IGEM Grant Report

○ **Progress (due Jan. 1)** X Annual (due Jul. 31) Final (due Aug. 31)

IGEM Grant # <u>IGEM22-002</u> Principal Investigator <u>Owen McDougal</u>

Submission Date <u>1/1/2024</u> Primary Institution Boise State University

Instructions: Complete each section of this report directly on this template. Completed reports must be <u>4 pages or less in 12 pt Arial font</u>, excluding the expenditure report. Reports that do not follow these requirements will be returned for revision. Submit reports by the appropriate due date to HERC@osbe.idaho.gov

Section 1: Summary of project accomplishments for the reporting period and plans for the upcoming reporting period.

Reporting period: July - December 2023 - In year 3 of the IGEM HERC project, we proposed to construct Food and Dairy Innovation Center (FDIC) labs and submit 12 grants to generate \$1.5M in external funding. Our accomplishments associated with lab construction and grant activity are as follows. Construction of three FDIC lab modules, of 650 sq ft per lab for a total of nearly 2,000 sq ft., began on October 25, 2023. Completion of FDIC lab modules is expected in the summer of 2024. Our project team is currently managing 17 sponsored projects, for a total budget of \$35,032,287. In 2023, the project team submitted 19 grant proposals, 12 of which have been awarded, for a total of \$16,937,649, and the other 7 grants are pending (see **Table 1**). The FDIC team has trained 16 graduate students, 17 undergraduate students, and employed 6 staff since July 2023. Of the estimated 5-10 publications/patents for FY24, our team has published 1 paper with three additional manuscripts under review, and more submissions planned. Our goal of 10-20 internships and jobs for FY24, has led to 5 internships and 1 job at the halfway point. Our plan for the second half of FY24 is to continue grant submissions, student mentorship, publication submissions, and promote internship and job opportunities for students.

External Funding /	YR1		YR2		YR3*	
Grants & funding	(\$500K)	\$	(\$1M)	\$	(\$1.5M)	\$
Grants Administered			15	\$4,579,541	17	\$35,032,287
Grants Awarded						
(FDIC-direct)	5	\$668,541	8	\$2,437,351	10	\$6,586,469
Grants Awarded						
(FDIC-indirect)					2	\$10,351,180
Grants Pending					7	\$18,174,104
Foundations/Gifts	0	\$-	1	\$25,000	1	\$25,000

Table 1. Summary of FDIC extramural funding activity.

Section 2: High-level summary of budget expenditures for the period just completed. If budget is underspent at time of report, explain why and plans for expending funds.

The overall budget expenditures equate to 60% of total funds having been spent on infrastructure, instrumentation, and equipment. The budget categories that have been spent down less than 50% are salary and fringe (66% & 69% respectively, remaining).

The reason for the budget expenditure anomalies is that summer salary and fringe will make up for the budget excess from the academic year.

Section 3: Demonstration of economic development/impact, including the following as applicable: patents, copyrights, plant variety protection certificates received or pending; technology licenses signed, start-up businesses created, and industry involvement; private sector engagement; jobs created; external funding; any other pertinent information.

The FDIC has been exceedingly engaged with private sector companies as partners on external grants, and as sponsors of funded projects. The companies that have contributed time, resources, and funds over the past six months include, Agropur, Glanbia Nutritionals, Daisy Brand, Jones & Company Flavorings, Valley Food Tec, Genesis Organics, Ingredion, Dairy West, Cinder Wines, Telaya Winery, Food Physics, Anheuser Busch, Mountain Malt, Southern Fabrication Works, J.R. Simplot Co., McCain Foods USA, Gibby Group, Top Onion USA, Amalgamated Sugar, Chobani, Brabender, National Dairy Council, Global Gardens, and Agilent Technologies. These partnerships have led to the continued employment of three postdoctoral researchers, two research technicians, and program director. Of the 19 grant proposals in 2023, 11 of them are with industry partners, 12 were funded, 7 are pending, and none have been declined at this time. Total external funding for the 12 grants that have been funded in 2023, together with industry collaborators, amounts to \$16,937,649, with another \$18,174,104 pending.

Industry partners have also provided internship opportunities for students in FY24. **Table 2** gives an overview of our progress in securing internships and jobs for students since the FDIC was originally funded. The YR3 partners are Daisy Brand, Food Physics, Carollo Engineering, and National Renewable Energy Laboratory (NREL).

	jobs for students

Section 4: Number of faculty and student participants as a result of funding, and brief description of student efforts.

Table 3 provides a summary of student, staff, and faculty participation in the FDIC. The students work with FDIC faculty in independent research through Vertically Integrated Project (VIP) courses in Food Systems and Plasma Medicine and Agriculture. The staff are postdoctoral researchers and research technicians working with FDIC faculty. The faculty are FDIC team members and the expanded network of professors that collaborate on extramural grant activity or industry engagement through FDIC sponsored projects.

Table 4 provides a summary of students, their degree program, and a brief description of their project activity associated with the FDIC. The student academic program has been provided to demonstrate the interdisciplinary nature of the work being addressed in the FDIC.

Student (graduate*)	Title/Position	Project/Topic
Mark Skinner*	MSMSE PhD	PEF in potato chip processing
Alyssa Hendricks	CHEM BS	PEF in potato chip processing
Tauras Rimkus	CHEM BS	PEF in potato chip processing
Rianat Lukman*	CHEM MS	Dairy protein analysis by NIR and HPLC
Matt Lorentz*	CHEM MS	PEF treatment of grapes to make wine better
Kvlie Johnson*	CHEM MS	Separations Technologies that Enable Production and Use of High-Value
,	-	Biomass Streams from Agricultural and Food Processing Wastes
Alder Escobar	CHEM BS	PEF treatment of grapes to make wine better
Mia Rheede*	BMOL PhD	Bioactive ingredient degradation in ready-to-mix drinks and protein bars
Amber Hawley	CHEM BS	PEF treatment of grapes to make wine better
Morgan Fong	CHEM BS	PEF in potato chip processing
Anna Shuey*	BMOL PhD	Investigating Bioactive Alkaloids in Kratom
Jordan Hoover	BIOL BS	Investigating Bioactive Alkaloids in Kratom
Delaney Odell	CHEM BS	Investigating Bioactive Alkaloids in Kratom
Christopher Orizaba		Investigating Bioactive Alkaloids in Kratom
McKenzi Riggs	CHEM BS	Investigating Bioactive Alkaloids in Kratom
Gracie Garringer	CHEM BS	Cold atmospheric-pressure plasma array for inactivation of plant pathogens
Sarah Knowlton	CHEM BS	Gas mix impact on ROS generation by cold atmospheric-pressure plasma
		discharge
Mason Feerar	BIOL BS	Cold atmpressure plasma array for inactivation of plant pathogens
Jocelyn Stephens	CHEM BS	Use of cold atmospheric-pressure plasma array for inactivation of plant
		pathogens
Krystal Sosa*	BMOL PhD	Use of cold atmospheric-pressure plasma array for inactivation of plant
		pathogens
Kaden Falkner	CHEM BS	Use of cold atmospheric-pressure plasma array for inactivation of plant
		pathogens
Hassan Mohammed	CHEM BS	Use of cold atmospheric-pressure plasma array for inactivation of plant
		pathogens
Sumona Islam*	ECE MS	Use of cold atmospheric-pressure plasma array for inactivation of plant
		pathogens
Gretchen Kunz*	BMOL PhD	Use of cold atmospheric-pressure plasma array for inactivation of plant
		pathogens
Matthew Ostapovich	BIOL BS	Use of cold atmospheric-pressure plasma array for inactivation of plant
		pathogens
Stephanie Rood*	BIOL MS	Gas mix impact on ROS generation by cold atmospheric-pressure plasma
		discharge
Konnor Sjullie	BIOL BS	Cold atmospheric-pressure plasma devices for inactivation of foodborne
		pathogens
Dalton Miller*	CHEM MS	Biofilm experiments in Medicine; Gas mix impact on ROS generation by
		cold atmospheric-pressure plasma discharge; Cold atmospheric-pressure
		plasma inactivation of bacterial biofilms in porcine wound models
Cale Thorton*	CHEM MS	In cell NMR, analysis of metabolites
Joseph Collins*	BMOL PhD	whey protein isolation, structure evaluation and degradation monitoring
Madison Dirks*	BMOL PhD	GMP bioactivity assessment
Elizabeth Ryan*	BMOL PhD	PEF to improve whey protein spray dry efficiency and powder quality
Habeeb Babatunde*	CS PhD	Chemometric software development for real time monitoring of casein
		protein throughout a processing facility

Table 4. Brief description of student effort associated with the FDIC

Section 5 : Updated details and/or progress on the long-term sustainability plan for the project and description of future plans for project continuation or expansion.

The long-term sustainability plan for the FDIC will be dependent on grant support and industry engagement. Our team will continue to submit proposals under the topics of, advanced manufacturing or center programs that build capabilities for support staff and academic programs to leverage sustainable operations that align with the CHIPS and Science Act, Schmidt Foundation Virtual Institute for Feedstocks of the Future, and the Department of Energy Cross-Sector Technologies. We will adopt (1) a recharge center model to include infrastructure for industry to supplement financing for the center, (2) industry funds "facility use agreement" for their people to come in to use the center equipment, and/or (3) industry directly funds research. Incentivize start-up companies having access to the FDIC facilities to develop their IP for promotion of economic development.

Section 6: Expenditure Report – Attach an expenditure report as a separate document showing expenses toward the original budget submitted for this project. The expenditure report does not count toward the page limit. A written summary of budget expenditures should be provided in section 2 of this report.
