stakeholders to prevent future occurrences.
  - After Action Plan with recommendations for improving future response to events. The Action Plan should include but not excluded to:
    - Item Number
    - Date/Time Assigned
    - Description
    - Point of Contact (POC) of Item
    - POC Number
    - Status
    - Due Date/Time
    - Resolved Date/Time

- Remedial Training as needed to implement After Action Plan findings.
- Formal incident report including the above details will be provided to the Concessionaire and University. The Formal Incident Format Guide should include but not excluded to:
  - Incident – Provide a summary of the event and current status of critical infrastructure.
  - Incident Descriptions – Provide a detailed account of the event and remedial actions taken.
  - Root Cause – Provide a suggested root cause to the event and provide justification for the root cause.
  - Records of Events – Captures significant activities during the course of the event.
  - Action Item List – List all actions required to prevent recurrence.
  - Appendices – Place any additional items used in the investigation into the appendices. Add as many as needed to support the root cause conclusions.
Summary – Provide a summary of your analysis and conclusions in this area. Also, detail out the actions required to prevent recurrence.

- Post-incident will be tracked as follows:
  - CMMS work order ticket will be created for each action item.
  - All reports will be posted in an accessible location for review.

INCIDENT COMMAND CENTER (ICC) CONFIGURATION

RECOMMENDATION FOR ICC CONFIGURATION

Best practice is to have an Incident Command Center (ICC) available. An alternate, off-site option should be available (could be a hotel) if access to the primary facility is denied. The designated room must be available for quick conversion to an ICC although it may have alternate uses at other times. Equipment shall be stored nearby to ensure that it remains dedicated for use in an incident. A room or rooms shall be identified which can be made available for work groups to use.

The ERT should have access to a personal computer and a printer. This should be a printer that is directly connected and not networked. Basic office supplies and equipment should include the following: White boards with erasable pens and erasers, flip charts, bulletin boards, and push pins. Arrangements for meals and accommodations should be anticipated so that a team can be sustained for long periods if needed.

A recommended configuration includes:

- A dedicated PC with directly connected printer/scanner/copier
- Access to video teleconference room (VTC)
- Conference Call bridge access in both rooms with secured access to bridge
- At least four telephone lines, these can be cell phones
- Ability to record telephone conversations
- An internet connection and wireless router
- TV with access to national and international news media
- Projector for use with PCs.
- Two way radio communications (VHF) capability.

The following additional equipment for an ICC should be considered:

- Rolling containers for supplies
- Access to kitchenette area with vending machines /beverages /coffeemaker /microwave
- Emergency Food and Water Supplies
- Digital camera with extra memory and batteries
- 2 Battery powered Radios and additional batteries
- Electrical adapters (110v) and surge protectors
• Multiple Time Zone Clocks
• Sleeping area and supplies available for longer term events
• Shredder – if one is not available locally
• Satellite telephone
• Maps of asset areas.
• Building MEP drawings, schematics, etc.
• Any other item that would be of value to the Facility team

Good management of the ICC is vital to the successful running of an incident. The Information above should serve as an example checklist is not all inclusive. A balance should be achieved between having a dedicated, permanently equipped facility and having a room that requires fitting at the last moment (which is undesirable). It is likely the first bridge call and initial discussions are likely to take place from a convenient office and remote locations; the team is likely to move to the ICC if and when members physically meet together.

SAFETY AND HEALTH POLICY

SUMMARY
It is the priority of MIEDI to provide a safe and healthful working environment for all our employees, client employees, partner-vendors, and visitors in our area of operation. In our approach to safety, we consider compliance with State and Federal regulations as our base line and strive to exceed this base by using best practices and continual review.

We believe we have a responsibility for the safety of employees, vendor-partners, customers, and site visitors to maintain a workplace free from injury and accidental damage and which creates a minimal environmental impact. We expect all employees to participate in our safety efforts. These efforts help make MIEDI one of the best places to work.

Employees are expected to follow the safe work practices they learn about in new employee orientation and ongoing training; be watchful for the identification and reporting of hazards; and to participate in employee programs improving and promoting safety. In turn, MIEDI is committed to providing the financial and personnel resources to safety, holding our front-line management accountable, providing training and equipment for safe job performance, and responding to employee suggestions and identification of hazards.

Achieving voluntary compliance with State and Federal regulations relating to employee health and safety can only be met through cooperation of all employees and vendor-partners on our programs. This cooperation is imperative if we are to have an effective Facility Safety Plan. This Safety Plan is available to all facility personnel. It is the responsibility of each employee to read, understand, implement, and always maintain the Safety Plan.
PURPOSE
This Safety Plan has been developed to serve as a guide in achieving the following:

- The standardized coordination of safety practices with our clients and vendor-partners, who will be following established industry practices, State/Federal requirements, and OSHA standards.
- Establish clear lines of communication, responsibility, and accountability for safety at all the facilities that we manage.
- Elimination of personal injury and property damage, thus reducing our losses as well as those to clients, vendor-partners, and their employees.

SAFETY RULES
This Safety Plan includes policies for the safe operation of equipment, handling of materials, and conduct of employees. The procedures, duties, and responsibilities outlined in this program will be in effect throughout the duration of MIEDI programs at the campus. Acts or conduct, including but not limited to the following, are prohibited, and can result in disciplinary action up to and including termination. These rules apply to the facility and its property, adjacent owner’s property, and parking areas.

- Fighting, horseplay, or creating a disturbance
- The presence of alcoholic beverages, marijuana, illegal drugs, narcotics or controlled substances by employees while on duty and/or at locations under the employer’s control, is prohibited and is cause for disciplinary action up to and including termination.
- Possession of firearms or other deadly weapons
- Falsification of records/reports involving claims of injury or damage
- Unauthorized building of fires
- Violation of published safety rules, misuse of safety or fire prevention equipment
- Failure to report any accidents or injury immediately to your immediate supervisor
- Running on any site is strictly prohibited except in extreme emergencies
- Wear uniform clothing suitable for the weather and your work. Torn, loose clothing, cuffs, sleeves, etc. are hazardous and could cause accidents.
- Hardhats must be worn in all required areas where indicated
- Proper eye protection must be worn when you are exposed to flying objects, dust, harmful rays, chemicals, flying particles, etc. No exceptions. All eyewear, including prescription eyewear must be ANSI Z87 rated and have side shields.
- Proper footwear must be worn on all work sites. Sturdy work boots. The wearing of sport shoes, tennis type shoes, sandals, dress shoes, and similar footwear is strictly prohibited.
- Always use gloves, aprons or other protective clothing when handling rough materials, chemicals and hot or cold objects.
- When spray painting, finish spraying, burning, exposed to large quantities of dust or to other toxic hazards, always wear a respirator. Check with the Critical Facility Manager for respirator training and fit testing.
• No work shall be performed in proximity to electrical conductors closer than ten (10) feet unless the conductors have been effectively guarded.
• Compressed gas cylinders shall be chained or secured in the upright position at all times. Cylinders shall be placed in cylinder carts whenever they are being transported to different locations on the client site.
• Always store materials in a safe manner. Tie down or support piles as necessary to prevent falling, rolling or shifting.
• Shavings, dust, scraps, oil or grease should not be allowed to accumulate. Good housekeeping is a part of the job.
• Refuse piles must be removed as soon as possible. Refuse is a safety and fire hazard.
• Immediately remove all loose materials from stairs, walkways, ramps, platforms, etc.
• Do not block aisles, traffic lanes, fire exits, gangways or stairs
• Avoid shortcuts – use ramps, stairs walkways, and ladders
• Standard guardrails must be erected around all floor openings and excavations must be barricaded
• Get help with heavy or bulky materials to avoid injury to yourself or damage to material
• Keep all tools and materials away from the edges of scaffolding, platforms, shaft openings, etc.
• Know the correct use of hand and power tools. Use the right tool for the job
• All electric power tools (unless double insulated), extension cords, and equipment shall be properly insulated and grounded. Damaged cords shall be replaced. All extension cords must have GFCI.
• Know the location and use of fire extinguishing equipment and the procedure for sounding a fire alarm
• Flammable liquids shall be used only in small amounts at the job location and in approved safety cans
• Proper guards or shields must be installed on all power tools before use. Do not use any tools without the guards in their proper working condition.
• Do not operate any power tool or equipment unless you are trained in its operation and authorized by your supervisor
• Use tools only for their designed purpose
• Do not remove, deface or destroy any warning, danger sign or barricade. Do not interfere with any form of accident prevention device that is being used by other workers. Correct signage will be used to indicate the hazard or work area.

SAFETY RESPONSIBILITIES
It is the desire of MIEDI to protect employees from accidental injury and damage to health while working for our organization. This matter must receive top priority attention from all levels.

Safety is the functional responsibility of each individual who has the right to demand safe operations. It is everyone’s obligation to teach each other to work safely and to understand the rules and procedures
of this manual. The facility Supervisors and each level of our organization are accountable for safe performance.

Duties and responsibilities of all personnel under MIEDI ’s Safety Plan are as follows:

**ALL EMPLOYEES**

- Be familiar with and comply with proper safety and health practices
- Use the required safety devices and proper personal protective safety equipment, as instructed, at all appropriate times
- Notify supervisor immediately of unsafe conditions and acts. All employees are empowered to correct unsafe conditions as necessary and to stop all unsafe acts.
- Report all accidents and near misses to supervisor immediately
- Abide by the rules and regulations of the MIEDI Safety Policies
- Abide by applicable State regulations and United States CFR 29 1926.20, employee’s responsibilities
- The MIEDI Facility Manager and the Safety Manager are to be promptly notified when an OSHA/State Inspector visits the site

**FACILITY DIRECTOR**

- Develop technical guidance and interim programs to identify and remove physical hazards from sites
- Formulate, recommend, and administer approved changes to the Facility Safety Plan
- Prepare and distribute to management, regular reports on the status of safety at the facility
- Advise all levels of management on matters pertaining to safety, to include establishing a “chain of command” and a network to communicate safety matters within the organization
- Maintain an adequate accident report system, personally investigating serious accidents and taking corrective action to eliminate accident causes
- Cooperate with program management personnel in the safety training of employees
- Maintain working relationship with MIEDI Safety Manager’s
- Insure there is full compliance with applicable Federal, State, and local regulations, and client requirements
- Recommend programs and activities that will develop and maintain incentives for the motivation of employees working safety
- Recommend disciplinary procedures for repeat violators of safety rules
- Review all accident reports with site lead and the injured employee

**OPERATORS, MAINTENANCE AND WATER TECHNICIANS**

- Is familiar with and enforces safety regulations applicable to company operations within area of responsibility
• Correct and coordinate safety activities within his/her area of responsibility, to include motivation of employees for safe work practices
• Assure that safety devices and proper individual protective equipment are used by persons under his/her supervision
• Instruct all employees within area of responsibility in job safety and health requirements and insist on compliance
• Assure that injuries are treated promptly and reported properly
• Assist in the investigation of all accidents, obtain all pertinent data, and file a complete report with the Safety Manager and site FM. Recommend corrective action
• Assure that no unsafe conditions exist in area of responsibility and report to the Facility Manager or the Safety Manager on any corrective actions needed which are beyond his/her control
• Hold daily safety briefings with employees to:
  o Discuss how to safely perform current assignments for the day
  o Discuss topics provided by Safety Manager
  o Encourage open discussion and safety suggestions from employees
• See that prompt first aid is administered to an injured employee
• Conduct safety inspections of work area, direct corrective action for unsafe conditions noted, and inform the Safety Manager of inspection results
• Maintain a valid First Aid Card
• Assure that all vendor-partners are abiding by the safety practices of the facility when on site

APPRENTICES, CMMS PLANNER SCHEDULER
• Is familiar with safety regulations related to his/her area of responsibility
• Direct and coordinate safety activities within area of responsibility
• Require all employees under his/her supervision to utilize the proper individual protective equipment and job safety device
• Assure that safety equipment is available and that storage locations are clearly designated
• Conduct safety inspections of work area, direct corrective action for unsafe conditions noted, and inform the Safety Manager, FM, AFM, or LFE of inspection results
• Assure that front line Supervisors are aware of and comply with requirements for safe practices and conditions to be maintained at the facility
• Review all accidents with front line supervisors. Submit full report to the Safety Manager, FM, AFM, or LFE and assure that corrective action is taken immediately to alleviate the cause.
• Require all vendor-partners and vendor-partner personnel to comply with applicable safety regulations
• Provide information and recommendations (feedback) to Safety Manager, FM, AFM, or LFE concerning safety matters
SUBCONTRACTORS (VENDOR-PARTNERS)
Each vendor-partner is responsible for the safety of their own personnel, and will:

- Provide and execute all work so as to comply with Federal, State, and local codes as well as MIEDI Facility Safety Plan. Where conflict occurs, the most stringent shall apply.
- The vendor-partner uses the required safety devices and proper personal protective safety equipment, as instructed, at all appropriate times.
- Provide and enforce the use at all times of the personal protective equipment specified by State regulations, OSHA requirements and the Facility Safety Plan.
- Comply with procedures and practices in addition to those outlined above, which the Facility Manager may, at his/her discretion, institute to ensure safety. The AFM, LCFE, and FE may also be assigned as the designee by the FM.
- Provide supervisory investigation reports on all accidents.
- Attend site meetings addressing safety.
- Schedule daily safety briefings for all employees and maintain records of these briefings.
  - It may be possible for the vendor-partner to attend the MIEDI safety briefings.
- Take immediate action to correct unsafe practices or conditions when discovered.
- Maintain a file of Safety Data Sheets (SDS) for all hazardous materials that are brought onsite, conduct the necessary training, and provide personal protective equipment as required.
- Report to the MIEDI Facility Manager any observed unsafe conditions, or practices, of violations of job security which are not within vendor-partner’s jurisdiction.
- Tools and equipment will be inspected by each vendor-partner as required by the Facility Safety Plan.
- Provide a copy of vendor’s written Safety Program to the MIEDI Facility Manager.
- Conduct a thorough safety indoctrination of all new hires and maintain records of same.

PERSONAL PROTECTIVE EQUIPMENT
The following guidelines will be used for Personal Protective Equipment (PPE) selection and use.

PPE – 29 CFR 1910.132
Protective equipment, including personal protective equipment for eyes, face, head, and extremities, protective clothing, respiratory devices and protective shields and barriers, will be provided, used, and maintained in a sanitary and reliable condition. This protective equipment must be used wherever there is a reasonable possibility of worker exposure to hazards associated with processes or environment, biological, chemical and radiological agents, or mechanical irritants encountered in a manner capable of causing injury or impairment in the function of any part of the body through absorption, inhalation or physical contact.

PPE must meet the following minimum requirements:
• Adequately protect against the particular hazards for which they were designed
• Be reasonably comfortable when worn under designed conditions
• Fit properly without interfering with the movements or vision of the wearer
• Be durable
• Be capable of being cleaned and/or disinfected
• Be kept clean and in good repair

Provide special protective equipment and clothing whenever these conditions capable of causing injury or impairment are present:

• Hazards of process or environment
• Biological, chemical or radiological hazards
• Mechanical irritants
• Welding, cutting or working molten metal

All PPE equipment and clothing are to be maintained in a sanitary and reliable condition.

Supervisors must provide a type of protection suitable for the work to be performed and employees must use the protection. To properly evaluate the workplace, the supervisor must perform a job hazard assessment (JHA) and select the types of PPE which will protect the employee.

**EYE AND FACE PROTECTION - 29 CFR 1910.133**

Employees working in agricultural and laboratory research and maintenance environments, including but not limited to laboratories, greenhouses, fields, and shops will wear eye protection at all times.

The supervisor will ensure employees use appropriate eye or face protection when exposed to eye or face hazards from flying particles and projectiles; biologicals, chemicals, pesticides, and radiological agents; acid or caustic liquids; and hazardous dusts, gases, mists or vapors.

Eye and face protective equipment is required by OSHA where there is a reasonable probability of preventing injury. Suitable safety glasses, goggles or face shields are required where a hazard exists that could cause injury to unprotected eyes. Examples of conditions where suitable eye protection must be provided include:

• Biological, chemical or radiological hazards
• Machines
• Flying objects
• Welding, cutting or working molten metal
• Operating construction equipment such as a drill, saw, lathe, grinding wheel
• Extreme light, glare, UV or laser exposure

Suitable eye protection must comply with American National Standards Institute (ANSI) Z87.1-1989. Eye and face PPE must be distinctly marked to facilitate and document compliance.

Respirators will be provided when required to protect the health of the employee. The supervisor will provide respirators which are applicable and suitable for the purpose intended. The supervisor will be responsible for enforcing and maintaining a respiratory protection program which will include the requirements outlined in 29 CFR 1910.134(c), Respiratory Protection Program.

Respiratory protection requires constant vigilance to protect workers. Employee participation in the Respiratory Protection Program is required for both cartridge masks and dust masks. Program requirements include but are not limited to:

- Performance of hazard assessments
- Determination of airborne contaminant levels. Employee exposures to contaminants may not exceed the OSHA Permissible Exposure Levels (PEL) nor the Threshold Limit Values (TLVs) of the American Conference of Governmental Industrial Hygienists (ACGIH) [whichever limit is more stringent].
- Implementation of a written Respiratory Protection Program including training on the selection, fitting, use, maintenance, cleaning, disposal, recordkeeping, and supervision.
- Whenever respirators are used in areas with atmospheres immediately harmful to life, at least one other person with backup equipment and rescue capability must be provided.
- Performance of a physical examination to ensure employee is fit to wear respiratory protection.

Selection and use criteria for respirators, cartridges, and dust masks must meet the standards in 42 CFR 84, Respiratory Protection, published by the Public Health under National Institute for Occupational Safety & Health (NIOSH). Selection of respiratory PPE will be based upon hazard assessments and manufacturers’ performance recommendations.

HEAD PROTECTION – 29 CFR 1910.135

The supervisor will ensure that each employee wears a protective helmet or hard hat when working in any area where falling debris, low objects, or electrical conductors may create a hazard. Selection and use criteria for suitable helmets and hard hats must comply with ANSI Z89.1-1986 headwear standards.

The supervisor will ensure that each employee wears foot protection when working in areas where a hazard exists that could cause injury to feet or toes due to falling or rolling objects, objects piercing the sole, and exposure to electricity. Selection and use criteria for suitable foot PPE must be based upon a hazard assessment and must comply with ANSI Z41.1-1991 foot and toe protection standards.
ELECTRICAL PROTECTION — 29 CFR 1910.137 AND SUBPART S
The supervisor will ensure that each employee working in areas where an electrical hazard exists are provided and use PPE such as insulating blankets, matting, covers, line hose, gloves and sleeves made of rubber, and insulated tools. Selection and use criteria for electrical PPE must be based upon a hazard assessment and must comply with the guidelines found in OSHA 29 CFR 1910.137(a) (1).

HAND PROTECTION — 29 CFR 1910.138
The supervisor will ensure that each employee wears hand protection when working in areas where a hazard exists that could cause injury to hands and fingers due to skin absorption of hazardous substances, severe cuts, lacerations, abrasions, punctures or burns, and temperature extremes.

Hand protection must meet the following minimum requirements:

- Adequately protect against the particular hazards for which they were designed
- Be reasonably comfortable when worn under designed conditions
- Fit properly without interfering with the movements of the wearer
- Be durable
- Be capable of being cleaned and/or disinfected and/or disposed of upon completion of intended use
- Be kept clean and in good repair

Selection and use criteria for suitable hand protection will be based upon a hazard assessment and must comply with the PPE manufacturers’ performance recommendations.

NOISE (HEARING CONSERVATION PROGRAM) — 29 CFR 1910.95
The supervisor will ensure that each employee working in areas where the sound level is at, or exceeds 85 dBA, measured on the A scale of a standard sound level meter at the slow response. When employees are subjected to sound at or exceeding 85 dBA, feasible administrative or engineering controls will be utilized. If such controls fail to reduce sound level below 85 dBA, personal protective equipment will be provided and used to reduce sound levels. The supervisor will be responsible for enforcing and maintaining a hearing conservation program which will include the requirements outlined in 29 CFR 1910.95(c), Hearing Conservation Program.

Noise is a constant hazard in many daily working environments and operations. In responding to the need to protect workers, supervisors will protect their employees by:

Implementing a written Hearing Conservation Program including training for:

- Monitoring of work environments
- Notification of employee exposure levels
- Establishing the need for hearing protection
- Providing workers with baseline and subsequent annual audiograms
Training of employees in hearing conservation and PPE selection, fitting, use, maintenance, cleaning, disposal, recordkeeping and supervision
• Record keeping of employee exposures
• Monitoring noise levels using approved meters
• Hearing protection based upon dBA

Selection and use criteria for suitable hearing protection will be based upon a hazard assessment and must comply with the PPE manufacturers’ performance recommendations.

FALL PROTECTION – 29 CFR 1926.501 - 503
The supervisor will ensure personal fall protection is provided for employees working on roofs, in trees, on ladders, man lifts, powered working platforms, cages, and other lifting devices where personnel are elevated 6 feet or more above ground level surfaces. Safety belts*, harnesses, and lines are required when there is a danger of falling. A second person to tend the lifeline is required whenever entry into a bin, tank, or other potentially dangerous area is made.

Selection and use criteria for suitable personal fall arrest systems must meet the requirements of 29 CFR 1910.28, Appendix C.

*Note: MIEDI does not allow the use of safety belts on any sites by MIEDI employees or contractors.

FIRE PREVENTION AND RESPONSE
The MIEDI Facility Manager is responsible for implementation and enforcement of the fire response program. This program is aimed at protecting life and property while minimizing losses. Fire protection activities are emphasized at all times. Procedures have been created for response should a fire occur in the facility.

Employees are not allowed to attempt to put out a fire unless they have had proper training that includes the use of fire extinguishers. Always evacuate when instructed. Do not attempt to re-enter the building until the “All Clear” is given.

HOUSEKEEPING
• Avoid accumulation of flammable rubbish and waste materials.
• Remove trash from inside buildings and away from buildings daily or whenever an accumulation of material may constitute a fire hazard. Do not, under any circumstances, use wood sawdust or shavings as an absorbent for spilled flammable liquids or petroleum lubricants.
• Burning of rubbish is prohibited.
REFUELING OF EQUIPMENT
• Refuel all gasoline powered equipment outside and clear of structures, with engines shut off.
• Locate gasoline equipment, such as pressure washers, so exhausts are well away from combustible material.

HEATING DEVICES
Use of open flame devices, sources of heat, and spark producing equipment is prohibited in areas containing flammable materials.

Remove all empty propane, acetylene, oxygen, and butane gas cylinders from buildings, marked as empty (MT), and store and secure in an upright position in an approved area.

WELDING
• The Facility Manager, AFM, LFE, or Program Manager coordinates and approves all welding operations through use of a Hot Work Permit.
• No welding or open flame devices may operate within 50 feet of any spray painting or any substance that produces flammable vapors.
• Cover all combustible materials that cannot be moved a safe distance from welding operations with approved non-combustible blankets or non-combustible rigid barriers for protection from sparks.
• Minimum of a 20 pound, B or C rated fire extinguisher must be present within 10 feet from the source being welded.
• Follow MIEDI’s Hot Work Permit system requirements as outlined in the MIEDI Safety Policies.

FLAMMABLE LIQUIDS
• Segregate all flammable liquids, chemical fuels, resins, lubricants, and solvents by labels and store in an approved location. DO NOT store non compatible materials in the same storage area.
• Keep flammable liquid containers covered at all times when not in use.
• Do not store flammable liquids in the work area, except in a quantity needed to accomplish the job.
• Dispose of flammable paint or solvent rags and any materials subject to spontaneous combustion in covered metal containers. Containers are to be emptied at the end of each day.
• Store all flammable liquids in safety cans or approved containers.

ELECTRICAL EQUIPMENT
• The use of frayed and worn extension cords is not permitted.
• The overloading of extension cords and electrical receptacles is not permitted.
• Protect temporary wiring from damage and creating a trip hazard.

**SPRAY PAINTING, FLAMMABLE RESINS, AND CHEMICALS**

• No spray painting or application of chemicals that give off flammable vapors is permitted within 50 feet of a possible ignition source.
• Use approved exhaust fans and blowers in areas where conditions hinder the dissipation of hazardous vapors.

**ACCESS AND EGRESS**

• Maintain access to the site at all times, day or night for fire apparatus or ambulance. Keep all storage areas clean and organized.
• Maintain exit routes for personnel at all times.

**COMBUSTIBLE BUILDING MATERIALS**

• Store combustible materials separate from buildings.
• Segregate storage of various materials by type with approved separation provided for non-compatible materials.

**SMOKING**

• Smoking is not permitted inside buildings.
• The University of Idaho has a tobacco-free campus policy. Smoking is not permitted on campus grounds and use of the following products is prohibited:
  o Cigarettes
  o E-cigarettes
  o Cigars
  o Snuff
  o Snus
  o Water pipes
  o Pipes
  o Hookahs
  o Chew
  o Any other non-combustible tobacco products
FIRST AID & INJURY MANAGEMENT
MIEDI and facility Security provides basic first aid and arranges for emergency transportation for employees with on-the-job injuries or illnesses.

FIRST AID TRAINING, KITS AND SIGNS
- All MIEDI employees on site must be trained in first aid/CPR/AED.
- First Aid/CPR/AED certification is good for 2 years.
- First aid kits will be kept in accordance with the requirements of the General Safety and Health Standards and located in all departments. These units will be properly maintained and stocked.
- Signs listing emergency numbers, procedures, etc., will be strategically located, such as near the first aid kit, beside the telephone, etc.

TRANSPORTATION OF INJURED OR ILL EMPLOYEES

NON-EMERGENCY
MIEDI will transport employees with non-emergency injuries to and from the medical facility.

EMERGENCY
Call 911 and they will arrange for transportation to a medical facility as appropriate.

INJURY MANAGEMENT
An employee who has sustained an on-the-job injury or illness may return to work if a release from the attending physician has been obtained (use “Release for Work Authorization” Form). An employee who is restricted to specific tasks due to casts, braces, or other medical devices, such as crutches, may return to work following the case being reviewed by:

- The MIEDI Safety Manager
- The MIEDI Facility Manager
- The employee's physician

Workers’ compensation cases will be reviewed by the McKinstry workers compensation claims counsel.

Note: Employees will be returned to work as soon as is medically possible.

TREATMENT AT A NON-REFERRED MEDICAL FACILITY
Any employee who obtains outside medical treatment for an alleged on-the-job injury or illness must report to the MIEDI FM or AFM the injury or illness and the name of the attending physician no later than the first weekday following treatment. Failure to report this information may result in the denial of workers compensation benefits.
MEDICAL RECORDS KEEPING
The MIEDI Facility Manager and/or Safety Manager is responsible for ensuring that the appropriate safety related reports concerning occupational injuries and illnesses are filled out, filed, and maintained.

REPORTS AND OSHA
- The following reports and records must be filled out, filed, and maintained:
- Supervisor's Incident Report (SIR) is to be completed for all injuries sustained by facility personnel requiring a physician's attention. A copy of the completed report is sent to the MIEDI Safety Manager.
- OSHA 300 Log will be maintained by the Safety Manager and not by site management.
- MIEDI Safety Manager must report to OSHA
  - Within 8 hours all work-related fatalities
  - Within 24 Hours
    - Inpatient hospitalization
    - Amputations
    - Losses of an eye
- How to report an incident

Refer to the Error! Reference source not found. Response section in this Plan.

ACCIDENT REPORTING AND INVESTIGATION
Each occupational injury or illness that results in treatment by a physician must be thoroughly investigated and monitored. In addition, certain first aid cases as well as non-injury and near miss incidents with a potential for serious injury must also be investigated.

The purpose of accident investigation is to identify contributing causes so future incidents of a similar nature can be prevented. These contributing factors also have a bearing on legal liability issues. Investigations should be directed toward fact finding, not fault finding.

The investigation should begin as soon as possible after the necessary notifications (i.e. OSHA, MIEDI Safety Manager) have been accomplished. All accident investigation reports are submitted to the Facility Manager or site management and forwarded to the MIEDI Safety Manager.

CONCLUDING THE INVESTIGATION
At the conclusion of a major accident investigation, a meeting is held to assure that the causes of the accident have been determined and that proper corrective actions have been initiated. Personnel who must attend this meeting include:

- The MIEDI Facility Manager
- The vendor-partner’s Safety Representative (as required for any incidents involving vendor-partner’s)
• The MIEDI Safety Manager

If all the facts involved in an accident are known, it should not be difficult to determine what actions are necessary to prevent injury to other employees with similar duties or exposure to similar conditions.

CHEMICAL HAZARD COMMUNICATION PROGRAM

State and Federal chemical hazard communication (HAZCOM) standards require that we provide information to our employees concerning hazardous chemicals used in the workplace to which employees may be exposed. This program addresses container labeling, Safety Data Sheets (SDS) employee training, and other information on chemicals found in this workplace. The goal of our program is to reduce the possibility of illnesses and injuries caused by exposure to chemicals. We intend to do that by providing employees with as much information as needed concerning the hazards of chemicals they come into contact with, and to present that information in a usable, readily accessible form.

All chemicals, this includes any samples, must be approved by McKinstry facility management prior to being brought on site. Approval forms may be found on the facilities SharePoint website. You can contact the Safety Manager for assistance in locating and filling out the request.

Each facility has its own HAZCOM program because of the different activities and chemicals used. For some facilities, special HAZCOM training is required before an employee may enter the facility.

The Safety Manager is responsible for reviewing the Hazard Communication Program, including the chemical inventory, at least annually, to ensure that it is up to date.

CONTAINER LABELING

Chemical manufacturers, importers, and distributors must properly label shipments of hazardous chemicals with the identity of the chemical, clearly noted hazard warnings, and the name and address of the manufacturer or other responsible party.
Facility personnel will verify that chemical containers are properly labeled at the time they are received from the manufacturer or distributor. All containers will be labeled, tagged or marked with the identity of the chemical contained therein, and will show hazard warnings appropriate for employee protection. The hazard warning must be legible, and prominently displayed. Should employees discover any unlabeled containers at the facility, they shall immediately notify their supervisor or a MIEDI Safety Manager.

Containers into which chemicals will be transferred, and which can be expected to be used by several employees or over a period longer than one shift, will be labeled to show contents and an appropriate hazard warning using the HMIS (Hazardous Material Identification System) labels. Labels that become torn, corroded, or defaced such that content and hazard information cannot be determined will be replaced. For replacement purposes, we will use pre-printed HMIS labels that provide all required information.

The higher the number for hazard rating on the HMIS label, the greater the hazard.

If and when the chemical supplier informs us of new or significant hazards, labels for these portable containers will be changed accordingly.

**SDS**

Chemical manufacturers and importers are required to develop a Safety Data Sheet (SDS) for each hazardous chemical they produce or import. The SDS contains information on the chemicals, such as physical properties, health and safety data, and first aid information.

SDS’s for each chemical in use at the facility will be kept on a current basis at the location of use, the facilities office, and on the facility SharePoint site.

Employees have the right to review all SDS’s on file for hazardous chemicals used at the facility.
It is our policy not to accept any chemicals, even on a trial basis, without an accompanying SDS. SDS’s will be expected to either accompany the actual shipment of the chemical or be emailed in a timely fashion to the individual responsible for ensuring that SDS’s are obtained for all potentially hazardous chemicals used at the facility. In the event an SDS is not received with the first shipment of a chemical, the responsible person at the facility will contact that supplier, in writing, via email to request the appropriate SDS.

Revised or updated SDS’s received from our suppliers will replace the existing SDS covering that chemical and the revised SDS will be brought to the attention of our facility employees.

SAFETY TRAINING

All employees will be trained in this safety program including requirements of the HAZCOM standard, the location of the hazardous chemical inventory, where to find and how to read SDS, the HMIS labeling system, and the hazards of chemicals they are likely to be exposed to. This will include how they can protect themselves.

Employees will receive training on this program at new employee orientation, upon assignment from their supervisor about specific hazards in their work area, and whenever there is a new chemical or use of a chemical.

All employees will be trained how to access the on-line MIEDI SDS program in case they should need information about a chemical being used on site.

Training and information will be provided for all employees prior to exposure to hazardous chemicals and when new chemicals are introduced to the work area. This will cover:

- The existence and requirements of the OSHA Standard Methods and observations that may be used to detect the presence or release of a hazardous chemical in the work area (such as continuous monitoring devices, visual appearance or odor of hazardous chemicals when being released, etc.)
• The physical and health hazards of the chemicals in the work area (this may discuss classes of chemicals, not necessarily each and every individual chemical)

Training documentation will be maintained by the Facility Manager or facility designee.

**SUBCONTRACTORS (VENDOR-PARTNERS)**
Vendor-partners, who will include temporary employment service employees performing work at the facility, will have access to our Chemical Hazard Communication Program, and will be advised of the presence of hazardous chemicals to which their employees may be exposed.

All outside vendor-partners are required to follow the Chemical Hazard Communication Program for all work at the facility without exception.

**ASBESTOS AND LEAD MANAGEMENT**
All MIEDI employees and vendor-partners will participate in, and enforce the facility safety program, which will include employee training and special task controls. All potentially exposed personnel will be trained in this program and all such training will be documented.

**ASBESTOS**
- Intact and undisturbed asbestos materials do not pose a health risk. When asbestos containing material is properly managed, release of asbestos fibers into the air is prevented or minimized. Do not disturb any material that could possibly contain asbestos (insulation, floor coverings, ceiling tile, etc.) unless you are properly trained and qualified.
- If the insulation or other material is not marked or identified, you must treat it as if it contains asbestos until it is determined by a qualified person that it is asbestos free.
- Once a material has been identified as containing asbestos, it should be labeled immediately.
- Positive identification of asbestos requires laboratory analysis.
- If you suspect that a material could possibly contain asbestos, stay away until it has been properly tested by qualified personnel.

**LEAD PAINT**
- Never grind, cut, or weld on any structure that could possibly contain lead paint.
- Paint must be tested by a qualified person, prior to beginning work, to determine the existence of lead. If it is shown to contain lead, it must be properly abated by trained and qualified personnel.

**INDOOR AIR QUALITY**
Indoor Air Quality (IAQ) refers to the air quality within and around buildings and structures, especially as it relates to the health and comfort of building occupants.
Managing indoor air quality problems, particularly transient odors, can be a significant challenge. Experience has shown that effective response to these concerns is based on a working partnership between the building occupants, who best understand the problem, and on-site staff with knowledge of mechanical systems specific to the facility. Information from all of these groups is necessary to identify and prioritize potential solutions.

RESPONSE ROLES

PRIMARY RESPONDERS

- Facilities technicians from the facility operations group who respond to building service calls
- A Certified Industrial Hygienist for health and safety evaluation of IAQ situations and to arrange for cleanup of hazardous materials spills.

The role of primary responders is to:

- Evaluate whether there is an emergency situation at the facility using an appropriate meter or tools. This testing equipment, combined with the facility engineer’s knowledge and awareness of the setting and any symptoms they notice in the setting, will provide the best evaluation. An “emergency” is a situation in which there is an imminent threat to human health or property. Such a situation is managed, as described above, by calling for an emergency response.
- If the situation is not an emergency, the responder's role is to determine if any quick fixes are available to resolve the issue.
- ”Quick fixes” are situations in which there is a clear source of an odor which can be quickly resolved. This resolution involves either stopping the source that is creating the odor, or contacting the person managing the source of the odor to determine how long the odor is likely to continue.
- In either case, the primary responder’s responsibility is to explain what they know of the situation to the occupants so the occupants can make an informed decision as to whether to continue occupancy. If a "quick fix" is not available, and the situation is not an emergency, it will be referred to a secondary responder for follow-up within 48 hours.
- Written documentation is required for all complaints and investigations. Document the incident and follow-up with the Safety Manager and/or the Facility Manager.

SECONDARY RESPONDERS

Secondary Responders provide longer term investigation of IAQ concerns. Secondary responders include:

- MIEDI site operations staff with building resources and expertise
- Safety Manager or Facility Manager to manage the investigation
AIR SAMPLING
When the source of the odor is clear, direct reading equipment may be available at the facility that can be used to determine the airborne concentrations of certain specific chemicals. Otherwise, air sampling to determine the source of the odor or the concentration of the chemicals involved is limited in usefulness and is likely to take a week or more to produce results. On-site review of such situations by a qualified industrial hygienist is necessary to make the most effective use of any sampling done.

AIR QUALITY STANDARDS
MIEDI is committed to keeping chemical exposures as low as reasonably achievable. Keeping specific exposures within OSHA/State Permitted Exposure Limits (PEL) will be considered the minimum requirement for building performance. Supervisors of workers with concerns about exposures below OSHA PELs will decide how to accommodate these individuals in consultation with Risk Management staff.

LADDER SAFETY
Guidelines are as follows:

- No aluminum ladders are allowed at the facility.
- Inspect ladders prior to use. All defective ladders must be tagged and removed from service immediately. All ladders must be inspected by a competent person monthly and tagged with the appropriate monthly inspection tag.
- Extension ladders must have nonskid feet and be set on a solid, level surface.
- Extension ladders must be set at a proper angle of 4:1.
- Step ladders must be set on a solid, level surface, fully opened with spreaders locked in place. Do not use step ladders in a folded position.
- Secure ladders as needed to prevent the ladder from shifting. This applies to A-frame and extension ladders.
- Do not use the top two steps or rungs of a step ladder.
- All ladders must be secured by tying off or other acceptable means.
- Ladders shall be extended 36 inches above a landing.
- Do not carry tools, materials, etc., while climbing ladders. Both hands must remain free to assist in climbing.
- Always face ladder while climbing ladder and/or working from ladder.
- Job-built ladders shall not be allowed on site.

ELECTRICAL SAFETY PROGRAM
Electrical work shall be conducted, and electrical circuits, equipment, and components shall be installed and maintained, in accordance with the following requirements:
Moscow ID Eco District I, LLC

Bringing the value of experience to the future of education for the University of Idaho

- State electrical standards for construction.
- State Electrical Construction Code.
- State Electrical Work Safety Rules.
- National Fire Protection Association, current National Electrical Code (NEC)
- Current NFPA-70E codes and standards.

When deemed appropriate, MIEDI Safety Manager, after careful evaluation, may grant exemption in writing from special requirements or this procedure for specific electrical work on an individual basis. Justification for granting such exemptions shall be documented on the Energized Electrical Work Permit or on an attachment thereto.

Each employee shall receive electrical safety training based on his or her exposure. Only qualified persons are allowed to work on or near exposed electrical parts.

Live parts to which an employee may be exposed shall be de-energized and locked and/or tagged before work is performed on or near them. However, in certain situations, de-energizing introduces additional or increased hazards or is infeasible due to equipment design or operational limitations. In these situations, written justification for conducting work on energized electrical parts and a detailed description of the safety-related work practices to be used to protect employees shall be completed.

Live parts that operate at less than 50 volts to ground need not be de-energized if there will be no increased exposure to electrical burns or to explosion due to electric arcs.

Examples of increased or additional hazards include the following:

- Interruption of life support equipment.
- Deactivation of emergency alarm systems.
- Shutdown of hazardous location ventilation equipment.
- Removal of illumination for an area.
- Shut down of critical communication devices.

Examples of work that may be performed on or near energized circuit parts due to equipment design or operational limitations include the following:

- Testing/troubleshooting of electric circuits that can only be performed with the circuit energized.
- Work on circuits that form an integral part of a critical continuous process that would otherwise need to be completely shut down in order to permit work on one circuit or piece of equipment.

When exposed live parts are not de-energized (for reasons of increased hazards or infeasibility), appropriate safety measures shall be documented on the “Energized Electrical Work Permit” and fully implemented to protect employees who may be exposed to the electrical hazards involved.
• Safety-related work practices shall be designed to protect employees against direct contact of energized circuit parts with any part of the body or indirect contact through some other conductive object.
• Work practices used shall be suitable for the conditions under which the work is to be performed, and for the voltage level of the exposed electric conductors or circuit parts.
• Employees working in areas where there are potential electrical hazards shall be provided with, and shall use, the appropriate electrical protective equipment for the work to be performed.

If work will be performed within 20 ft. of overhead utility or electric lines, local electrical utilities should be notified.

Workers shall take special care when handling material in the vicinity of exposed electrical circuits to prevent contact with electrical parts.

Signs, barricades and/or attendants shall be used to isolate the work area and warn others of the exposed energized electrical circuits.

Exposed non-current-carrying metal parts of fixed equipment shall be grounded except when specifically excluded by 29 CFR 1910, Subpart S.

Exposed non-current-carrying metal parts of cord-and-plug connected equipment shall be grounded.

Portable power tools shall be either grounded or of a double insulated type. Double insulated tools must bear a permanent label identifying them as such.

Extension cords shall be grounded, designed for hard or extra-hard usage, and maintained in good repair. Damaged electrical cords will be cut up and disposed of.

Ground Fault Circuit Interrupter (GFCI) devices are required on all 15 and 20 amperes 120 volt temporary wiring. Extension cords are considered temporary wiring.

Cords shall be protected against damage from traffic, pinch points, and sharp corners. Examples include doorways, roadways, roof edges, etc.

ASSURED GROUNDING PROGRAM

• Employees shall be instructed that each cord set and any equipment connected by cord and plug, except cord sets and receptacles that are fixed and not exposed to damage, shall be visually inspected by the user before each use for damage and defects, such as deformed or missing pins, insulation damage and indication of possible internal damage. Equipment found to be damaged or defective may not be used until repaired.
• All 120-volt, single phase, 15- and 20-ampere receptacles, 120-volt flexible cord sets, and 120-volt equipment connected by cord and plug that are not a part of the permanent wiring of the building or structures shall be tested to assure that electrical continuity is maintained through all required equipment grounding conductors and their connectors. These tests shall be conducted as follows:
• All equipment grounding conductors shall be tested for continuity.
• Receptacles of cord sets shall be tested for correct attachment of the equipment grounding conductor. The equipment grounding conductor shall be connected to its proper terminal.
• A test log will be maintained on all equipment tested.
• All required tests shall be performed:
  • Before the first use
  • Before equipment is returned to service following any repairs
  • Before equipment is used after any incident that can be reasonably suspected to have caused damage (e.g., when a cord set is run over)
• At intervals not to exceed once per month, except cord sets and receptacles that are fixed and not exposed to damage, which shall be tested at intervals not exceeding three months
• All receptacles, attachment caps and plugs, and receptacle of cord sets shall be tested in the following manner:
  • While in service with receptacle circuit tester
  • When not in service with a continuity tester
• NOTE: All equipment connected by cord and plug shall be tested for ground wire continuity with a volt-ohm meter or a continuity tester.
• Tests shall be documented by means of color coding. The following color coding system is suggested to verify that testing is current and that all receptacles, portable cords, and tools have been inspected and tested as required:

<table>
<thead>
<tr>
<th>Color Code System</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jan/Jun</td>
</tr>
<tr>
<td>Feb/Aug</td>
</tr>
<tr>
<td>Mar/Sep</td>
</tr>
<tr>
<td>Apr/Oct</td>
</tr>
<tr>
<td>May/Nov</td>
</tr>
<tr>
<td>Jul/Dec</td>
</tr>
</tbody>
</table>

• All receptacles, cords, and tools shall be marked with the tape used to designate the period for which the inspections and tests were conducted. The tape will be placed on the receptacle cover of any electrical equipment installed as a permanent fixture in a temporary electrical system. The tape will be placed within 4 inches of the male end of any electrical cord.

**ENERGIZED ELECTRICAL WORK (250 VOLTS OR MORE)**

• Prior to work commencing on or near energized electrical parts of 50 volts or more (nominal voltage between any two conductors), the following activities shall be completed:
• All measures are taken to de-energize all electrical sources(s) and ensure that there is no feasible alternative of completing the work in the vicinity of energized parts.
• An Energized Electrical Work Permit is completed and approved by facility manager. Standardized permits which are developed and implemented for routine tasks are reviewed periodically and are kept on file in the respective departments.
• Employee representatives actively participate in establishing protective measures and completing the permit.
• On all energized circuits or equipment carrying 440 volts or over, as a safety measure, two (2) or more electrical trained competent persons must work together, one (1) standing by wearing rubber protective gloves (does not apply to testing and troubleshooting).
• The permit is reviewed with the worker(s) involved in the work activities.
• The completed permit is available with other pre-job safety planning documents.

**PPE**
Workers who perform work on or near energized parts must use appropriate Personal Protective Equipment. The use of this equipment is evaluated during pre-job safety planning phases of each job and identified on the energized electrical work permit.

• Rubber protective equipment (gloves, sleeves, blankets and mats) is to be used. If an operation on a piece of equipment will be so intricate that it is more hazardous to wear gloves, then this work may be done without gloves.
• Rubber protective equipment (gloves, mats, etc.) is maintained in a safe, reliable condition, stored and used according to the manufacturers recommendation and is not used for other than its intended purpose.
• Equipment to be used is inspected before each use to verify the item is in satisfactory condition and has been tested as required.
• Rubber gloves are inspected for holes and air tested before use.
• Workers performing work on any energized electrical equipment shall wear the appropriate arc-rated clothing based on the calculated incident energy for that equipment.
• Shock protection (rubber insulating gloves with leather protectors) shall also be required based on the Shock Hazard Analysis conducted for the voltage that is being worked on.
• Only voltage rated insulated tools or insulating protective barriers that are approved by a nationally recognized testing organization shall be used.

**ELECTRICAL TEST EQUIPMENT**

• Only qualified personnel may use electrical test equipment.
• Electrical test equipment must be visually inspected immediately before use and is not to be used if defective. Defective test equipment is identified by tagging it out of service.
• Electrical test equipment is used only for intended applications.
• When verifying that circuits are de-energized, electrical test equipment is checked on a known energized source for proper operation immediately before and after use.
• When performing zero energy checks, assure that stored electrical or mechanical energy cannot re-energize the circuit.

LOCKOUT/Tagout (LOTO)

All energy sources shall be isolated before employees place themselves in a position to be exposed to hazardous movement of machinery, the hazardous release of a material, or the release of energy.

All employees shall be instructed in the safety significance of the lockout and tagout procedures on each project. MIEDI/client procedures need to be reviewed prior to commencing work. MIEDI employees will be trained to follow these procedures. MIEDI Facility Manager and/or the Safety Manager are responsible for this review and determination.

All equipment shall be locked and tagged out to protect against accidental or inadvertent operation when such operation could cause injury to personnel. Do not attempt to operate any switch, valve, or other energy-isolating device bearing a lock and or tag. To do so shall result in severe disciplinary action up to and including immediate termination.

MIEDI facility supervision shall survey the specific work site to locate and identify all energy sources to be certain which switch, valve or other energy isolating devices apply to the equipment to be locked and tagged out. More than one energy source (electrical, mechanical and/or others) may be involved. Questionable energy source problems must be resolved before job authorization is obtained and lockout/tagout commences.

Locks

Each facility will have lock and tag cabinets/boxes at locations in proximity to the lock and tag operations. Each control lock cabinet/box contains numbered locks and tags. Control locks are individually keyed so that the key of one lock does not open any other lock. Control locks are to be used for control of McKinstry work areas. Control lock cabinets/boxes are always to be locked. The lock and tag administrator will control the access to control lock cabinets/boxes.

MIEDI will furnish each employee with necessary lockout locks and tags unless specified differently by owner/client. Each individual’s personal lockset will be keyed differently. All locks are to have only one key, and will be issued to the employee with the lock set.

Logbook

A master log of all locks issued to employees will be kept by facility supervision. The log will show which locks (by number) are issued to which employee (by name and lead).

MIEDI supervision will use a Lock and Tag Logbook to provide a summary of information about lockouts and tagouts. Logbooks shall contain the following information as a minimum: Unique sequential number, equipment of component affected, date installed, reason for installation, person authorizing
installation, date removed, person authorizing removal. Logs can be found at LOTO stations in every facility.

**Lock Out Procedure**

- Notify all affected or potentially affected employees that a lockout / tagout is required to perform work and the reason, therefore.
- Notify the Facility Control/Operations Center before disconnecting power to any equipment on site. Any disconnecting of power on equipment (air handlers, pumps, chillers, cooling towers, fume hoods, supply fans, Data Center cooling and power equipment, fire panels) may send an alarm to the Control/Operations Center. Provide the Control/Operations Center with the name of the equipment, where it is located, and how long you expect the equipment to be locked out.
- If the equipment is operating, shut it down using an approved procedure.
- Operate the switch, valve, or other energy-isolating device so that each energy source (electrical, mechanical, hydraulic, etc.), is isolated from the equipment. Stored energy (such as that in capacitors, springs, elevated machine members, rotating flywheels, hydraulic systems, and air, gas steam or water pressure, etc.) shall be dissipated or restrained by methods such as grounding, repositioning, blocking, bleeding down, etc.
- Lockout or tagout devices shall be affixed to each energy isolating device by authorized employees.
- Lockout devices, where used, shall be affixed in a manner so they will hold the energy isolating devices in a “safe” or “off” position.
- Tagout devices, where used, shall be affixed in such a manner, as they will clearly indicate that the operation or movement of energy isolating devices from the “safe” or “off” position is prohibited.
- Where tagout devices are used with energy isolating devices designed with the capability of being locked, the tag attachment shall be fastened at the same point at which the lock would have been attached.
- Where a tag cannot be affixed directly to the energy isolating device, the tag shall be located as close as safely possible to the device, in a position that will be immediately obvious to anyone attempting to operate the device.
- After ensuring that no personnel are exposed, and as a check verifying isolation of the energy sources, operate the hand switch or other normal operating controls to make certain the equipment will not operate. **CAUTION:** Return operating controls to neutral or “Off” position after the test.
- In the event equipment needs to be secured from being energized “protect equipment only”, use equipment control locks. The lock and tag administrator will be responsible to place the control lock and multiple lockout device on the system. Each project will have one designated staff person responsible for placement and removal of control locks. A tag must be placed with the control lock identifying the problem, and the contact person. Control locks will be provided by MIEDI and marked designating MIEDI as owner of the lock.
On completion of work, or shift, ensure all tools and equipment are clear. Remove all personal locks and tags and have the next shift install their lock. The control lock and lockout device is to remain on the system until such time as no more work is to be performed on the system.

When the equipment is ready to be re-energized, notify the Control/Operations Center that work is complete on the equipment. This lets the Control/Operations Center know that any alarms or troubles that come into the system are now real and not maintenance or repair work related.

In the preceding steps, if more than one individual is required to lockout/tagout equipment, each shall place his/her own personal lock and tag on the energy isolating device(s). In complicated lockout/tagout situations where multiple energy sources need to be locked out by multiple employees, an approved lock box may be used.

Removing an Abandoned Lock

- Before an employee’s lock is removed, MIEDI’s lock removal procedure will be implemented. This procedure should follow these guidelines:
- Identify the owner of the lock by checking the master list.
- Contact the employee assigned to the lock regardless of whether the employee is at work or at home. The employee is to remove the lock.
- If the employee cannot be located:
- MIEDI Facility Manager and employee’s supervisor must be present. If a dedicated Safety Manager is on site, he/she must also be present.
- All three supervisors will walk the entire system to ensure that all work is complete, all clean-up is performed and that the system is safe to remove the lock. Only the employee’s supervisor has the authority to remove the lock.
- The employee’s supervisor is responsible to ensure that the employee whose lock was removed is notified before returning to work that their lock was removed.

Lock Box Procedures

If multiple sources of energy are involved, or if more than one individual or department is working under the protection of a group lockout, a lock box will be used. The supervisor initiating the lockout will complete the requirements of an approved procedure specific to the piece of equipment locked out, noting the equipment is locked out and any exceptions to lockout points for that system or piece of equipment. The completed approved procedure will be attached to the lock box.

After placing keys for each piece of equipment locked out in the lock box, the supervisor initiating the lockout will place a multiple lockout device on the box and lock it with a MIEDI control lock. Each employee working in the area affected by the lock box shall attach his or her personal lock to the multiple lockout device. Personal locks are to be removed at the end of each shift and replaced with locks from the next shift.
WELDING AND CUTTING

- Only trained, competent employees that are thoroughly knowledgeable in the elimination of hazards will be allowed to perform welding and/or cutting operations.
- Proper PPE must be worn at all times during the performance of welding and/or cutting operations. Soft-cap welding may be allowed in special circumstances only with the approval of the safety manager.
- Long sleeve shirt must be worn.
- Proper eye protection against radiant energy shall be used.
- A hot work permit must be obtained and completed prior to beginning any welding or cutting. Permits are only good for that day. A new permit is required daily for all hot work.
- Inside buildings, cylinders shall be stored in a well-protected, well-ventilated, dry location at least 20 feet from highly combustible materials, such as oil or excelsior. Cylinders should be stored in designated places away from elevators, stairs or gangways. Designated storage places shall be located where cylinders will not be knocked over or damaged by passing or falling objects or subject to tampering.
- The handling, storage, and utilization of all compressed gases in cylinders, portable tanks, rail tank cars, or motor vehicle cargo tanks shall be in accordance with Compressed Gas Association Pamphlet P-1-1965.
- A 10-pound ABC fire extinguisher shall be located within 25 feet of storage and use areas.
- “No smoking” signs must be located in the area.
- Cylinders shall not be stored within 40 feet of an occupied dwelling (e.g., office trailer).
- Proper ventilation shall be utilized.

HOT WORK PERMITS

- MIEDI facility team members and vendor-partner management teams will rigidly enforce this hot work permit rule. All employees will be trained in the program and will be expected to abide by it.
- This rule will be strictly enforced throughout the facility.
- Fire alarm systems will be placed in BYPASS to eliminate any potential of accidental building evacuation during the hot work.
- The Control/Operations Center must be notified before placing any fire alarm system into BYPASS and must be notified when placing the fire system back into NORMAL operation.
- If fire systems (alarm systems, sprinklers, fire pumps, and halon) must be disabled, a Red Tag permit must also be filled out and the Control/Operations Center notified.
- In all areas where hot work is to be carried out, a hot work permit must be completed and signed by the facility LFE, AFM, or FM.
- The permit must identify the type of work to be performed, the location of the work, a list of all hazards, the location of fire suppression equipment, and the date of the work.
• Appropriate fire suppression equipment must be readily available (within 20 feet of hot work).
• Hot work areas will be clear of all flammable and combustible materials. Where materials cannot be removed, they must be protected with fire-resistant material.
• An employee, wearing an orange vest for identification, must be designated to act as fire watch. The fire watch must remain in the work area at all times the hot work is being performed.
• Fire watch shall be present for one hour after completion of the work and 30-minute checks shall be completed for three hours after the initial one hour fire watch is completed.
• Employees involved in hot work and fire watches must be trained in the use of fire protection equipment.
• The Facility Manager or his/her designee must approve hot work inside any confined space. Confined space permit and hot work permit must be completed and signed.

UTILITY VEHICLE/GOLF CART POLICY
MIEDI and its clients provide Vehicles to employees so they may fulfill their job-related duties. Vehicles are used to transport equipment and people, patrol the facility grounds, and for facility maintenance activities. This policy establishes consistent standards regarding:

• Vehicle Operating Standards
• Department & Driver Responsibilities
• Operator Requirements & Standards
• Vehicle Condition and Standard Safety Features
• Accident Reporting Procedures
• Compliance with these standards will ensure the safe operation of these vehicles for the facility including Vehicle drivers, vehicle operators, cyclists, and pedestrians.
• Vehicles owned by MIEDI and its clients may only be used for official business by MIEDI employees who are associated with the facility. Vehicles may not be used for personal business such as unauthorized home-to-office travel, which will be considered vehicle misuse.
• Knowledge of and compliance with applicable state laws, rules, regulations, and policies are the responsibility of the driver and noncompliance may result in suspension of user privileges.
• All accidents involving a Vehicle will be reported immediately to the Facility Manager/Assistant Facility Manager to which the Vehicle is registered and to the applicable State/Municipal Department of Public Safety/Police as required by law.

VEHICLE OPERATING STANDARDS
• Vehicle operation is governed under State Revised Statutes and operators are subject to the rules of the road including stopping, turning, and safe operation. Vehicle operators observed in violation of these rules can be cited by the police.
• Drivers must have a valid State driver’s license with a satisfactory driving record.
• Vehicles are to be operated at speeds no greater than 15 MPH or as safety concerns demand. Operators should always consider the terrain, weather conditions, and existing pedestrian and vehicular traffic, which may affect the ability to operate the Vehicle safely.
• Vehicle operators will stop at all “blind intersections” and then proceed with caution.
• Vehicles will be operated only within the confines of the facility.
• Vehicles are not to be driven on any landscaped area unless it is the only available way to gain access to the specific area where work is being performed. If the Vehicle must be on a landscaped area in order to allow a pedestrian(s) the proper right-of-way, it should be brought to a full stop, then immediately returned to the designated driving surface as soon as the area is clear.
• Vehicles will be operated in such a manner that they do not impede or interfere with normal pedestrian or vehicular traffic flow on sidewalks, ramps or roadways. In that respect, Vehicles will be operated on service drives and roadways whenever possible, rather than on sidewalks designed primarily for pedestrian use.
• Vehicles will be operated with the utmost courtesy, care, and consideration for the safety of pedestrians.
• Pedestrians will be given the right-of-way at all times.
• Vehicles will not be parked:
  • in fire lanes
  • in DMV disabled parking
  • in reserved parking
  • within 20 feet of the main entrance/exit of any building in any manner that would impede the normal flow of pedestrian traffic

SUPERVISOR RESPONSIBILITIES
• Supervisors will assure that each employee in their department, who operates a Vehicle, is properly advised of this policy.
• Supervisors are responsible for obtaining a signed copy of the Vehicle Safety Guidelines Acknowledgement form from each employee in their facility that operates a Vehicle, attesting to the employee’s knowledge and understanding of, and agreement to abide by, the Vehicle policy. This signed Acknowledgement must be completed and placed in the employees personnel file prior to the employee driving a Vehicle.
• Supervisors should provide a minimal amount of hands on training prior to an employee driving a Vehicle.
• Supervisors will implement procedures for the control of Vehicles overseen by them. Such procedures may include the use of a “sign-out log” for keys

EMPLOYEE/OPERATOR REQUIREMENTS & STANDARDS
• No one under the age of eighteen (18) will operate a Vehicle.
• Vehicle operators are responsible for the security of ignition keys during the time that a Vehicle is assigned to them. Any time a Vehicle is unattended, the ignition will be turned off, and the key will be removed from the ignition and kept in the possession of the authorized operator.
• Vehicle operators are not permitted to drive while wearing devices that impede hearing, e.g., stereo headsets, earplugs, etc.
• All passengers must be in seats designed for such use. No passengers are allowed to be transported in the truck beds or on the sides of Vehicles with the exception of the transport of an injured person secured on a backboard.
• Cell phone usage while driving a Vehicle is prohibited.
• MIEDI employees will not operate Vehicles registered to clients unless the supervisor for the client to which the Vehicle is registered has granted prior approval.

VEHICLE CONDITION AND STANDARD SAFETY FEATURES
• Vehicles owned or operated by MIEDI employees will be equipped and maintained with working headlights and taillights (two red lights, one each located on the opposite sides at the rear of the Vehicle that stay on during night operations).
• Vehicle’s physical condition should appear to be new condition (no dents, dings, cracked fenders, etc.)
• Vehicles purchased without headlights and/or taillights are to be used only during daytime operations.
• Electric turn signals are required for nighttime operation; hand signals suffice for daytime operation.
• Vehicles will be equipped with a working horn or bell and a “Slow Moving Vehicle” sign, if needed.
• Vehicles will not be modified in any manner that affects the recommended mode of operation, speed, or safety of the Vehicle.

VEHICLE MAINTENANCE RESPONSIBILITY
• Each Vehicle operator is responsible for providing timely notification of safety and maintenance concerns to the MIEDI supervisor of the facility to which the Vehicle is used.
• Supervisors will be responsible for seeing to the timely repair of such concerns and, if the Vehicle cannot be operated safely without said repairs taking place, the Vehicle will be taken “out of service” until the repairs are completed.

GASOLINE/DIESEL POWERED EQUIPMENT
Many facilities have gasoline/diesel powered equipment and thus introduce the hazard of potential fire and dangerous fumes. All generators and equipment that must be used inside the confines of an enclosed building, and are gas or diesel fuel powered, shall have an exhaust system to exhaust fumes to
the outside of the building. All personnel and vendor-partners at the facility shall abide by the following procedures and requirements.

**FIRE**

OSHA and fire departments have regulations regarding quantity and methods of handling gasoline/diesel. The following rules will minimize the danger from fire:

- Review OSHA and local fire department requirements and comply with these standards.
- Storage of gasoline/diesel containers must comply with OSHA rules.
- Fuel transfer operations must be conducted outside of the facility.
- When drums are used for storage, drum-pumps which are designed specifically for flammable liquids must be used. Use safety bungs for the vent opening. The use of a gravity feed or bottom draw drum-pump is prohibited.
- Use only approved metal safety cans for filling engine tanks. (Automatic safety latch closer, funnel, and flash arrestor). (No plastic cans)
- Shut down engine and allow it to cool before refueling.
- Have a 20-pound ABC dry chemical type extinguisher available wherever flammable liquids are handled.
- No smoking near gasoline or any other flammable liquids.
- All drums shall be properly labeled as per OSHA 1926.59 Hazard Communication.

**FUMES**

Gas engines exhaust carbon dioxide and carbon monoxide. Dioxide is heavier than air, monoxide slightly lighter. A mixture of the gases usually is heavier than air although heat may cause it to rise. Both are without color, taste, or smell. Light concentrations cause headache and nausea. Death is swift in heavy concentrations. A few minutes may be too long, don’t discount this hazard. If anyone exhibits symptoms, do not attempt rescue without proper personal protection equipment.

Do not run gas engines in pits, manholes, or confined spaces without positive ventilation. Always pipe gas engine exhausts to outside air when engine is located in enclosed space. Start blower before engine. If engine stops, be sure space is well ventilated before sending anyone in to restart. If in doubt, check for fumes with CO Tester.

Danger spots are deep excavations, pits, manholes, hoist engineer’s shanties, pipe or crawl spaces under basement floors, and where gas heaters are used.
HAND AND POWER TOOLS

GENERAL REQUIREMENTS

- All hand and power tools and similar equipment shall be maintained in a safe condition. All hand and power tools for the facility shall receive a safety inspection prior to each use.
- Belts, gears, shafts, pulleys, sprockets, spindles, drums, flywheels, chains, or other reciprocating, rotating, or moving parts of such equipment shall be guarded if such parts are exposed to contact by employees or otherwise create a hazard.
- Switches:
  - All hand-held powered sanders, grinders with wheels 20-inch or less, routers, planers, trimmers, nibblers, shears, scroll saws, and jigsaws with blade shanks one-fourth of an inch wide or less may be equipped with only a positive “on-off” control.
  - All hand-held powered drills, tappers, fasteners, drivers, grinders with wheels greater than 2 inches in diameter, disc sanders, belt sanders, reciprocating saws, and other similar operating power tools shall be equipped with a momentary contact “on-off” control and may have a lock-on control if turnoff can be accomplished by a single motion of the same finger or fingers that turn it on.
  - All other hand-held powered tools such as circular saws, chain saws, and percussion tools without positive accessory holding means shall be equipped with a constant pressure switch that will shut off the power when the pressure is released.

MACHINE GUARDING

Parts of machines whose operation exposes an employee to injury shall be guarded. Hand tools for placing and removing material shall be such as to preclude the operator from placing a hand in a danger zone.

FAN BLADE GUARDING

A guard with openings no larger than ½ inch shall protect fans with blade periphery less than 7 feet above the floor.

HAND TOOLS

Impact tools, such as drift pins, wedges and chisels, shall be kept free of mushroom heads.

POWER OPERATED HAND TOOLS

- All electric power operated tools shall either be of the approved double-insulated type or properly grounded and have cords free from defects.
- Use of hoses or electric cords to hoist or lower tools is not permitted.
• Pneumatic power tools shall be secured to hose or whip by some positive means to prevent the tool from becoming accidentally disconnected.
• Safety clips shall be securely installed on pneumatic impact tools to prevent attachments from being accidentally expelled.
• Compressed air shall not be used for cleaning purposes except where reduced to less than 30 psi, and then only with effective chip guarding and personal protective equipment.
• All hoses exceeding ½ inch inside diameter shall have a safety device at the source of supply or branch line to reduce pressure in case of hose failure.
• All fuel powered tools shall be stopped while being refueled, serviced or maintained.
• Only employees who have been trained in the operation of a particular power actuated tools shall be allowed to operate the tool.

ABRASIVE WHEELS AND TOOLS
• All abrasive wheels shall be provided with safety guards.
• All abrasive wheels shall be inspected, and ring tested before mounting to ensure they are free from cracks or defects.
• All abrasive wheels shall be matched with RPMs to the motor power source.
• All employees using abrasive wheels shall be protected by appropriate eye protection equipment.

JACK-LEVER AND RATCHET (SCREW AND HYDRAULIC)
• All jacks shall have a positive stop to prevent over travel.
• The manufacturer’s rated capacity shall be legibly marked on all jacks and shall not be exceeded.

JACKS
• The base of a jack shall be on a firm foundation or be blocked. After the load is raised, it must be blocked or otherwise secured.
• Jacks must be properly maintained and thoroughly inspected dependent upon service conditions, but once each 6 months as a minimum.

POWDER ACTUATED TOOLS
• Employees must be trained, competent, and certified in each powder-actuated tool that they use.
• Warning signs must be posted while powder actuated tools are in use. Hearing protection is required to be used by the operator.
TOOLS EMITTING LASER LIGHT BEAMS

- Employees must be trained, competent and certified to use tools emitting laser light beams.
- Warning signs must be posted while using tools emitting laser light beams.

Most survey and construction equipment is optical or Class I laser in nature. On occasion, it may be necessary to use laser equipment with higher power such as Class II or Class IIIa lasers. All lasers are required to be marked as to classification. This policy applies to all laser use. Prior to any laser use the supervisor will evaluate the need for personnel protective equipment, and training.

Categories of Lasers

Class I lasers are the most common and are generally exempt from most control measures. Class I laser output may be viewed directly when it is used in accordance with the manufacturer’s guidelines and as the manufacturer intended. No warning signs, personal protective equipment or special precautions are required.

Class II lasers emit visible low powered radiation as a continuous-wave or pulsed. Class II lasers are used in barcode scanners, laser pointers, some survey, leveling and construction equipment, gun sights and others. These lasers have a low potential for harm due to the expected aversion response. There is some risk of harm if stared at or, if for some reason, the aversion response is impaired. Class II lasers potential for harm rises if viewed through magnifying devices such as field glasses, theodolites, and scopes. When using a Class II laser follow the following precautions:

- Read and familiarize yourself with the manufacturer’s instructions and safety recommendations
- Position lasers so that the potential for eye exposures is minimized
- When possible, terminate beam at end of its useful path
- Whenever practical, position beam at a height other than eye level
- Block unnecessary beam reflections and remove shiny objects that may cause unexpected reflections
- Never look directly into the beam or direct it at anyone’s face
- The laser should be rigidly placed to prevent accidental altering of beam

Class III and Class IIIa lasers are considered moderate hazard devices. They can emit visible or invisible radiation. Their beams are not normally hazardous when viewed momentarily with the naked eye, but when viewed through binoculars, theodolites or other such devices can be harmful to the eye. The following safety precautions should be followed:

- All the recommendations for Class II apply
- When used outdoors or in an open area in a facility, establish a hazard zone with tape and caution signs or ropes to warn of hazard
• Evaluate the need to post warning signs indicating that Class III laser work is being performed.
• Protective eye wear shall be worn by all employees, visitors, and others in the zone where the lasers are being used.

**CONFINED SPACE PROGRAM**
MIEDI employees and vendor-partners will comply with MIEDI’s confined space permitting and entry program. All employees entering confined space must be trained by McKinstry Safety Team prior to entry.

**PURPOSE**
To comply with State and Federal regulations and to ensure that information is available about the dangers related to working in spaces having limited means of egress which may present problems due to accumulation of toxic or flammable contaminants, oxygen deficient or excess atmospheres, or mechanical, electrical, corrosive or temperature hazards, the following Confined Space Program has been established. All affected employees of MIEDI will participate in the confined space program. This written program will be kept at the facility and will be available to all employees and to other parties in accordance with applicable laws and regulations.

**DEFINITION**
A confined or enclosed space means any space having a limited means of egress, which is subject to the accumulation of toxic or flammable contaminants or has the potential for an oxygen deficient atmosphere. Confined or enclosed spaces may include, but are not limited to, storage tanks, process vessels, bins, boilers, ventilation or exhaust ducts, sewers, underground utility vaults, tunnels, and open top spaces more than four feet in depth such as pits, tubs, vaults, caissons and vessels.

Before entering any confined space, the space must be tested for percent of oxygen, percent carbon monoxide, percent hydrogen sulfide, and percent explosive gasses. The measurement will be performed with an instrument capable of checking percent concentrations. Only trained individuals can use these instruments.

**EXPLANATION OF INSTRUCTIONS**
The atmosphere must contain an oxygen concentration above 19.5% and less than 23.5%, flammable gas concentration below 10% of the lower explosive limits. OSHA permits work at concentrations of 19.5% or greater, but less than 23.5%. The further below the limit, the greater the risk of developing mental impairment, unconsciousness, and death. Generally, a person’s senses are not sensitive enough to warn of an oxygen deficiency; therefore, an instrument capable of determining oxygen concentrations is used to ensure that breathable air is present in the confined space.
Normal atmosphere contains zero concentrations of flammable gas. Work is permitted at concentrations of 10% of the lower limit of explosive concentration - known as the lower explosive limit (LEL). Rarely is work performed when there is any concentration of explosive gas. Some explosive gases have an odor added to them. Propane is odorized and at flammable concentrations the odor is highly noxious. An instrument is a better indicator of concentration than a person’s nose, so an instrument is required to measure the percent of LEL before entering into a confined space.

The MIEDI Facility Manager, or designee, is to confirm that the proper steps have been taken and that safeguards have been tailored for the unique hazards present in each operation involving the confined space.

The entry supervisor is responsible for the direct work of his or her teammates. This includes working in a safe manner. The entry supervisor must realize the limitations of the instruction to cover all confined space entries and should accordingly review each entry situation, noting peculiarities that are not covered and take whatever steps are necessary to provide a safe work area.

(Staff and contract employees are subject to these instructions)

**METHODS OF COMPLIANCE**

Evaluation: Conditions within the confined space will be tested to determine if acceptable entry conditions exist before entry is authorized. Pre-entry testing is required. Whenever an employee is within a confined space, continuous monitoring will be required at all times. If there are any questions regarding the confined space, they should be directed to the MIEDI Safety Manager.

- All equipment must be calibrated and operated according to the equipment manufacturer’s instructions. The operator of any test equipment will be trained to know the equipment’s limitations as well as how to properly calibrate and operate the equipment. The entry supervisor will conduct evaluation of the atmosphere within the confined space. Each authorized entrant shall be provided the opportunity to observe all monitoring and testing.
- The evaluation shall be made immediately prior to entry
- Each entry will include the following testing, which must be conducted in the order listed:
  - Test for % oxygen
  - Test flammable gases and vapors (% LEL)
  - Test for toxic gases and vapors

**CONFINED SPACE MANAGEMENT PROCEDURES**

Once it has been determined that a confined space exists, the Entry Supervisor shall pre-plan before allowing entry to the confined space. The plan will specify the management procedures to be followed depending upon the site and task conditions. These may include provisions for the following:
WORK PRACTICE CONTROLS FOR CONFINED SPACE ENTRY

Below are the basic steps to be followed in confined space entry. The specific requirements for each confined space entry will depend upon the facility and task conditions. The facility-specific confined space plan will specify the methods for all phases of the project and will specify who is responsible to:

- Train employees
- Initiate the confined space entry permit and ensure that the appropriate items listed below are noted on the permit
- Isolate external hazards associated with the confined space
- Conduct the required atmospheric testing and proceed only if conditions are safe
- Ensure that the initial cleaning and vapor freeing (ventilation) has been done
- Ensure that the proper isolation has been accomplished.
- Ensure that continuous ventilation is in place and the appropriate air monitoring equipment is on hand and working correctly.
- Assemble all required tools and equipment (emergency lighting, fire extinguisher).
- Assure availability of a safety harness, lifeline and retrieval system if the possibility of a highly toxic, flammable or oxygen deficient atmosphere exists or can develop. No employee will enter the space if this possibility is anything other than very rare.
- Place an attendant outside the confined space with the capability of maintaining communication with the entrant.
- Wear all required personal protective equipment
- Grant entry approval
- Contact the facility Control Center and notify them of a confined space entry in progress, the number, and location of the confined space, and who will be entering the space.
- Enter the confined space.
• Oversee that all work within the confined space is conducted in an alert, cautious manner, always looking for signs of danger
• Evacuate the space if there is any indication of ill effects such as dizziness, irritation or excessive odor. If there is anything that does not appear right, the space must be evacuated immediately.
• Contact the facility Control Center when work is complete, and the confined space entry is terminated.

**ISOLATION**
Conditions or actions outside of the confined space can create hazards with the space, creating a need for isolating the confined space as a way of protecting the entrants from these remotely caused hazards. For example:

• Lockout and tagout of electrical energy
• Lockout and tagout of mechanical energy
• Blocking the source of liquids and gases (fuel, water, chemicals, steam, etc.)
• Barriers to keep people and items from accidentally entering the space

![Danger Confined Space Sign](image)

*Figure 2. Example of tunnel entrance on campus.*

Lockout/Tagout procedures will be strictly followed. Many times, entry into a confined space will require the lockout/tagout of one or more energy sources. If required, lockout/tagout procedures will be
included as part of the facility-specific confined space plan and MOP for the work to be accomplished. A single valve cannot be used to block out liquids and gases. This type of blockage requires a blank flange (blind flange), double block and bleed, parting flanges or some other fail-safe method of blocking the materials. Whenever possible, the isolation methods will be visually observed, tested and noted on the permit and MOP.

VENTILATION

- Prior to entry, mechanical ventilation will be used to purge the confined space of any hazardous atmosphere and testing shall be conducted following the purging.
- The time required to purge the space will depend on the volume of the confined space and the capacity of the blower.
- Continuous ventilation shall be used to maintain safe conditions whenever an employee is in a confined space (e.g., <10% of LEL, >19.5% oxygen and below all PEL’s).
- Care must be taken with the placement of ventilation equipment to avoid problems and maximize its effectiveness.
- Equipment should be set up such that it blows air into the space instead of exhausting air from the chamber.
- The number of bends in the ducting needs to be kept to a minimum.
- The air should enter the space in the vicinity of where the workers will be in the space.
- The air discharge must be well into the space (not right at the opening) and not close to the ceiling.
- The source of the ventilation air needs to be evaluated to ensure it does not include contaminants such as engine exhaust.
- Each confined space will be different and the optimum location for the ventilation discharge will be determined in pre-planning and MOP authoring.

Use the following calculation for determining the minimum required CFM:

# of Air Changes per Hour (ACH) required x cubic feet of the space (LxWxH) / 60 minutes = minimum CFM delivery rate

Example:

4 ACH x 512 (8L x 8W x 8H) standard utility vault / 60 minutes = 34.13 CFM (minimum blower delivery requirements)

NOTE: Must take into account the number of bends in the duct as that will result in air flow loss. Most new blowers have the data printed right on the blower. Also need to take into consideration space configuration and air contaminants/hazardous materials.
PERMIT
Prior to entry into the space, a Confined Space Entry Permit will be completed for each confined space entry. The permit must be signed by the entrant(s) and entry supervisor. If the confined space conditions remain the same, the permit may be valid for up to eight hours. No permit will be issued for more than one work shift or eight hours, whichever is shorter. The completed permit must be made available to authorized entrants via posting at the entry portal or other effective means. The MIEDI Confined Space Entry Permit, must be used.

ATTENDANT
A confined space entry attendant (observer) is required for each entry. The attendant must have confined space training and experience and shall:

- Monitor and protect the confined space entrant(s) (this is the primary duty of the attendant).
- Have sufficient knowledge of the hazards of the specific confined space being entered. This includes knowing the potential hazards, the signs and symptoms of hazard exposure, and the appropriate emergency procedures to be followed.
- Communicate with the entrant(s) as necessary to monitor their status and alert the entrant(s) of the need to evacuate the space.
- Summon rescue and other emergency services as soon as the attendant determines that the entrant(s) may need assistance.
- Remain outside the confined space and perform no other duties that might interfere with the attendant’s primary duty and focus. The attendant will remain in place until relieved by another qualified person or until the entrant(s) exit the confined space.

RESCUE
Pre-entry planning must include the development and implementation of procedures for summoning rescue and emergency services. This must be addressed in the MOP.

RECORD KEEPING
Upon completion of all work in the confined space, the Facility Manager, Facility Control Center, or other designee must be notified. The space is then sealed and posted with confined space signage. All permits and documentation must be kept on file for a minimum of one year.

BATTERY SAFETY
POLICY
MIEDI has developed this safety program to ensure employees are protected when working in battery rooms, or with batteries.
RESPONSIBILITIES

- Management shall provide the funding necessary to support this policy.
- The Facility Safety Manager, Facility Manager, Lead, or other designee will manage this program.
- Leads shall ensure the safe work practices identified below are implemented by their employees.
- Employees are required to know and use these procedures.

BACKGROUND

Lead-acid batteries are physically large batteries that contain lead plates in a solution of acid to create electricity. They are a common power source for many applications, mostly cars, boats, standby power generators, and UPSs. Nationally, 2300 people are injured each year using lead acid batteries. Acid burns to the face and eyes comprise about 50% of these injuries as these batteries can easily explode. The remaining injuries were mostly due to lifting or dropping batteries as they are quite heavy.

Note: A battery cannot be turned off. There is always potential across the posts of a battery, regardless of any controls.

Note: Batteries can cause thermal burns when current passes through your body and chemical burns if you are exposed to the acid.

DEFINITIONS

Cell – The basic electrochemical unit consisting of an anode and a cathode. The nominal voltage of a lead acid cell is 2.0 volts and a nickel cadmium cell is 1.2-volts. The starting battery in your car or truck is a six-cell battery and your flashlight may require two D cells.

Jar – The container which holds a cell or group of cells. Typical jars will have one, two, three, four or six cells.

Battery – Two or more cells connected together electrically. The cells may be connected in series, parallel or both to provide the required operating voltage and current. A typical UPS system will have one or more 240-cell batteries. The nominal voltage of this battery is 480 VDC.

Flooded Cell – A cell design characterized by an excess of free electrolyte. The products of electrolysis (gasses) and evaporation can freely exit the cell through a vent. Flooded cells typically have clear jars and the electrolyte is a liquid similar in appearance to water.

Valve-regulated, Sealed Lead Acid Cell (VRLA) – A cell that is sealed and fitted with a vent, which opens to release excess pressure as required.
STANDARD PRECAUTIONS

- Always store or recharge batteries in a well-ventilated area away from sparks or open flames.
- Damaged lead acid batteries shall be kept in properly labeled acid-resistant secondary containment structures.
- Use only chargers that are designed for the battery being charged.
- Always keep lead acid battery vent caps securely in place.
- Do not store lead acid batteries in hot locations or in direct sunlight.
- Use nonmetallic containers and funnels.
- If acid gets into your eyes, flush immediately with water for 15 minutes, and then promptly seek medical attention.
- If acid gets on your skin, rinse the affected area immediately with large amounts of water. Seek medical attention if the chemical burns appears to be a second degree or greater.
- Never over charge a lead acid battery and only replenish fluid with distilled water.
- Emergency wash stations shall be located near lead-acid battery storage and charging areas.
- Prevent open flames, sparks or electric arcs in charging areas.
- Lead-acid storage and charging areas should be posted with "Flammable - No Smoking" signs.
- Neutralize spilled or splashed sulfuric acid solution with a baking soda solution, and rinse the spill area with clean water.

PROCEDURES – NEW BATTERIES

- Never perform work in a battery room or on a battery alone.
- Follow the facility check-in/checkout procedures for working in battery rooms.
- Before working on any battery or in a battery room, identify the location of safety showers and eye wash stations.
- Locate neutralizing agents (baking soda) and a spill containment kit and review its use.
- Ensure you have an open exit route at all times. Do not allow yourself to be trapped with no escape route.
- Wash your hands after working on a battery. Avoid wiping your eyes, nose or mouth with your hands while working on a battery.
- Do not smoke or have open flame in or near a battery room or around jars. Most jars that you may work around vent hydrogen gas.
- Verify the operation of the exhaust fan(s) in the battery room. These fans are designed to prevent the buildup of hydrogen gas, which is an explosion hazard.
- Wear the PPE required for the task at hand. This may include gloves, aprons, and face shields. Safety glasses are always required.
- Use insulated tools. Cells have high fault currents. A single 2-volt cell may supply over 5000 amps when the positive and negative posts are shorted together. The generated heat is more than enough to melt metal and cause burns.
Use insulated blankets or other materials to shield the battery connections should you have to perform work over the battery.

**METHOD OF PROCEDURE (MOP) – SERVICING BATTERIES**

- Keep metal tools and jewelry away from the battery.
- Inspect for defective cables, loose connections, corroded cable connectors or battery terminals, cracked cases or covers, loose hold-down clamps, and deformed or loosed terminal posts.
- Replace worn or unserviceable parts.
- Check the state of charge of non-sealed and sealed batteries with an accurate digital voltmeter while electrically powered equipment is turned off (MOP must be used). Also check the electrolyte levels and specific gravity in each cell of non-sealed batteries (MOP must be used).
- When checking the electrolyte liquid levels of the batteries, use a rated flashlight that is intrinsically safe. In the event one is not available, use a plastic/nonmetallic flashlight, turn on the flashlight prior to getting near the battery when checking cell levels and turn off the flashlight when you are away from the batteries.
- Follow the battery manufacturer’s recommendations about when to recharge or replace batteries.
- Tighten cable clamp nuts with the proper size wrench. Avoid subjecting battery terminals to excessive twisting forces.
- Use a cable puller to remove a cable clamp from the battery terminal.
- Remove corrosion on the terminal posts, hold-down tray and hold-down parts.
- Use a tapered brush to clean battery terminals and the cable clamps.
- Wash and clean the battery, battery terminals, and case or tray with water. The corrosive acid can be neutralized by brushing on some baking soda (sodium bicarbonate) solution. If the solution does not bubble, the acid is probably neutralized. Rinse the battery with water to remove the baking soda solution.
- To prevent shocks, never touch or come in contact with both terminals at the same time. If baking soda solution is applied with a cloth, remember that these solutions can conduct electricity.
- When battery cables are removed, ensure that they are clearly marked "positive" and "negative" so that they are reconnected with the correct polarity.
- Use a battery carrier to lift a battery, or place hands at opposite corners. Remember, batteries can weigh 30 to 60 pounds, so practice safe lifting and carrying procedures to prevent back injuries.
- Use self-leveling filler that automatically fills the battery to a predetermined level. Never fill battery cells above the level indicator.
- Do not squeeze the syringe so hard that the water splashes acid from the cell opening.
- Insulated tools shall be used when working on battery connections and shock protection (rubber insulating gloves with leather protectors) shall be worn when using insulated tools.

*(ALL WORK ON BATTERIES REQUIRES AN APPROVED MOP)*
SAFETY INSPECTIONS

MIEDI has a policy and procedure for conducting inspections of the safety conditions at the facility. The purpose of such inspections is to improve safety conditions and practices.

Note: Any Safety concerns/issues identified during daily rounds shall be documented and addressed.

Note: Annual safety audits shall be conducted per the established schedule by the facility Safety POC.

Safety inspections generally uncover conditions that can cause injuries and/or fires. The following are suggestions that should be used in making an inspection in the facility.

- Conduct annual safety inspections of the facility, using the Safety Audit Form.
- Where unsafe conditions are found.
- Initiate action to correct the condition.
- Place warning signs and guarding to keep employees away from unsafe areas. In addition, warn employees verbally.
- Notify the Facility Safety Manager, Facility Manager, or Lead if you cannot correct the hazard.
- When an employee is noted performing unsafe practices:
  - Tell him/her of the unsafe act.
  - Explain why the act is unsafe.
  - Describe and show the correct, safe action.
  - Re-check employee's performance at a later time to assure that safe practices are being followed.
  - Make all corrections in a firm, but friendly manner. Let the employee know that you are interested in them and their safety.

INCIDENT REPORTING

All incidents shall be reported to your immediate supervisor.

All incidents shall be reported as soon as practicable to the MIEDI Incident Reporting Hotline:

1-866-772-3108

OCCUPATIONAL SAFETY AND HEALTH ACT

It is MIEDI’s policy to achieve compliance with the Safety and Health Act (OSHA) of 1970 (29 CFR 1926, 1910).

Facility personnel are to become familiar with the requirements of this act, and work diligently to meet the stated objective.
As additions, deletions, or other changes relating to this legislation are made, the facility MIEDI’s employees will be advised of such changes by the Safety Manager, or facility POC, and institute action as necessary.

**OCCUPATIONAL SAFETY AND HEALTH STANDARDS**

Pursuant to authority provided under the Occupational Safety and Health Act, MINIMUM health and safety standards have been developed (29 CFR Part 1926.1910).

The above-referenced Standards have been adopted by MIEDI and every effort to achieve compliance will be made. If and when conditions or practices in violation of these standards are discovered, corrective action will be initiated as soon as possible.

Occupational Safety & Health Compliance Inspections can occur when:

- OSHA/State has been notified that a specific work-related incident has taken place.
- Periodically OSHA and/or State safety officers may visit workplaces for the purpose of ensuring that employers are complying with the above-referenced health and safety standards. Inspections are intended to serve the overall remedial purpose of the Act, which is to make the employer's workplace as safe as reasonably possible. Based on the results of the inspection, the Facility Manager, Owner and/or MIEDI could be subjected to monetary penalties for violation of the OSHA Standards. Inspections are basically in three categories:
  - Fatalities and/or serious accidents - This type of inspection occurs after the employer notifies OSHA/State to report a death, probable death of any employee, or the inpatient hospitalization of 2 or more employees within 8 hours of occurrence.
  - General - These inspections are scheduled by OSHA/State. They are random and unannounced. Usually the inspection involves the entire facility.
  - Complaints - This type of inspection occurs as a result of the inspection agency receiving a complaint concerning an alleged unsafe or unhealthy condition. These complaints are generally registered by an employee or a representative of the employees. While in most instances the inspector limits his/her inspection to complaint particulars, they may choose to conduct an inspection of the entire facility.

The MIEDI Facility Manager and the Safety Manager are to be promptly notified when an OSHA/State Inspector visits the site.

**OSHA OR STATE COMPLIANCE OFFICERS**

The OSHA or State compliance officers may inspect work sites at any reasonable hour, interview employees, and collect environmental samples. Requests to review documents and/or to take photographs must have prior approval by Owner, MIEDI and/or Facility Manager.

OSHA and State compliance officers shall, at all times, be treated in a courteous and businesslike manner.
STATE OPERATED COMPLIANCE PROGRAMS
Certain states are now operating under approved State Plans for occupational safety and health rather than the Federal OSHA program. These states may have adopted the existing Federal OSHA standards and procedures or may have developed their own.

Where MIEDI is subject to State Occupational Safety and Health plans, our safety policy and program will be based on State requirements. It is the responsibility of the facility Safety POC to verify which OSHA/State regulations (federal/state) apply to MIEDI facility operations.

OSHA 300 - PERFORMANCE TRACKING
It is the responsibility of the facility to notify the MIEDI Safety Manager which shall include the incident into the OSHA 300 log. OSHA requires that all recordable injuries be entered on the log within 7 days of knowledge of the injury.

Definitions for the OSHA Log
Recordable Injury or Illness:

- Recordable occupation injuries or illnesses are any occupational injuries or illnesses, which result in:
  - Death
  - Loss of consciousness
  - Days away from work
  - Restricted work activity or job transfer
  - Medical treatment beyond first aid
  - A significant work-related injury or illness diagnosed by a licensed healthcare professional
  - A broken bone
  - Medical removal from the job

Restricted work activity occurs when an employee, as a result of a job-related injury or illness, is physically or mentally unable to perform all or any part of his or her normal assignment during all or any part of the workday or shift.

Lost workdays are the number of days (consecutive or not) after, but not including the day of injury or illness during which the employee would have worked but could not do so: that is, could not perform all or any part of his or her normal work assignment during all or any part of the workday or shift, because of occupational injury or illness. The number of recordable lost workdays is limited to 180 even if more days are actually missed.
Posting
The OSHA 300 Summary must be completed and posted on the employee safety bulletin boards from February 1st to April 30th of each year.

Recordkeeping
The log and summary must be maintained for 5 years following the year to which they pertain. These records are to be made available for review by any employee, former employees, their representatives, both personal and union and compliance officers from OSHA or State.

Data Analysis
The OSHA log will be frequently reviewed to identify trends and areas where incidents are occurring to allow application of the appropriate corrective actions.

Training
Face to Face training
All training will be coordinated between the facility team and the MIEDI Safety team. These requests will be scheduled on availability of both the participants and trainer(s). The following are the identified categories and the MIEDI Safety team will identify which modules are required based on the site and conversations with the facility management.

Weekly Training
MIEDI hosts a weekly safety briefing with rotating topics. Attendance is mandatory with exceptions made with manager approval.

OSHA 10
All newly hired facility personnel shall be required to take OSHA 10 – General Industry course.

First Aid/CPR/AED
All newly hired facility personnel must attend and qualify an approved First Aid/CPR/AED training and certification course(s).

Refresher training shall be completed every 2 years via online LMS.
Fire
All newly hired facility personnel must receive training on fire responses including, but not limited to:

- Escalation of identified fire.
- Fire extinguisher use.
- Fire evacuation with pre-approved meet up locations.
- This training will be refreshed annually.

Natural Disaster
All newly hired facility personnel must receive training on natural disasters which includes, but not limited to:

- Tornado Warning
- Earthquake
- Hurricane
- This training will be refreshed annually.

Human Threat
All newly hired facility personnel must receive training on human threat responses which includes, but not limited to:

- Bomb threats directed at the facility
- Armed assailant at the facility
- This training will be refreshed annually

Site Equipment
All newly hired facility personnel must receive training based on the equipment the MIEDI team will use on site. This list of equipment consists of, but not limited to:

- Forklift Operation/Safety Check
- Man Lift Operation/Safety Check
- Enclosed Spaces Entry/Permit
- Hot Work Use/Permit
- This training will be refreshed and performed with all MIEDI team as new equipment is introduced to the site.

Module Based Training
Learning Management System (LMS) – There are online modules for each Facility team member to take on the LMS system provided by MIEDI. Each module is assigned to a week and shall be completed before
the end of the shift week for all 52 weeks of the year. Required training shall be completed prior to or returning from PTO.

- Monthly Safety Topic
- There are 12 monthly safety topics prepared by and provided by the MIEDI Corporate Safety team. Each member of the Facility team is required to read and sign the provided documentation. This documentation needs to be provided, by the Facility Safety POC, digitally to the Safety team at the end of each month.

**BUSINESS CONTINUITY PLAN**

Note: The Business Continuity Plan is under development in coordination with the U of I. The University Business Continuity Plan Committee has been formed with MIEDI and U of I partners to begin developing the plan. This effort is on hold per direction from the U of I as they seek to hire a new Director of Public Safety and Security.
All utility related incidents should be routed to InfoCentre by calling 1-855-936-3685. Depending on the nature of the incident, including utility type, time of day, and availability of staff, the appropriate MIEDI response team is dispatched.

UNAVAILABILITY OF THE MAJORITY OF STAFF

This section is under development.

District Energy Plant (Steam, Chilled Water, Compressed Air)
In the event of a loss of the majority of the Energy Plant staff the following actions will be taken:

- Temporary, untrained staffing for boiler and chiller operations
- Wood boiler shutdown to minimize risk and complexity of operations
- Bring one natural gas boiler online and train new staff on its operation
- Absorption chiller shutdown to minimize risk and complexity of operations

Water Systems (Domestic Water, Reclaimed Water, Sanitary Sewer, Stormwater)
In the event of a loss of the majority of the Water Systems staff or Water Purveyor the following actions will be taken:

- Activate retainer Water Purveyor to continue operations
  - If retainer Water Purveyor is not available:
    - Contact State of Idaho for availability of regional Water Purveyors

Electrical Systems
MIEDI has no staff with high voltage licenses for work on electrical systems. All work is done by qualified subcontractors. If the high voltage subcontractor is unavailable the next available vendor is contacted to begin work. In the event of a life safety emergency, such as a downed power line, Avista Utilities will be dispatched to make the area safe.

UNAVAILABILITY OF KEY APPLICATIONS AND EQUIPMENT

This section is under development.

Wood Boiler
- Shift operations to natural gas boilers.

TES Tank
- Isolate tank and switch to chilled water load following operating mode.

McClure Chiller
- Isolate chiller.
- Depending on weather conditions, bring a chiller at NCCP or SCCP online.
- Coordinate with the university to begin load shedding as needed.

Air Compressors
- Procure and connect a portable air compressor to support load.
Transformers
- Procure and connect a portable generator to support load.

Distribution Switches
- Isolate section. Coordinate with Avista to reconfigure ring bus to feed campus from other feed.
- Procure and connect portable generators to support loads as needed.

Domestic Wells
- Coordinate with the City of Moscow to supply water to campus.
  - Drop campus pressure.

Reclaimed Water Plant
- Isolate reclaimed plant. Feed campus irrigation system with domestic water.

UNAVAILABILITY OF KEY BUILDINGS AND FACILITIES
This section is under development.

District Energy Plant
In the event of a loss of the Energy Plant the following actions will be taken:
- Shut down all boilers, turbines, air compressors, and equipment before evacuation if safe to do so.
- Notify the University of a complete shutdown of steam and compressed air.
- Bring SCCP online as needed.

South Campus Chiller Plant
In the event of a loss of the South Campus Chiller Plant the following actions will be taken:
- Shut down all chillers, cooling towers, pumps, and chemical treatment equipment if safe to do so.
- Send out a notice of Chilled Water load shedding to U of I Facilities based on ambient conditions.
- Bring NCCP online as needed.

Domestic Water Wells
In the event of a loss of a Domestic Water well the following actions will be taken:
- Switch operations to the secondary well.
- Notify the University.

Domestic Water Storage Tanks
In the event of a loss of a Domestic Water storage tank the following actions will be taken:
- Switch operations to the secondary storage tank.
- Notify the University.
Reclaimed Water Plant
In the event of a loss of the Reclaimed Water Plant the following actions will be taken:

- Isolate and shut down Reclaimed Water system.
- Notify the City of Moscow Water Treatment Plant and the University.
- Source bulk chlorine for Domestic Water chemical treatment.

MINIMUM REQUIRED RESOURCES FOR RECOVERY
This section is under development.

BUILDING EMERGENCY ACTION PLAN
The Building Emergency Action Plan identifies types of incidents and their associated recommended response action. The following matrix provides a visual representation of this information:

</table>

MEDICAL EMERGENCIES

- Call 9-1-1 or have someone call for you.
- If it is possible and safe to do so:
  - Protect victim from further injury by removing any persistent threat to the victim. Do not move the victim unnecessarily. Do not delay in obtaining trained medical assistance.
  - Provide first aid until help arrives if you have appropriate training and equipment.
  - Send someone outside to escort emergency responders to the appropriate location.
LOCATION OF FIRST AID KITS AND FIRE EXTINGUISHERS

Figure 4. District Energy Plant (1st Floor).

Figure 5. Facilities Services.

Figure 6. South Campus Chiller Plant.
Figure 7. McClure roof.

Figure 8. Bay 3 storage area.
EVACUATION
In the event of an incident requiring the Evacuation of the facility, the following procedures are to be followed.

PREPLAN YOUR ESCAPE
- Each office area has at least two unobstructed ways out.
- Verify that the exits are always usable (doors, stairs, and hallways are not to be blocked).
- Do not use the elevators.
- Know both a primary and alternate location of fire-rated stairwells that will provide a path all the way to the outside.
- When directed by an authority person an Evacuation Emergency Marshall, evacuate to nearest exit.
- After evacuating the building, do not leave the premises unless instructed to do so by your Emergency Marshall.
- The emergency number is “9-1-1” for fire and police.
- Know where your department will assemble; a head count will be conducted of the personnel.

Figure 9. Reclaimed Water Chlorination Building.
EMERGENCY MARSHALLS AND ASSEMBLY AREAS

- Each area of the building has been assigned one or more Emergency Marshall. Please make sure that you check in with your Emergency Marshall in case of an emergency. If your Emergency Marshall is not available, please find Incident Commander.
- All employees are to report to the assembly area so we can ensure all building participants are safe and accounted for. The designated assembly area is shown in the following pictures below.
- Evacuate the building at the nearest exit and proceed to the designated assembly area. Please ensure, for your safety, to wait on only the designated assembly area. Emergency vehicles will need clear access to our facility. DO NOT LEAVE THE ASSEMBLY AREA UNTILL HEAD COUNT IS DONE, AND THE INCIDENT COMMANDER DETREMINES IT IS SAFE TO LEAVE.
- Find Your Emergency Marshall at the assembly area and wait for the head count.
- Unless unusual conditions dictate otherwise, the best evacuation route is the nearest stairway and out the nearest exit.
- Once outside, meet at the designated assembly point. Your Emergency Marshall will take a head count to make sure everyone is out and accounted for. Never attempt to re-enter the building to search for someone missing. Let emergency responding officials (fire and police) know that some personnel are still absent.

PERSONS WITH PHYSICAL DISABILITIES

- If you have a temporary or permanent disability that might prevent your safe, orderly, and prompt evacuation during an emergency, some additional planning is needed. This includes:
  - Identifying primary and secondary routes out of an area to the exits or a safe area of refuge. Stairwells are designed to provide protection from smoke and fire; however, doors to these areas must be kept closed to afford this protection.
  - Locating communication devices (phones).
  - Establishing a Buddy System with individuals who are familiar with your disability to obtain assistance during an evacuation.
  - Make sure to know who the ADA coordinator is, and where is the ADA assistance area.
  - Being prepared to call “9-1-1” and describing where you are located within the building.
  - When the alarm sounds, proceed to the nearest exit and evacuate the building with assistance from your buddy or ADA coordinator.
  - If no one can assist you down the stairs, proceed to the stairwell or designated area of refuge; and inform other evacuees that you need immediate rescue. Ask individuals to inform rescuers of your whereabouts.

FIRE

- When there is a Fire Alarm: EVERYONE EVACUATES!
- If you discover a fire or smoke condition, immediately contact InfoCentre to begin the Evacuation
• Whenever you hear the fire alarm, LEAVE IMMEDIATELY! Don’t assume that the fire alarm is false or a test and wait to see what others do. In a fire situation, seconds count.
• Is the Door Hot? Before opening a door, make sure there is no fire on the other side by using the back of your hand to touch the door, doorknob, or door frame. If heat is present, don’t open the door; there’s probably fire on the other side. If the door, doorknob, or door frame is cool, open the door slowly, pass through, close the door behind you, and leave the area.
• Stay Low When There Is Smoke - If you encounter smoke while escaping, drop to a crawl or get as low as you can to the floor. The cleanest air will be within 1 to 2 feet off the floor. If the main exit is blocked by fire or smoke, use your alternate route. If this is not feasible, go back in your area to wait for rescue.
• If You Cannot Escape - Close all doors between you and the fire. Seal cracks around doors with a cloth to keep the smoke out. CALL “9-1-1.” While waiting for rescuers, signal from a window by waving an object, posting a sign, or shouting.

Keep Exits Clear - All stairwells, exits, and corridors must be kept free of all obstructions at all times. No furnishings, decorations, or other combustible objects or flammables shall obstruct exits. Corridors and other portions of the means of egress are meant to be a certain width so that the expected numbers of people in the building can quickly exit or evacuate in a fire situation. Any time there are obstructions, the possibility of people becoming trapped or slowed down in a fire increases greatly. Since the prime function of corridors is to allow people to escape during a fire, we don’t want these areas to be the origin of fire or a means of allowing it to propagate. This can very easily happen if combustibles are stored and allowed to accumulate there.

**AIRCRAFT CRASH**

Saying the lives of co-workers and others is our first priority in the event of an aircraft disaster. If an aircraft crashes at your location, a tremendous impact, vibration, explosion, fire, smoke, toxic gases, and other hazards can be expected.

To minimize chaos, please follow these steps:

• An orderly evacuation or relocation to a safe area must be executed as soon as possible, or as soon as it is safe to do so, in accordance with the Building Evacuation Procedures.
• Call 9-1-1.
• Report the number of injured people, damage sustained, and any other hazardous conditions that may exist.

**HAZMAT INCIDENT**

• In the event of an internal chemical spill or environmental emergency proceed as follows:
• Notify InfoCentre of the incident.
• Quickly evacuate the affected area.
• If the odor is overwhelming and threatens to spread beyond the space where the spill occurred, call 9-1-1, and notify InfoCentre.
• Evacuate the building and move as far away from the spill as possible, ideally to the designated evacuation assembly area if it is not near the spill and if it is safe to do so. Be sure to check in with the Emergency Marshal.
• Those persons with knowledge of the incident should be available to The Safety team, Facilities Management and/or emergency response personnel. A description of what happened, where, when, and the type of product(s) spilled will be important in cleaning up the spill in a timely fashion.
• Only when the environmental hazard is removed and the "all clear" is given, will the building be re-occupied.

EXPLOSION
• Get under a sturdy table or desk if things are falling around you. When they stop falling, leave quickly, watching for obviously weakened floors and stairways. As you exit from the building, be especially watchful of falling debris.
• Do not use elevators.
• Check for fire and other hazards.
• Once you are out, do not stand in front of windows, glass doors or other potentially hazardous areas.
• If you are trapped in debris, use a flashlight, if possible, to signal your location to rescuers.
• Tap on a pipe or wall so rescuers can hear where you are.
• Shout only as a last resort. Shouting can cause a person to inhale dangerous amounts of dust.
• Avoid unnecessary movement so you don't kick up dust.
• Cover your nose and mouth with anything you have on hand. (Dense-weave cotton material can act as a good filter. Try to breathe through the material.)

BOMB THREAT
DO NOT USE YOUR CELL PHONE OR RADIO ONCE A THREAT IS RECEIVED, AS RADIO WAVES MAY CAUSE A DEVICE TO DETONATE! DO NOT EVER OPEN OR CLOSE DOORS ONCE A BOMB THREAT IS RECEIVED, AS PRESSURE CHANGE CAN DETONATE BOMBS!

If you receive a bomb threat by telephone, try to attract someone's attention discretely and quietly while continuing to listen to the caller. The person you attracted should immediately call a supervisor. Attached is a bomb threat script and anyone who receives a bomb threat call should follow these steps:

• Be calm and courteous.
• Try to keep the caller talking, asking the caller to repeat his or her message.
• Ask the caller these questions:
  ○ Where is it located?
When will it go off?
What does it look like?
Why are you doing this?
Who are you?
Time you received the call?

- Note phone number from your phone display
- Notice the following:
  - Is the caller male or female?
  - Does the caller have an accent?
  - Are there background noises?
  - Does this voice sound familiar?
- Notify your supervisor so they can notify security.
- Notify the Police Dept. by dialing “9-1-1.”
- State that you have received a bomb threat.
- State your address.
- State your Company name.
- Answer all questions from the 9-1-1 Operator. DO NOT HANG UP UNTIL THE OPERATOR RELEASES YOU.
- Visually search your immediate area for any unusual objects. DO NOT DISTURB ANY OBJECTS!
- Follow the instructions of the POLICE when they arrive.

**LOCKDOWN**

Lockdowns are implemented when there is an immediate threat to the building occupants. In the event of a Lockdown, employees and visitors will be instructed to secure themselves in the room they are in and not leave until the situation has been curtailed. This enables Emergency Responders to secure staff in place, address the immediate threat and remove any innocent bystanders from immediate danger.

Lockdowns prohibit unauthorized personnel from entering the facility. In a lockdown situation all exterior doors are locked with only the main front door being enabled for entry. This door will be monitored by the Workplace Solutions team or our contract security provider.

**STEPS TO BE TAKEN IN THE EVENT OF A LOCKDOWN**

- The order to implement McKinstry’s lockdown procedures will be announced by the McKinstry Facilities Team and Our Emergency Marshals after a decision has been made by the ERT that a credible threat to campus security exists.
- In the event of a lockdown lock all exterior doors and stay inside.
- Set exterior doors to Locked in the Lenel Access Control system.
• Prevent entry into building. Until security personnel or police arrive at McKinstry, the Emergency Marshals must be prepared to lock all doors to prevent access by any non-employees.
• Emergency Marshals, the McKinstry Facilities team and/or our third-party Security Service will conduct badge checks before allowing any individual access to the interior of the campus.
• Continue with daily activity inside.
• Be vigilant and immediately report any suspicious activity to the emergency marshals or to InfoCentre.
• Do not, under any circumstances, exit the building unless authorized to do so by emergency personnel.

CIVIL DISTURBANCE
Any indication of a civil disturbance such as a riot, demonstration, or picketing should immediately be reported to InfoCentre.

In addition to Lockdown procedures, response to a Civil Disturbance may also include one or more of the following:

• Blinds should be closed.
• Moving to the safest location in your area, taking fire extinguishers, first aid supplies and all other provisions with you.
• Not leaving the building until it is determined there is no further danger. If you must evacuate the building, exit with caution and do not run. Remember, do not attempt any physical contact with demonstrators unless it is necessary to free someone who is in danger. Do not engage in conversations or make comments to demonstrators as this may provoke them.
• Noting all rooms invaded by the demonstrators to facilitate a later search for suspicious items.
• Reporting, but not touching, any foreign or unusual items.

STATE OF EMERGENCY / ALERT
In the event of a State of Emergency, the Authorities and/or the Workplace Solutions Team may ask that you evacuate the building. In such instances the following measures should be taken:

• Take your keys, purse and personal belongings with you only if it safe to take the time to do so.
• Proceed to the designated evacuation assembly area for your department and check-in with the Evacuation Emergency Marshall so a head count can be given to the Authorities for any missing persons.
• You may not return to the building until the “all clear” is given.

In the event of a National State of Alert, Workplace Solutions may take the following measures:

• Implement the Lockdown Plan
• Conduct inspections of the building commons areas such as restrooms, closets, roofs, corridors and garages for evidence of any suspicious packages, persons or vehicles.
• Building white zone/curb side drop off areas will be limited to the pick up or discharge of passengers only. Any cars parked at the curb and all unattended vehicles will be towed.
• Deliveries will not be permitted to enter the building until Security has contacted the customer and received permission and/or instruction that delivery is expected and deliveries will be accepted. Any indication of a civil disturbance such as a riot, demonstration, or picketing should immediately be reported to InfoCentre.

SHELTER IN PLACE
There are several events that may cause a campus wide Shelter-in-place order. It may be severe weather, earthquake, tornado, flooding or even the release of hazardous materials within the campus or in outlying areas such as the railyard adjacent to McKinstry. In the event of a shelter in place order, all employees should immediately find interior rooms or offices that will provide protection from debris or hazardous materials.

In the event of a Shelter-In-Place order being given, McKinstry’s Workplace Solutions Engineers will be responsible for closing all air intakes and making any adjustments needed to prevent hazardous contaminants from entering the affected buildings’ air systems.

HAZMAT INCIDENT (EXTERNAL)
If you are requested to remain inside and Shelter in place:

• Close and lock all exterior doors and windows. Close vents, fireplace dampers, and as many interior doors as possible.
• Turn off air conditioners and ventilation systems. In large buildings, set ventilation systems to 100 percent recirculation so that no outside air is drawn into the building. If this is not possible, ventilation systems should be turned off.
• Go into the pre-selected shelter room. This room should be above ground and have the fewest openings to the outside.
• Seal gaps under doorways and windows with wet towels or plastic sheeting and duct tape.
• Seal gaps around window and air conditioning units, bathroom and kitchen exhaust fans, and stove and dryer vents with duct tape and plastic sheeting, wax paper or aluminum wrap.
• Use material to fill cracks and holes in the room, such as those around pipes.
• If gas or vapors could have entered the building, take shallow breaths through a cloth or a towel. Avoid eating or drinking any food or water that may be contaminated.

EARTHQUAKE
In the event of an earthquake or rare event of a tornado, do not evacuate unless instructed to do so! You are safer inside. Remember: DROP, COVER, HOLD. Drop to floor, get under cover and hold on until movement stops. Planning ahead is the best way to be proactive in an emergency.

INDOORS:

- MOVE away from windows, glass partitions, shelves, file cabinets and suspended objects, where objects may create a moving hazard.
- COVER by getting under a desk or other furniture.
- HOLD on to stay under cover until movement has stopped.
- Do not use the elevators.
- Do not strike a match or lighter for any reason.
- Do not attempt to leave the building during an earthquake. Wait until you receive an "all clear".
- Hazards such as downed power lines and falling debris can be harmful. If you do leave the building, you may not return until the "all clear" has been given.
- Be aware of aftershocks.
- When the earthquake is over, return to your normal workstation if it is safe. The Evacuation Emergency Marshall will take roll call to account for all employees.
- If safe, conduct a thorough inspection of your office to locate any trapped or injured persons, dangerous or shorting electrical circuits, damaged and leaking water pipes, unstable walls and ceilings.
- Do not talk to the media. Refer all questions to Corporate Communications Department.

FLOODING

- Assess the severity of the situation. If a water pipe has ruptured it is imperative that the flow of water be stopped.
- Immediately notify InfoCentre at 1-855-936-3685
- If it is a major leak, contact the Fire Department at 9-1-1 to assist with eth removal of water
- Notify the local water department and power company
- Should it become necessary, evacuate the building following the evacuation procedures.

ACTIVE SHOOTER
In the event that there is an armed assailant on Campus all McKinstry employees should follow these three actions:

RUN – Evacuate the area upon becoming aware of an attack if it is safe to do so. Call 9-1-1 when it is safe to do so.
HIDE – If you are unable to immediately evacuate the area for any reason find an interior room with the minimum windows to hide in. Barricade the door the best you can. Silence all electronics and remain as quiet as possible. Use text to communicate if possible.

FIGHT – Be prepared to fight for your life. As a last resort, if faced with the assailant use every possible weapon at your disposal to fight for your survival. Be prepared to act with extreme violence as you attempt to save yourself and others around you.

Follow all instructions of emergency responders.

TRAINING AND EXERCISE REQUIREMENTS
The EAP provides details on the type and frequency of training and exercises required to maintain a safe working environment.

NEW EMPLOYEE TRAINING
As part of their onboarding experience, all new McKinstry employees are required to participate in the McKU New Hire Safety Orientation class. This training will cover the actions to be taken in the event of an emergency or disaster. In addition, new hires should familiarize themselves with their office area and closest means of exit.

EMERGENCY MARSHALL TRAINING
Emergency Marshals will receive additional training from the McKinstry Workplace Solutions team and Incident Commander. The training will occur quarterly and will focus on leader duties in the event of an evacuation, shelter-in-place, lockdown or Active Shooter scenario. Emergency Marshals shall take part in and assist with all scheduled drills. Emergency Marshals shall also maintain current 1st Aid/CPR/EAD certification.

DRILLS AND EXERCISES
All McKinstry employees are required to participate in scheduled drills and exercises. The drills will be coordinated by the Incident Commander in conjunction with the ERT and may involve Evacuation Drills, Earthquake Drills and Active Shooter exercises. The Incident Commander will schedule annual Fire Drills with the local Fire Department and our Fire Protection vendor. Logs of the drills shall be maintained to include the number of participants, total time to evacuate and any issues or recommendations that result from the drill. These logs shall be forwarded to the Senior Facilities Manager for review and recommendation.
COMMITTEES
The following committees have been formed to support the overall success and operation of the P3 partnership.

ENERGY ADVISORY COUNCIL
The Energy Advisory Committee drives energy and climate policy and provides oversight of integrated energy efficiency measures to attain carbon neutrality. The Committee also seeks to derive resiliency and preservation of natural resources through managed change and integration of climate policies serving campus infrastructure.

The committee advises University leadership on the potential to integrate and leverage resources:

- Concession Agreement. Provide input to prioritization of projects supporting campus public utilities, dovetailing the 5-year Capital Plan with the University’s ongoing 6-year Capital Investment Plan
- Other Fund Sources. Synchronize financial capital through grants, agreements, and appropriated funds instruments.
- Natural Resources. Influence best management practices in forestry and agriculture culminating in energy recovery and environmental restoration.
- Educational Opportunities. Engage faculty, staff, and students across all of its schools and programs in educational and research opportunities that will help influence the plan’s execution and its continued evolution.
- Higher Education and Research. Influence broader higher education objectives serving businesses with a tailored curriculum and research opportunities emphasizing the ever-changing energy and natural resource market.
- Funding of Higher Education. Engage in enterprise business opportunities ranging from yields in power generation to agricultural and forest activities to reduce the cost of higher education.

CAPITAL PLANNING
The purpose of the Capital Plan Committee is to provide ongoing strategic direction for Capital Improvements with respect to the University of Idaho Utility Systems. The Committee establishes a formal process for MIED! and the Concessionaire to improve efficiency, repeatability, quality, and effective acceptance for annual Capital Improvements submitted to the University.

UNIVERSITY BUSINESS CONTINUITY PLAN
TBD

IDAHO RURAL WATER ASSOCIATION
TBD
INTERAGENCY COOPERATION AND COORDINATION (ICC)

The purpose of the Interagency Cooperation and Coordination (ICC) Committee is to provide ongoing, strategic direction for cooperation between MIEDI, the Concessionaire, and the University. The committee establishes formal communications protocols for all stakeholders on campus projects and ensures all parties are coordinating effectively for work on both sides of the Lines of Demarcation.

SUSTAINABILITY

The Sustainability Committee assists the University of Idaho and P3 partners in developing data driven policies to meet the university’s carbon neutrality goals. The Committee oversees the collection and reporting of sustainability metrics, maintains U of I relationships with 3rd party sustainability groups, and leverages the campus departments, colleges, and student body to promote the conservation of natural resources.

Date: March 30, 2021

Revised Submission Date: June 29, 2021
TABLE OF CONTENTS

I. Introduction and Revised Assumptions ................................................................. 4
II. Revised Capital Improvements proposed for Approval ......................................... 5

APPENDIX A. Revised Project Sheets for Capital Improvements proposed for Approval ......................... 6
I. Introduction and Revised Assumptions

This document is provided following the University's response to Sacyr Plenary Utility Partners Idaho LLC's Initial Five-Year Plan on April 29, 2021, and the direction jointly discussed on the same date and the following weeks.

Sacyr Plenary Utility Partners Idaho LLC is excited to submit a revised list of Capital Improvements proposed for Approval that allows for further visibility into the capital expenditures required to develop these projects and, as a result facilitates an informed Approval. This is achieved by adding an indicative estimate for (A) the total costs for construction and installation, including all hard and soft costs, any financing costs, and any applicable sales or use tax, and (B) forecasted annual operations and maintenance costs, both associated with each proposed Capital Improvement. Such approach is further described in Concession Agreement Section 4.3.(c).

All proposed Capital Improvements have been scoped according to these principles, and a distinction between Engineering Studies and Standard Capital Improvements—as defined in March 30, 2021's submission—is no longer made across the revised Project Sheets in Appendix A. However, a significant number of the proposed Capital Improvements do require additional work to provide further information regarding, among other things, the scope, design, or cost. This circumstance, when applicable, is highlighted in the section "Approach" of each Project Sheet, where the cost of such additional work for each of the Capital Improvements has already been addressed to help expedite the Approval process.

Lastly, I would also like to draw your attention to the fact that, following the written confirmation via email on April 27, 2021 regarding the preferred billing cycle of Capital Improvements, total costs have already been adjusted for all proposed Capital Improvements to reflect semiannual billing cycles.
## II. Revised Capital Improvements proposed for Approval

### PROPOSED CAPITAL IMPROVEMENTS FISCAL YEAR 2022

**PROPOSED CAPITAL IMPROVEMENT COST**  
$31,413,204
APPENDIX A. Revised Project Sheets for Capital Improvements proposed for Approval
PROJECT NAME: Electrical Improvements at Menard Law

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Electrical

Statement of Work: This project proposes the replacement of the existing 3,500 kVA@13.4 kV transformer located in the basement of the building. This is a well-known problem in the system, where the transformer is far beyond its expected life and ground water issues are present. It is assumed for this project that the existing electric meter in the Menard Law Building (meter ref.: ELM071-0-014) is fully operational.

The proposal includes the replacement of the existing transformer with a new pad-mount dry transformer located outside the building. The need for a larger transformer capacity is not anticipated. Works will include trenching, vault or pad, enclosure, subject to final location and design, and may result in disruption of service during the cutover. Transformer’s protection switches are assumed to be replaced.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

<td>—</td>
<td>7</td>
<td>10</td>
<td>8.80</td>
</tr>
</tbody>
</table>

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $32,751.

Additional notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,518,606.

(B) Forecasted annual operations and maintenance costs: $7,500 (Capped O&M Costs).

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it would
improve safety of maintenance personnel due to location and accessibility of equipment both for regular maintenance and emergency access. Street vaults/hand hole have water build up due to ground water leakage. Many have water up to stress cone termination points. Need to be pumped out and assessed for repair or mitigation. Past emergency repair is not in a safe and properly supported condition for 13.2KV service line.

(E) Proposed schedule:

<table>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(F) Impact on Sustainability: Positive, by reducing energy losses due to the new transformer higher efficiency rate.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,512,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: A preliminary estimation is that is around 1% of the annual consumption might be saved (around 11,000 kWh).
PROJECT NAME: Electric Vault Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency.

UTILITY SYSTEM AFFECTED: Electrical

Statement of Work: This project begins with the undertaking of a complete survey of the electrical vaults and switch gear on campus. Many vaults have old equipment that is in a poor condition and are not serviceable. Improvements will include major repairs and full replacements of any damaged vaults, according to the outcome of further analysis. It will also address ground water issues, with the installation of sump pumps and water level sensors (in all vaults with alarms) as needed. These activities may result in temporary service disruption in several buildings. There are 85 known underground vaults on campus and it seems likely that additional vaults may be identified.

The preliminary scope of this Capital Improvement includes the full replacement of 30 of the 85 existing vaults, which will be selected considering its condition and criticality, and are assumed to be critical vaults that need immediate replacement.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

</tbody>
</table>

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $555,304.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $2,610,510.

(B) Forecasted annual operations and maintenance costs: $12,000 (Capped O&M Costs).

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives.

(E) Proposed schedule: EPC extends through June 2023 (included).

(F) Impact on Sustainability: Negligible impact.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,592,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Replacement and Installation of New Fire Hydrants

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Domestic Water

Statement of Work: Replace 21 fire hydrants on campus. Project includes engineering, procurement, excavation, connection to water supply loop, and installation and commissioning of new hydrants with thrust blocks and isolation valves as needed. The project also includes painting the new hydrants to match the University of Idaho brand standards. Install 2 new additional hydrants at Menard Law and Graduate Art Studio for increased fire protection and to facilitate system flushing. Water Piping loop alteration and civil works included.

The proposed hydrants specifications are:

- American Flow Manufacturer and model 5 ¼” Waterous Pacer
- ANSI/AWWA C502 Standard compliant

Why: Project has been prioritized according to the scoring criteria presented in the submission.

<table>
<thead>
<tr>
<th>Safety</th>
<th>Resiliency</th>

<td>—</td>
<td>7</td>
<td>9</td>
<td>8.20</td>
</tr>
</tbody>
</table>

Approach: Development and engineering prior to construction commencement. Works to be scheduled and organized to reduce risks and potential disruption while part of the water supply system is non-operational.

The hydrants to be replaced are the following:

B15-01 B15-02 B15-03 B15-04 B17-04 B18-01 B18-04
C17-06 C18-02 C19-01 C19-02
D17-05 D17-07 D17-08 D18-02 D18-04 D20-01
E19-01 E19-05 E19-06 E20-06

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is
presented for this Capital Improvement:

(A) Total Costs: $413,872.

(B) Forecasted annual operations and maintenance costs: $824 (Capped O&M Cost).

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, (i) age of these hydrants making repairs difficult and expensive, (ii) reliability of functioning hydrants is decreasing, and (iii) additional risk to property if the hydrants fail when its operation is required.

(E) Proposed schedule:

<table>
<thead>
<tr>
<th></th>
<th></th>

<td></td>
<td></td>
</tr>
</tbody>
</table>

(F) Impact on Sustainability: Reduced water leakage.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $410,741

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Anticipated reduction on domestic water consumption due to reduced water leakage.
Statement of Work: The Library and Memorial Gym storm sewer has had a number of infiltrations and performance issues over the last years. The improvements proposed in the selected section (University Avenue and Academic Mall to Memorial Gym) will range from major repair and restoration of the storm water system to the replacement of some sections of the existing piping.

Highly damaged existing 6", 8", and 12" clay tile lines will be replaced with identical or higher nominal caliber piping. At least, seven manholes will be reconditioned due to visible failures and damage. Additional work, including a survey of the system will be needed to assess the full scope of the works undertaken.

The Capital Improvement includes excavation, demolition, bedding, backfill, and surface restoration.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $22,353.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, (i) in 2019 investigations showed that the line in the project are failing and a concern with a collapse may be imminent with emergency repairs done in 2019, (ii) there is evidence in the Library basement that the Sanitary Sewer is infiltrating the storm water, and (iii) there is also evidence of storm water overflow infiltrating the Memorial Gym.

(E) Proposed schedule: EPC extends through June 2022 (included).

(F) Impact on Sustainability: Positive, due to a reduction in leaked water infiltration.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,564,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Domestic Water Systems Emergency Generator

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Domestic Water, Sewer, Reclaimed Water

Statement of work: The domestic water wells are not backed up with emergency power as recommended by IDAPA 58.07.08; Small Community Water System. Without backup power the system can only provide a maximum of 14 days of domestic water if the storage tanks are full before the incident. This is inadequate life support for firefighting or dining, housing, and medical treatment of the 9,500 students on campus during an extended.

Installation of a new generator with capacity to support either Well #3 or #4 including transfer switches, panels, circuits, modifications, and controls necessary to a complete and functional system. Project includes engineering, procurement, installation, wiring, connection, and commissioning of a new 600kW emergency generator.

Emergency Generator specifications:

- Manufactures and model: Caterpillar C18 ACERT In-Line 6, 4 cycle diesel. Stand-alone, encapsulated with noise attenuation (technical data annexed at the end of the Project Summary sheet).
- Nominal capacity: 600kW.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

</tbody>
</table>

(F) Impact on Sustainability: This solution has a positive impact on sustainability in that the domestic water system supplies the entire campus, including the steam plant and the chiller plants for make-up water. The generator system provides the University the opportunity to mitigate the need to rely on the City of Moscow's municipal water system in a power outage scenario, reducing the replacement costs of water, and insuring the major steam plant has a constant flow of water. This water supply is critical to the steam plant's make-up water needs, ensuring the optimum operating conditions for steam production which reduces inefficient steam plant operation.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,436,004.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Expected annual diesel fuel cost will approximately be $8,556, in addition to fuel delivery fees estimated at $150 per delivery. Total cost estimated at $8,706.

### APPLICABLE CODES AND STANDARDS:  

Note: Codes may not be available in all model configurations. Please consult your local Cat Dealer representative for availability.

### STANDBY:  

Output available with varying load for the duration of the interruption of the normal source power. Average power output is 70% of the standby power rating. Typical operation is 200 hours per year, with maximum expected usage of 500 hours per year.

### PRIME:  

Output available with varying load for an unlimited time. Average power output is 70% of the prime power rating. Typical peak demand is 100% of prime rated kW with 10% overload capability for emergency use for a maximum of 1 hour in 12. Overload operation cannot exceed 25 hours per year.

### RATINGS:  

Ratings are based on SAE J1349 standard conditions. These ratings also apply at ISO3046 standard conditions.

### DEFINITIONS AND CONDITIONS:  

1. For ambient and altitude capabilities consult your Cat dealer. Air flow restriction (system) is added to existing restriction from factory.

2. Emissions data measurement procedures are consistent with those described in EPA CFR 40 Part 89, Subpart D & E and ISO8178-1 for measuring HC, CO, PM, NOx. Data shown is based on steady state operating conditions of 77° F, 28.42 in HG and number 2 diesel fuel with 35° API and LHV of 18,390 BTU/lb. The nominal emissions data shown is subject to instrumentation, measurement, facility and engine to engine variations. Emissions data is based on 100% load and thus cannot be used to compare to EPA regulations which use values based on a weighted cycle.

3. UL 2200 Listed packages may have oversized generators with a different temperature rise and motor starting characteristics. Generator temperature rise is based on a 40° C ambient per NEMA MG1-32.
C13/C15/C18
Weather Protective Enclosures
U.S. Sourced
Diesel Generator Set
350-750 kW 60 Hz

Features
Robust/Highly Corrosion Resistant Construction
• Factory installed on skid base
• Environmentally friendly, polyester powder baked paint
• 14 gauge steel
• Interior zinc plated fasteners
• Exterior stainless steel fasteners
• Internally mounted exhaust silencing system
• Designed and tested to comply with UL 2200 Listed generator set package
• Compression door latches providing solid door seal

Excellent Access
• Large cable entry area for installation ease
• Accommodates side mounted single or multiple breakers
• Three doors on both sides
• Vertically hinged allow 180° opening rotation and retention with door stays
• Lube oil and coolant drains piped to the exterior of the enclosure base
• Radiator fill cover

Security and Safety
• Lockable access doors which give full access to control panel and breaker
• Cooling fan and battery charging alternator fully guarded
• Fuel fill, oil fill and battery can only be reached via lockable access
• Externally mounted emergency stop button
• Designed for spreader bar lifting to ensure safety
• Stub-up area is rodent proof

Transportability
These enclosures are of extremely rugged construction to withstand outdoor exposure and rough handling common on many construction sites.

Options
• Caterpillar Yellow or white paint
• UL Listed integral fuel tank with 680, 400, and 300 gallon capacities
• UL Listed sub-base fuel tank with 660, 1000, 1900, and 2200 gallon capacities.
• IBC Certification for 150 mph wind loading
• Anchoring details are site specific and are dependent on many factors such as generator set size, weight, and concrete strength. IBC Certification requires that the anchoring system used is reviewed and approved by a professional engineer
• AC/DC lighting package

PROJECT NAME: Sewer Slip Line Memorial Gym to Library

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Sanitary Sewer

Statement of Work: Develop and slip line the existing sanitary sewer line from the Memorial Gym to the Library. Project estimates repairs of lengths of 60’ of 10", 60’ of 8", and 100’ of 6”.

During Fiscal Year 2019 investigations revealed that the storm water and sanitary sewer lines in the project area are in a state of disrepair with evidence of high probability of failure in the short term. Additional evidence was discovered in the basement of the library with infiltrated sanitary sewer effluent. Emergency storm system repairs were completed in 2019 however more work is needed to prevent further failures. At this time the slip line approach is the least cost solution until a major replacement is undertaken. Work will include excavation, demolition, bedding, backfill, surface restoration, connection hardware and sealing within manholes. Please refer to a sketch at the end of this summary.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: Development and engineering prior to construction commencement and subsequent transition. Work to be scheduled and organized to reduce risks and potential disruption while part of the system is non-operational.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $138,189.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, (i) the
clay lines are beyond the life expectancy with the risk of collapse, (ii) slip lining would be the least invasive solution if the existing clay tiles are not so damaged or blocked with broken tiles, (iii) if there are failures of the existing system, another design solution will need to be developed, and (iv) the location is in a sensitive part of Campus, with students and activities. Construction will be organized to minimize the impact to campus operations.

(E) Proposed schedule:

</tbody>
</table>

(F) Impact on Sustainability: Reduced sewage leaks.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $137,144

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.

Figure 1. Sewer Slip Line Library to Memorial Gym
PROJECT NAME: Replacement and upgrade of 6” Jordan PRV

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Steam Plant, Electrical Turbines

Statement of Work: There is known performance issues of the existing pressure regulation valve (PRV) design and function for the steam system. This project will replace the piloted 6” Jordan PRV with two smaller parallel (likely 2”, subject to final scope) electronic PRVs. These new PRVs will be integrated into the controls of the micro-turbines for the purpose of bypassing steam flow around the turbines and on to campus for flows that are not in the ranges of the various turbine combinations. These PRVs would also work with the 8” PRV for those times when the turbines are bypassed.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $26,752.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $76,089.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: N/A

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, this system will be considered as impactful to the reliable operation of the new turbine project at the steam plant. Impacts to the turbine project must be considered.
(E) Proposed schedule: EPC extends through June 2022 (included).

(F) Impact on Sustainability: Negligible impact.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $75,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
**PROJECT NAME:** Hot Lime Softener PRV Stations Upgrade  

**DATE SUBMITTED:** 06/29/2021  

**PROJECT JUSTIFICATION CATEGORIES:** Safety, Resiliency, Operational Efficiency  

**UTILITY SYSTEM AFFECTED:** Steam Plant and Loops  

**Statement of Work:** In the process of softening water, steam is used. Current PRVs that decrease pressure of steam have failed and may not be sized properly for efficient operations. The scope of this Capital Improvement includes the replacement and upgrade (subject to the outcome of the additional work) of the hot lime softener PRV stations. Additional ancillary elements may have to be replaced.  

**Why:** Project has been prioritized according to the scoring criteria presented in the submission.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $28,949.  

**Additional Notes:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.  

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:  

(A) Total Costs: Study: $190,536.  

(B) Forecasted annual operations and maintenance costs: $0.  

(C) Proposed modification to the Recovery Period: None.  

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives.  

(E) Proposed schedule: EPC extends through September 2022 (included).

(F) Impact on Sustainability: Negligible impact.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $189,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Boilers System Valves Upgrade

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency, Operational Efficiency

UTILITY SYSTEM AFFECTED: Steam Plant, Steam loops

Statement of Work: Internal inspection of the Steam Drum has not occurred in the past 7 years because of the stop-check and main header valves are leaking steam and causing the steam drum to be inaccessible for even a short period of time. This puts the entire boiler system at risk as there is no safe way to evaluate the condition of the piping in the steam drum of every boiler. Insurance liability could also be affected as access to the steam drum for internal inspections is an operational requirement.

Proper steam isolation is essential for safety during maintenance of the steam loop, maintenance of the valves, and internal inspection of the boilers. To tackle this problem, 19 valves will be replaced with high quality steam valves, with the main header valves for each boiler being installed in a double block and bleed arrangement following code requirements. The valves on the main steam loop will be 8" and 10" high quality domestic high pressure steam isolation valves. An additional 10" isolation valve to isolate 'A' boiler is also considered as part of the scope. There may be additional piping, or ancillary components that are also part of the project scope.

During the temporary shutdown of the steam plant, additional testing and evaluations are anticipated to occur, including (i) Eddy current tests on all four boilers to determine water tube integrity and thickness, (ii) inspection of the air pre-heater tubes on 'A' Boiler to determine useful life.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $297,000.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:
(A) Total Costs: $2,939,705

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, this system needs to be developed and scope defined to configure appropriate amount of engineering and equivalent/replacement parts analysis. Due to the age of the steam plant, future parts compatibility needs to be confirmed.

PROJECT NAME: Steam Plant Security and Exterior Upgrades

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Steam Plant, Steam system

Statement of Work: The exterior of the Energy Plant has been neglected for several years and is in a general state of disrepair. Most doors at the Energy Plant are not locked or monitored, creating a security and safety issue.

Install “card-key” access and new doors at all exterior entrances of the Energy Plant. Replace the exterior door to the motor control center shed for the wood boiler. Install other systems/equipment as necessary to fully secure building doors and provide safety to operators and utility assets.

Proposed new equipment:

- 8 newly installed exterior doors
- Control Access System with 8 points of control
- 8 Access card locks
- Supply of 100 PROX III proximity fobs
- (1) new Overhead Door Co, roll up door and hardware (see attached PDF files)

Why: Project has been prioritized according to the scoring criteria presented in the submission.

### Options

- Electric operator (RHX®, RSX®, RMX®) or crank operation
- Bottom sensing edge, sloping bottom bar
- Galvanized steel bottom bar angles and guides
- Between-jamb mounting
- Stainless steel or aluminum slats
- High-usage package
- High-wind load option (FBC, TDI, DADE)*
- Cylinder lock
- Exhaust ports
- Flat slat profile option F-265 and C-600 heavy-duty 6” curved slat (Model 610)
- Perforated 18-gauge steel slats with 1/16” (2 mm) diameter holes on 1/16” (2 mm) centers
- Fenestrated slats with uniformly spaced openings of 5/8” x 3” (16 mm x 76 mm) or 1” x 10” (25.4 mm x 254 mm) on F265 slat only
- PowderGuard® Premium powder coat paint finish in 197 standard colors, or color-matched to specification
- PowderGuard® Zinc and PowderGuard® Weathered finishes
- Special application doors:
  - Oversized doors to 1500 ft². (139.4 m²)
  - Combination doors with grilles and/or with full or partial standard, perforated or fenestrated slats
  - Spark-resistant doors, craneway doors, pass doors

**FBC – Florida Building Code; TDI – Texas Department of Insurance; DADE – Miami-Dade Building Code Compliance Office**

**When purchased together**
Door that is strong, durable, handsome and versatile

Model 610 – the best selling door of our line. Stormtite™ Model 620 is an ideal choice for keeping climate-controlled air in and the elements out. Available to fit openings up to 30'-4" x 28'-4" (9246 mm x 8636 mm), these doors are fabricated of 18- to 24-gauge galvanized steel (depending upon door width), and can withstand wind loads up to 20 psf. Interlocking slats with endlocks ensure a tight fit while minimizing lateral movement.

Design versatility is afforded by a wide array of options, including a selection of slat profiles; curtain materials, finishes and colors; electric operation, and special features for unique applications. Each of our rolling service doors is configured for precise fitting of components, simpler installation, lower maintenance costs and trouble-free operation for life. The result is a door tough enough to perform exceptionally well in demanding industrial environments – and attractive enough to meet exacting aesthetic requirements.

Architect's Corner

A resource for architects, containing comprehensive technical and resource materials to support your project, including drawings and specifications for commercial doors.

www.overheaddoor.com

The original, innovative choice for unequalled quality and service.

Overhead Door pioneered the upward-acting door industry, inventing the first upward-acting door in 1921 and the first electric door operator in 1926. Today, we continue to be the industry leader through the strength of our product innovation, superior craftsmanship and outstanding customer support, underscoring a legacy of quality, expertise and integrity. That’s why design and construction professionals specify Overhead Door products more often than any other brand. Our family of over 400 Overhead Door Distributors across the U.S. and Canada not only share our name and logo, but also our commitment to excellence.
2022/11 PROJECT SHEET

PROJECT NAME: Catwalk and Ladder Upgrades

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Steam Plant, Steam System

Statement of Work: All existing catwalks and ladders will be upgraded throughout the steam plant to allow proper and safe maintenance of the system, ensuring compliance of safety codes. This Capital Improvement estimates that 35% will need to be fully replaced.

These are some examples of the current physical condition and some of the upgrades to be performed:

- Woodchip Silo platform is pieced together and does not meet safety code.
- Woodchip ships ladders need to be secured and allow access to UES employees only.
- Ladder to platform does not have proper fall protection.
- Ladder system on boiler exhaust needs to be removed.
- Install steps on each side of the AHU pipes with platforms and handrails.
- Install cages on all multi-level ladders.
- Install ladders with higher handrails.
- Install handrails at all points of unprotected steep steps.
- Mid-rail and top-rail around boilers are not compliant, entire area needs to have code approved platform.

Additionally, proper access to the boiler’s economizers will be added. The additional work will fully identify which structures are in critical condition and in need of replacement as well as the most appropriate solution for these items.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $23,377.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $760,894.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives.

(E) Proposed schedule: EPC extends through June 2022 (included).

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Domestic Waterline Replacement Campus Dr. to Blake Ave.

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Domestic Water

Statement of Work: This Capital Improvement covers the replacement of the domestic waterline from Campus Dr. to Blake Ave. This is some of the oldest waterline on campus and is at the end of its life. The length is approximately 550 feet. Work will include excavation, demolition, bedding, backfill, surface and landscape restoration, valves, ties, taps, tees, and thrust blocks. Additionally, controls will be updated.

The project also includes the required elements for future connections and system growth, and the necessary chlorination sampling and testing, to guarantee the safety of the system after being brought on-line.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

<table>

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Steam Plant Renovation and Upgrades
DATE SUBMITTED: 06/29/2021
PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency
UTILITY SYSTEM AFFECTED: Steam Plant

Statement of Work: The steam plant system is near the end of its useful life and needs to be accessed in order to deliver the campus steam needs reliably and responsibly.

To extend the useful life of the asset, several renovations are needed, including the bearings, conveyors, and hydraulic rams in the truck dump system. Similarly, a replacement of the carrier absorber tank, and a complete overhaul of the silo sweep will be performed, including the auger motor, the gearbox, and other ancillary items, will be included as part of this Capital Improvement.

These systems are critical to the safe operation of the steam plant and are structural to meet the safety and fire regulations.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

(F) Impact on Sustainability: Negligible impact.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $507,600.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: McClure Chiller Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency, Operational Efficiency

UTILITY SYSTEM AFFECTED: Chilled Water

Statement of Work: The existing McClure chiller (350-ton Carrier model) has been in service since 1995 and has not been serviced since 2013. The unit is in need of a major overhaul, and additional work needs to be conducted to define next steps. This is the only chiller capable of running in the winter (no redundancy) and should it fail all critical cooling loads are at risk.

As part of the overhaul the following elements will be replaced, bearings, coils, damaged expansion valves, control elements, refrigerant R-134A (including removal and disposal), and any other component that might be needed to extend the chiller’s useful life. Installation of a new electrical meter is also included.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $26,752.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $179,552.

(B) Forecasted annual operations and maintenance costs: $3,000 (Capped O&M Costs).

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, this
assumes no other causes or problems with the system, and normal wear and tear is the reason for replacement.

(E) Proposed schedule: EPC extends through September 2022 (included).

(F) Impact on Sustainability: Positive, electrical consumption is expected to be reduced.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $178,200.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: A reduction of 5-10% in the consumption of electricity is expected.
PROJECT NAME: SCCP Chiller Replacement and Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Resiliency

UTILITY SYSTEM AFFECTED: Chilled Water

Statement of Work: The goal of this project is to ensure that the provision of chilled water meets the campus needs at all times. One of the existing 500-ton SmardT chillers will be dismantled and substituted with a new electrically-driven chiller of equal or greater capacity at the SCCP. The new chiller will use an environmentally friendly refrigerant.

This Capital Improvement includes the demolition, waste management of the old chiller, and the transportation, installation, and commissioning of the new chiller. The installation of new electrical meters is included for each of the chillers. Other ancillary systems may be replaced for this work.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

<table>

</table>

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $32,383.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $2,392,997.

(B) Forecasted annual operations and maintenance costs: $5,000 (Capped O&M Costs).

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives.

(E) Proposed schedule: EPC extends through November 2022 (included).
(F) Impact on Sustainability: Positive, due to the better electrical efficiency of the new equipment versus the replaced one. Additionally, the new refrigerant will be more environmentally friendly than the existing one.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,376,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: A reduction of 5-10% in the consumption of electricity is expected.
PROJECT NAME: Storm Water System Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Storm Sewer

Statement of Work: Due to capacity constraints, much of the storm sewer system is unable to function properly during certain storm events, causing surface flooding and deterioration to manholes and catch basins. As part of the additional work, 2,000 feet of the most critical part of the storm water system that have known problems and perform improvements is going to be surveyed including checked with camera. Prior to the assessment, the system will be jet-cleaned.

As part of this Capital Improvement, 50% of the total length of the assessed system (the section identified to be in the worst condition) will be replaced, including major repairs or full replacements of failing storm catch basins and manholes across campus. Works will also include the excavation, demolition, bedding, backfill, surface restoration, and any other items needed for a complete and functional system. Other adjacent piping systems could be impacted.

The final solution and scope will vary depending on the results of the additional work and based on the conditions found, with works ranging from a complete replacement to slip-lining.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessenaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessenaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $376,179.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $2,176,806.
(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, there is also evidence of storm water overflow infiltrating the Memorial Gym.

(E) Proposed schedule: EPC extends through September 2023 (included).

(F) Impact on Sustainability: Positive, due to the decrease in leaks and infiltrations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,160,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Sanitary Sewer System Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Sanitary Sewer

**Statement of Work:** Improvements to the sanitary sewer system are needed to increase the system's reliability and functionality. The sanitary sewer system has many sections that are far beyond their useful life. To address this situation, 2,000 feet of the most critical sections of the sanitary sewer system which have had poor performance and caused problems in past years will be investigated. As part of the additional work, these pipes will be jet-cleaned, and assessed via video camera, including the catch basins, the manholes' integrity, and the creation of a pipe material catalog with a condition report.

As part of the Capital Improvement, 50% of the total length of the surveyed system (that identified to be in worst conditions) will be replaced. Works will also include excavation, demolition, bedding, backfill, surface restoration, and any other items needed for a complete and functional system. Other adjacent piping systems could be impacted.

The final solution and scope will vary depending on the results of the additional work and based on the conditions found, with works ranging from a complete replacement to slip-lining.

**Why:** Project has been prioritized according to the scoring criteria presented in the submission.

<table>

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $376,179.

**Additional Notes:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $2,176,806.
(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See Previous Narratives. It assumes broken pipe pieces and debris. Tree roots and human solid waste blockages have been found historically in this system on campus. High likelihood of COVID-19 contamination risk.

(E) Proposed schedule: EPC extends through September 2023 (included).

<table>
<thead>

</tbody>
</table>

(F) Impact on Sustainability: Reduction in sewage water leaks and infiltration. Reduction in sewage system clogs.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,160,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
Statement of Work: This Capital Improvement is needed to ensure a reliable and steady chilled water supply to serve all campus’ needs. Arup’s Condition Assessment Report already indicates that the NCCP cooling towers #1 and #3 are far passed its expected useful life and are in a terminal condition. The proposed additional work includes a thorough analysis to identify any major repairs and improvements in the plant’s cooling towers.

Subject to the analysis and the outcome of the additional work, it is anticipated that the scope include a full replacement of the cooling tower in worst condition and other major repairs in the remaining towers. A common header is also considered for all towers with an indoor basin, to allow for enhanced performance in cold weather. Secondary pumps will also be rebuilt or resized for the new flows. Other ancillary systems will be impacted with this work. New metering devices for both electricity and water for each tower affected are considered as part of the scope.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

<table>
<thead>

<td>6.92</td>
</tr>
</tbody>
</table>

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $32,952.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $1,741,097.

(B) Forecasted annual operations and maintenance costs: $10,000 (Capped O&M Costs).

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, had been detected flow and temperature issues. Equipment at end of life. Tower design is outdated, causing poor performance and low efficiency. Secondary pumps are poorly designed for current needs and pump curves do not meet current flow needs. These issues reduce NCCP’s ability to meet peak cooling demands, risking critical cooling loads such as IT servers and research.

(E) Proposed Schedule: EPC extends through August 2022 (included).

<table>

(F) Impact on Sustainability: Positive. A reduction in water and electricity consumption is expected due to enhanced CT System efficiency. More environmentally friendly chemicals will be used.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,728,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: A reduction of 10% in water and electricity consumption is expected due to enhanced CT System efficiency. This cannot be quantified due to the lack of metering devices.
Statement of Work: This Capital Improvement will address known failures and poor performance due to the aged systems involved. Subject to the additional work, a complete replacement of the domestic water line of approximately 600 feet, running from the SE side of the Renfrew Hall to SE of the Agricultural Science Bldg. The new pipe will be 6” PVC instead of the existing 4” galvanized line. Works will include excavation, demolition, bedding, backfill, surface and landscape restoration, valves, ties, taps, tees, and thrust blocks. The required elements that would allow for future connections and system growth, as well as the necessary chlorination sampling, and testing to ensure the safety of the system are also included. In addition, system controls might need to be updated. Other systems might be impacted.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

The meters will be checked, substituted with new units, and newly installed (for those missing). The scope currently assumes meter replacements for at least 50% of the meters inspected. The selection and installation will be done considering their future integration in a control system. All associated mechanical and civil works are also included.

**Why:** Project has been prioritized according to the scoring criteria presented in the submission.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $183,600.

**Additional notes:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $1,304,424.

(B) Forecasted annual operations and maintenance costs: $30,000 (Capped O&M Cost).

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, the study will consider (i) existing metering/monitoring documentation found/made available at the time of this proposal, (ii) controls and monitoring hardware/software systems, and (iii) historical operational and reporting documentation.

(E) Proposed Schedule:

(F) Impact on Sustainability: There are expected sustainability improvements as systems are monitored and optimized.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.
(H) Fee or charge payable to the Operator: $1,296,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: There are expected energy savings as monitoring systems inform operational optimization. These amount cannot be quantified due to the lack of precise metering.
2022/21 PROJECT SHEET

PROJECT NAME: Utility Tunnel General Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Chilled Water, Compressed Air, Steam Loop

Statement of Work: Tunnel sections in the Utility System are up to 108 years old and some have partially collapsed showing extensive signs of failure, providing unsafe conditions for personnel access and circulation of pedestrians and vehicles over the tunnel structures.

As part of the additional work associated to this Capital Improvement, a complete visual structural investigation of 2,500 ft of tunnel will be conducted, including core sampling of concrete walls and an engineering analysis of the utility tunnel network. Subject to the results, the project will include the major repair of a maximum length of 1,250 ft, covering the sections that are identified to be in the worst condition. The scope of this Capital Improvement will exclude any repairing in piping, cables, or any system inside those sections.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $81,530.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $2,829,428.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives.
(E) Proposed schedule: EPC extends through September 2024 (included).

(H) Fee or charge payable to the Operator: $2,808,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Utility Tunnel Improvements at 7th Street and Janssen Engineering Building

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Steam, Water, Chilled Water, Compressed Air

Statement of Work: The tunnel section at 7th Street and Janssen Engineering Building (JEB) is a known location of structural failure. The length of this section is 40 ft in length. The tunnel lid and walls are crumbling and collapsing with ground water intrusions. A collapse would put at risk all the utilities that pass through this section of tunnel (steam, chilled water, compressed air). The tunnel also acts as the sidewalk for pedestrians and runs under the road at the intersection, posing a life safety risk. This section is approximately 72 years old.

The scope of the Capital Improvement includes a major repair of this tunnel section. Any repairing in piping, cables or any system inside this section is not excluded. The additional work will provide further definition and characteristics of the activities to be included in this major repair.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $34,448.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $381,029.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. Destructive testing
is not anticipated to develop this project, however potential damage resulting from inspections is not contemplated
in this proposal.

(E) Proposed schedule: EPC extends through September 2022 (included).

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting
firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on
the professional liability insurance coverage. The premium associated to such policy is usually prorated by the
firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: Utility Tunnel Improvements at Renfrew Hall

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Electrical distribution, Steam, Water, Compressed Air, Telecom

Statement of Work: The tunnel section at Renfrew Hall, including the Central Mall tunnel that runs North and South, is a known location of structural failure. The length of this section is 60 feet in length. This section of tunnel is used for foot traffic as well as vehicular traffic including fire engine access to the Central Mall. The tunnel lid and walls are crumbling and collapsing with ground water intrusions. A collapse would put at risk all the utilities that pass through this section of tunnel (high voltage electrical distribution, steam, chilled water, compressed air). This section is approximately 59 years old.

The scope of the Capital Improvement includes a major repair of this tunnel section. Any repairing in piping, cables or any system inside this section is not excluded. The additional work will provide further definition and characteristics of the activities to be included in this major repair.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
PROJECT NAME: SCCP Cooling Tower Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency, Operational Efficiency

UTILITY SYSTEM AFFECTED: South Campus Chiller Plant, South Campus Chilled Water Loop

Statement of Work: This Capital Improvement is needed to improve underperforming conditions in the cooling system. The cooling tower makeup water does not keep up with evaporation rate. Similarly, the tower level control is poorly designed and prone to failure. On shutdown, the tower basin is prone to overflow and causes cavitation of the condenser pump during operations. All these circumstances reduce the plant's ability to meet peak cooling loads.

As part of the additional work suggested for this Capital Improvement, an analysis of the plant's deficiencies will be conducted to define the scope and cost of the changes and improvements needed to extend the life of the asset and improve the cooling towers performance. The cavitation and overflow issues will also be investigated.

Subject to the outcome of such analysis, the installation of an actuated ball valve and probe level control on the 900-ton BAC cooling tower that supports the York chiller is proposed as this project's scope to correct the water flow issue.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

PROJECT NAME: Sheep Farm Water Vault Improvements

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Domestic Water

Statement of Work: This Capital Improvement will provide electrical service and insulation to the existing structure to protect the water system components during the winter months. The project includes the installation of approximately 400 ft of 100-amp service from Pump House #3 to the Sheep Farm water vault.

In addition, the scope of work covers the installation of R-21 or better insulation on all walls and ceilings with the addition of a vapor barrier to protect the existing water meters, as well as a backflow prevention valve.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

PROJECT NAME: Storm Sewer Slip Line Campus Dr. and Blake Ave.

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency

UTILITY SYSTEM AFFECTED: Sanitary Sewer

Statement of Work: Slip line the existing storm sewer lines along Campus Drive to the Niccolls Building and in front of the Lionel Hampton School of Music to Blake Avenue. This system is known to be some of the oldest on campus and is well beyond its expected service life are in a state of disrepair with evidence of high probability of failure in the short term. This slip lining is expected to be 75’ in length. At this time, the slip line approach is the least cost solution until a major replacement is undertaken. Scope of work includes excavation, demolition, bedding, backfill, surface restoration, connection hardware and sealing within manholes. Please note a sketch of this the system at the end of the summary.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

**PROJECT NAME:** Sanitary Sewer Slip Line Campus Dr. and Blake Ave.

**DATE SUBMITTED:** 06/29/2021

**PROJECT JUSTIFICATION CATEGORIES:** Safety, Resiliency

**UTILITY SYSTEM AFFECTED:** Sanitary Sewer

**Statement of Work:** Develop and slip line the existing sanitary sewer line from Campus Drive to Blake Avenue. This section of the sewer system is known to be some of the oldest on campus and well beyond its expected service life. During Fiscal Year 2019 investigations revealed that the storm water and sanitary sewer lines in the project area are in a state of disrepair with evidence of high probability of failure in the short term. At this time, the slip line approach is the least cost solution until a major replacement is undertaken. The expected slip lining is 410' of 6" and 720' of 12". Works will include excavation, demolition, bedding, backfill, surface restoration, connection hardware and sealing within manholes. Please refer to the sketch at the end of this summary.

**Why:** Project has been prioritized according to the scoring criteria presented in the submission.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $144,846.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in supply costs or consumption costs: Negligible change.

PROJECT NAME: Thermal Energy Storage Tank Sensor Upgrades

DATE SUBMITTED: 06/29/2021

PROJECT JUSTIFICATION CATEGORIES: Safety, Resiliency, Efficiency

UTILITY SYSTEM AFFECTED: Chilled Water

Statement of Work: The level sensors on the Thermal Energy Storage (TES) tank are not reliable and some have failed. As a result, no accurate information is provided to the control system. Similarly, operational problems have been identified in the temperature probes, which are needed to properly manage the level of the thermal tank and optimize its performance.

This project will procure and replace the level and temperature measurement systems.

Why: Project has been prioritized according to the scoring criteria presented in the submission.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $18,036.

Additional Notes: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Materials, including asbestos, which originated prior to Closing.

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Costs: $81,664.

(B) Forecasted annual operations and maintenance costs: $7,500 (Capped O&M Cost).

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives.

(E) Proposed schedule:
(F) Impact on Sustainability: Negligible impact.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $81,000.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible change.
This Five-Year Plan consists of a budget and plan prepared by the Concessionaire in accordance with Section 7.2 for the operation of the Utility System and performance of its obligations under the Long-term Lease and Concession Agreement for the University of Idaho Utility System, in respect of the period consisting of Fiscal Years 2023 through 2027.

APPENDIX A. Project Sheets for Capital Improvements ............................................................................. 16
I. Introduction

Sacyr Plenary Utility Partners Idaho LLC is excited to submit this Five-Year Plan, that delineates the Capital Improvements proposed to make in each Fiscal Year to the Utility System, including Capital Improvements to address conditions of the Utility System existing prior to the Closing Date.

Throughout this first year of the Term, the Concessionaire has been able to further understand the conditions, limitations, and operational status of the Utility System. The most visible result of such steep learning has been the discovery of latent issues with the Utility System that were in critical condition prior to the start of the Term and will continue to be in critical condition until applicable Capital Improvements are completed. As a result, the core focus of this Five-Year Plan is the stabilization of the Utility System, prioritizing safety and reliability in accordance with the Performance Standards and Key Performance Indicators, over other potential objectives.

All projects listed in this document are proposed to be performed by Moscow ID Eco District I, LLC, a fully-owned subsidiary of McKinstry Essention, LLC, that serves as Contractor to the Operator within the Long-Term Lease and Concession Agreement for the University of Idaho Utility System.
II. Planning Process

The planning process for Fiscal Year 2023 was built upon a subset of the four founding principles: safety, reliability leading to resilience, operational efficiency, and carbon neutrality. In order of priority, those principles are:

- Provide for the safety of the general public, campus community, and operations personnel.
- Operate, maintain, and plan for reliability and resilience of the Utility System.
- Improve operational efficiency.
- Develop and implement a plan for energy independence and carbon neutrality.

While comprehensive stewardship of the Utility System resources requires that all four of these principles be represented in the planning process, early experiences with the Utility System have revealed a critical need to focus the near-term planning efforts on two of them: safety and resilience. Many components of these systems are at the end of their useful life, historically deficient of proper maintenance, or in a partial state of failure leaving the likelihood of a critical system failure unacceptably high and calling for a critical need to upgrade. Achieving a safe environment and resilience in the existing systems is critical before any substantive gains in operational efficiency or carbon neutrality can happen.

Above all, it is imperative that the safety of the general public, the campus community, and the operations personnel be prioritized. Following closely behind, the focus on safety is that of building resilience, starting with reliability. System failures have revealed substantial reliability issues and the Concessionaire’s team has systematically identified vulnerabilities in the Utility System.

As a result, the planning process for Fiscal Year 2023 is solely focused on safety and resilience for the stabilization of the Utility System, so more progressive long-range planning can commence in the future. Besides the direct safety and business interruption risks, the vulnerabilities identified are direct threats to meeting the Performance Standards and Key Performance Indicators in the Concession Agreement. The Capital Improvements proposed within this Five-Year Plan are specifically identified to manage these risks and constitute a crucial first step in advancing the quality of the Utility System.

A planning process focused on safety and resilience required evaluating the risks associated with the existing systems and their mitigation. This methodical approach characterized the Utility System’s subsystems to evaluate deficiencies and vulnerabilities. In the case of complex systems, such as the Energy Plant, the components of the subsystems were also identified. For each system, subject matter experts were engaged in planning sessions to discuss the condition, needs, and potential vulnerabilities associated throughout the Utility System, and within them, 44 subsystems and approximately 180 component sets. Once each system’s deficiencies and opportunities were identified, project scopes were developed that centered on addressing these safety and resiliency issues. These projects were structured to maximize complementary work to reduce the number of service disruptions or otherwise gain implementation efficiency. While it will be continuously improved over the next several planning cycles, this effort established the concept of system planning for each Utility System.
Vulnerability Assessment

The potential for each Capital Improvement to mitigate risks was established by using a simple vulnerability assessment matrix. This approach evaluated (i) the impact of the risk/vulnerability based on the safety and reliability principles, and (ii) the likelihood of a failure. It is worth noting that all the Capital Improvements identified herein are presented because they mitigate either a significant safety or resiliency risk, or in several cases, both.

Capital Improvements were assigned an impact rating of low, medium, or high from both a safety and a reliability standpoint. The safety sub-rating estimates the impact of a failure, due to the vulnerability, on the health and life safety of the general public, campus community, and operations staff. The reliability sub-rating estimates the impact of a failure, due to the vulnerability, on business interruption impacts, costs of emergency repair/temporary operations, and cascading property damage resulting from failure (floods, fire, freeze up, building shutdown, etc.). Each risk was also assigned a likelihood rating of low, medium, or high, according to the probability that a failure may occur.

Using a simple matrix, Capital Improvements were assigned a phase designator, from Phase 1 to Phase 5. This designation provides guidance about the importance of a Capital Improvement. A later phase designation should not be construed as diminishing the necessity of the project but rather is a reflection of the reality that all projects cannot be done simultaneously.

Projects with the highest impact and likelihood were ranked as Phase 1 projects, a designation that identifies the risk associated with inaction as unacceptably high. These projects must be implemented to mitigate critical safety and/or reliability risks.

These planning efforts have revealed a significant volume of critical (i.e., Phase 1) work and a similar volume of important (i.e., Phase 2) work that is imperative to address in the near term. Utility failures carrying unacceptable safety and reliability concerns are very likely to occur without immediate action.
Projects with a lessor phase designation (i.e., Phase 3-5) also have important roles in risk mitigation. While the impact and likelihood of failures due to inaction are projected to be less severe, there are still risks and a plan for immediate implementation is needed.

It is necessary to understand that this vulnerability assessment is a tool for the University and the Concessionaire to compare projects and help inform what projects need to be prioritized. Unknown and unforeseen issues within systems exist and may cause failures that cannot be predicted. These designators are the best indicator available to measure the criticality of a project.

*Annualization of Capital Improvements*

Capital Improvements presented within this submittal have been developed and selected through an exhaustive capital planning process, and urgent and immediate approval and completion of these Capital Improvements is necessary to allow the Concessionaire to operate and maintain the Utility System in full compliance with the Performance Standards and Key Performance Indicators.

While we understand the financial constraints of the University, it is our duty to notify the University that these Capital Improvements are essential for the safe and reliable operations and maintenance of the Utility System, and therefore should be approved and undertaken urgently and immediately.

Nevertheless, in order to facilitate the University's review and comply with the Concession Agreement's requirements for the composition of the Five-Year Plan, we have created a timeline for these investments following the level of criticality of such undertakings. Impact and likelihood may be less severe as the project's phase designation number increases but all of them are critical to aspects of the Utility System, pose significant safety and reliability risks, are essential for continuing compliance with the Performance Standards and Key Performance Indicators, and an accelerated approval of their implementation is needed.
III. Supply Use Trends

Supplies expected to be used to operate the Utility System are wood chip fuel, natural gas, and electricity. There is no change from previous years, nor any change expected in the foreseeable future.

The FY2023 Supply use per month and yearly trends are shown below. The estimate for Fiscal Year 2023 is emphasized in red for each plot. The estimated usage of Supplies throughout the year is dependent on campus activities, especially whether students are on campus or not, and weather. Supply use also grows with the increased campus population and building square footage.

**Wood Fuels**

Wood fuel use peaks in the winter with heating loads but is not at its lowest during peak cooling season. This is because steam fired absorption chillers are used in the summer to produce Chilled Water with wood chips. Wood fuel use is instead at its lowest in the shoulder spring/fall months, when the overall HVAC needs of campus are at their lowest. This is partially the reason why planned wood boiler maintenance shutdowns are scheduled in the spring and summer. In a typical year over 90% of the steam produced at the Energy Plant is from the wood boiler. Wood fuel is measured and purchased in bone dry tons (BDTs) instead of units of energy (e.g., MMBTUs) because the energy content for wood varies significantly depending on species and moisture content.

**Natural Gas**

Unlike wood fuel, natural gas use at the Energy Plant does not follow a consistent pattern year over year. While it is difficult to predict, there are some common trends. Natural gas is typically used at the Energy Plant to meet peak steam loads when the wood boiler can't keep up with demand and during wood boiler shutdowns. Peak steam loads are in the winter, so there is some natural gas use when temperature drop below freezing. In the summer, there is typically little to no natural gas use.

Scheduled wood boiler shutdowns are not on specific dates, but instead based on the level of maintenance needed and campus loads. To minimize Supply Costs shutdowns are scheduled in the shoulder spring/fall months when loads are at the lowest. Thus, natural gas use is at its highest in the spring and fall. Unscheduled shutdowns occur throughout the year and are likely the driving cause for variability in natural gas use.

**Electricity**

Electricity use on the East Feed is typically stable throughout the year, with a minor increase late summer during the cooling season and students returning to campus. Electricity purchased from Avista on the East Feed is expected to drop when the turbines and PV array are online, which has been accounted for in the estimate for Fiscal Year 2023. Electricity use on the West Feed is also stable but increases during the
summer season because of the South Campus Chiller Plant. The two electric feeds will likely need to be rebalanced after power generation begins.

APPENDIX A. Project Sheets for Capital Improvements
**PROJECT CODE:** 23/1-001

**PROJECT NAME:** Energy Plant Catwalk, Ladder, and Safety Upgrades

**UTILITY SYSTEM:** Steam

**DATE SUBMITTED:** December 31st, 2021

**SAFETY AND RESILIENCY ASSESSMENT:**

The impact associated with safety is **high** (unacceptable fall risks exist that could result in severe injury). The impact associated with resiliency is **high** (a fall injury can result in interruption of critical steam plant services and reputational damage).

The likelihood of these events is **high** (unacceptable, unsafe fall conditions exist).

---

**Background:** Ladder and catwalk systems are critical for the safe and efficient operation of the District Energy Plant. They provide timely and safe access to major systems with the Plant including the wood silo, wood handling equipment, boilers, and the hot lime softeners. Unsafe catwalks slow down response time during emergencies, increasing the risk of severe damage to equipment and personal injury or death to operators with a maximum fall risk of 72 ft. This project provides a full engineering assessment to either upgrade existing or replace ladder and catwalk systems to be compliance with safety codes.

**Objectives:** The main objectives of this Capital Improvement are:

- Mitigate severe safety issues by eliminating fall risks.
- Increase resiliency by eliminating risks to the Steam Plant operations staff.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Demolition of structurally unsafe catwalks and ladders.
- Assessment and construction of new catwalks or modification of existing areas including the following:
  - Replace the woodchip silo platform.
  - Secure ship ladders to restrict access.
  - Install fall protection and handrails on all ladders or replace with compliant ladder systems.
  - Install cages on all multi-level ladders.
  - Remove boiler exhaust ladder system.
  - Install safe steam pipe crossings with platforms and rails.
  - Install handrails at multiple points of unprotected steep steps.
  - Install safe platform and railing around boilers.
  - Add boiler economizer access ladders and platforms.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey
covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

Additional work will occur within the Steam Plant perimeter. Any outage periods of the wood fuel boiler will be coordinated with the University.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $58,104.

**Additional Information:**

![Unsafe ladder systems](image1)

*Figure 1. Unsafe ladder systems to service boiler exhaust stack and roof.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $809,205.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) there are no structural deficiencies at the woodchip silo that would prevent the construction of a safe catwalk system, and (ii) there are no space constraints that would prevent installation of ladder cages or handrails. Only minor interruption to plant operations during construction.
(E) Proposed schedule: EPC (Commiss.) occurs in July 2023.

(F) Impact on Sustainability: Promotes safe and efficient Steam Plant operations.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $803,412.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/1-002

PROJECT NAME: Ash Handling System Upgrades

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (unsafe rotating equipment conditions exist, severe fire risk). The impact associated with resiliency is high (failure likely to disable the wood fuel boiler).

The likelihood of these events is high (equipment is heavily damaged).

Background: The ash handling system removes wood ash from the boiler after combustion and is critical for operation. It consists of a series of ash hoppers, augers, and mechanical systems used to move the ash from the boiler to a truck outside to be hauled away. The wood boiler provides significant economic and environmental benefits to the University, however, at 35 years old, many of the subsystems are in critical need of upgrade. This project replaces the existing ash handling system and separates fine and large ash. Most of the system is original equipment and well beyond its expected life. The entire ash handling system is heavily damaged from years of use with major components warped from the heat, leaking, and breaking down frequently, creating severe fire risks. Sealing the system will significantly reduce the amount of ash that builds up in the plant, increasing the expected life of exposed mechanical systems. Fine ash has a higher economic value when separated from large ash, providing a potential revenue stream to the University. A complete redesign and replacement of the system and an economic feasibility study for separating fine ash is required.

Objectives: The main objectives of this Capital Improvement are:
- Upgrade the ash handling system for the wood boiler to increase uptime.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Address long term health concerns from ash exposure.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:
- Demolition of the ash handling system including:
  • Ash conveyors and subsystems (x9).
  • Elevating conveyor and subsystems.
- Install new ash handling system including:
  • Fine and large ash conveyors.
  • Elevating conveyor.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.
**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University for the wood boiler shutdown from spring to fall to minimize the gas use during the construction stage. In addition, the Concessionaire will engage with the relevant University departments to identify potential impacts or benefits from the current ash waste.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $238,788 and will also include a feasibility study for fine ash separation.

**Additional Information:**

*Figure 1. Schematic design of ash handling system.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,938,940.

(B) Forecasted annual operations and maintenance costs: +$5,800. Fine ash conveyor is a new piece of equipment not presently in the O&M program at the University of Idaho. The new system will have specific O&M requirements to maintain expected life.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) construction can be coordinated with the University and completed within one summer to minimize wood boiler downtime, (ii) sufficient space for parallel fine and large ash conveyance systems, and (iii) 1% electrical efficiency improvement in conveyance system offset by additional fine ash system.

(F) Impact on Sustainability: An improved ash handling system will increase the reliability of the wood fueled boiler, reducing the natural gas consumption. The collection of fine ash can be used for land applications.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.
(H) Fee or charge payable to the Operator: $2,916,540.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$500, wood fuel, natural gas, and electricity. Decreased wood boiler downtime, improved conveyance efficiency.
PROJECT CODE: 23/1-003

PROJECT NAME: Energy Plant Steam Piping Upgrades

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and campus steam shutdown).

The likelihood of these events is high (multiple valves have failed).

Background: The steam piping in the Energy Plant is critical for transporting steam produced by the boilers to the tunnel network and reducing pressure to safe levels. Isolation valves in the system are used to provide safe access to critical equipment for service. This project replaces the isolation valves and a pressure reducing valve (PRV) in the main steam header, all of which are beyond their serviceable life and/or not designed for operating pressures. The newest valves were replaced in a 2002 State of Idaho DPW project and are already failing, exposing operators to severe burns from high pressure steam leaks. The 8” PRV is not rated for the higher pressures required by the new turbines and cannot be operated in parallel without severe life safety risks. Without the 8” PRV the only redundancy to the turbines is the 6” PRV, which is not sized to meet peak campus loads. This also creates a single point of failure if the turbines are offline, risking a complete steam shutdown to campus if the valve fails.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade plant level steam piping to plant operating pressures.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address health concerns that should be physically mitigated rather than dependent on procedures.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Reconfigure D Boiler 6” piping to connect to main steam header.
- Replace all high pressure isolation valves (x19).
- Replace 8” PRV with two 4” electric PRVs.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and
the provision of fencing to prevent unauthorized access to construction areas.

The Concessionaire will coordinate with the University for the replacement of valves that may require steam shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $57,996.

**Additional Information:**

![Failed isolation valve preventing safe work on critical systems.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $3,024,915.

(B) Forecasted annual operations and maintenance costs: +$0. No O&M Costs change anticipated.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) no steam shutdown will be required when connecting D boiler to the main steam header, (ii)
workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

(F) Impact on Sustainability: Minimal reduction in fuel, water, and chemical consumption by reducing steam losses during service.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,001,860.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible. Minimal savings from reduced losses during service work.
PROJECT CODE: 23/1-004

PROJECT NAME: Gas boilers Capital Renewal

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **high** (severe physical and life safety issues). The impact associated with resiliency is **high** (extended outage and building shutdown).

The likelihood of these events is **high**.

---

**Background:** The natural gas boilers provide redundancy to the wood boiler and meet peak heating loads on campus. They are critical to the successful operation of the Energy Plant and necessary to achieve performance standards and resiliency desires. However, their ages range from 45-81 years old, and the subsystems are in need of replacement and upgrade. This project upgrades the subsystems critical to the successful operation of the boilers. Several single points of failure, or long repair time, issues exist within these systems. Many of these systems are original equipment and are well beyond their serviceable life, posing safety risks from natural gas leaks and boiler tube ruptures. Upgrading these systems will improve efficiency and extend the useful life of the boilers. Complete gas boiler system replacements will be needed without these upgrades.

**Objectives:** The main objectives of this Capital Improvement are:

- Upgrade gas boilers to extend useful life and improve performance.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required O&M practices in a safe manner.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Replace degraded and ruptured boiler tubes.
- Replace gas burners for all three boilers.
- Replace gas trains for all three boilers.
- Replace all critical valves for all three boilers.
- Replace FD fans, VFDs, and motors for all three boilers.
- Install cascading blowdown systems for Boilers C and D only.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.
A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

The Concessionaire will coordinate with the University the staggering of boiler work to maintain steam plant resiliency to prevent need for steam shutdown.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $215,892 and will also include (i) Eddy current testing on the boiler tubes, and (ii) non-destructive testing for corrosion and wall thickness degradation on all four exhaust stacks.

**Additional Information:**

*Figure 1. Detailed views of the natural gas boilers.*

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:
(A) Total Cost: $5,404,580.

(B) Forecasted annual operations and maintenance costs: +$3,100. O&M increase for expanded complexity of controls, gas trains and additional cascading blowdowns.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) only 20% of boiler tubes will need to be replaced after Eddy current testing, (ii) exhaust stack replacement is not needed, (iii) natural gas reductions from 2% burner efficiency increase at current prices based on FY21 data, (iv) stage construction to maintain N+1 redundancy to the wood boiler to prevent risk of steam shutdown to campus, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs in September 2023.

(F) Impact on Sustainability: Improved efficiency and performance of the boilers reduces natural gas consumption.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $5,363,388.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,200, natural gas. Due to improved efficiency of gas burners.
PROJECT CODE: 23/1-005

PROJECT NAME: Utility Tunnel Repair on 6th Street

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high.

Background: The utility tunnel network is critical for distributing many utilities across campus including steam, chilled water, high voltage power, natural gas, and IT/telecom. This project replaces the tunnel lid on 6th St from Line St to the Wallace Complex. Tunnel lids are critical for protecting utilities from ambient conditions and also serve as the sidewalks of much of campus. The lid on 6th St has been in service for up to 70 years and needs repair to prevent collapse. Some sections on 6th St are supported with non-engineered, temporary screw jacks that may not be adequate. The risk of collapse poses a severe safety risk to the general public and potential shutdown of all Energy Plant utilities. This was identified in the FY19 project to replace the tunnel lid at 6th and Line, but project funding could not support the additional scope. This project can be coordinated with the Capital Improvement 23/1-010 Distribution Steam and Condensate Upgrades for reduced overall costs and impact to campus.

Objectives: The main objectives of this Capital Improvement are:

- Extend the useful service life of the existing tunnel.
- Mitigate severe resiliency issues associated with aging systems.
- Address safety concerns associated with tunnel collapse.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Saw cut removal of tunnel lid.
- Replace the lid of the 6th St utility tunnel (approx. 1200 ft).
- Provide protection for live utility services during construction.
- Bedding and backfill.
- Surface restoration.
- Identify and remove abandoned utilities.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended that University of Idaho ITS department identify and remove abandoned and damaged IT and telecommunications lines in construction areas while accessible.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey
covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University to schedule construction during the summer season to reduce impact to campus operations.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $128,952 and will also include core drilling and laboratory analysis for tunnel walls and lid to determine integrity.

**Additional Information:**

---

*Figure 1. 6th Street Tunnel lid to be replaced.*

*Figure 2. Aging sections of the tunnel.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $12,299,630.

(B) Forecasted annual operations and maintenance costs: $0. Like for like repairs and/or replacements.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) core sampling and structural investigation may reveal that only sections of the tunnel need to be replaced, which may significantly reduce project cost, (ii) tunnel walls and floor will be in good condition and not require repair or impact construction, (iii) underground construction conditions will be reasonable free of obstruction, conflict, hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and are not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2023. EPC (Commiss.) occurs in October 2023.

(F) Impact on Sustainability: None.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $12,207,024.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible.
PROJECT CODE: 23/1-006

PROJECT NAME: Water Treatment Improvements Project 1

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium. The impact associated with resiliency is high (extended steam outage to campus).

The likelihood of these events is high (PRV stations are failing).

Background: The Hot Lime Softening (HLS) tanks and associated feedwater and condensate chemistry subsystems are critical for protecting the boilers and steam distribution systems from scaling, which reduces efficiency and risks significant damage. These systems experience frequent fouling due to the type of fluids used, which reduces efficiency. HLS tank #2 is almost 20 years old and in need of reconditioning to extend its useful life. This project rebuilds the PRV stations for each HLS tank, reconditions HLS #2, and upgrades the water treatment system. Most of these systems are beyond or approaching their end of serviceable life. The PRV station for HLS #1 has failed with no parts commercially available. The PRV station for HLS #2 is in critical need of replacement before it fails with no redundancy. Failure of PRV station #2 will result in a complete steam shutdown to campus until replacement as boilers cannot be operated without water treatment. This is an example where N+1 redundancy does not exist.

Objectives: The main objectives of this Capital Improvement are:

- Recondition Hot Lime Softener #2 to extend its useful life.
- Mitigate resiliency issues associated with systems beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Rebuild PRV stations for both HLS tanks.
- Recondition HLS #2 and replace valves with stainless steel valves.
- Replace all critical valves for the zeolite and charcoal systems.
- Replace booster pumps and backwash pumps.
- Replace slurry tank motor.
- Replace saltwater tank, pumps, valves, and piping.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be
responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $90,180 and will also include non-destructive testing on de-aerators and hot lime softeners to determine integrity and remaining serviceable life.

**Additional Information:**

---

**Figure 1. Failed PRV Station #1.**

**Figure 2. Hot Lime Softener #2.**

---

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,309,980.

(B) Forecasted annual operations and maintenance costs: $0. Like for like repairs and/or replacements.

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) HLS tank and de-aerator are structurally sound and do not need to be replaced, dependent on non-destructive testing, and (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs in September 2023.

(F) Impact on Sustainability: Improvement from reduced pumping requirements to move fluids in the system. Fewer losses and less electric load.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,299,996.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible, associated with a minor improvement from reduced pumping requirements.
PROJECT CODE: 23/1-007

PROJECT NAME: Wood Fuel Handling System Upgrades

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (unsafe rotating equipment and fire risk conditions exist). The impact associated with resiliency is high (failure likely to disable the wood fuel boiler).

The likelihood of these events is high (conditions are critical to address, failure is imminent).

Background: The wood handling system at the Energy Plant transports fuel from delivery trucks to the throat of the wood boiler. The wood boiler provides significant economic and environmental benefits to the University, however, at 35 years old, many of the subsystems are in critical need of upgrade. This project upgrades the fuel handling subsystems including hydraulics, augers, and conveyance systems. Several single points of failure, or long repair time, issues exist within these systems. These systems are original equipment and damaged from years of use, posing severe safety risks to operators, fuel supplier delivery drivers, and vehicle and pedestrian traffic. Emergency repairs were needed in 2021 and will be needed again in the very near future, indicating that significant failures are imminent. Without a functional fuel handling system, the wood boiler will be shut down, significantly increasing Supply costs to the University until addressed. Shutdown of the wood boiler risks N+1 performance standards for the Steam System as the Energy Plant would be completely dependent on natural gas availability, posing a significant risk to campus.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the wood fuel handling system to extend its useful and serviceable life.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Replace glycol heating unit for deliver ramp.
- Upgrade the walking floor with new components including:
  - Hydraulics, slats, nylon surfaces, bearings, seals.
- Upgrade exterior fuel conveyance system with new components including:
  - Unclassified belt and cover.
  - Classifier drive and cover.
  - Classified belt and magnet.
- Upgrade silo fuel conveyance system with new components including:
  - Elevated screw.
• Silo exit auger.
• Damaged silo bucket elevator and buckets.
• Install speed control to silo bucket elevator.
• Damaged metering bin bucket elevator and buckets.
• Install speed control to metering bin bucket elevator.
- Upgrade metering bin including:
  • Demolition of existing metering bin.
  • Reengineer for improved fuel flow to throat.
  • Replace drives.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

Additional work will occur within the Steam Plant perimeter. Any outage periods of the wood fuel boiler will be coordinated with the University.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $177,336.

Additional Information:

Figure 1. Tipper hydraulics in poor condition surrounded by combustible materials.

Figure 2. Hydraulic system beyond serviceable life.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,162,888.

(B) Forecasted annual operations and maintenance costs: $0. Like for like replacements. The new system will have specific O&M requirements to maintain expected life. Downtime from breakdowns and jams should be reduced from improved performance.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) construction will be phased during two summer seasons to ensure the wood boiler is available during winter heating season and to reduce logistics impact to fuel suppliers, (ii) a partial replacement of damaged buckets only (15 buckets per elevator), (iii) a 1% electrical efficiency improvement in the conveyance system will be derived, and (iv) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

Figure 3. Aged wood conveyance system in poor condition.

Figure 4. Elevator buckets are heavily worn.
(E) Proposed schedule: EPC (Const.) extends through June 2024. EPC (Commiss.) occurs from June 2024 to July 2024.

(F) Impact on Sustainability: Improved fuel handling will increase the reliability of the wood boiler, reducing natural gas consumption.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,146,932.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,000, wood fuel, natural gas, and electricity. The decrease is associated to reduced wood boiler downtime, and improved conveyance efficiency.
PROJECT CODE: 23/1-008

PROJECT NAME: Feedwater System Improvements

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (unsafe piping exists). The impact associated with resiliency is high (failure likely to disable the wood fuel boiler, pumps failing risk complete Energy Plant shutdown).
The likelihood of these events is low.

Background: The feedwater system is critical to boiler operations and is in need of replacement. This project addresses issues in the system to improve performance, resiliency, and safety. Most of these systems are original equipment and are well beyond this serviceable life and becoming unrepairable. The feedwater piping to D Boiler is of an unknown age and likely not up to code. The current pipe layout in the Energy Plant is a result of efforts to minimize cost and maximize uptime during construction over the years. As a result, piping often does not follow an optimum path and has excessive bends, which increases losses in the system.

Objectives: The main objectives of this Capital Improvement are:
- Improve performance of the feedwater system.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns presented by condition of existing assets.
- Improve O&M practices for safe and reliable operation.

Scope of Work: The scope of work of this Capital Improvement is:
- Upgrade feedwater pumps and VFDs (x4).
- Optimize feedwater pipe layout in the Energy Plant.
- Replace distribution valves (x15 4" valves, x2 6" valves).
- Replace D Boiler piping (approx. 175ft).

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.
**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $89,748 and will also include (i) a flow analysis to identify losses and potential improvements in the system, and (ii) non-destructive testing of the 2,500 gal feedwater tank to determine remaining useful life.

**Additional Information:**

![Figure 1. Aged feedwater pump.](image1)

![Figure 2. 64-year-old feedwater pump showing heavy leakage.](image2)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,696,493.

(B) Forecasted annual operations and maintenance costs: $0. No change in O&M Cost is expected.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) a 2% increase in the feedwater pump efficiency, and (ii) the 2,500 gal feedwater tank is still serviceable and does not need to be replaced.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs in September 2023.

(F) Impact on Sustainability: Minor improvement from reduced losses in pipe network.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,683,720.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$600, wood fuel, natural gas. The decrease is associated with reduced losses in the pipe network and increased pump efficiency.
PROJECT CODE: 23/1-009

PROJECT NAME: Boiler Controls Modernization

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical, life safety, and health issues). The impact associated with resiliency is high (potential for boiler shutdowns).

The likelihood of these events is medium (controls are failing).

Background: The control systems for each boiler are over 30 years old and no longer made or supported by the manufacturer. Currently there are no commercially available parts for these systems. The controls for the wood boiler fail regularly, which puts the boiler out of compliance with the University’s Air Quality Permit with Idaho DEQ. Gas boiler controls are located at each boiler instead of centralized, significantly increasing response time to problems and reducing the Energy Plant’s ability to monitor equipment. The Chilled Water system is also located far away from the operator station. This project addresses these problems by upgrading and centralizing the boiler control systems into one location to improve plant safety and operational efficiency. As critical components of the Steam and Chilled Water Systems, when these controls fail the respective utility system also fails. With spare parts no longer available there is risk of permanent boiler shutdowns until the controls are replaced. Shutdown of boilers risks N+1 performance standards for the Steam System, posing a significant risk to campus.

Objectives: The main objectives of this Capital Improvement are:

- Centralize Energy Plant controls to increase response time before severe damage occurs.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Address long term health concerns from wood dust, ash, and noise exposure that should be physically mitigated rather than dependent on procedures.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Demolition of the existing supervisors’ office.
- Construction of a 2-story, 30ft x 12ft centralized control room with office space and conference room on second story.
- Installation, wiring, and programming of SCADA system to include the following systems:
  • Wood boiler (x1).
  • Natural gas boilers (x3).
  • Feedwater pumps (x4).
  • Condensate pumps (x4).
  • Steam turbines (x3).
  • Absorption chillers (x2).
• Cooling towers (x3).
• Emergency generator (x1).
- Install a standalone server for data collection and storage.
- Catwalk modification for access to second story.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $438,048 and will also include architectural and engineering design drawings and specifications to construct a control room and office space.

**Additional Information:**

![Figure 1. Obsolete operator station, manned 24/7 and exposed to environmental hazards.](image1)

![Figure 2. Demo supervisors’ office.](image2)

![Figure 3. Examples of obsolete gas boiler control and operator station.](image3)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $4,024,783.

(B) Forecasted annual operations and maintenance costs: $9,900. Decrease from fewer repairs to keep controls operational. Increase from more complex and expanded control system. Additional controls and server maintenance needs. The new system will have specific O&M requirements to maintain expected life.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) commercially available control systems will be compatible with existing boilers, (ii) sufficient space will exist for the necessary centralized control room and supervisors’ office, (iii) staged demolition and construction of controls at each boiler so N+1 redundancy is maintained in the event of a failure, (iv) 0.5% reduction in fuel costs due to improved control of boiler operations based on FY21 data, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2024. EPC (Commiss.) occurs from August 2024 to September 2024.

(F) Impact on Sustainability: Negligible.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,994,056.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$5,000, wood, natural gas, and electricity. The decrease is associated to minor electrical load increase, improved boiler control.
PROJECT CODE: 23/1-010
PROJECT NAME: Wood Boiler Capital Renewal Project 1
UTILITY SYSTEM: Steam
DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and wood boiler shutdown).

The likelihood of these events is medium.

Background: The wood fuel boiler provides significant economic and environmental benefits to the University, however, at 35 years old, many of the subsystems are in critical need of replacement. This project upgrades the boiler subsystems including the woodchip grate system, internal components, and fans. Each of the subsystems addressed is critical to the operation of the wood fuel boiler. Several single points of failure, or long repair time, issues exist within these systems. Most of these systems are original equipment, well beyond serviceable life, and damaged from years of use. Improvements will increase efficiency, extend the useful life of the boiler, reduce Supply Costs to the University by decreasing boiler downtime, and increase the resiliency of this system, a critical aspect to achieve performance standards and associated resiliency goals of the University. The alternative to these upgrades would be either complete replacement of the boiler and associated fuel and ash handling systems, switch to natural gas fuel at significantly higher Supply costs, or transition away from central steam heating to campus.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the wood boiler to extend its useful service life.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Mitigate single point of failure risks by keeping N+1 critical spares on hand.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Recondition throat.
- Replace failing grate supports, linkages, and hydraulic ram systems.
- Recondition firebox and replace all spray on refractory.
- Replace ash hopper firebricks with refractory.
- Eddy current test boiler tubes and retube as needed.
- Rebuild steam drum diverter, mud drum diffusers, and water column.
- Replace soot blower lances (x8), gear trains, and soot blower valves.
- Replace ID fan, FD fan, under-fire fan, over-fire fan, VFDs, motors, and dampers.
- Replace all critical valves.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.
Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the timing during the lowest steam use to reduce natural gas costs during shutdown. Wood boiler shutdown can be done without an impact to steam customers.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $256,284 and will also include Eddy current testing on the boiler tubes.

Additional Information:

Figure 1. Refractory in need of replacement.

Figure 2. Exposed firebrick in boiler.

Figure 3. Condition of boiler tubes unknown.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,321,361.

(B) Forecasted annual operations and maintenance costs: $0. Downtime from breakdowns and labor costs should be reduced from improved performance, but it will compensate the increased O&M costs due to Higher complexity of equipment.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 20% of boiler tubes will need to be replaced, (ii) Supply savings achieved through 1% decrease in wood boiler downtime and improved operations based on FY21 data, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2024. EPC (Commiss.) occurs in October 2024.

(F) Impact on Sustainability: Improved wood boiler efficiency reduces natural gas use during peak loads.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,303,856.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$10,000, wood fuel, natural gas, electricity. The decrease is associated with decreased wood boiler downtime, improved efficiency of the boiler and subsystems.
**PROJECT CODE:** 23/1-011  
**PROJECT NAME:** 950 CAT Loader Major Rebuild and Hough Replacement  
**UTILITY SYSTEM:** Steam  
**DATE SUBMITTED:** December 31st, 2021

### SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **medium** (fire risk near wood fuel storage). The impact associated with resiliency is **high** (extended wood boiler outage and increased Supply Costs).

The likelihood of these events is **medium** (loader is failing and beyond recommended runtime).

---

**Background:** The 950 CAT loader is critical for successful operation of the wood chip storage facility. It is used to deliver wood chips from piles to the chip trailer to be used at the Energy Plant. This project rebuilds the engine and mechanical systems of the loader. The loader has passed the recommended runtime hours by the manufacturer and requires a certified rebuild before severe damage occurs. Several failures have occurred in 2021 including fouling fuel injectors and an engine fire, indicating that more significant damage may occur soon if not addressed. Loss of the loader reduces the Energy Plant’s ability to meet campus loads with wood fuel, potentially increasing Supply Costs to the University. The backup Hough loader should be replaced as it is well beyond its life expectancy and not reliable. The existing 950 CAT will provide N+1 redundancy to the new loader.

**Objectives:** The main objectives of this Capital Improvement are:

- Restore N+1 redundancy for the wood chip storage facility.
- Mitigate severe resiliency issues associated with aging systems.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Certified inspection and rebuild of the existing 950 CAT loader to act as a backup
- Purchase a new loader of similar size to act as the primary loader
- Remove the Hough loader from service
- Administer procurement in accordance with CA Contract Part IV-Performance Standards: Steam and Condensate section 9) Fuel Operations and Storage.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this
proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $1,620, and will also include (i) a certified inspection of the 950 CAT to determine scope of rebuild, and (ii) the administration of procurement of the new loader.

Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $771,686.

(B) Forecasted annual operations and maintenance costs: $1000. Upgraded loader will have additional O&M requirements due to increased complexity.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the cost for loader rental during the rebuild is not included in the indicative price, (ii) the new loader would be purchased and on site before the rebuild commences.
(E) Proposed schedule: EPC (Overhaul) occurs from July 2025 to October 2025.

(F) Impact on Sustainability: Minor efficiency and emissions improvement.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $765,936.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/1-012

PROJECT NAME: Distribution Steam and Condensate Upgrades

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues associated with steam pipe rupture). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: The steam and condensate piping in the tunnel network is critical for distributing heat to campus buildings safely. This project upsizes major sections of the system and upgrades valves and expansion joints. Most of these systems are beyond or approaching their end of serviceable life. The lines by ISUB are over 95 years old, threaded, and beginning to rust, posing a high safety risk to operators and pedestrians if the pipe ruptures. Rupture poses an extreme safety risk to pedestrians and operators from exposure to high pressure, high temperature steam, reduced steam service from pressure loss to all buildings, decreased condensate return rate, and severe damage to all utilities in the tunnel until the pipe can be isolated. Years of water damage is eroding the outside of the pipe, increasing the likelihood of failure and shutdown to campus buildings. The lines on 6th Street are at least 59 years old and too small to meet current or future steam loads. The 6th Street line will need to be upgraded before additional buildings such as Kibbie or Hartung are connected to the network. Additional isolation valves will improve resiliency and add the ability to redirect steam to buildings in the event of a failure. Eventually all steam and condensate piping on campus will need to be replaced, along with their associated valves, supports, and insulation, as much of the system is beyond its expected life. This project addresses the most vulnerable and high risk sections.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade major steam lines to support campus growth.
- Mitigate severe resiliency issues associated with aging systems.
- Address safety concerns associated with the physical conditions of current assets.

Scope of Work: The scope of work of this Capital Improvement is:

- Replace 8” steam and 4” condensate lines from Idaho Ave. to University Ave. (approx. 325 ft).
- Upgrade 6” steam/5” condensate lines on 6th Street from Central Mall to Wallace Complex to 10” and 6” (approx. 670’).
- Upgrade the 5” condensate line on 6th Street from Line Street to Central Mall to 6” (approx. 425 ft).
- Replace aged expansion joints.
- Replace condensate receivers and pumps (x2).
- Install additional condensate sampling points.
- Install double block and bleed isolation valves at key points.
- Identify and remove abandoned utilities.

Beyond the Concessionaire's Line of Demarcation associated with this Capital Improvement, it is recommended that University of Idaho ITS department identify and remove abandoned and damaged IT and telecommunications lines in construction areas while accessible.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the construction of steam and condensate pipe during the summer season to reduce impact to campus.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $90,180 and will also include (i) a tunnel inspection to obtain exact quantities of valves, sampling points, expansion joints, and abandoned utilities, (ii) the development of a steam and condensate system flow model to ensure the pipe sizing is adequate, and (iii) the drafting of a constructability plan for steam and condensate shutdown of areas.

Additional Information:

![Figure 1. 95-year-old threaded pipe poses a safety hazard.](image1)

![Figure 2. 95-year-old threaded pipe is rusting through.](image2)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $5,750,062.

(B) Forecasted annual operations and maintenance costs: $7,800. Additional isolation valves and equipment required maintenance.

(C) Proposed modification to the Recovery Period: None.
(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 30 expansion joints (10%) will be replaced, (ii) 5 condensate sampling points will be added, (iii) 10 additional isolation valves will be added, (iii) the additional work may identify additional needs to be presented in a future Capital Improvement, (iv) the necessary pipe sizing may change depending on the flow study, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2025. EPC (Commiss.) occurs in October 2025.

(F) Impact on Sustainability: Negligible.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $5,705,100.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible.
PROJECT CODE: 23/1-013

PROJECT NAME: Energy Plant Emergency Generator Upgrades

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is **medium** (loss of heat in winter). The impact associated with resiliency is **high** (extended outage and building shutdown).
The likelihood of these events is **low**.

Background: The emergency back-up generator is critical for providing power to the Energy Plant during total electrical outages. This project upgrades the system by replacing the aging generator and electrical components and connecting them to the microgrid. Most of these systems are 26 years old and beyond their serviceable life. Though the turbines are expected to provide power during an Avista outage, the generator is still necessary to provide “black start” functionality if there is an outage while the turbines are offline. Each of the subsystems addressed is critical for the successful operation of the Energy Plant during such an outage. Without power there would be a complete steam and compressed air loss to campus buildings. Modernizing the generator and connecting to the Energy Plant microgrid will provide for automatic start-up and synchronization with the turbines, reducing potential interruptions to plant operations or campus when power from the utility is lost or restored.

Objectives: The main objectives of this Capital Improvement are:
- Upgrade the generator to provide black start capability.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.

Scope of Work: The scope of work of this Capital Improvement is:
- Remove the existing generator, ATS, and emergency panel ‘X’.
- Install new 208V, 3-phase, 300 kW diesel generator with 24-hour belly tank on the exterior of the building.
- Install new ATS and emergency panel to support electric loads of the natural gas boilers.
- Upgrade the emergency electrical system and connect to microgrid controls.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian
accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the construction schedule during summer hours to reduce impact to the Energy Plant parking lot.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $80,892 and will also include a power study for proposed emergency circuits.

**Additional Information:**

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $681,164.

(B) Forecasted annual operations and maintenance costs: $0. No change in O&M Costs expected.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) suitable space is available outside the building, and (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2026. EPC (Commiss.) occurs in September 2026.
(F) Impact on Sustainability: Minor impact from larger diesel generator fuel consumption.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $675,972.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible.

PROJECT CODE: 23/1-014
PROJECT NAME: Energy Plant Building Envelope Improvements
UTILITY SYSTEM: Steam
DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (physical and life safety issues). The impact associated with resiliency is medium (plant security issues).

The likelihood of these events is medium.

Background: The exterior envelope of the Energy Plant has been in disrepair for some time, with the last major improvement 35 years ago with the addition of the wood boiler. Many portions of the building are original from 1926. Upgrades are needed for the plant to continue operation for the next 50 years. This project addresses the many significant safety issues for both plant operators, and vehicle and pedestrian traffic outside. Security additions at doors and windows are needed to prevent unauthorized access. Providing a setback from the building is necessary for protection from falling objects and glass. Many of these issues can be addressed while also improving the general appearance of the building.

Objectives: The main objectives of this Capital Improvement are:

- Improve the general condition of the Energy Plant to extend useful life.
- Increase security and prevent unauthorized access.
- Address safety and security concerns presented by degraded condition of existing assets.
- Address long term health concerns from ash exposure.

Scope of Work: The scope of work of this Capital Improvement is:

- Install card access locks on all exterior doors.
- Replace windows with safety glass. Recondition all window operating mechanisms.
- Replace failed roof exhaust fans.
- Replace roof.
- Connect roof drains to stormwater collection system instead of sewer.
- Recondition brickwork and repaint sheet metal exterior.
- Plant a tree row on east side of building to reduce safety risks in parking lot.
- Upgrade exterior lighting and Bay 3 to LED lights.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.
A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the partial closing of Lot 14 and adjacent sidewalks during construction, as well as a potential reconfiguration of the parking lot.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $155,412 and will also include the preliminary architectural and engineering design documents to include windows, landscape tree planting, and exterior façade re-finishing.

**Additional Information:**

*Figure 1. East side of building.*

*Figure 2. Failed exhaust fan and broken windows.*

*Figure 3. Brickwork at Energy Plant.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $3,767,158.

(B) Forecasted annual operations and maintenance costs: $0. No change in O&M Cost is expected.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 40% of brickwork will be repointed, (ii) trees will be planted away from utilities and their ownership turned over to the University after construction, (iii) construction work will be staged over 2 years to reduce impact to campus activities, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through June 2027. EPC (Commiss.) occurs from June 2027 to July 2024.

(F) Impact on Sustainability: Improvement as a result of a new tree row that will act as a carbon sink improving local air quality.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $3,739,392.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible. Any LED savings will be offset by additional loads.
PROJECT CODE: 23/1-015

PROJECT NAME: Utility Tunnel Upgrades

UTILITY SYSTEM: Steam, Chilled Water, Electricity

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended utility outages and building shutdowns).

The likelihood of these events is low.

Background: The utility tunnel network is critical for distributing many utilities across campus including steam, chilled water, high voltage power, natural gas, and IT/telecom. This project upgrades the systems within the tunnels that remove water and keep workers and pedestrians safe. These systems are critical for preventing flooding damage to utilities and the tunnel walls as well as reducing the risk of severe life safety hazards such as electrocution or natural gas leaks. Many of these components are not suited for the environment or are at the end of life and are in need of upgrades. The existing sump pumps are not rated for high temperature water and fail often. Much of the racking used to support pipes is heavily damaged from rust and corrosion over time, posing a safety and resiliency risk. Lighting systems are inadequate, causing unsafe conditions. This project removes, replaces, and repairs systems to extend the tunnels’ life.

Objectives: The main objectives of this Capital Improvement are:

- Extend the useful life of the tunnel system by implementing effective water management to reduce water intrusion damage.
- Mitigate resiliency issues by replacing damaged/inadequate utility racking and removing abandoned systems.
- Address safety concerns presented by the physical condition of existing tunnel systems.
- Prevent unplanned outages by replacing degraded iron pipe with copper.

Scope of Work: The scope of work of this Capital Improvement is:

- Conduct thorough assessment to provide water management, racking, lighting, and piping improvements throughout the tunnel system.
- Replace sump pumps with high temperature pumps and standardize (x10).
- Convert lights to LED and install central system to shut off lights remotely.
- Replace damaged utility racking.
- Identify and remove abandoned utilities in construction areas.
- Upgrade corroded iron compressed air pipes to Type K copper.

Beyond the Concessionaire’s Line of Demarcation associated to this Capital Improvement, it is recommended that University of Idaho ITS department identify and remove abandoned and damaged IT and telecommunications lines in construction areas while accessible.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey
covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University and building occupants any potential utility shutdowns.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $73,548.

**Additional Information:**

*Figure 1. Iron compressed air lines.*

*Figure 2. Failing sump pump.*

*Figure 3. Fluorescent lights still in use.*

*Figure 4. Flooding due to failed sump pump near high voltage power.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,986,061.

(B) Forecasted annual operations and maintenance costs: $0. No change in O&M Cost is expected.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) 25% of lighting needs to be converted to LED, (ii) 5% of utility racking requires replacement, (iii) 300’ of iron pipe requires replacement, (iv) utility racking will be able to be repaired or replaced without shutting down utility service, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2027. EPC (Commiss.) occurs in October 2027.

(F) Impact on Sustainability: Improvement from reduced electric loads.

(G) Anticipated tax credits or other benefits: Possible rebate from Avista being assessed.

(H) Fee or charge payable to the Operator: $1,971,108.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible. The reduction from lighting energy savings will be offset by operational sump pumps.
PROJECT CODE: 23/1-016

PROJECT NAME: Condensate Return System Upgrades

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (unsafe working conditions). The impact associated with resiliency is medium (potential risk to building envelope).

The likelihood of these events is low.

Background: The condensate return system is critical to boiler operations and is in need of upgrades provided by this project. This project addresses issues in the system to improve performance, resiliency, and safety. These systems are beyond expected life and should be replaced before failure. The main hot well tank is 95 years old, underground, and in unknown condition. Loss of these tanks risks a steam system shutdown and structural damage to the building envelope of the Energy Plant.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade condensate return system to improve performance.
- Mitigate resiliency issues associated with systems approaching end of life.
- Address safety concerns that should be physically mitigated rather than dependent on procedures.
- Improve O&M practices for safe and reliable operation.

Scope of Work: The scope of work of this Capital Improvement is:

- Replace condensate pumps at the hot well tanks and install VFDs (x4).
- Install exhaust fans in the hot well room.
- Recondition the hot well tanks and reline (x2).
- Replace critical valving in hot well room.
- Install flash tank to capture high pressure steam losses.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this
proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $77,976 and will also include a structural assessment of the hot well tanks.

**Additional Information:**

![Figure 1. Aged condensate pumps in hot well room.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,630,428.

(B) Forecasted annual operations and maintenance costs: +$1,500. The increase is required for the additional flash tank and exhaust fans.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) hot well tanks will still have useful life left if relined, (ii) no major structural repairs or replacement is needed, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.

(E) Proposed schedule: EPC (Const.) extends through July 2027. EPC (Commiss.) occurs in August 2027.
(F) Impact on Sustainability: Improvement from more efficient pumps. Reduced flash steam losses.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,618,164.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$100, electricity. The reduction derives from VFDs and reduced steam losses.
PROJECT CODE: 23/1-017

PROJECT NAME: Wood Boiler Capital Renewal Project 2

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (long-term health concerns for operators). The impact associated with resiliency is medium (extended outage and building shutdown).

The likelihood of these events is low.

Background: The wood fuel boiler provides significant economic and environmental benefits to the University, however, at 35 years old, many of the subsystems are in critical need of upgrade. This project upgrades the boiler subsystems associated with improving performance and managing emissions. Each of the subsystems addressed is critical to the successful operation of the wood fuel boiler and is in serious need of upgrades. Several single points of failure, or long repair time, issues exist within these systems. Most of these systems are original equipment and are well beyond this serviceable life. Upgrading these systems is critical to plant reliability, will improve efficiency, extend the useful life of the boiler, and reduce Supply Costs to the University.

Objectives: The main objectives of this Capital Improvement are:

- Recondition the wood boiler to extend its useful service life.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address health concerns presented by the condition of existing systems.
- Allow O&M practices for safe and reliable operation.

Scope of Work: The scope of work of this Capital Improvement is:

- Replace economizer.
- Refurbish air pre-heater and improve access.
- Repaint and insulate the boiler skin.
- Replace emissions land.
- Emissions management improvements.
- Upgrade damper controls for over and under fire fan flow.
- Efficiency and balancing study to optimize operation.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.
A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the construction schedule during the lowest steam use to reduce natural gas costs during shutdown, and the use of Lot 14 for use as a laydown area. The wood boiler shutdown can be done without an impact to steam customers.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $314,280 and will also include (i) an engineering assessment on emissions control method modernization, (ii) an engineering assessment on insulating boiler skin, (iii) a non-destructive testing of the exhaust stack to determine useful life, and (iv) Eddy current testing on air preheater tubes.

**Additional Information:**

![Figure 1. Exterior walls of boiler warping from age and heat.](image1)

![Figure 2. Non-insulated exterior walls.](image2)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) **Total Cost:** $2,908,404.

(B) **Forecasted annual operations and maintenance costs:** $0. No change in O&M Cost is expected.

(C) **Proposed modification to the Recovery Period:** None.

(D) **Explanation of all relevant assumptions, variables, and data sources:** See previous narratives. In addition, it is assumed that (i) 20% of air preheater tubes will need to be replaced, (ii) exhaust stack will still have useful life
and will not need to be replaced, (iii) construction will be staged across two summer seasons to ensure the wood boiler is operational during the heating season to reduce Supply Costs, and (iv) wood fuel requirements will be reduced by 2%.

(E) Proposed schedule: EPC (Const.) extends through June 2028. EPC (Commiss.) occurs from June 2028 to July 2028.

(F) Impact on Sustainability: Improvement in wood boiler efficiency will reduce the use of natural gas during peak loads.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,886,948.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$20,000, wood fuel, natural gas. The decrease is associated with the improved efficiency of the boiler and its subsystems.
PROJECT CODE: 23/1-018

PROJECT NAME: Wood Fuel Storage Conveyance System Improvements

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (some mitigation required). The impact associated with resiliency is medium (further degradation will become more impactful). The likelihood of these events is low.

Background: The Fuel Storage conveyance system has been in service since 2010 and requires upgrades. The mechanical measurement, unloading, and conveyance systems all require improvements in order to provide reliability of operation and allow for an adequate O&M practice. Periodic material jams and inadequate lighting present a safety concern to the operations staff. Unacceptable safety concerns are being managed by implementing protocols in the interim, but they need to be addressed promptly.

Objectives: The main objectives of this Capital Improvement are:

- Improve wood handling performance at the Wood Chip Storage Facility.
- Mitigate a severe safety and resiliency issue.
- Upgrade conveyance to increase reliability.
- Mechanical and lighting upgrades to improve safety.
- Implement required O&M practices for a safe and reliable operation.

Scope of Work: The scope of work of this Capital Improvement is:

- Replace load scale and upgrade electronics.
- Replace tipper pins and upgrade hydraulics.
- Improve tipper chute to eliminate jamming.
- Replace conveyance belt and source spare material.
- Install yard lighting and motion sensors to improve safety and security.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian...
accommodations will be implemented as needed.

The Concessionaire will coordinate with the University a construction plan for this Capital Improvement.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $129,276 and will also include a schematic design of the scale, the tipper, the conveyance equipment, as well as the lighting improvements.

**Additional Information:**

![Figure 1. Tipper hydraulics surrounded by flammable material.](image1)

![Figure 2. Wood chip conveyance system.](image2)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $957,408.

(B) Forecasted annual operations and maintenance costs: $0. No change in O&M Cost is expected.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) transformer will have sufficient power for new loads, (ii) construction will be scheduled during the spring season to reduce impact to operations, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.
(E) Proposed schedule: EPC (Commiss.) extends through July 2027.

(F) Impact on Sustainability: Improvement derived from a more efficient wood fuel conveyance, thus mitigating unplanned outages and the associated increase in the use of natural gas fuel.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $950,616.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible electricity. The savings derived from the use of LED will likely be offset by the additional loads.
PROJECT CODE: 23/1-019

PROJECT NAME: Wood Fuel Storage Facility Improvements

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (some mitigation required). The impact associated with resiliency is low (further degradation will become more impactful).

The likelihood of these events is low.

Background: The Fuel Storage Facility has been in service since 2010 and is critical to the supply of high-quality fuel to the Steam Plant and therefore, the reliability of steam plant operation. The lack of stormwater collection on the south side of the building has resulted in groundwater seeping into the wood fuel and eroding the area underneath the hardscape. These voids pose a risk to the structural integrity of the facility and need to be repaired. The wet wood fuel negatively impacts the Energy Plant’s efficiency and is a risk to the wood boiler as rocks, mud, and potentially broken pavement may make their way into the fuel supply. The Storage Facility access is unrestricted, and instances of unauthorized access occur on occasion. This is a public safety and security concern as property damage or personal injury could occur.

Objectives: The main objectives of this Capital Improvement are:

- Increase Steam Plant resilience and efficiency by maintaining high fuel quality.
- Remove stormwater from the area to protect fuel quality and building foundation.
- Improve safety and security of the Storage Facility by installing access control.
- Replace the horizontal surfaces (apron and roadways) to maintain high quality fuel free of debris.

Scope of Work: The scope of work of this Capital Improvement is:

- Repair portion of damaged hardscape to include concrete demolition and restoration.
- Install stormwater collection system for the roof and south side of building.
- Excavation, backfill, and bedding for stormwater system.
- Install a gate and card access at the Storage Facility entrance.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the provision of perimeter fencing to prevent unauthorized access to construction areas.
The Concessionaire will coordinate with the University a construction plan for this Capital Improvement.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $104,112 and will also include a geotechnical evaluation of hardscape to identify location and magnitude of voids (2 bore holes, 2 test pits).

**Additional Information:**

![Figure 1. Wood Chip Storage Facility location behind Facilities Services.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $628,055.

(B) Forecasted annual operations and maintenance costs: $500. Additional O&M associated with maintenance of the gate and the management of the stormwater system.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) pumped ground water removal systems will not be required, (ii) a 40’x40’ patch of the worst concrete section -may vary on results of geotechnical evaluation-, (iii) efforts will be made to mitigate impact on surrounding vegetation but impacts may occur and are not included in this scope, (iv) a 0.1% reduction in wood fuel requirements from reduced moisture content, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.
(E) Proposed schedule: EPC (Const.) extends through August 2027. EPC (Commiss.) occurs in September 2027.

(F) Impact on Sustainability: Positive impact as a result of a higher efficiency operations at the Steam Plant derived from improved fuel quality (reduced moisture and debris).

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $623,268.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,000, wood chips. The savings derive from a more efficient operation with reduced-moisture fuel.
PROJECT CODE: 23/1-020

PROJECT NAME: Water Treatment Improvements Project 2

UTILITY SYSTEM: Steam

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is low. The impact associated with resiliency is low.
The likelihood of these events is low.

Background: The Hot Lime Softening (HLS) tanks and the associated feedwater and condensate chemistry subsystems are critical for protecting the boilers and the steam distribution systems from scaling that reduces efficiency and risks significant damage (such as damaged/destroyed boiler internals, steam and condensate main degradation, and steam trap failure). These systems experience frequent fouling due to the type of fluids used, which reduces efficiency. HLS tank #1 is 58 years old and needs to be replaced. Most of this system is well beyond its serviceable life. HLS #1 is non-functional and well beyond its serviceable life. Replacement is critical for the future reliability of the Steam Plant.

Objectives: The main objectives of this Capital Improvement are:
- Right size the Energy Plant water treatment system.
- Mitigate resiliency issues associated with systems beyond their serviceable life.
- Improve O&M practices for a safe and reliable operation.

Scope of Work: The scope of work of this Capital Improvement is:
- Remove and replace HLS #1.
- Optimize flow path between the HLS tanks to provide redundancy and improve efficiency.
- Replace scaled piping between the HLS tanks.
- Replace distribution valves between HLS tanks.

There is no recommended related work beyond the Line of Demarcation associated with this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University to locate a laydown area in Lot 14.
Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $78,300 and will also include an engineering assessment on water technology options.

Additional Information:

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,837,414.

(B) Forecasted annual operations and maintenance costs: $0. No change in O&M Cost is expected.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that workable solutions for all required coordination with University activity will be achievable. Coordination with the University for other work that may impact this Capital Improvement will occur.
(E) Proposed schedule: EPC (Const.) extends through September 2027. EPC (Commiss.) occurs in October 2027.

(F) Impact on Sustainability: Minimal improvement from reduced water consumption.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,823,580.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible (<1%), wood fuel, natural gas. Less steam vented from a smaller HLS tank.
PROJECT CODE: 23/2-021

PROJECT NAME: Chilled Water Distribution Upgrades Project 1

UTILITY SYSTEM: Chilled Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low (flooding risk). The impact associated with resiliency is medium (extended outage and building shutdown).

The likelihood of these events is high (multiple joints have failed in the past).

Background: Chilled Water is distributed through miles of direct buried piping to campus buildings for cooling needs. Since the South Campus Chilled Plant was constructed the operating pressure of the distribution network has increased due to the height of the Thermal Energy Storage Tank. While this improves overall performance, the increased pressure has put additional stress on pre-existing pipes that were not designed for it. Design deficiencies include pipe and fitting selection not suitable for pressure levels and inadequate thrust blocks to restrict pipe movement. Multiple joints in the system have failed because of this in recent years, causing unplanned outages and flooding until repaired. This project aspires to provide repairs to the highest risk joints in the existing system before failure risks unplanned outages. Upgrades are needed across the system to improve resiliency and prevent loss of service to critical cooling loads such as research and servers. A chilled water model is needed to identify the highest pressures in the system and most likely points of failure, further safety and resiliency risks, and support campus growth. Remediation of the inadequate piping systems will likely require multiple projects. This project’s Additional Work will determine the construction plan and extent of projects required.

Objectives: The main objectives of this Capital Improvement are:
- Address design deficiencies in the CHW distribution network
- Mitigate resiliency issues associated with inadequate piping construction details
- Address safety concerns associated with the physical conditions of current assets

Scope of Work: The scope of work of this Capital Improvement is:
- Replace glued joints with flanged joints
- Provide excavation, demolition, bedding, backfill, surface restoration, etc.
- Model the Chilled Water system to identify deficiencies, restrictions, and support future growth

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which
originated prior to Closing.

A construction safety plan will be developed including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University chilled water shutdown to buildings as needed and potential road and walkway closures.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $244,080 and will also include (i) development of a chilled water system flow model, and (ii) development of a construction plan to repair at risk joints.

Additional Information:

Figure 1. Joint that failed at NCCP in January 2021 and flanged joint installed after failure.

Figure 2. Failed joint not installed correctly
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $916,853.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) as-builds of previous chilled water line construction projects will be available, (ii) the replacement of ten 12” joints in the hardscape and softscape areas would be performed, (iii) the Additional Work and flow study may identify additional needs to be presented in a future Capital Improvement project, (iv) necessary pipe sizing may change depending on flow study, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2025. EPC (Commiss.) occurs in October 2025.

(F) Impact on Sustainability: Supports future connections to the chilled water system, which reduces carbon footprint.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $909,684.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
Background: The North Campus Chiller Plant (NCCP) is critical for supplying chilled water to campus buildings and increases wood boiler performance in the summer. This project upgrades the condenser water loop and cooling towers that serve the absorption chillers. Most of these systems are well beyond their serviceable life and in need of replacement. The cooling towers are heavily scaled, which reduces performance and useful life. Re-engineering the condenser water loop and replacing cooling towers will improve performance, resiliency, and provide for redundancy to the McClure Chiller Plant during cold weather. Neither the cooling towers or pumps were sized for their matching chillers, which reduces performance and the NCCPs ability to support critical cooling loads. Loss of NCCP if the cooling towers go down will impact campus operations by potentially triggering chilled water load shedding and increased Supply Costs to the University as electric chillers are brought online and steam turbine output is reduced.

Objectives: The main objectives of this Capital Improvement are:

- Improve performance and operating efficiency of the NCCP.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Change assets in order to achieve required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Redesign condenser loop with a common header for all chillers and cooling towers.
- Install and indoor basin to allow for cold weather operation.
- Replace primary and secondary pumps and VFDs (x5).
- Replace cooling towers (x3).
- Upgrade controls and monitoring.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be developed during the development stage including the protection of live utilities, and
the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be implemented as needed.

The Concessionaire will coordinate with the University the Line Street closure for crane operations. The construction is scheduled during the fall season to avoid chiller shutdown during the peak cooling season.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $114,264 and will also include eddy current testing on both absorbers.

**Additional Information:**

![Figure 1. Cooling towers at NCCP](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $5,742,498.

(B) Forecasted annual operations and maintenance costs: $0.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that workable solutions for all required coordination with University activity will be achievable.
Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Dev.) extends through July 2027. EPC (Const.) occurs from August 2027 to November 2027. EPC (Commiss.) occurs in November 2027.

(F) Impact on Sustainability: Improved from the reduced water consumption and noise in vicinity.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $5,700,672.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,000, electricity. Improved efficiency from rightsizing pumps and towers.
PROJECT CODE: 23/2-023

PROJECT NAME: South Campus Chiller Plant Emergency Generator

UTILITY SYSTEM: Chilled Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low. The impact associated with resiliency is low (extended outage and building shutdown).

The likelihood of these events is low.

Background: The South Campus Chiller Plant (SCCP) is not backed up with emergency power. Without power chilled water cannot be distributed to campus buildings with year-round critical cooling loads during outages. This project installs a generator sized to support the TES tank and associated pumping needed to distribute chilled water to campus, but not run chillers or cooling towers to produce chilled water. Cooling loads on campus would be met as long as the TES tank is charged. These subsystems are critical to the successful operation of the chilled water system. Installing a generator improves resiliency and mitigates risk to critical campus cooling loads such as research and servers. This is a first step towards supplying chilled water to campus during a power outage to achieve performance standards. Future Capital Improvement projects will be proposed to operate chillers and cooling towers during outages.

Objectives: The main objectives of this Capital Improvement are:

- Provide chilled water to critical campus cooling loads during power outages.
- Mitigate resiliency issues associated with a lack of backup power.

Scope of Work: The scope of work of this Capital Improvement is:

- Install a 480V, 3 phase, 3kW diesel generator with 24-hour belly tank on exterior of building.
- Install ATS, emergency panel, circuits, and controls to support CHW circulation pumps, TES tank sensors, and controllers.
- Connect Water Systems SCADA panel to emergency circuit.
- Construct enclosure and fencing around generator.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A construction safety plan will be developed including the protection of live utilities, and the provision of fencing to prevent unauthorized access to construction areas. Temporary traffic and/or pedestrian accommodations will be
implemented as needed.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $70,848 and will also include an electrical load assessment to right size the new generator.

**Additional Information:**

![Figure 1. Potential exterior locations for the generator.](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $611,887.

(B) Forecasted annual operations and maintenance costs: +$4,700. The increase is associated with labor and fuel cost for regular service checks.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the size of the generator is dependent on the outcome of the project 23/2-021, (ii) the generator does not need to be sized to support chilled water production to reduce cost and footprint, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.
(E) Proposed schedule: EPC (Const.) extends through July 2027. EPC (Commiss.) occurs in August 2027.

(F) Impact on Sustainability: There will be a minor impact from the fuel consumption of the diesel generator.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $607,284.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: Negligible.
PROJECT CODE: 23/3-024

PROJECT NAME: Electrical Transformer and Primary Component Capital Equipment Reserve

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown)

The likelihood of these events is high.

Background: Campus wide, the building electrical services, including conductors, connectors, transformers, and switches are aged; have no record of being tested nor maintained; and are a significant risk to the reliability of the campus electrical system. Recent failures indicate that substantial upgrade work is needed to bring the electrical distribution system up to required operating condition. This upgrade work is likely to take many years and additional failures are imminent. This project establishes mechanisms to respond to electrical distribution outages while permanent solutions are being planned and implemented. These capital assets are also required to do planned replacements of primary electrical system components. Lead time for primary electrical components can be very long. Without this work, extended outages could interrupt University business, cause property damage, and render unsafe occupancy conditions.

Objectives: The main objectives of this Capital Improvement are:

- Improve the safety/reliability of Primary Electrical Distribution system by preparing immediate response to outages.
- Maintain Performance Standard Part V.6, 7 and 8 and mitigate negative impact to Availability KPIs.
- Provide reserve transformers for emergency replacement service.
- Achieve a reserve supply of strategic primary electrical assets such as transformers, elbows, and bushings.
- Established baseline condition of primary electrical components.
- Procure emergency generation for quick dispatch to address electrical outages due to failures.

Scope of Work: The scope of work of this Capital Improvement is:

- Perform an assessment of the transformers to determine number, size, and characteristics to stock.
- Evaluate existing transformer stock. Retain, refurbish, or dispose of existing as determined.
- Purchase, receive, and stock capital equipment reserve including strategic transformer sizes.
- Purchase portable generator for response to emergency power outages.
- Coordinate capital equipment reserve with transformer replacements to maintain a rolling stock.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey
covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

Equipment will be stored safely and prepared for safe deployment as part of the Safety Plan.

The Concessionaire will coordinate with the University access to all transformers and vaults required for the Additional Work.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $84,564 and will also include (i) evaluation of primary components, developing reserve stock requirements and specification of primary components, (ii) the testing of existing reserve transformers to determine viability, and (iii) an oil and thermography testing of all transformers, primary switches, and vaults.

**Additional Information:**

![Figure 1. Portable generator in place while transformer is being removed/replaced.](image1)

![Figure 2. The replacement of transformer can take months.](image2)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,287,884.

(B) Forecasted annual operations and maintenance costs: +$500, as O&M Costs for the new generator.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) a strategic reserve of primary electric components will allow much more predictable response to electrical failures, (ii) the primary electric components for permanent repair will have a long lead time, and (iii) a strategic reserve may serve as rotating stock if sizing is correct for a permanent solution.

(E) Proposed schedule: EPC (Const.) extends through October 2023. EPC (Commiss.) occurs in November 2023.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,278,504.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. The equipment will be static in reserve during normal operations.
PROJECT CODE: 23/3-025

PROJECT NAME: Electrical Vault Inspections and Upgrades

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high.

Background: The primary electrical system is largely distributed in an underground system including multiple vaults where cables are pulled, terminated, or spliced. These vaults are susceptible to excessive water intrusion. In many cases primary distribution splices are submerged in water that are not suitably rated for this application. This condition causes severe safety issues for personnel and campus community as well as severe resiliency issues. This project remediates water intrusion issues and unsound conditions. Before work is done on the vaults, it’s imperative that the condition, capacity, and needs of the campus electrical distribution be well understood. A study to gain this information is necessary as Additional Work.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a severe safety and resiliency issue.
- Maintain Performance Standard Part V.6, 7 and 8 and mitigate negative impact to Availability KPIs.
- Modernize electrical distribution components (vaults) to allow primary electrical system to be adequately maintained per industry and performance standards.
- Implement required monitoring, water control, and O&M practices for a safe and reliable operation.
- Perform a comprehensive campus-wide electrical distribution study to inform future steps toward a safe and resilient electrical system necessary in order to provide operations per performance standards and University expectations.

Scope of Work: The scope of work of this Capital Improvement is:

- Perform assessment of the Campus Electrical Distribution System.
- Investigate 85 electrical vaults, primary switches, conductors.
- Assess condition of underground primary distribution assets.
- Develop a remediation plan for water intrusion and unsound conditions.
- Install sump pumps and water monitoring systems.
- Establish baseline thermography and, where applicable, oil testing.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was
completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned or public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University any required periodic restrictions of access to immediate work areas. Planned interruptions to building electrical services may be required.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $589,248 and will also include (i) a Campus Electrical Distribution System Study, (ii) a condition assessment of the underground primary distribution assets, and (iii) developing scope, schedule, budget for water management and primary component remediation.

**Additional Information:**

*Figure 1. An electric vault that is completely submerged. Condition of equipment is unknown.*

*Figure 2. Electrical conduits submerged in vaults.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $4,909,371.

(B) Forecasted annual operations and maintenance costs: +$800. The installation of water management systems will increase the O&M requirements.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the scope of this project is highly dependent upon the findings of the Additional Work, and (ii) 10 of the underground vaults require water management, 10% require major repair, 50% require normal repair, and 40% only require minor repair (this estimate is a rough order of magnitude only).

(E) Proposed schedule: EPC (Const.) extends through October 2023. EPC (Commiss.) occurs in November 2023.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $4,870,044.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: +$500, electricity. Additional electrical costs associated with the operation of the sump pumps.
PROJECT CODE: 23/3-026

PROJECT NAME: Menard Law Building Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high (previous components failures).

Background: Transformers are over 30 years old and have no record of being tested. The November 2019 failure and emergency repair of the oil filled, 13.2kV disconnect switch in Menard Law indicates that failure is imminent on this equipment of same age. That failure was the direct cause of the TLC basement flood that shut the building down for 3 weeks. The emergency repair of components resulted in spliced high voltage cable, eliminated building disconnect, and unsafe conditions. This condition presents a clearly dangerous condition for personnel and building occupants while leaving property at significant risk of damage. The main switch gear is beyond life and needs to be upgraded at the same time to remain safe and resilient. Main switch gear work is beyond the contractual demarcation point and is University responsibility.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a severe safety and resiliency issue.
- Modernize electrical service to building up to point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.

Scope of Work: The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot style transformers currently installed on the interior of the building. Thermograph and oil test. Establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
  • Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to SEL-735. Replace as necessary.
- Vault work:
  • Repair damaged items in electrical vaults accessed for transformer replacements.
  • Repair any areas of water infiltration in electrical vault, provide water management system.
  • Thermograph vault components, establish baseline records.
Beyond the Concessionaire's Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building's main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned or public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University for the College of Law building shutdown. Other buildings may be impacted as well.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $79,056 and will also include (i) a 30-day power study to evaluate load size for transformer sizing, and (ii) the documentation of vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.

**Additional Information:**

*Figure 1. Unsafe conductor splice laying on the floor after emergency repairs in 2019.*

*Figure 2. Conditions in transformer room dangerous enough to require Arc flash PPE before entering.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $776,752.

(B) Forecasted annual operations and maintenance costs: +$200. The upgraded electric meter and new vault sump will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) original transformers and switchgear were sized to serve electric boilers and chillers that have since been removed, (ii) new transformer is expected to be smaller and more efficient, (iii) work not included: no VFI switches nor appurtenances, no SEL 751, no switch operators, no microgrid infrastructure, no temporary generator, (iv) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2023. EPC (Commiss.) occurs in October 2023.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $770,904.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$650, electricity. It is assumed a 1% improvement in electrical efficiency based on historic metering.
PROJECT CODE: 23/3-027

PROJECT NAME: Kibbie Dome Building Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown)

The likelihood of these events is high.

Background: These transformers are 47 years old and have no record of being tested. Recent failure and replacement of one of the transformers in October 2021 indicates imminent and unpredictable failure of others. Multiple safety and reliability concerns were identified during the emergency replacement. These conditions present a clear dangerous condition for personnel and building occupants while leaving property at significant risk of damage. There is significant risk to campus events scheduled including football games and graduation ceremonies. The main switch gear is beyond life and will require replacement at the same time. If the University upgrades the field lighting to LED at the same time, there is significant energy savings and reduced project cost/O&M by eliminating the need for a 480V transformer.

Objectives: The main objectives of this Capital Improvement are:

- Upgrade electrical system of the Kibbie Dome to reduce risks to scheduled events.
- Mitigate a significant safety and resiliency issue.
- Modernize electrical distribution and metering.
- Achieve a safe arc flash condition.
- Implement required O&M for a safe and reliable operation.

Scope of Work: The scope of work of this Capital Improvement is:

- Replace 1200 kVA pad mount transformer serving north Kibbie Dome Concourse and field lighting (13.2kV to 480V).
- Replace 225 kVA pad mount transformer serving north Kibbie Dome Concourse (13.2kV to 208V).
- Replace 1500 kVA pad mount transformer serving south Kibbie Dome Concourse and field lighting (13.2kV to 480V).
- Replace primary feeders to sectionalizer. Trenching, backfilling, patching included.
- Replace secondary feeders to Main Building Service for all three service points. Trenching, backfilling, patching inc.
- Install protective bollards in front of transformers.
- Install SEL-735 electric meters (x4).
- Install ethernet cabling for meters.
- Install sumps pumps in electric vaults serving transformers (x2) and make repairs as needed.
Beyond the Concessionaire's Line of Demarcation associated with this Capital Improvement, it is recommended (i) the upgrading of stadium lights to LED to reduce transformer size and Supply Costs, (ii) replacing switchgear for each transformer and right size for energy savings and improved reliability (x4), and (iii) replacing 400A disconnect switch for road show power.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned or public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University an event schedule for shutdowns and the scheduling of the 480V-XFMR replacement after LEDs are installed.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $79,056 and will also include (i) electric load evaluations to right size new transformers and, (ii) the inspection of the electric vaults serving each transformer.

Additional Information:

![Figure 1. Example of oil leaking from transformer.](image1.jpg)

![Figure 2. Electrical map of Kibbie Dome for reference.](image2.png)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,922,799.

(B) Forecasted annual operations and maintenance costs: +$400. The upgraded electric meters and new vault sumps will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) new transformers expected to be smaller and more efficient, (ii) work not included: no VFI switches nor appurtenances, no SEL 751s, no switch operators, no microgrid infrastructure, no temporary generator, (iii) underground construction conditions will be reasonably free of obstruction but conflict, hazardous materials could impede completion, (iv) efforts will be made to mitigate impact on surrounding vegetation but impacts may occur and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs in September 2023.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,908,144.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$530, electricity. It is assumed a 1% improvement in electrical efficiency based on historic Kibbie Dome metering.
PROJECT CODE: 23/3-028

PROJECT NAME: Administration South Building Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown)

The likelihood of these events is medium.

Background: These transformers are over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. These transformers are located within the building, also posing a significant risk to the building envelope if they fail. Main switch gear is beyond life and is strongly recommended for upgrade at the same time.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
- Maintain Performance Standard Part V.3, 4, 6 and 8 and minimize KPI Events.

Scope of Work: The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot style transformers currently installed on the interior of the building. Thermograph and oil test. Establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalized to new transformer:
  - Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to SEL-735. Replace as necessary.
- Vault work:
  - Repair damaged items in electrical vaults accessed for transformer replacements.
  - Repair any areas of water infiltration in electrical vault, provide water management system.
  - Thermograph vault components, establish baseline records.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of an arc flash analysis and any resulting corrective measures/placarding.
Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned or public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University for the electrical shutdown of the building. Other buildings may be impacted as well.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $79,056 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.

Additional Information:

Figure 1. Aged transformer and electrical equipment in Admin south basement.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $731,057.

(B) Forecasted annual operations and maintenance costs: +$200. The upgraded electric meter and new vault sump will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) new transformer is likely to be smaller and more efficient, (ii) work not included: no VFI switches nor appurtenances, no SEL 751, no switch operators, no microgrid infrastructure, no temporary generator, (iii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2024. EPC (Commiss.) occurs in October 2024.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $725,544.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$400, electricity.
PROJECT CODE: 23/3-029

PROJECT NAME: Art & Architecture North Building Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is **high** (severe physical and life safety issue). The impact associated with resiliency is **high** (extended outage and building shutdown).

The likelihood of these events is **medium**.

**Background:** These transformers are over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. These transformers are located within the building, also posing a significant risk to the building envelope if they fail. Main switch gear is beyond life and is strongly recommended for upgrade at the same time.

**Objectives:** The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
- Maintain Performance Standard Part V.3, 4, 6 and 8 and minimize KPI Events.

**Scope of Work:** The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot style transformers currently installed on the interior of the building. Thermograph and oil test. Establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalized to new transformer
  - Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to SEL-735. Replace as necessary.
- Vault work:
  - Repair damaged items in electrical vaults accessed for transformer replacements.
  - Repair any areas of water infiltration in electrical vault, provide water management system.
  - Thermograph vault components, establish baseline records.
Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of arc flash analysis and resulting corrective measures/placarding.

**Safety and Logistics:** To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned or public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University for the electrical shutdown of the building. Other buildings may be impacted as well.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $79,056 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.

**Additional Information:**

*Figure 1. Poor, unsafe access to Art & Architecture north transformer room.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $713,537.

(B) Forecasted annual operations and maintenance costs: +$200. The upgraded electric meter and new vault sump will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the new transformer will likely be smaller and more efficient, (ii) work not included: no VFI switches nor appurtenances, no SEL 751, no switch operators, no microgrid infrastructure, no temporary generator, (iii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2024. EPC (Commiss.) occurs in October 2024.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $708,156.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$50, electricity.
PROJECT CODE: 23/3-030

PROJECT NAME: College of Natural Resources Building Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: These transformers are over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. These transformers are located within the building, also posing a significant risk to the building envelope if they fail. Main switch gear is beyond life and needs to be upgraded at the same time to remain safe and resilient.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
- Maintain Performance Standard Part V.3, 4, 6 and 8 and minimize KPI Events.

Scope of Work: The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot style transformers currently installed on the interior of the building. Thermograph and oil test. Establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalized to new transformer
  • Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to SEL-735. Replace as necessary.
- Vault work:
  • Repair damaged items in electrical vaults accessed for transformer replacements.
  • Repair any areas of water infiltration in electrical vault, provide water management system.
  • Thermograph vault components, establish baseline records.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of arc flash analysis and resulting corrective measures/placarding.
Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned or public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University for the electrical shutdown of the building. Other buildings may be impacted as well.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $79,056 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.

Additional Information:

![Figure 1. Aged transformers and electrical equipment in CNR basement.](image-url)
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $833,566.

(B) Forecasted annual operations and maintenance costs: +$200. The upgraded electric meter and new vault sump will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the new transformer will likely be smaller and more efficient, (ii) work not included: no VFI switches nor appurtenances, no SEL 751, no switch operators, no microgrid infrastructure, no temporary generator, (iii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2024. EPC (Commiss.) occurs in October 2024.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $827,280.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$1,200, electricity. It is assumed a 1% improvement in electrical efficiency based on historic meter data.
PROJECT CODE: 23/3-031

PROJECT NAME: Hartung Theatre Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

PROJECT CODE: 23/3-034

PROJECT NAME: Swimming Center Building Electrical Service Replacement

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is medium.

Background: These transformers are over 30 years old and have no record of being tested. Multiple recent high voltage electrical failures on campus indicate that aged transformers on campus will begin failing more frequently, severely disrupting campus operations. These transformers are located within the building and next to the pool, also posing a severe life safety risk and significant risk to the building envelope if they fail. Main switch gear is beyond life and needs to be upgraded at the same time to remain safe and resilient.

Objectives: The main objectives of this Capital Improvement are:

- Mitigate a significant safety and resiliency issue.
- Modernize electrical service to building up to point of demarcation.
- Achieve a safe arc flash condition at the primary equipment.
- Implement required O&M for a safe and reliable operation.
- Maintain Performance Standard Part V.3, 4, 6 and 8 and minimize KPI Events.

Scope of Work: The scope of work of this Capital Improvement is:

- Provide new exterior pad-mounted transformers to replace pot style transformers currently installed on the interior of the building. Thermograph and oil test. Establish baseline records.
- Provide new SEL-735 or equivalent electrical meter and integrate with all existing building meters.
- Provide new (13.2kV) concrete encased feeders from existing vault sectionalized to new transformer
  - Backfill and restore surface to match existing.
- Provide new secondary feeders from new transformer to existing building electrical service.
- Connect steam condensate, chilled water, and domestic water meters to SEL-735. Replace as necessary.
- Vault work:
  - Repair damaged items in electrical vaults accessed for transformer replacements.
  - Repair any areas of water infiltration in electrical vault, provide water management system.
  - Thermograph vault components, establish baseline records.

Beyond the Concessionaire’s Line of Demarcation associated with this Capital Improvement, it is recommended (i) the replacement and evaluation of the building’s main distribution panel and its distribution system, and (ii) the performance of arc flash analysis and resulting corrective measures/placarding.
Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan will be prepared around public sidewalk and street traffic (safety will need to be aware of and planned or public walk area). The equipment removal will occur through grated access at sidewalk level. Arc Flash PPE required.

The Concessionaire will coordinate with the University for the electrical shutdown of the building. Other buildings may be impacted as well.

Approach: As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $79,056 and will also include (i) conducting a 30-day power study to evaluate load size for transformer sizing and, (ii) the documentation of any vault damage and the development of a plan to remediate vault water issues, structural concerns, etc.

Additional Information:

Figure 1. Unsafe, aging transformers and electrical equipment below the swimming pool.
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $734,757.

(B) Forecasted annual operations and maintenance costs: +$200. The upgraded electric meter and new vault sump will require additional O&M.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) the new transformer will likely be smaller and more efficient, (ii) work not included: no VFI switches nor appurtenances, no SEL 751, no switch operators, no microgrid infrastructure, no temporary generator, (iii) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials that could impede completion, (iv) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (v) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2024. EPC (Commiss.) occurs in October 2024.

(F) Impact on Sustainability: Improved through the increased electrical efficiency of the equipment and the mitigation of potential damages.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $729,216.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$250, electricity. It is assumed a 1% improvement in electrical efficiency based on historic meter data.
PROJECT CODE: 23/3-035

PROJECT NAME: West Farm Primary Distribution Improvements

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is medium (degraded overhead, electrical safety concerns). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high.

Background: Electric loads at the West Farm are met with an overhead 4160V electrical distribution system. This system is well beyond its useful life and failures are common, with two occurring in FY21. Currently the West Farm received power from only one overhead line, creating a single point of failure that can impact multiple buildings. This project removes the overhead system, moves it underground, and connects it to the campus loop. Aged pole mounted transformers would be replaced with pad mount transformers, increasing resiliency, and increasing response time. This upgrade will improve efficiency, safety, and eliminate single points of failure to reduce disruptions to West Farm operations. This project is required to eliminate unplanned outages and meet Performance Standards and Availability KPIs.

Objectives: The main objectives of this Capital Improvement are:

- Improves the safety and reliability of the Primary Electrical Distribution system at the West Farm.
- Eliminate aging overhead primary distribution infrastructure.
- Maintain Performance Standard Part V.6, 7 and 8 and mitigate negative impact to Availability KPIs.
- Established baseline condition of primary electrical components.

Scope of Work: The scope of work of this Capital Improvement is:

- Remove overhead existing 4160V distribution including poles, transformers, conductors.
- Install new pad mount transformers, vaults, sectionalizing cabinets, duct banks, conduits, and wires for connection to the existing 13.2kV campus primary.
- Install underground 13.2kV campus primary encased in concrete at point of utility service.
- Provide secondary feeders from pad-mounted transformers to existing building electrical services and reconnect.
- Provide new SEL 735 meters on all building electrical services. Commission meters and establish data management.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which
originated prior to Closing.

A detailed safety plan covering open pit and electrical work will be developed.

The Concessionaire will coordinate with the University the access to all the transformers and vaults required for the Additional Work, as well as for any building service interruptions.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $145,044 and will also include (i) power studies on each building to right size transformers, and (ii) oil and thermography testing of all transformers, primary switches, and vaults.

**Additional Information:**

---

*Figure 1. Aging poles, cross bars and mount transformers that pose failure risks.*

*Figure 2. Pole leaning, risking line slap and downed lines.*
Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $8,605,057.

(B) Forecasted annual operations and maintenance costs: +$7,200. Higher voltage distribution, upgraded meters, and new equipment will require additional O&M. Thermography/oil testing required every three years for large transformers.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction but conflict, hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through July 2024. EPC (Commiss.) occurs in August 2024.

(F) Impact on Sustainability: Improved due to increased efficiency of distribution conductors and transformers.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $8,540,208.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: -$500, electricity. The reduction is associated with a minor efficiency increase.
PROJECT CODE: 23/3-036

PROJECT NAME: Primary Electric Switch Upgrades

UTILITY SYSTEM: Electric

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is low. The impact associated with resiliency is medium.

The likelihood of these events is low.

Background: Campus is served by two Avista 13.2KV services with pole mounted fuse disconnects. This type of utility service is antiquated and substandard for a campus of this complexity. The 24/7 nature of a campus with residents, research, and critical systems demands a modernized primary electrical service. Failure at the either of the two points of service will result in widespread electrical outages for campus that requires a manual process to address. Additionally, future microgrid and generation projects at the University will require that the point of service switching is upgraded. This project modernizes the electrical service from Avista at both the East and West point of service. This modernization will move the campus toward a more durable utility situation and will help mitigate the risks associated with widespread outages. Further work on this Phase 5 project will include potential cost share with Avista, ownership issues, etc.

Objectives: The main objectives of this Capital Improvement are:

- This project improves the safety and reliability of the Primary Electrical Distribution system and is necessary to maintain Performance Standard Part V.6 and 8 by replacing antiquate manual switching and reducing the amount of overhead electrical service.
- Upgrade the Primary Switching at two points of service from Avista to make these critical switching locations modern and capable of handling microgrid interconnection issues such as back feed protection.
- Coordinate requirements, construction, cost, and ownership with Avista.
- Re-establish primary electric metering and data management after implementation.
- Upgrade the primary electrical conductors at the points of service to the first sectionalizer.

Scope of Work: The scope of work of this Capital Improvement is:

- Provide new 13.2 kV, pad-mounted, motor operated switches with SEL-751 relays at East and West Avista points of service.
- Reinstall and commission SEL metering at East and West Avista points of service.
- Install new primary conductors to refeed campus with underground primary encased in concrete duct bank.
- Coordinate with Avista to install point of service equipment that meets interconnectivity requirements.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was
completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan covering open pit and electrical work will be developed.

The Concessionaire will coordinate with the University any campus service interruptions.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $128,088 and will also include (i) any interconnectivity requirements of primary switches, (ii) any switch requirements to establish modernized utility service to facilitate future microgrid control, and (iii) coordination with Avista on scope, ownership, operation, and cost of this project.

**Additional Information:**

![West campus utility feed, mechanical switching, and overhead distribution (left), and East campus utility feed (right).](image)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $2,352,113.

(B) Forecasted annual operations and maintenance costs: + $1,800. Upgraded switches and new relays will require additional O&M. Increased associated with primary switch inspection, and annual thermography testing.
(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) coordination with Avista will result in costs incurred to develop this project, (ii) Avista will require upgraded switching/controls for on-campus generation interconnection, (iii) Avista will participate in scoping and cooperate on ownership/cost issues, (iv) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials could impede completion, (v) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur and their remediation is not included in this scope, and (vi) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through July 2027. EPC (Commiss.) occurs in August 2027.

(F) Impact on Sustainability: This Capital Improvement enables future microgrid and generation projects.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $2,334,420.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None. Switch upgrades alone will not impact system’s efficiency.
SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issue, lack of emergency response capability due to failures). The impact associated with resiliency is high (an inadequate fire suppression will impact the campus operations).

The likelihood of these events is high.

Background: The fire hydrants on campus provide critical fire protection to campus buildings and occupants. This project replaces known failed and aging hydrants. These hydrants are aged and beyond their life expectancy. Replacement parts are becoming commercially unavailable for older hydrants and some have failed, posing a severe fire risk to campus. Two new hydrants will be installed with the project to improve fire protection near Menard Law and the Graduate Art Studio. Flow data doesn’t exist for some hydrants due to failure. Base records need to be established.

Objectives: The main objectives of this Capital Improvement are:

- Improve fire protection on campus.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address safety concerns associated with the physical conditions of current assets.
- Change assets in order to achieve required the O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Replace 21 fire hydrants.
- Install 2 new fire hydrants.
- Provide assembly and installation of new hydrants including asphalt repair, excavation, and thrust blocks as necessary.
- Manage outages/utility interruptions required to perform work. Coordinate fire service outages.
- Provide removal and disposal of old hydrants.
- Site sediment control, temporary traffic conditions provided/coordinated.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which
originated prior to Closing.

Custom safety plans for each of the 23 construction sites, including fencing of open pit areas, traffic control, and temporary walkway conditions will be developed.

The Concessionaire will coordinate with the University that all construction sites allow for campus activities and accommodate for vehicular and pedestrian traffic. Coordination will also cover all water line shutdown requirements, and liaison with public safety entities for temporary outages of water systems.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $56,916 and will also include (i) the resolution of any utility conflicts, and (ii) identification of any utility outage plan needs.

**Additional Information:**

---

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) **Total Cost:** $751,501.

(B) Forecasted annual operations and maintenance costs: +$1,000. New hydrants will require annual O&M and rebuilding, ten year paint annualized.

(C) **Proposed modification to the Recovery Period:** None.

(D) **Explanation of all relevant assumptions, variables, and data sources:** See previous narratives. In addition, it is
assumed that (i) existing conditions will vary for landscape and hardscape replacement, (ii) water service lines to hydrants will not require replacement or upsizing and, (iii) no known underground coordination issues exist, however, detailed utility location will be required. Coordination with the University for water line and building outages will be necessary.

(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) extends through August 2023.

(F) Impact on Sustainability: Multiple fire hydrants are not currently functional, presenting a direct threat to emergency response. Adequate emergency response for property and life protection is a fundamental requirement of campus sustainability.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $745,848.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/4-038

PROJECT NAME: Domestic Water Line Replacement on Central Mall

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (health risks to building occupants due to dead end line). The impact associated with resiliency is high (future failure will impact core campus).

The likelihood of these events is high (line has collapsed).

Background: At over 70 years old, this line collapsed in 2017, creating a dead-end line in the domestic water system that creates a health risk to building occupants. The line is intended to create a loop in the distribution system near Renfrew Hall and Agricultural Science Building, improving flow and water quality on campus. This project replaces the existing line and upgrades the size to keep up with campus growth.

Objectives: The main objectives of this Capital Improvement are:

- Replace the collapsed domestic water line under the Central Mall.
- Mitigate severe resiliency issues associated with systems well beyond their serviceable life.
- Address health concerns associated with the physical conditions of current assets.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Asphalt and natural surface demolition.
- Existing 4” piping modifications, abandonment.
- Install new 6” DR18 C900 PVC Water Line and all appurtenances.
- Bedding and Backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-base paint, which originated prior to Closing.

A detailed safety plan covering open pit work in a core area of the campus and water quality will be developed. Temporary traffic and/or pedestrian accommodations will be implemented as needed. Similarly, a safe return to service and the disinfection process will be documented.
The Concessionaire will coordinate with the University for any building shutdowns and disruptions due to open pit work to allow for campus activities.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $34,128.

**Additional Information:**

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $455,191.

(B) Forecasted annual operations and maintenance costs: +$0. No O&M Cost anticipated.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict, hazardous materials could impede completion, (ii) efforts will be made to mitigate impact on surrounding trees and vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable
solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.

(E) Proposed schedule: EPC (Const.) extends through September 2023. EPC (Commiss.) occurs from September 2023 to October 2023.

(F) Impact on Sustainability: Improvement of the health safety and the reliability/functionality of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $451,764.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/4-039

PROJECT NAME: Sheep Farm Water Vault Improvements

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCE ASSESSMENT:

The impact associated with safety is high (safety risk to the operators). The impact associated with resiliency is high (potential loss of service to Sheep Farm).

The likelihood of these events is high.

Background: The Domestic Water service to the Sheep Farm and Soil Stewards north of campus comes in at a vault near Well #3. The vault is unfinished and has a shed constructed over it. The vault floods seasonally, submerging the backflow prevention valves, meter, and other equipment needed to supply the Sheep Farm with water. Though only 10 years old, equipment is already in poor condition and pipes are leaking. This project runs power to the vault from Well #3, relocates equipment out of the vault, and improves the overall condition of the shed to extend its useful life. Installing insulation and heat will help minimize the mold growing on the interior walls of the shed.

Objectives: The main objectives of this Capital Improvement are:

- Reconfigure vault to extend the useful life of equipment.
- Mitigate an unsafe condition for operators and resiliency of service to Sheep Farm due to difficulty of access.
- Change assets in order to achieve the required O&M practices in a safe manner.

Scope of Work: The scope of work of this Capital Improvement is:

- Natural surface demolition and excavation.
- Run power to vault.
- Relocate water flow meter and backflow prevention station, replumb.
- Install finishes to shed including flooring, insulation, lighting, and electric heat.
- Bedding and backfill.
- Construction supervision.
- Disinfection and place system in service according to Public Water System requirements.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based point, which originated prior to Closing.

A detailed safety plan covering open pit work, an excavated site, and water service rerouting will be developed.
Documentation including the disinfection and backflow prevention testing, and an official notice of return to service will be provided.

The Concessionaire will coordinate with the University with regard to the Sheep Farm and Soil Stewards for shutdown. Temporary water provisions will be provided.

**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $27,108.

**Additional Information:**

![Figure 1. Interior vault at shed.](image1).  
![Figure 2. Leaking water line in vault.](image2)

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) **Total Cost:** $371,400.

(B) **Forecasted annual operations and maintenance costs:** +$200. Increase associated with annual maintenance for new structure and heater.

(C) **Proposed modification to the Recovery Period:** None.

(D) **Explanation of all relevant assumptions, variables, and data sources:** See previous narratives. In addition, it is assumed that (i) underground construction conditions will be reasonably free of obstruction, conflict and hazardous materials that could impede completion, (ii) efforts will be made to mitigate impact on surrounding vegetation but impacts may occur, and their remediation is not included in this scope, and (iii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.
(E) Proposed schedule: EPC (Const.) extends through August 2023. EPC (Commiss.) occurs from August 2023 to September 2023.

(F) Impact on Sustainability: This Capital Improvement will increase the electrical use due to additional heating. Metered water use, and an effective backflow prevention will protect the campus community.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $368,604.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: +$200, electricity. Increase is associated with the use of the seasonal electric heater.
PROJECT CODE: 23/4-040

PROJECT NAME: Building Backflow Assemblies Replacement at South Hill Apartments

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:
The impact associated with safety is high (severe physical and life safety issues in confined spaces). The impact associated with resiliency is high (extended outage and building shutdown).

The likelihood of these events is high.

Background: The backflow assemblies serving each apartment building are located in crawlspace with very limited access. In nine locations the assemblies are far from the access point and create severe safety risks for workers. Due to the safety hazard these assemblies can't be tested as required by regulations and risks loss of water service to the occupants until the buildings are compliant. Access is needed to each assembly from outside the building instead of the crawlspace. The meters for each building are aged and no longer functional. They need to be replaced and located with the assemblies for accurate billing.

Objectives: The main objectives of this Capital Improvement are:
- Eliminate unsafe work conditions by moving backflow assemblies out of crawlspace.
- Increase occupant safety by making presently inaccessible backflow assemblies maintainable.
- Bring South Hill Apartments up to code.
- Restore metering for auxiliaries billing.

Scope of Work: The scope of work of this Capital Improvement is:
- Inspect and replace all backflow assemblies as needed.
- Move 9 backflow assemblies to accessible locations.
- Install 30 new backflow preventer assemblies and domestic water flow meters for each building.
- Construct 18 new enclosures outside the buildings for each assembly.

There is no recommended related work beyond the Line of Demarcation associated to this Capital Improvement.

Safety and Logistics: To the extent required by applicable law, the University will provide (i) an asbestos survey covering any area to be disturbed by a demolition or renovation work; or (ii) proof that the original work was completed using asbestos-free materials. In accordance with the Concession Agreement, the University will be responsible for abatement of any Hazardous Substances, including asbestos and lead-based paint, which originated prior to Closing.

A detailed safety plan for work in confined spaces will be developed.

The Concessionaire will coordinate with the University and with the building’s occupants for any shutdowns.
**Approach:** As established in section 4.3(c), the Concessionaire requests that the University respond to this proposed Capital Improvement only pursuant to section 4.3(c)(ii), requiring that the Concessionaire perform additional work, to provide more information regarding the scope, design, and cost of the proposed Capital Improvement. The anticipated cost of such additional work is $96,660.

**Additional Information:**

![Map](image)

*Figure 1. Map of apartment complex with access locations and backflow assemblies marked.*

Pursuant to the Long-term Lease and Concession Agreement, Section 4.3.(c) (2), the following information is presented for this Capital Improvement:

(A) Total Cost: $1,389,709.

(B) Forecasted annual operations and maintenance costs: +$0. No change in O&M Cost is anticipated.

(C) Proposed modification to the Recovery Period: None.

(D) Explanation of all relevant assumptions, variables, and data sources: See previous narratives. In addition, it is assumed that (i) new backflow preventer assemblies and metering in serviceable configuration, and (ii) workable solutions for all required coordination with University activity will be achievable. Coordination with University for other work that may impact this project will occur.
(E) Proposed schedule: EPC (Const.) extends through May 2024. EPC (Commiss.) extends through May 2024.

(F) Impact on Sustainability: This Capital Improvement will enhance the public health safety of the domestic water system.

(G) Anticipated tax credits or other benefits: No tax credits or other benefits have been identified.

(H) Fee or charge payable to the Operator: $1,379,484.

(I) Proposed changes to the limits on the professional liability insurance coverage: All engineering and consulting firms engaged for Capital Improvements proposed for Approval will have a limit of $1,000,000 limit or greater on the professional liability insurance coverage. The premium associated to such policy is usually prorated by the firm over their annual contracts.

(J) Potential change in Supply Costs or consumption of Supplies: None.
PROJECT CODE: 23/4-041

PROJECT NAME: Domestic Water Emergency Generator

UTILITY SYSTEM: Domestic Water

DATE SUBMITTED: December 31st, 2021

SAFETY AND RESILIENCY ASSESSMENT:

The impact associated with safety is high (severe physical and life safety issues). The impact associated with resiliency is high (extended outage and campus shutdown, inadequate fire suppression and production capability during power outages).

The likelihood of these events is high.

Background: The domestic water wells are not backed up with emergency power as recommended by IDAPA 58.07.08. Without backup power the domestic water system cannot provide a predictable supply. Fire suppression capabilities would be critically reduced or completely non-functional. Loss of water pressure would result in public health concerns and greatly disrupt campus operations due to the lack of domestic water supply to the campus community. Lack of water main pressure can also leave the domestic water system susceptible to contamination by reverse flow from unprotected/failed backflow prevention and/or leaks in the system. This project installs a new generator with capacity to support Wells #3 and #4.

Objectives: The main objectives of this Capital Improvement are:

- Provide domestic water during power outages.
- Mitigate severe resiliency issues.
- Address severe safety concerns that should be physically mitigated rather than dependent on procedures.
