

Higher Education Research Council

Idaho Global Entrepreneurial Mission Program

2nd Year End Report

Proposal No.	IGEM 16-003
Project Title:	ISU:Wide Band Gap and Harsh Environment Semiconductor RD&D Capability
Name of Institution:	Idaho State University
Administrative Contact:	Dave Harris (PI has left ISU)
Reporting Period:	July 1, 2016-June 30, 2017

In September, 2016 the PI for this project, Dr. Eric Burgett, left ISU. After the PI left the project halted because of the current lack of leadership. This issue is being addressed as projects are negotiated with outside entities. We will address this lack as we are making new hires in Nuclear Engineering and Applied Physics. Leadership for this project will be re-established as will internal and external partnerships which will allow activities to continue.
